They are not content with a few.

Oh, long has this flower been blooming,  
All unconscious of its fate,  
Never dreaming that in the future  
'T would represent our "Golden State."

It grows by the bank of the river  
And all over the dusty plain;  
It greets us in early springtime,  
And we rejoice to see it again.

And where the south wind blows softly,  
Among its fernlike leaves,  
It bends its golden blossoms  
And of hidden treasure breathes.

It is the California Poppy,  
And of all our native flowers  
Has been chosen as the emblem  
Of this glorious State of ours.

### Growing Old.

The ancients Romans placed the beginning of  
old age at forty-six. Doubtless in some indi-  
viduals it begins before that time, and in some,  
years after. When the hair turns gray, when  
the eyes require artificial lenses, when the step  
loses its elasticity, or becomes measured and  
slow, one must believe that he has passed the  
"water-shed" and entered on the decline of  
life—at least as regards the physical part of  
him.

But this may only mean that the long appren-  
ticeship of childhood, youth and middle life is  
over, and that he has entered on the golden  
autumn of ripe and abundant fruitage. He has  
learned the use of his tools; henceforth there  
need be no bawling work, blunders, no misfits.  
At eighty, Mrs. Somerville wrote her work  
on the wonders revealed by the microscope; at  
ninety, she was pushing her researches in the  
higher mathematics.

When Moltke achieved his renown, he was  
some years past sixty. Gladstone, the grand  
old man, still holds his own at eighty-two.  
Holmes still delights us "Over the Teacups."  
Lowell has never written better prose than  
during the last ten years. Longfellow was as  
charming in his age as in his prime. Mrs.  
Howe and Mrs. Livermore, in the seventies,  
still draw and delight large audiences. The  
list might be indefinitely extended.

The elderly may do less work at sixty and at  
seventy than at forty, but they may do it bet-  
ter, with more ease to themselves, with an as-  
sured certainty of success that they had not in  
their younger days. And if their hearts are  
young, they will never grow old.

And what is the secret of keeping the heart  
young? Is it not the loving the same things  
in age that one loved in youth? If in youth  
we love those things that in themselves are  
eternally lovely and desirable, and keep on  
loving them through all the years, can our  
hearts ever grow old? If the love of the neigh-  
bor parallels the love of self, if love of truth,  
intelligence, virtue, reverence toward God,  
cultivated in youth, and changing not but to  
increase as the years increase—if all these char-  
acterize the individual, how can his heart  
grow old? He is, as Macaulay says of the  
Greek spirit, "Fresh in immortal youth, ex-  
empt from mutability and decay." And  
"though the outward man perishes, the inward  
man is renewed day by day."—Sel.

CLEANING COLORED WOOLENS.—Four ounces  
of white castile soap, four ounces of ammonia,  
two ounces of alcohol, two ounces of glycerine.  
Shave the soap in one quart of water over the  
fire. When dissolved add four quarts of rain  
water, and when nearly cold the other in-  
gredients. Bottle and keep in a cool place.  
One cup of this mixture in two quarts of water  
will be sufficient for ordinary use. Now lay  
the goods on an old sheet, and iron rapidly and  
lightly on the wrong side, and then roll tightly  
on a curtain pole or any round piece of wood.  
If this is carefully done you do away with the  
creases made by folding. For black silk or  
cloth dissolve one tablespoonful of borax and  
one tablespoonful of indigo in one pint of warm  
water. Sponge the pieces well and lay smoothly  
one above the other, and, if possible, put in the  
sun to dry.—Ladies' Home Journal.

### Pacific Grove Assembly for 1891.

The Chautauqua Literary and Scientific Cir-  
cle makes the following announcement:

The attractions of Pacific Grove, on Monterey  
bay, are too widely known to need any reitera-  
tion. It is pre-eminently the place for sum-  
mer recreation. The managers of the assembly  
are able now to announce their program quite  
fully. The dates are from June 24th to July  
10th. Recognition Day, the time of the gradu-  
ating exercises, will be July 10th. Opening  
Day and Recognition Day are the *Festal Days*,  
and will be grand occasions.

Dr. Hirst will preside during the whole as-  
sembly in his own admirable way. The de-  
partments remain largely in the familiar hands:

Marine Botany, Dr. C. L. Anderson; General  
Botany, Miss M. E. B. Norton; Conchology,  
Prof. Josiah Keep; Biology, Prof. W. W. Tho-  
burn; Pictography, Mr. C. E. Platt; Voice  
Culture, Miss A. L. Cadle; Cooking School,  
Mrs. Sophie W. Knight; Art, Prof. Ivey  
(Southern Cal.).

A new department for Historical Study will  
be organized by Mrs. Florence Williams, the  
well-known lecturer and teacher, who last year  
delighted the assembly with her lectures.

Prof. Ivey is art instructor in the University  
of Southern California and takes the place of  
Miss Kennedy, who has returned to her Eastern  
home. He is an English artist of wide reputa-  
tion and great ability, both as artist and  
teacher.

Prof. S. D. Waterman, principal of the Ber-  
keley High School, will continue his excellent  
work in the department of Teachers' Review  
and Normal Instruction.

A new feature will be a department of Higher  
Pedagogics, under the care of Prof. Will S.  
Monroe of Pasadena. Prof. Monroe is a new  
man in California, but already has a high re-  
putation among our educators. Prof. Ira Moore,  
principal of Los Angeles State Normal School,  
says of him: "He is an assured success as an  
Institute worker, which means that he is a man  
picked from ten thousand." During the last year  
Prof. Monroe has lectured before ten of our  
County Institutes, to the profit and delight of  
our teachers. His presence at our Assembly  
makes it worth while for every teacher in our  
part of the State to improve this opportunity  
for getting new ideas and fresh enthusiasm.

The Sunday School Normal Department will  
this year be greatly re-inforced by the presence  
of Dr. J. G. Gilbert of Indianapolis, a distin-  
guished Sunday School Normal teacher, who  
has come to this coast on the combined invita-  
tion of our State Sunday School Committee and  
the Chautauqua Society. He will take charge  
of the classes in Sunday-school normal work at  
Pacific Grove, and brings to us a reputation of  
almost unequalled capability. Let the Sunday-  
school workers and bible students of this region  
rally to this standard.

### Lecturers.

The popular Lecture Department of the As-  
sembly is to be up to its usual brilliant record.  
A partial list of speakers follows:

Dr. P. S. Henson of Chicago takes the place  
of Dr. Gunsaulus of last year, and is a grand  
platform man.

Dr. W. H. Witbrow of Montreal, Snpt. of  
the Canada C. L. S. C., will lecture upon the  
Catacombs. He is a traveler, an author and  
an enthusiastic speaker. His lectures are  
finely illustrated.

President Homer Sprague of Dakota will give  
two of his great historical lectures.

Prof. John Dickinson of San Francisco,  
brother of the famous Anna Dickinson, and a  
well-known scientist and popular lecturer, will  
fill two evenings.

Prof. E. Destrilla of the Berkeley Deaf and  
Dumb Institute will give two illustrated pan-  
tomic lectures of novel interest.

Prof. Barnard of Mt. Hamilton and Dr. J.  
H. Wythe of Oakland will each give an il-  
lustrated stereopticon lecture.

Mrs. E. M. Stanton of San Francisco, author  
of a popular book upon physiognomy, will give  
a very taking lecture upon "How to Read  
Faces."

Rev. Selah Brown will be present with some-  
thing new and delightful for his hosts of friends.

### Music and Popular Concerts.

These favorite parts of the Assembly are never  
overlooked. This year we are not going abroad  
for our talent when so much lies at our door.

The University Glee Club, of Berkeley, will  
bring their fresh young vigor, enthusiasm and  
capital training to the service of the Assembly.  
The public may expect confidently such music,  
both vocal and instrumental, as they have  
seldom enjoyed. "The Boys" have won golden  
opinions wherever they have appeared—in  
Oakland, Stockton, Napa and elsewhere. They  
will be supplemented by other musical talent,  
the very best procurable.

A grand "Destruction School," wherein many  
famous old "boys and girls" figure, will give  
the Chautauqua a chance for once to laugh  
at some of their dignitaries.

The schedule of prices will remain un-  
changed. The greatest amount of returns for  
the smallest outlay that is known to this part  
of the world.

The Hotel Carmelo offers a charming home  
to the visitor. Cottages and tents to rent in  
abundance. Boarding houses and restaurants  
on every hand. The sea always and every-  
where in sight and hearing.

Whatever else you leave out of your summer

program, do not leave out Pacific Grove and its Assembly.

New railroad circulars, with full directions, can be obtained soon at every station of the S. P. R. R. The C. L. S. C. Annual will be out in a few weeks, with full daily program and much additional information. Write for one to the Secretary, Mrs. M. H. Field, San Jose, Cal.

### Chaff.

Nothing grows much faster than troubles that are unred.

"KEEPING up appearances" means a frugal diet in order to give an occasional dinner party.

DURING the winter the hen may be dilatory, but she generally comes to scratch when the garden is planted.

It is easy for a girl to fall in love with a worthless man, but when she has to support him by taking in washing—ah, there's the rub.

"On what grounds did Henshaw get his pension? I never heard that he did any fighting during the war." "He didn't; but he claims his sympathies were enlisted."

NANCY (to her cousin from the city)—Can you climb trees? Maude (first visit to the country, in pained surprise)—Haven't you an elevator?

MR. FIGG—Tommy, my son, do you know that it gives me as much pain as it does you when I punish you? Tommy—Well, there's some satisfaction in that, anyhow.

MAY—What on earth made you refuse Lord Sideboard's offer? Ethel—Well, it's bad enough to be called "lady" by policemen and ticket-choppers without legalizing the epithet.

CLIENT—You have an item in your bill, "Advice, Jan. 8, \$5." That was a day before I retained you. Lawyer—I know it. But don't you remember on the 8th I told you you'd better let me take the case for you? Client—Yes. Lawyer—Well, that's advice.

A YOUNG lady in a Northport, Me., school compared ill in this manner: "Nominative, ill; comparative, worse; superlative, dead." The whole class looked up very much surprised, and the master, with an effort to control the sadness which he felt, arose and said: "Scholars, you may have 15 minutes for the funeral."

"I understand that a cyclone carried your house away," said a Chicago man to a Kansas friend. "Well, I lost the house," replied the Kansan, "but I don't blame it altogether on the cyclone." "No?" "You see, I was fool enough to put wings on the building."

FARMER PEASTRAW—Well, son, what did you learn at college? Son—I learned to fence, for one thing. Farmer Peastraw—That's good; I'll get some nails to-morrow and we'll have a bout.

### The New Vagrant Law.

The Senate bill defining vagrancy and punishment has been signed by the Governor. It provides that the following classes of persons shall be deemed vagrants, and when arrested shall be punished for misdemeanor: First—Every person, except a California Indian, without visible means of living, who has the physical ability to work and who does not seek employment nor labor when employment is offered him; or, second, every healthy beggar who solicits alms as a business; or, third, every person who roams about from place to place without any lawful business; or, fourth, every person known to be a pickpocket, thief, burglar or confidence operator, either by his own confession or by his having been convicted of either of said offenses, and having no visible or lawful means of support, when found loitering around any steamboat landing, railroad depot, banking institution, broker's office, place of public amusement, auction-room, store, shop, or crowded thoroughfare, car or omnibus, or at any public gathering or assembly; or, fifth, every idle or dissolute person, or associate of known thieves, who wanders about the streets at unusual hours of the night; or, sixth, every person who lodges in any barn, shed, shop, out-house, vessel, or place other than such as is kept for lodging purposes, without the permission of the owner or party entitled to the possession thereof; or, seventh, every lewd or dissolute person who lives in and about houses of ill-fame; or, eighth, every person who acts as a runner or caper for attorneys in and about police courts or city prisons, in incorporated cities or cities and counties; or, ninth, every common prostitute and common drunkard is a vagrant and is punishable by imprisonment in the county jail for not exceeding six months.

HOW TO CLEAN RUBBER SHOES.—A correspondent of an Eastern journal says there is a homely fact that people ought to know in these days, when we are getting a taste of an old-fashioned winter, so that rubber shoes are in frequent requisition by all classes. He wishes to make it known that the easiest way to clean rubber shoes of any kind is to rub them with vaseline. They then clean much better and last longer than if they are washed with water.

DISTILLED SPIRITS CONSUMED IN THE ARTS. According to the new census report, the total quantity of distilled spirits consumed in the arts, manufactures, and medicine in the United States during the twelve months ending Dec. 13, 1889, was 10,976,842 proof gallons.

## YOUNG FOLKS' COLUMN.

### Bayberry Tallow.

[Written for the RURAL PRESS by LUPA.]

"Grandpa."  
"Well, Harry."  
"What is that you keep biting every little minute?"

"What does it look like?"  
Harry picked up the gray-green lump from grandpa's shoe-bench and turned it over and over, feeling, smelling and finally tasting, but all the time looked puzzled, and at length asked again:

"What is it, grandpa?"  
"It's tallow."

"Tallow! What's it good for?"  
"Well, in hot weather I rub my thread over it to keep it from getting sticky and tangling itself. It is good, too, for polishing the edge of the shoe sole after it is pegged and trimmed."

"Can you do anything else with it?"

"Yes, grandma melts it with the other tallow when she makes candles in the spring."

"What for?"

"To make them harder for summer so they'll not melt and run down on the candle-stick."

Again Harry tried to push his thumb-nail into the hard lump, but in less than a minute came another question.

"Say, grandpa, where does it come from?"

Grandpa laughed, then said, while his eyes still twinkled:

"Why, Hal, you're a perfect catechism."

"What's a catechism?"

"Something that asks questions."

"But what's the good of a tongue if a fellow don't use it?"

"Maybe it's like the bone I read about that somebody had found in us and couldn't see any use for, so named it the resurrection bone."

Grandpa saw that Harry was catching his breath to ask what that meant, so he went back to the first subject.

"Now about this tallow, my boy. I'll tell you. It grows on bushes."

"On bushes?"

"Yes. Do you remember when we went to the pasture yesterday you found some small, hard berries and asked me if that was where all the shot grew?"

The boy's cheeks flushed hot when he remembered how his cousins had laughed at that question, and began to feel as if he did not know much if he had lived in a city all his life.

"You know I told you they were bayberries, and that gray coating on the outside is this tallow, bayberry tallow."

"But how do you get it off?"

"By steeping them in hot water. The tallow comes to the top, we skim it off, melt it again without the water, cool it in some sort of mold a cup or a dish, anything that comes handy, take it out and it is done."

Harry was silent for a wonderfully long time for him, looking at the tallow and whistling softly to himself; then he nodded decidedly at the leather roller which had coaxed his inquisitive forefinger between the cogs of its wheels and given it a sharp nip on his first visit to the shop, pushed both hands to the bottom of his pockets, shook some imaginary dollars there and said in a low, emphatic tone:

"I'll do it. See if I don't."

Grandpa wouldn't risk being called a catechism, so asked no questions then nor after, though he wondered what took Harry off alone day after day, but he had faith in the boy; besides, he believed children had a right to secrets as well as older ones and that all would be understood in good time, so the child came and went as he pleased and seemed to get happier every day till—I am not going to say how long afterward, for I have forgotten and it makes no difference—at length came the evening of July 31, when his eyes shone like stars, and every few minutes he commenced to speak then clapped his hand over his mouth and shut back the words. His cousins were sure they would die of curiosity before long, but grandpa had told them to keep still and they had obeyed, though with some grumbling. The boy went to bed early, trying to sleep but lying awake instead, for an hour or more, and several times in the course of the night waking himself and them by laughing aloud.

Morning twilight, the morning of the "Glorious Fourth" found him slipping softly out of bed into his clothes and down the stairs, while all the rest were in the midst of their best dreams. In a few minutes Babel, Jericho, Pandemonium were nothing compared with that spot. Each pane in the little, old-fashioned window seemed driven into a nervous chatter by the booming, clashing and rattling in the house and out. Rover bounded ten feet into space with a terrific yelp of fear and anger, the hired man shouted:

"Thunderation! what's a-goin' on?"

Bridget flopped over on her knees, snatched her beads and commenced calling on the Virgin Mary and all the saints. Grandma twined at her night-cap strings and exclaimed:

"For mercy's sake, what's the matter?"

Mary screamed, and the boys rushed to the windows with whoops of delight, but Grandpa laughed long and heartily, winding up this exercise with, "It's that boy."

In a few seconds came another explosion louder than the first, and in the after silence a merry, boyish voice called for: "Three cheers

for the Fourth of July," and the front windows seemed suddenly blazing with stars and stripes as they unrolled with a grand sweep from the end of a pole almost too heavy for the young arms that held it. The various ghosts dematerialized in a twinkling, to appear again in every day costume and help swell the shout of the little patriot. To their eager questions he answered only:

"I did it with bayberry tallow."

Though it was a puzzle still to the rest, Grandpa understood the days spent in the pasture, the trips to town (of course to sell the berries to the candle-makers), and the mysterious bundles brought back and carefully locked in his trunk. Grandpa understood but simply said:

"I'll risk you, Sonny!"

## DOMESTIC ECONOMY

### A Dissertation on Dishcloths.

[Written for the RURAL PRESS by ADAH F. BATTLE.]

Of the prose waits that periodically go the rounds of the press, few have a clearer mission than "Death in the Dishcloth." The reappearance of this article is the signal for many a kitchen holocaust. Dishcloths of uncertain age, grimy appearance and greasy odor give place to wholesome pieces of various texture.

Yet is it so hard to keep dishcloths clean? Decidedly, no, to the woman who does her own work. Her sister, who depends on the work of others, will have greater difficulties; careful directions will, however, have their effect here.

But let us turn to our subject, lest we find ourselves in the mazes of the servant girl question. I hope you use the dishmop, the small five or ten cent kind; for economy does not tempt to using it too long. But you do not confine yourselves to the mop so, as to the homestead kind, here is a field for choice. Old linen is lousy and its place is in the hospital basket. The very coarsest linen is, however, good.

Next come the crash towels. They make the best of dishcloths, especially for glassware. To my mind they are fully as good as those netted from cotton twine. Next to the towel, I prefer knitted cotton. Heavy knitted undershirts, cotton, when cleansed by an extra boiling in kerosene or ammonia may find a place in the culinary department of the neatest kitchen-keeper.

If you must use calico cloths, let it be in fruit-canning time—a season when blackberry stains or jelly marks are likely to disfigure anything used around the cans. Lay calico fruit-cloths where they can be found and you will save your dishcloths.

The important point and the one oftenest neglected does not concern texture or color, but cleanliness, and this is not an imputation against American housewives. Do you wonder that with her many cares one thing is sometimes neglected? The dishcloth does not appeal to her sense of the beautiful, but its unloveliness is more is more than compensated for by its usefulness. Let us keep it clean. That means that the dishwater must be free from grease. If the water is hard, use a little washing-soda, but don't put your hands in the dishwater. Take your mop, or, if you use a cloth, fold with your dish tongs. In soft water use plenty of soap, and wash milky dishes in clear water with a different cloth, before putting them into the suds.

When the dishes are washed, rinse the cloths in warm suds, then in cold water. Hang them on a line and you will have no trouble with musty cloths even in dampest weather.

Besides the little line near the dishpan, it is well to have another line outside the kitchen window. Then don't use dishcloths too long, and there need be no more cries of "death in the dishcloth."

QUERY.—Will some reader of the RURAL inform me what is the best way of preserving orange and lemon peel?

DELICATE CRACKERS.—Two pints of flour, one pint of sweet cream, yolks of three eggs. Roll out thin, stick and bake like any other thin biscuit.

BEETS.—Boil beets in salt water until tender. Remove the skins, cut in thin slices, and fry in butter. Dust with pepper and salt. Squeeze over the juice of a lemon.

WAFFLES WITHOUT EGGS.—A tablespoonful of lard put into a teacupful of cornmeal; pour scalding water on it until it is as thick as mush; put to this one pint of buttermilk, half a teaspoonful of soda, and one pint of flour. They are very nice if well made.

TEA CAKE.—Three tablespoonfuls of softened butter, and one cup of sugar beaten together until light as a feather, three eggs (the yolks and whites beaten separately), adding the yolks first, then one cup of flour, and lastly the whites; no baking powder.

NEW ORLEANS POTATOES.—Pare and cut raw potatoes into three-fourth-inch dice; throw them into ice-water for thirty minutes to one hour. Drain very dry. Have ready a kettle of deep lard. When you are sure it is really boiling, drop in the potatoes and fry golden brown four or five minutes. Sift them out; drain, dry on brown paper in the month of the oven. Sprinkle with salt and serve. A quarter of an onion fried first in the lard gives a very pleasant flavor.

## GOOD HEALTH.

### La Grippe Epidemic.

La grippe, according to the report of the State Board of Health for February, is again upon us, and rapidly developing into a widespread epidemic, quite equal to that which prevailed during the winter of 1889-90. The present epidemic is characterized by its sudden onset and the intensity of its initiatory symptoms, the premonitory chill, the fever, headache, backache, pains in the bones and muscles, that more nearly resemble *dengue*, or *hackbone fever*, than any other disease. Another feature peculiar to the present epidemic is the frequency with which cases occur in which the cough is almost entirely absent, and others in which pneumonia of a low type is almost certain to be developed. The debility accompanying the disease is invariably present and must be treated by stimulants liberally given. The origin of the disease being unknown, the power of the sanitarian over it is exceedingly limited, and consists chiefly in advising the avoidance of all depressing influences that might deteriorate the healthy constitution, or impair its strength.

In many cases it is accompanied by slight pneumonia or pleuro-pneumonia, which in feeble constitutions may assume a severe type. This may account for the unusual mortality from pneumonia during the month of February—160 deaths being counted in a population of 721,975.

La Grippe is a febrile disorder, and it usually ends with a slow convalescence. Its mortality when not attended or immediately followed by pneumonia, is generally small—not over two or three per cent of the cases. It is generally accompanied by loss of strength and depression of spirits. It appears to travel like cholera from east to west.

### The Origin of La Grippe.

It is supposed to be occasioned by the presence in the atmosphere of a specific organism which enters the body in the air that is breathed, and rapidly multiplies until the food on which it lives is exhausted, when it perishes and disappears. Hence it is admitted to be both contagious and infectious. If this theory of its origin be sound, it follows that little good can be done by medicines, though they may mitigate some of the more annoying symptoms. The high priests of bacteriology are studying to discover some means of destroying this supposed yet undiscovered bacillus.

There does not appear to be much connection between la grippe and a common cold, except that the occurrence of a cold may so weaken the system as to make it more susceptible to the attack of la grippe bacillus. Hence care should be taken to avoid exposure. There is no need for especial alarm, but people, especially the aged and feeble, should be upon their guard against possibilities.

### The Treatment of the Disease.

The symptoms or the approach of the disease are given above. We clip from a cotemporary the following rules for treatment which will generally be found to apply to all cases. The first is to stop the chill with which the attack usually begins, and this should be done with hot bottles, and in obstinate cases with the use of a hot brick steeped in alcohol. At all costs, the temperature of the patients must be restored. This accomplished, the loss of strength caused by the disease should be met by a generous use of digestible and nutritious food. Physicians generally supplement this treatment by prescribing a number of drugs which may be of service or may not. The chances are that they will do no harm. The patient should remain indoors, in a room that is free from draughts and suitably warmed. He should, so far as he can, keep up his spirits by cheerful reading and conversation.

It was found last year that people who had had the grippe were left in a crippled condition when it disappeared. They remained for weeks feeble and liable to catch other diseases; they suffered terribly from depression of mind, and the nervous system remained out of order for quite awhile. These consequences of the malady are characteristic, and it is not easy to see how they can be prevented. Physicians have not succeeded as yet in discovering an antidote for nervous depression, and la grippe takes on that shape in the stage of convalescence. It leaves "the blues" behind it, and it is beyond the reach of modern art to dispel them.

The spread of this disease might no doubt be materially lessened if the public could be taught to look upon it as it does upon diphtheria and small-pox, and take the same precautions in isolating its victims as it does in cases of those diseases. A cotemporary makes a good point, applicable to all contagious diseases, as follows: Another point upon which it might be well to inform the public is, that where an infectious or contagious disease occurs in a home and the washing of the patient's bedding or clothing is sent away to be washed without first having them thoroughly disinfected and the washer-woman or any of her family thereby become infected, they can recover damages in a court of law if not previously notified or warned that the clothing is infected. A few successful suits of this kind would engender caution and a realization of the fact that public protection must be afforded against infectious disease.

## The Week.

Cool, drying winds from the northwest have ruled for several days over a considerable area of the State, and the exhaustion of moisture has been rapid. Much soil packed by the heavy rains of February has dried out faster than was anticipated, and plowing is yielding clouds in soils apt to pack. More rain would be desirable to secure fine tilth and to carry on the growth of grass and grain, and a good shower would be generally welcomed.

The Legislature is on the point of adjournment as we go to press and the end of the prolonged session will be hailed with delight all around. This Legislature has either been the most objectionable or else the most unfortunate the State has lately seen. And yet it has done some very good things, and it is not unlikely that a careful estimate, after the memory of the unfortunate "sensations" of the session has passed away, may show its work better than it now is credited with. Such is usually the case and such is at all events a charitable view to take of it.

## Ramie Culture.

A French professor expresses great confidence in the future of ramie culture in France. He thinks it will be the means of delivering that country from its present heavy obligations to other countries for textile materials. Whatever we of California may think of these conclusions, we cannot but note with interest the hopefulness of the ramie industry in a country where both its cultivation and manufacture have made most important progress during the comparatively short time of but little over a single decade.

Commencing with its cultivation only, it soon began to take a prominent place among the manufacturing industries of that thrifty people. Starting without any aid from Government, it soon arrested the attention of government officials to such an extent as to induce them to speak encouraging words for it. Experiments were also ordered for the purpose of ascertaining its relative excellence, as compared with other fibers. One series of these experiments in comparison with Russian hemp showed the breaking weight of same to be from 125 to 160 as compared with 80 for Russian hemp. Another series of experiments in regard to its traction capacities with hemp, flax, silk and cotton were found to be represented by the figures 100, 36, 25, 13, 12, respectively. The elasticity of the same fibers stood 100, 75, 66, 400, 100. Several other carefully conducted experiments were also made, in all of which, ramie held the first position with large odds in its favor.

A very important property of ramie for the manufacture of cordage and sail cloth was found to exist in its incomparable power for resisting the action of damp atmosphere and water.

There is no fiber known which is capable of being wrought into such a variety of useful fabrics as ramie. Samples have been shown in this city of every class of goods for both male and female wear, from the coarsest and cheapest which can be utilized up to fabrics which bear almost undistinguishable likeness to the best Lyons silk, or such as will not suffer in comparison with the finest Chantilly lace.

Until within a few years manufacturers have been compelled to rely mostly upon the slow and tedious though cheap process of hand decortication, as practiced in India; but recently most effective machine decorticators have come into use which are able to do the work quite as well and cheaper than the same work can be done by the ten-cents-a-day laborers of India. By the aid of these machines there need be no lack of the raw material for our factories wherever or whenever they might be established.

Several of these machines have been introduced into California, one of which was shown at work at the last Mechanics' exhibition in this city, which appears to answer all the demands that can be asked for such work. In all other portions of the world where ramie decortication has been introduced, it has been worked in a state more or less green or damp, and resort has to be made to some chemical process to remove the gummy substance which always adheres to the fiber. It has been found, however, that the dry climate of California so effectually removes the moisture from this gum and renders it so brittle that it is sufficiently removed in the form of fine dust by the action of the decorticator to place the fiber in a marketable condition without the use of chemicals. This is a very great advantage, saves much cost and largely adds to the advantage which the California grower will have over growers in other and less favorable climates.

Considering all these facts, and especially this last-named advantage, it would seem to behoove California farmers to carefully consider the importance of this new and promising industry. Experiments made under the auspices of our State University, as well as by many practical farmers in various portions of the State, have fully shown the admirable adaptability of this State for the cultivation of the ramie. In our issue of the 14th inst. we made known the fact that a market had already been established here for the fibre, in localities where a sufficient quantity could be grown to make it an object to locate a machine for its decortication and proper preparation for transport. We also alluded to a movement in that

direction which had been initiated in Sonoma county. Since that date we notice that the matter has been taken up by the farmers in Sacramento county, and it is to be hoped both Sonoma and Sacramento will take active measures to produce a sufficient quantity of the plant in their respective centers to make a thorough and practical trial, the present season, and thus demonstrate to the State that we have a business at our command which may be readily and speedily advanced to one of the most important industries of the State.

A bill appropriating \$10,000 for the encouragement of ramie planting in this State has passed both branches of the Legislature—the Senate by a unanimous vote—and will, no doubt, receive the signature of the Governor.

## Farmers' Institutes.

An important letter on Farmers' Institutes by Col. R. P. McGlincy of Santa Clara county may be found upon another page of this issue. As Col. McGlincy had wide experience in Institute work in the Western States, before he came to California, his words on the subject will carry exceptional weight. We are glad that he has such faith in the value of the Institutes, and hope that his services may be enlisted in helping on the work in this State.

As has already been stated in our columns, the Regents of the University have taken steps for the promotion of Institutes in this State, but it should be borne in mind that but preliminary steps only have been taken. Specific instructions to the officers to whom they intrust the chief part of this work have not yet been prepared, nor can they be until the features of the situation are properly considered. It is, therefore, not possible yet to take up the work formally. Still Professors Hilgard and Wickson are ready to take part in Institute work as far as possible, consistent with other University duties. It is just in the midst of a term at Berkeley; the classes in the agricultural department are unusually large, and the first duty of the instructors is to their pupils. Before the beginning of another term it is expected that arrangements will be completed by which the contemplated Institute work may be formally taken up.

Two Institutes are now planned for the first week in April under the auspices of the County Alliances of Tulare and Fresno counties. The Tulare meeting is arranged for Thursday evening, April 2d, in Tulare City, and Prof. Wickson is expected to be present. The subject will be "Injurious and Beneficial Insects," and it is hoped that the meeting will draw out a full discussion of local observation and experience.

The Fresno County Alliance has arranged an Institute to be held in Fresno on Friday and Saturday, April 3d and 4th. The committee, consisting of J. H. LaRue, W. F. Blaney, C. B. Kemble and John S. Dore, appointed to make the preliminary arrangements for the Institute, has been actively at work, and a meeting full of interest is assured. The Fresno city board of trade will provide suitable ball accommodations. The Institute will open on Friday morning with an address by Prof. Wickson on the "Aims, Methods and Accomplishments of Farmers' Institutes." On Friday afternoon, Prof. Hilgard will speak upon "Alkali; its causes and remedies." It is expected that full discussion will follow this address, and information of great practical value will be brought out. Many other speakers have been invited by the local committee, and we regret that we have not a full list of speakers and subjects to publish in the RURAL. It will no doubt be found in the Fresno papers before the day of meeting, and the announcement should attract a large concourse.

**SENATOR FELTON.**—Just after the RURAL went to press last Wednesday the Legislature elected Charles N. Felton of San Mateo county U. S. Senator to fill the unexpired term of the late George Hearst. Mr. Felton was born in New York 53 years ago, and came to this State in 1849, at the age of 17. He followed mining at first, then mercantile pursuits, becoming finally a prominent San Francisco merchant. He has held a number of public offices and has used his large capital in the building up of a number of industrial enterprises in various parts of the State.

**CO-OPERATION AMONG FRUIT-GROWERS.**—The fruit-growers of the Cupertino district of Santa Clara county held a meeting to advance co-operation, on Tuesday evening of this week, at

which Col. McGlincy delivered an address favoring the movement. The co-operative society proposes to dry and market the products of its members, as has already been described in the RURAL.

**THE W. P. C. P. A.**—The convention of the members of this association of women writers of the coast was held in this city last week and was a great success from all points of view. Quite a number of the RURAL Home Circle contributors were in attendance, and we are promised for our next issue an outline of the meeting of the association and of its scope and purposes. We are much gratified at the success of the effort at co-operation among our gentle pen pushers and shall be glad to minister to it in any way we can.

**THE CANNERY COMBINE.**—Meetings have been held again during the past week between the local cannery owners and the agent for capitalists who propose to buy the whole output of them. It is reported that the cannery fixed the figures at which they would sell and that the agent took the figures and promised to summon another meeting if his backers desired to deal on the proposed basis. Thus the matter stands at present.

## ENTOMOLOGICAL.

## The New County Commissioner Law.

We are indebted to Hon. H. P. Stabler for the following copy of a bill which has passed both houses and may have the Governor's signature before it reaches our readers. It was introduced by Mr. McComas.

**AN ACT.**—Amendatory of an act entitled "an act to protect and promote the horticultural interests of the State," approved March 14, 1881, approved March 19, 1889.

**SECTION 1.** Section two of said Act is hereby amended so as to read as follows:

**SEC. 2.** It shall be the duty of the County Board of Horticultural Commissioners in each county, whenever it shall deem it necessary, to cause an inspection to be made of any orchards, or nursery, or trees, plants, vegetables, vines, or fruits, or any fruit-packing house, storeroom, salesroom, or any other place or articles in their jurisdiction, and if found infested with scale insects, or codlin moth, or other pests injurious to fruit, plants, vegetables, trees, or vines, or with their eggs or larvae, they shall notify the owner or owners, or person or persons, in charge or in possession of the said places, or orchards, or nurseries, or trees, or plants, vegetables, vines, or fruit, or articles, as aforesaid, that the same are infested with said insects, or other pests, or any of them, or their eggs or larvae, and they shall require such person or persons to eradicate or destroy the said insects or other pests, or their eggs or larvae, within a certain time to be specified.

Said notices may be served upon the person or persons, or either of them, owning, or having charge, or having possession of such infested place, or orchard, or nursery, or trees, plants, vegetables, vines, or fruit, or articles, as aforesaid, by any Commissioner, or by any person deputed by the said Commissioners for that purpose, or they may be served in the same manner as a summons in a civil action. [Any and all such places, or orchards, or nurseries, or trees, plants, shrubs, vegetables, vines, fruit, or articles thus infested, are hereby adjudged and declared to be a public nuisance.]

And whenever any such nuisance shall exist at any place within their jurisdiction, or on the property of any non-resident, or on any property, the owner or owners of which cannot be found by the County Board of Horticultural Commissioners after diligent search within the county, or on the property of any owner or owners upon which notice aforesaid has been served, and who shall refuse or neglect to abate the same, within the time specified, it shall be the duty of the County Board of Horticultural Commissioners to cause said nuisance to be at once abated by eradicating or destroying said insects, or other pests, or their eggs or larvae. The expense thereof shall be a county charge, and the Board of Supervisors shall allow and pay the same out of the General Fund of the county. [Any and all sum or sums so placed shall be and become a lien on the property and premises from which said nuisance has been removed or abated, in pursuance of this Act, and may be recovered by an action against such property and premises; which action to foreclose all such liens shall be brought in the proper Court by the District Attorney of the county, in the name and for the benefit of the county making such payment or payments, and when the property is sold, enough of the proceeds shall be paid into the County Treasury of such county to satisfy the lien and costs; and the surplus, if any there be, shall be paid to the owner of the property, if he be known, and if not, into the Court for his use when ascertained.]

The County Board of Horticultural Commissioners is hereby vested with power [to] cause [any and all such nuisances] to be at once abated in a summary manner.

**SEC. 2.** This Act shall take effect and be in force from and after its passage.

# THE STABLE.

## Types of Clydesdale Horses.

[Written for the RURAL PRESS by JOHN DARE EMERSON.]

In your issue of February 7th a portrait appeared of a "Royal and Representative Imported Clydesdale Stallion, one of the handsomest horses ever imported to America, named Prince Arthur Wellesley." The horse so portrayed and described has merit, but he is not a "good representative" of the best type of the Clydesdale horse. There are two types or strains in that breed of horses, the principal difference being in their legs and feet.

It will be noticed that Prince Arthur has very hairy fetlocks. Animals of that type are liable to suffer from the fetlock disease, known as "grease," particularly if they have to work on wet, clayey soils. Forty years ago the hairy-footed horse was more common than he is now. He was usually a shade larger than the other type of the breed, and for a short, heavy pull was slightly his superior, but when it came to the active endurance of every-day work, he did not show to advantage. His massive-looking legs made him attractive to some, but judges at fairs and shows, knowing that these were his weakest parts in wear, generally decided against them. Your remarks on the horse illustrated show that though he is nine years old, he has been the winner of only one prize, a second, and that at an unimportant exhibition in Annam, Dumfriesshire, Scotland, when he was but a yearling. He is, therefore, no more than a representative of a strain of Clydesdale horses which is dying out because of certain recognized defects, while the higher and more valuable type of the breed is year after year coming into wider use for work requiring strength, action and gentle intelligence.

The best type of the Clydesdale horse has considerable fetlock hair, but it is not of that dense kind, which, particularly in the forefeet, of the other type, causes a "hunchiness" neither beautiful nor useful.

I inclose a portrait of a first-class Clydesdale stallion, cut from the 1888 catalogue of Galbraith Bros. of Janesville, Wisconsin, for which I wrote to them two years ago.

If you will have the goodness to print this likeness in the PRESS, and reproduce alongside of it your illustration of Prince Arthur, the difference in the two types of the breed I have alluded to will be made plain, and you will confer a benefit on your subscribers. The stallion shown is Lord Lyndoch, foaled in 1884, the winner of four first prizes, one second and one third, all at important exhibitions, besides being highly commended at the Highland and

onned, though having been a great many years in this country without being directly interested in horses. I cannot pretend to know anything of the present condition of the Clydesdale horse-breeding industry except as a reader of published facts.

Dos Cabezas, Arizona.

NEW LEICESTER SHEEP FOR OREGON.—We learn from the *Oregonian* that last week a band of new Leicester sheep arrived at that

## FARMERS' INSTITUTES.

### Farmers' Institutes in California.

EDITORS PRESS:—I note with pleasure that an effort is to be made to have Farmers' Institutes in California. This is a movement I have long looked for, and in a small way have labored for. Remembering, as I do, the vast good ac-

through Farmers' Institutes than any other State, and in a recent letter from Wm. H. Morrison, the superintendent of these Institutes, I am informed that "the farmers are just as anxious for the meetings to be held in their respective counties as they were when the movement was first inaugurated five or six years ago, and that the Legislature is just as willing to appropriate money to help along the Institutes as when the appropriation was first asked for." That the farmers and people gen-

LORD LYNEDOCH (4530)

TWO TYPES OF CLYDESDALE HORSES: WHICH DO YOU PREFER?

Agricultural Society's show at Glasgow in 1888. The portrait must have been taken and all the prizes won by the time the horse was four years and a half old. I know nothing of his subsequent history. [He secured first prize at the Great American horse show held at Chicago in November, 1888, as well as first prize for the special premiums awarded by the American Clydesdale Society.—EDS. PRESS.]

I have no interest in the matter except on public grounds. I am a native of Clydesdale (as the vale and slopes of the River Clyde are termed), and in my youth had occasion to handle good horses of that breed. I write therefore as not entirely ignorant of the subject dis-

port direct from England. The sheep, four in number, arrived in superb condition, and, although only a little over a year old, are monsters in size, and even a novice can see at a glance that it has taken years of painstaking breeding to produce an animal of this class. Captain Pope stated that his agent in England was instructed to spare no expense in getting the best and to make ample provision for their safe transit. The sheep stood the voyage around Cape Horn like veterans. They were raised by B. Painter of Barley, near Rutland, England, and are from a prize family of what is now known as the Dishley or New Leicester. The sheep will be sent to Reedville.

complished in other States by reason of such gatherings among the farmers, I feel assured that a great benefit will accrue to all who cultivate the land, especially if proper subjects are discussed. I mean that if an Institute is to be held in a county where fruit-growing predominates, give more attention to that industry than to any other; but do not neglect the others. If the meeting is held where the cattle industry prevails, tell the farmers how they can feed for profit, and demonstrate to them the need of a well-balanced ration when they are fitting their cattle for market, and so on through the list.

Perhaps Wisconsin has made greater progress

erally approve of the Institutes is attested by the crowds that attend and the interest manifested in them. When I was engaged in the work there, I was surprised at the number of farmers and business men who attended and took part in the discussions. Earnest, intelligent farmers would often travel miles and remain until the session closed, and then return home thirsting for more information.

From Wisconsin the idea of such meetings spread to other States, until now Illinois, Ohio, New York, Missouri, Iowa, Nebraska, Minnesota, and perhaps others, hold Institutes, which are largely attended and grow in interest with each session.

There may be some of my brother agriculturists who do not know what the object of the proposed Institute is or how conducted. If there be such, let me say that the object is to teach how to get more out of the soil than is now gotten, and at the same time, if possible, lessen the labor. To make this matter still clearer, let me say that the object of the Farmers' Institute and the Teachers' Institute is identical, the imparting of knowledge and the discussing of improved methods in all the various branches of agriculture. When a Teachers' Institute is announced for any county, note the eagerness with which the ambitious and successful teacher prepares for it, although it is well known that by reason of such meeting, the teacher will have harder work to perform if he desires to succeed in his chosen vocation; then the object of the Farmers' Institute is to better the condition of the farmer.

How are they conducted? Well that is a broad question, but if I am to answer, would say, first ascertain where the meeting is to be held; then consult some of the farmers in that section, learn what they are most interested in, and then prepare a programme for their case. Call in some of the farmers and let them write a short paper or give a short talk on their way of conducting their farm; what they do with their product, etc. For evening (for I suppose none would be satisfied with less than a two days' meeting) arrange for several pieces of music and have some of the ladies read essays on floriculture, home adornments or kindred subjects. Following the essays or talks at each meeting let there be a general discussion of each subject, and so have each one present help make an interesting and profitable meeting. To add to the interest a variety of subjects can be presented. In this way these Institute meetings will differ from ordinary farmers' meetings.

Several years ago, with a number of gentlemen from Illinois, Iowa, Wisconsin and Minnesota I attended a Farmers' Institute at Jackson, Tennessee, in which we discussed every conceivable topic relating to agriculture from

mules to cotton; "goosher" peas to butter; eggs to cheese, honey to poultry; wine to apples; flowers to bread baking; hog and hominy to possum and sweet potatoes, in fact, for the four days we were there, we were kept busy answering questions, and so important did the State Commissioner of Agriculture deem this meeting that he had stenographic reports made of it, which were printed and scattered broadcast over the State, and with good results as I have been informed.

In a multitude of counsel there is wisdom, and each farmer who is fortunate enough to attend an Institute can add his mite by asking or answering a question and thus add to the popularity and increase the value of the meeting. If you find Prof. ———'s name on the program, don't feel embarrassed if you have a question to ask. Remember that the professor is, after all, only a man, and he will be glad to help you, for he will realize that the very question you ask will help him.

The chief feature of success attending all the Institutes in which I have taken part has been the informal manner in which they have been conducted and the freedom felt by the farmers in asking and answering questions. Remember, Brother Farmer, the Institute is for your benefit, and it devolves upon you to study how you can get the most good out of it.

Last fall, the farmers in Tulare county held two Institutes, and judging from the reports in the local papers, they were highly successful and doubtless very beneficial to all who attended. They were rather primitive in their way, yet they awakened a desire for more, and I have no doubt but that the farmers of Tulare county would be glad to spend two or three days again in an Institute; their effort gave them an idea that they yet had much to learn, and that they could learn from one another.

From my knowledge of Institutes, as they were conducted in the East, I have great hope of an improved agriculture in this State, if we profit by the example others have placed before us; then let us, one and all, give the movement our earnest, hearty co-operation, adding whatever we can to make it popular and successful, recognizing the fact that we may gather benefits individually and that each locality favored by such meetings will be stirred up and benefited even as the individual farmer will be.

I consider it fortunate that Prof. E. J. Wickson, of the College of Agriculture, is to have charge of these Institutes, as he is an able, capable gentleman and fully aware of the benefit kindred Institutes have been to other States, and from the experience he has had since he became a resident of the coast will know just what subjects to provide for each county where a meeting may be held, in order to give the farmers help on the subjects that perplex them most.

R. P. McGILINCY.

Sycamore Ranch, Campbell, March 17 '91.

## AGRICULTURAL NOTES.

### CALIFORNIA.

#### Butte.

**A GIANT GRAPEVINE.**—Chico Chronicle-Record, March 20: Much attention was attracted yesterday by a monster grapevine which was placed in front of Camper & Costar's real-estate office. It was taken from Rancho Chico, in the vicinity of Chico Vecino. Just above the roots it measures 42 inches in circumference. It is considered quite a curiosity and will probably be sent to San Francisco or to the World's Fair in Chicago.

**TREE-PLANTING AT BANGOR.**—Bangor Cor. Oroville Register, March 19: A large number of fruit trees and vines have been set out by different parties, and among those who have planted are Gardner Osgood, who has set out 1000 trees, mostly peach and French walnut. Dr. Allen has set out a lot of orange and almond trees. J. C. Turner has put out 500 trees of different varieties. Colonel Racerby has planted 1000 apple trees; his land is high enough to produce very fine apples. L. C. Hyland has planted 400 peach trees. J. B. Smith has set out between 300 and 400 olive and peach trees. Rafter Bros. have planted some 500 trees of deciduous fruits, and at the German colony H. Henricca has set out during the winter between 300 and 400 fruit trees.

**DECLINE IN BUTTE COUNTY SHEEP INDUSTRY.**—Oroville Register, March 19: Sheep-raising in Eastern Butte is rapidly decreasing. Formerly there were thousands of sheep there are not hundreds at present. The quantity of wool brought to this town has rapidly fallen off and the flocks kept have decreased to a limited number. While this may seem a deterioration in one sense, yet it shows that the lands formerly devoted to sheep-raising are now being planted and improved. They are being cut up and set out to fruit trees and vines. Those who raise sheep in the future must do so as these animals are raised in the East, a limited number being kept on each farm, and not thousands of acres pastured by sheep alone.

#### El Dorado.

**MOUNTAIN ORCHARDS.**—Georgetown Gazette: All that portion of the middle slope of the Sierras reaching from Georgetown to Volcanoville, Onion Valley and Slab Creek with an altitude of from 3000 to 4000 feet, is destined to become a great apple growing region. Here and there are small orchards, planted when early-day mining camps were prosperous, from which no better apples on the Coast find ready

sale at highest figures in the markets below. Several parties have begun planting orchards in this region. The pear and plum also grow to great perfection; and the peach, strange as it may appear, does very well as high up as 4000 feet altitude. Last season we ate peaches grown at Onion Valley.

#### Fresno.

**CROP PROSPECTS IN FRESNO COUNTY.**—Fresno Republican, March 20: Farmers assert that this year's harvest of cereals in Fresno county will be the largest yet produced. Several causes unite to effect the result. Last winter was so rainy that much of the land prepared could not be seeded, and consequently it lay idle through the year. All the land thus lying idle was seeded this season, in addition to the acres worked last year, besides much new ground, consequently the present acreage of grain is very large. The cold and rainless weather which prevailed up to a short time ago prevented the grain from growing above ground, but the roots spread under the surface, and now that the weather is favorable grain is springing up rapidly and exceptionally heavy, a fact which promises a large yield to the acre. The rains since January have been sufficient to insure good crops, even should there be no rain henceforth, although such showers as have been falling lately would be welcomed in the early part of next month.

#### Lassen.

**EDITORS PRESS:**—The 11th Agricultural District, which formerly comprised the counties of Lassen, Plumas, Sierra and Modoc, has been divided by an Act passed by the present Legislature, creating District No. 30 of Lassen and Modoc counties. Plumas and Sierra counties still remain in, and constitute the 11th Agricultural District. Three years ago Lassen had the District Fair, which was held at Susanville, and was generally conceded to be the best fair, in amount of premiums and exhibits, held in the State that year, aside from the State Fair. Lassen will in all probability have the 30th District Fair this season, and judging from the great number of fine stock in Modoc and Lassen counties, and the present fine outlook for grain and fruit crops, have one of the best fairs in the State to be held this year.—H., Susanville, March 15th.

**SHEEP SHEARING IN LASSEN COUNTY.**—Susanville Advocate, March 20: There are 30,000 head of sheep being sheared at Amesee. Some 30 men are employed in the work. The wool will be placed aboard the cars and shipped direct to market. This will be an immense saving to the sheepmen, as the expense of freighting the wool from the mountain camps has heretofore been no small figure.

#### Los Angeles.

**ORANGE AND LEMON PLANTING.**—Pomona Progress, March 19: A prominent nurseryman says that 1500 acres are being set to orange and lemon trees in this valley this spring. Over \$70,000 worth of citrus trees have been sold in Pomona since December, at an average price of \$1 per tree.

**ENCOURAGING CROP ADVICES FROM ANTELOPE VALLEY.**—Rosemond Cor. L. A. Evening Express, March 11: The estimate that there will be two bushels of wheat and barley this year to one last, does not appear unreasonable. In addition to the immense acreage sowed to grain, there are many putting in trees and vines on land that has been thoroughly domesticated and followed by tilling it to grain for two or three years, and now the rain has come just in time to help them out. There will also be a greater diversity of agricultural crops this year than ever raised here before. When irrigated potatoes are \$1 per hundred in Los Angeles, the hard, smooth, mealy potato of this valley commands \$2 per hundred here. There will be considerable acreage in this valley put in alfalfa, beets, cabbage, onions, potatoes and other vegetable crops this coming month. The fact that beans do as well here as in Ventura will also stimulate several to put in small pieces of two to ten acres in a place. There appears to be great confidence now as to the profit to be made here in all the deciduous fruits, French prunes, peaches and apples being the favorites, with pears and apricots as next best. There was considerable fruit set in Palmdale, near the mouth of Rock creek, last year, which did nobly, and now they think they can ring the bell on Livermore on cherries and impale the productive Riverside on anything but the citrus family, and perhaps when their trees are as old they will give lovely Pomona a grand tussle on French prunes. On the north side of the valley C. F. Bean put out some prunes and other deciduous trees, and it would be a difficult matter to find trees in the State that have done better or will beat them in bearing. His trees will have to be supported to carry the crop this year. The same may be said of the orchard of Ernest Schrader of this place. The trees, vines and berries put out by L. E. Hillen, Charles Werth, Dr. Orndall and others have done nobly, and settled the proposition of fruit-raising and grape-growing to a dead and moral certainty in this portion of the State. Mart Glesser, four miles west of here, has his 40 acres of trees set and is now putting in his trees for wind-break and timber growth. He is devoting ten acres to timber, shade and ornamental trees. His grain has come up handsomely and will soon be high enough to hide a rabbit or coyote. The people of the Quaker colony are working early and late putting in more land to hay and getting their homes started, so they can accommodate their families soon. The colony embraces some 24 families

and comprises over 100 people, who will be a good acquisition to our sparsely settled country. Mr. Miller and several of his neighbors in Township 9 north, 15 west, have been successful with their trees and vines, and they will multiply their setting of trees many times this season. The same can be said of many of the farmers around Fairmount, Nenach and farther west.

#### Napa.

**CROPS IN NAPA COUNTY.**—Napa Register, March 20: There has probably never been a season more favorable to farmers and fruit and vine men than the present one. There has been an ample fall of rain, and a better opportunity for putting in grain and planting trees could not be had. People have taken advantage of this state of affairs and a large acreage has been put in. Fruit trees are already blooming and give evidence of an abundant yield.

#### San Diego.

**EDITORS PRESS:**—We have had our share of the big rain. It has done some damage by washouts on the California Southern railroad near here, on the San Jacinto river and in the picturesque Temecula canyon; also by filling our beautiful Elsinore lake, to overflowing, the water was brought up higher into our orchards and some of our best garden and alfalfa lands were flooded. And yet the rains have done many, many times more good than harm. We are now sure of good hay and grain crops, of which we have a much larger acreage than ever before. The rain also helped our young orchards and vineyards, and will almost guarantee a good honey crop, which is one of the good things of this county. We have grown good honey crops each of the last five years, and good fruit also. We do have milk as well, though this may not be the veritable "land that with milk and honey flows," while we live on the fat or fruit of the land.—L. Y. Elsinore.

**TREE PLANTING ABOUT SAN DIEGO.**—S. D. Union, March 18: A Union reporter visited several of the prominent nurseries and gained the somewhat astonishing information that over 600,000 fruit and timber culture trees had been planted since Jan. 1st in the vicinity of this city. Of these the Poway Valley nursery sold 65,000 deciduous fruit trees and not less than 40,000 eucalyptus, pepper and other shade and ornamental trees. The Sunnyside nursery sold 40,000 deciduous fruit trees, 75,000 citrus trees and not less than 150,000 timber-culture trees, of which latter number 100,000 were mulberry trees. The Sweetwater Company sold 105,000 citrus trees, 50,000 deciduous trees of many kinds and over 200,000 timber-culture trees. Other nurseries have also done a large business, and the probability is that the estimate of 600,000 as a total number of trees planted is not far in excess, if at all, of the actual number. The nurserymen say that the planting of citrus trees has not yet fairly commenced, and that a few weeks will see very large additions to the number now out.

#### San Joaquin.

**EXTRAORDINARY WHEAT.**—Stockton Independent, March 22: Lockeford region must be a very prolific one. Yesterday some prolific samples, 45 stalked wheat stools, from the ranch of D. J. Thomas, five and one-half miles southeast of Lockeford, were left at the Independent office. The smallest had 40 stalks, and two others had 71 and 83 respectively. Mr. Thomas has 30 acres of this wheat which came up after the October rains on ground that has been plowed twice. The wheat is the white Australian and is pretty certain to yield 30 bushels to the acre.

**WHAT CAUSED THE GREAT ADVANCE IN THE PRICE OF SHEEP.**—Stockton Independent, March 13: There has been a great advance in the price of mutton recently and people are at a loss to account for it. Butchers are now paying 9½ cents a pound for it at wholesale and have been notified that the price will be 10 cents next week. Butchers say the reason of the advance is that there was no fall or winter pasturage in California for sheep, and that as they are so much more expensive to feed than beef cattle, most of the flocks were driven into distant regions where they could graze on the wild ranges. In the early part of the drought, mutton became cheaper, as farmers desired to be rid of superfluous sheep. When the flocks were reduced to such as the owners could afford to feed at home, the price advanced, and now there are very few for sale except in the mountains, and buyers are invading Nevada. As the San Francisco market takes 3000 sheep a day, the buyers are going farther and farther away to get supplies. This drain upon one side and the receding flocks upon the other have made mutton almost a luxury and advanced it from the usual wholesale price of 7 cents to nearly 10, and the end is not yet.

#### San Luis Obispo.

**AN EARLY SEASON.**—Adelaide Cor. S. L. O. Tribune, March 20: The land is now in excellent condition to receive late seed and push early-sown grain. The grain is growing so fast that we can almost see the stalks springing up. I have been in San Luis Obispo county many years, and have observed the seasons; the average is far in advance of any previous season.

#### Santa Clara.

**FRUIT GROWERS IN SANTA CLARA COUNTY INCORPORATE.**—San Jose Herald, March 20: Articles of incorporation were filed yesterday in the Clerk's office, of the West Side Fruit Growers' Association of Santa Clara Valley. The purposes of the corporation are to buy and to sell green, dried, canned evaporated fruits; also

for the purpose of buying, owning and selling real estate for the purposes of its business, and of doing every and all other things pertaining to preserved fruit or other orchard products; also to can, evaporate or otherwise preserve fruit or other orchard products necessary or proper for the purposes above mentioned. The place of the principal business to be in Santa Clara county, and the term for which the corporation is to exist is 50 years. The amount of the capital stock is \$100,000, divided into 4000 shares of \$25 value each.

#### Solano.

**GRAIN CROP PROSPECTS AT ELMIRA.**—Vacaville Reporter, March 19: D. F. Parker of Elmira paid us a pleasant visit Monday. Mr. Parker has 1000 acres sown to grain this season and reports the prospects as being very good.

**ORCHARD AND GARDEN WORK.**—Winters Cor. Dixon Tribune, March 18: The orchard business is still extending. G. W. Hill is putting out about 50 acres of new orchard. J. H. Hill has put out about 30 acres this year instead of 15, and Mr. Griffin is setting out about 50 acres in addition to his old orchard. Work is pushing in the orchards. Pruning and spraying have been finished and now the plows and harrows are in diligent use. The soil is in fine condition, and farmers are beginning to take plants from the hot-house and set them in their places. J. H. Hill has already put out a large number of tomato plants and cantaloupes, which, with continued sunny weather, will soon bloom and bear. Others have just put their seed in the hot-houses.

#### Sonoma.

**LARGE TRAFFIC IN CALVES.**—Petaluma Imp. print: Buying calves looks like a small business, but in Petaluma it brings to the dairymen and farmers in this section about \$50,000 a year. There are five or six men or firms engaged in the business, and competition among them is so lively that often runners are sent outside of town to meet the farmers coming in with calves. It is a cash business. About 10,000 calves are sold here yearly, and they average about \$5 per head. During April and May the daily average is about 250 head. For the remainder of the season the business is not so brisk. The calves are killed here and dressed with their hides on and then shipped to the city.

**SONOMA VALLEY OLIVE OIL RECEIVES A FRENCH MEDAL.**—Sonoma Index-Tribune: Col. Geo. F. Hooper, who made an exhibit of Sonoma valley olive oil, olives and wine at the Paris Exposition in 1889, which attracted no little attention at the time, received a bronze medal direct from Paris. The medal was given for the excellence of his olive oil, which has been pronounced by French connoisseurs to be a very superior article.

**A STALLION FOR WASHINGTON.**—Petaluma Argus, March 21: Geo. P. McNear sold a three-year-old Pointman stallion to a party from the State of Washington for \$1000. This colt, although not a full blood, weighed 1900 pounds. A full brother to this colt went to the same section of county four years ago, and has become noted as a stock horse.

**GOOD FRUIT A NECESSITY.**—Healdsburg Enterprise, March 21: From interview with Wm. Van Allen, Healdsburg cannery: "Our people ought to tend their energies to the improvement of their orchards. Good fruit is always in demand, green, dried, or canned. I have none of my 1890 pack on hand, and if the market is favorable I will run my packing-house to its full capacity. But we must have the best fruit. Try to impress upon the readers of your paper that the success of the cannery trade depends upon the quality of the fruit sent to market. The day is near at hand when the raiser of inferior fruit will be like the man who fell from the balloon—not in it. By-the-by, the McKinley tariff raised the cost of my tin \$1.50 a box. How does that strike you? Is that helpful to horticulture?"

#### Sutter.

**SUTTER COUNTY LEVEES.**—Marysville, March 15: The case of The People vs. Char. Lucke came up in the Justice's Court in Yuba City yesterday. Lucke was charged with malicious mischief in having cut private levees belonging to George Behlman, four miles west of Live Oak, in Sutter county. The defendant's attorneys admitted the cutting, but denied that it was done maliciously. They claimed that the levee was a nuisance and that it endangered the property of defendant and his neighbors by closing the natural channel and forcing the water in another direction. Over 30 witnesses had been subpoenaed by the defendant, including the county surveyor, and the case was bitterly contested. The jury not agreeing, District Attorney Mahon says he will continue the case and carry it to the higher courts if necessary. The case is of much importance to Sutter county, particularly the northern part, as a great many levees and ditches have been built. If it is finally decided that Behlman has no right to maintain a levee, the system of drainage in that section is worthless, unless laws governing the same are passed. Lucke offers to let Behlman, the prosecuting witness, select three responsible men to inspect the premises and decide upon a proper manner of getting rid of the water on the south side of Behlman's field. There was a ditch which formerly carried the water off, but Behlman closed it.

#### Stanislaus.

**TREE PLANTING AT OAKDALE.**—Oakdale Leader, March 20: The season has been one of

unusual activity in tree-planting around Oakdale, principally because the Oakdale irrigation ditch will be completed this spring. The fever, however, is also extending out into the farming districts, and many of our ranchers are talking of putting in orchards and vineyards and irrigating them by means of pumps operated by gas-engines.

Tulare.

PORTERVILLE FRUIT NOTES.—Porterville Cor. Tulare Register, March 20: The method of planting orange trees, or rather the treatment of the trees, is changed. Heretofore the foliage has been left on, almost entirely. Brey & Lackey lost about one-third of their setting last year, which they are now replacing, but they clip every leaf off, thus throwing the entire strength of the growth to rootlets. Other trees, however, as Dr. Henrahan's and many others, never stopped growing from the time they were set out. L. J. Redfield is having a piece of ground prepared for oranges. On the west side of the railroad the country has been cleared of all undergrowth and a house erected on nearly every ten acres.

A CANNERY AT VISALIA ASSURED.—Visalia Times, March 20: Farmers in this vicinity can make their calculations for planting tomatoes, beans and sugar corn, being assured that they will have a home market for these products. The cannery is an assured thing, and will be in operation by the first of July next.

GRAPE INDUSTRY AROUND PORTERVILLE.—Visalia, March 12: There are extensive raisin vineyards set out and being planted around Porterville. Probably 1500 acres of land is now devoted to raisin grapes. There are several small vineyards that have been in bearing for two or three years. Oliver Henry last season and the year previous put up a number of boxes of raisins for which he found a ready sale at the going market price. The grapes grown here are of an extraordinary size and contain a large percentage of sugar. When the vineyards now planted come into bearing and the manufacture of raisins becomes a permanent industry, those boxes containing the Porterville brand will win a name second to none in the market.

Ventura.

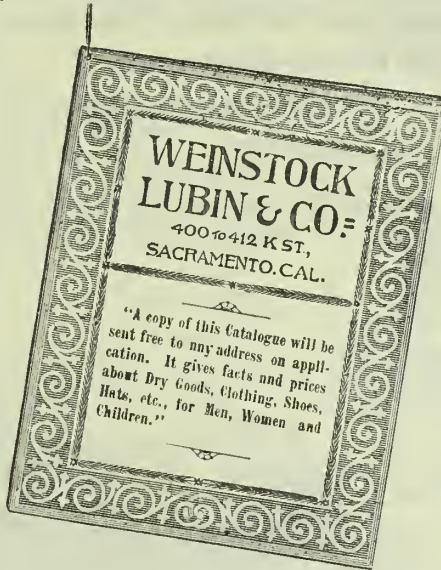

THE PROFITS OF WALNUT ORCHARDS IN VENTURA COUNTY.—Hollister Advance, March 20: The walnut orchards of Ventura county, according to reliable authority, yield their owners an average of \$100 per acre, year in and year out. A small-sized walnut orchard is a consummation devoutly to be wished.

NEVADA.

SHEEP HUSBANDRY THE COMING INDUSTRY. Virginia Enterprise, March 4: There are many great flocks of sheep grazing in Central and Eastern Nevada, but where there is now one sheep thousands will in a few years be seen. In regard to parts of Eastern Nevada the following by James Sampson, a well known sheep-raiser of White Pine county, taken from the White Pine News, is of interest: "In 1876 there were only 4000 sheep grazing within the borders of White Pine county, while at present there are 52,000 sheep grazing on its ranges, and just as soon as a railroad strikes the county, going west, there will be 300,000 sheep within the county. White Pine county is one of the finest grazing counties west of the Rocky mountains for both summer and winter ranges, for they join each other. Many stockmen in other sections have to travel 100 to 200 miles from their summer to their winter ranges, which makes it bad for some of the old stock and also for some of the young, and this takes off a good deal of the profit. I was talking to some sheepmen who are now grazing their flocks in Eastern Nevada, and they tell me they have to drive their sheep to the Central Pacific railroad in order to get their wool to market and save freight, and some of them are going to drive to Soda Springs, Idaho. In three years out of five, if a railroad were running through our county, we could ship mutton to market just as good as that fed in the East, but as it is, our sheep are not mutton when driven to the railroad. Mutton has never been better than at the present time on the range. Wm. Gregory, one of the oldest cattlemen in our county, and who has been a large owner, has sold his cattle and gone into the sheep business in Snake Valley. There is every indication that the sheepmen are the coming range kings. This is seen in California and other Pacific Coast States as plainly as here in Nevada." A California man says: "During the last five years the price of young mutton and lamb has been rising in price, not only in California, but everywhere in the East. The reason is very simple—it is because the production of mutton diminishes while the demand for consumption is increasing. In every State except Texas, agriculture chases away the sheep-raisers, who are obliged to reduce hands, while population increases regularly about a million and a half yearly. Never will the price of mutton be as low as formerly. It must go on increasing." Not only are sheepmen sure of good prices for mutton, but Nevada sheep-raisers are sure of good prices for their wool. Nevada wool already stands high in the Eastern market, and soon will be at the top, as the sheep-raisers of the State are sparing no pains in the improvement of their flocks by the introduction of thoroughbred rams. The cattle kings have had their day; soon the wool and mutton men will be crowned kings of the ranges.

# Gradually Growing Greater

Small wonder that our business is growing. We have the goods, the prices, and a very faithful worker in the Illustrated Catalogue which we send out Spring and Autumn. It "hangs on a peg" in thousands of homes, and is consulted as often as the almanac. It is a truthful book,—not a line put in to mislead. It is a happy, cheerful book, full of pictures and descriptions of things that will make life easier and pleasanter. It is an independent book, publishing its prices without fear of criticisms or comparisons. It is a just book, giving everyone the chance to get the same goods and prices as everybody else, and favoring neither the rich nor the poor, the high nor the low. It is a handy book, useful for reference or information, whether you buy of us or not. It is a book for people who want to know "what's going on" in the world of dress. The newest conceits, styles and inventions find places in its handsome pages.

And it costs nothing! Sent free to any address on application. Weinstock, Lubin & Co., Sacramento, Cal. Clothing, Dry Goods, Shoes, Hats, Millinery, Notions, Household Supplies, etc. The Largest General Retail House on the Pacific Coast.

## READY MADE DRESSES.

We keep ladies' dresses ready made in cashmere, wool and silk, at prices ranging from \$7.50 to \$27.50 for the complete costumes. The styles are changed twice each year; and full descriptions and illustrations of them are given in our Illustrated Catalogue. WEINSTOCK, LUBIN & Co., Sacramento.

## MEN'S \$3.50 TROUSERS.

We are making a great specialty of these goods, and are able to give unusual value for the money. The trousers are neatly cut, thoroughly well made and of medium-weight cloth. We change the patterns each season, and this year offer fine stripes in medium and dark effects. State which you prefer.

## Can Bone Spavin Be Cured?

EDITORS PRESS:—I would like to know the pathology of bone spavin in the horse, and whether it is curable. Please answer in the Veterinary column of the PRESS.—SUBSCRIBER, Lake Co.

EDITORS PRESS:—Bone spavin consists of inflammation excited in the cuneiform bones of the hock or in the large metatarsal and cuneiform bones. No kind of hock is exempt from this disease. Bone spavin is a very common cause of lameness in the horse, and it is very important that a veterinary surgeon be a good judge of a hock, for what may be a spavin in one horse may be a mere peculiarity of conformation in another.

Bone spavin is really an exostosis on the inner and lower part of the hock, terminating generally in ankylosis of the gliding joints.

The reason why spavin appears on the inside, is due to the inner side of the limb being more under the center of gravity.

Spavin arises from causes both hereditary and local. The exciting causes are sprains of the ligaments of the joint and concussion of the bones.

Bone spavin as a rule is curable in the young and middle-aged animals.

The object of the operation that I perform for this disease is to excite the exudation of lymph, and thereby hasten the process of ankylosis between the cuneiform bones and hence remove the lameness.—A. E. BUZARD, Veterinary Surgeon, 11 Seventh St., S. F.

## THE NEW PREMISES OF THE OLIVER DITSON COMPANY.

The Oliver Ditson Company, so well known throughout the United States for its prominence as a center for musical publications, musical instruments and all else appertaining to the divine art of music, has lately perfected a movement which not only gives the Company additional room in which to carry on their constantly increasing business, but also one of the finest buildings for the purpose in the city. The premises were originally numbered 453 to 459 Washington street, and at the time of their construction, were occupied as a dry goods store by Churchill, Olchist, Smith & Co., the firm occupying the whole building. Later, changes have occurred, alterations were made whereby a number of parts became occupants of the same; those giving way to the alterations and changes which, in taking possession of the building, were found necessary for the new business to be conducted therein. As now arranged, there is but one main entrance to the structure, which opens direct into the retail department, where every facility for handling the immense quantity of music demanded by the constant influx of patrons is to be noticed and appreciated. The counters, shelving, and in fact all the woodwork of this floor is of chestnut, and gives a light, cheerful appearance, conforming with the ceilings and other surroundings, all of which are the best that experience could suggest. Near the elevators, which are directly in front of the entrance, is the office of Mr. Clarence Woodman, Superintendent of the store; and at the rear is the entrance to the express and mailing departments, which are convenient and of good size, and apparently all that is needed for this portion of the work of the establishment. On the floor above is the office of Mr. J. C. Haynes, and the counting room; also the piano forte saloon, in charge of Mr. S. A. Gould, recently of New York, which is one of the best in size, light and space to be seen anywhere, and which, in its fitting up, includes a suite of three parlors, carpeted, finely lighted, and otherwise made attractive, and in which parties purchasing pianos can have them tried, and thereby get the same tone and effects as they would on the floors of their own homes. From this floor, entrance is had to the second story of the building, in which the concert has been so long, and where will be found the publication department and the publications of the house arranged on shelves in this and stories above for immediate use as the retail and wholesale departments may require. On one side of the third and fourth floors at a little later date will be established the wholesale and retail departments of the large business of J. C. Haynes & Co., which, as is well known, is a branch of the Oliver Ditson Company, and which will, by this change, have excellent facilities for the display and sale of the various musical instruments carried in the large and general assortment of the house. On the fourth floor, which is admirably arranged to handle the great stock of music, is also the advertising room of the concern, which has been made very pleasant by neatly tinted walls and pictures, and which is presided over by Mr. J. C. Johnson; and on the upper story there is still more stock, all of which is placed for quick handling as may be desired. The whole building is lighted by electricity and fitted with electric bells, having sufficient power in the basement for all the wants of the establishment. Summing up it can be stated that the building has a frontage of 70 feet, is elegantly appointed from basement to top, and in the alterations made, care has been had to have convenience and comfort go hand in hand, so that in receiving goods, preparing them for sale and in meeting the demands from customers, the easiest and pleasantest methods for the accomplishment of the same have been secured, and cannot fail to meet the approval of both those who serve and those who are served.

## The Porteous Improved Scraper.

Patented April 3, 1883. Patented April 17, 1883.

Manufactured by  
G. LISSENDEN.

The attention of the public is called to this Scraper and  
the many varieties of work of which it is capable, such as  
Railroad Work, Irrigation Ditches, Levee Building, Lev-  
eling Land, Road Making, etc.

This implement will take up and carry its load to any  
desired distance. It will distribute the dirt evenly or de-  
posit its load in bulk as desired. It will do the work of  
Scraper, Grader, and Carrier. Thousands of these Scrap-  
ers are in use in all parts of the country.

This Scraper is all steel—the only one manufac-  
tured in the State.

Price, all Steel, 4-horse, \$40; Steel 2-horse, \$31.

Address all orders to G. LISSENDEN, Stockton, Cal.

BROWNE'S  
Patent  
Squirrel  
Exterminator.

This is an apparatus for uruling  
straw and sulphur and also forces  
the fumes down their holes which  
never fails to kill. I will give \$100  
in case the exterminator does not  
kill (if properly applied) every  
ground squirrel that its deathly  
fumes comes in contact with.  
Thousands are in use. Price \$3.00.

## The Southern Citrus Fair.

(Written for the RURAL PRESS by CLARA S. BROWN.)

(Concluded from last issue.)

## San Bernardino County.

The most striking exhibit in the pavilion is the great arch of Redlands, beneath which is a representation of the Bear Valley dam. This arch is 18 feet high and 43 feet wide, built against the gallery at the left of the stage. A very artistic design is worked out with citrus fruits on a black background amid which the letters of Redlands gleam brilliantly at night, lighted with incandescent lamps. Under the balcony are piles of rocks, imitating the canyon slides, connected by a dam of oranges over which a painting of the reservoir has been stretched, so as to render the illusion more complete. There is a graveled water-course bordered by green grass, through which a waste stream is trickling. In front of this are three large pillars of oranges and lemons grown by E. B. Cutts, H. H. Sinclair, E. J. Waite, Lewis Jacobs, F. P. Morrison, John Dostal and Chas. Rowe. On the tables in front are oranges shown by C. R. Paine and Dr. Wm. Craig, lemons by Dr. Watrous, prize olives by Dr. Wm. Craig, same by M. Wormer, olive oil by I. L. Hewitt, and a small lot of dried fruits entered by various parties. The adjoining ante-room is beautifully fitted up in black and gold as a reception-room for the many admirers of Redlands' elaborate exhibit. This locality has 3500 acres planted in citrus fruits.

Ontario's traction-car stands near the entrance, at the left of Duarte's mosque. The fruit used upon and within it is very choice, while the design is a taking one and natural size. Ontario people are much dissatisfied with the verdict of the Committee on Designs. Beside it is a table 32 feet long and seven feet wide, covered with Navel, Mediterranean Sweet, St. Michael, Malta and seedling oranges exhibited by I. C. Wood, Dr. McDonald, F. M. Hewitt, A. D. Moore, H. J. Rose and A. & H. C. Oakley. Eureka and Lisbon lemons are shown by E. M. Hatch (whose pyramid wins a first prize) and C. D. Adams; olive oil by Harwood and Woodford.

The next table, same size, is occupied entirely by the exhibit of W. H. Backus, Riverside, and his enterprise is rewarded by the first premium for individual exhibit of citrus fruits. In the center of the table a hank of fine raisins is adorned with the blue ribbon. It is a remarkable display for one person to make and causes one to regret that Riverside does not make the grand showing as a locality which she might easily have done. Oncomonga has a table under the east gallery, where oranges are shown by H. J. Loomis, Capt. W. A. Ray, A. Petesch and E. F. Henderson; lemons by Chas. T. Brown; and raisins by Dr. Henderson. An arch over the table is formed of one season's growth of grapevines—20 feet—on which is hung a card saying, "You may fool a man about soil, but you can't fool a grapevine." Dr. Henderson last year raised 13 tons of Seedless Sultan grapes from ten acres of vines six years old. Rialto has a fine bank of lemons and Navel oranges in the ante-room, over which is a banner inscribed: "Rialto, young and vigorous! Having the best of land with an abundance of water, in the heart of the best locality, grain and brawn will place Rialto in the front rank."

## San Diego County

Displays nearly 200 boxes of fruit in the west gallery, and on her conspicuous blue banner says, "San Diego county welcomes you." A very good fac-simile of the harbor, the curving shore and Point Loma has been made with oranges and sheets of glass. A ship laden with oranges is sailing up to a wharf where another vessel lies discharging her golden cargo. Mrs. H. K. Litchfield of Paradise valley contributes Mediterranean Sweeties; H. Lownsbury shows Sicily lemons; T. J. Swayne, mandarins; W. W. Whitney, Sweetwater, seedlings; J. S. Harbison (the pioneer beekeeper of California), lemons; Warren Kimball of National City, lemons and Washington Navel; F. A. Kimball, olive oil and seedling oranges; Mr. Schlenker, two plates of seedling lemons, yet unnamed, supposed to spring from the Bonnie Brae; Mr. Hale of National City, Bella Franca lemons; L. E. Allen & Son, guava jelly and orange marmalade; Mrs. R. H. Young, San Diego, large harp of smilax and limes; from Whitmore's ranch in North Chollas valley, limes, Bonnie Brae and Eureka lemons; from Maj. Chase, El Cajon, Mediterranean Sweet and Blood oranges; Christian and Barnes, El Cajon, Navel and paper-rind St. Michaels; Mr. Marshall, El Cajon, raisins. Jas. P. Jones, who lives one-fourth mile from tidewater at San Diego, has a beautiful place three years old on which he has raised oranges this season, 82 to a tree, that I can testify completely refuse the statement often made that good oranges cannot be raised near the sea. They are very sweet and fine grained. He also raises the Bellaire Premium lemon, which originated in Florida, and is thought to be a valuable accession to the lemon family, being uniformly ohlong, of medium size and with sweet rind.

## Santa Barbara County

Has made a most painstaking effort to show the peculiar capabilities of her soil and climate, and she has succeeded. A beautiful room has been made of the wide south gallery, opposite the great stage. It is quite unlike any other department of the fair in its appear-

ance and greatly attracts the Eastern visitors, who linger over the tropical plants and fruit in admiring wonder as they are assured that everything grew to its perfection out of doors. To many persons this is the most interesting part of the exhibit in the pavilion. The reward which Santa Barbara will reap for her enterprise is manifest by such remarks as this, from the enthusiastic lips of a gray-haired, comfortable-looking tourist: "Well, if you can grow such things as these right outdoors in Santa Barbara, I'm coming up there!"

The space has been transformed into a bower of tropical foliage. Tall banana trees of different varieties are there in blossom and in fruitage. Date palms show first the pretty flower about to burst from its gigantic sheath, then the gracefully drooping blossoms and the fruit in various stages. They are great curiosities to strangers and the story of their fruitage is interesting. The trees are male and female; the former produces the fertilizing blossoms and upon the latter is borne the fruit. The pollen from the male tree is borne by the wind to the blossoms of the female tree and fertilization takes place. Even if the male blossom is cut from the tree and carried a long distance, it retains its powers and will fertilize any female tree it is placed in.

Kinton Stevens of Montecito is a leading exhibitor. He has Eureka lemons, Chinese mandarins, sour oranges from Jamaica, grown at Montecito (they look much like large mandarins), a pile of large, nice-looking St. Michaels, French mandarins, tree tomato (perfect plum shape), golden banana of Tahiti, Cuban lady-finger banana, horse or Orinoco banana, wild date of Cape of Good Hope, white yams and pineapples. He also has a table full of young tropical trees in pots; among them are the mahogany tree, coffee plant, logwood, Spanish lime, Rose apple, Gum Arabic acacia, marmalade tree, tamarind, alligator pear, star apple, turpentine mango, bread fruit, cinnamon, silver tree, cardamom plant, the traveler's tree of Madagascar, etc., a very interesting collection. He shows the *Securidula* or Chaco plant, a new food plant from Samoa which appears to be of the summer-squash nature.

Other Montecito exhibitors are: A. Magee, two large baskets Eureka lemons; Charles F. Eaton, Eureka lemons (from trees not four years old), Strawberry guavas, Bergamot lemons, Mission olives on their branches, ripe bananas and Abyssinian banana tree; E. H. Sawyer, olives; Mrs. N. K. Wade, loquats; Goodrich and Johnston, San Ysidro winery, show translucent orange jelly, orange wine, pickled limes in cans, a pyramid of seedling oranges and a box of limes.

Carplinteria is represented by big walnuts from Russell Heath's orchard; seedling oranges shown by James Shepherd and Mr. Webster; a dish of shaddock, lemons, limes, Navel and Mandarin oranges, entered by H. C. Ford; sweet-rind lemons, sweet and Acaapulco limes shown by Mrs. M. S. Dimmick; seedling oranges, Japanese mandarins and limes from Eugene Knapp's orchard; mammoth Navel and Eureka lemons grown by P. O. Higgins; and Y. Ornelz exhibits shaddocks. Mrs. H. Y. Laughlin has handsome Sicily lemons.

Eliwood Cooper, besides his large exhibit of the famous olive oil from "Ellwood," shows a fine lot of Sicily lemons grown without irrigation, the hither orange of commerce, sweet limes and Chinese lemons.

Charles Hails of Cathedral Oaks has a basket of large Mediterranean Sweet oranges, several lots of Navel, and a tempting basket of big, hard apples, light-green in color. These apples, with the equally choice red ones shown opposite by Mr. Machin of Lompoc, are the finest displayed in the fair. Joseph Sexton of Goleta shows cherimoyas, Japanese persimmons, loquats, improved soft-shell walnuts and Grenoble walnuts.

Dr. I. B. Shaw exhibits Tahiti seedling oranges grown in the town of Santa Barbara, within 1000 feet of tidewater, as deep in color of rind as the Blood orange. G. C. Packard has native olives in bottles.

F. J. Barker shows lemons; Mr. Opdyke, imported mandarins. A. Hope Deeg of Mission Canyon has a nice pile of seedlings and Malta Blood oranges.

Dr. L. G. Yates covers a table with spotted orchids and other tropical plants. C. H. McKevett of Santa Paula shows pomelos and sweet Imperial limes; the latter are round like the orange and large as ordinary lemons. Taken all in all, the Santa Barbara exhibit is one of striking variety, and its interest is enhanced by the constant presence of representative men who never tire of explaining everything to the crowd that haunts the place. If such attention were paid visitors all over the building, it would benefit both the places advertised and the people in quest of information.

## Ventura County

Does not make much of a showing, though there is no doubt but she might have entered a creditable exhibit if she had decided to do so. Ojai Valley is the only place represented. A small table is covered with seedling oranges and lemons from the Topa Topa ranch. In the center are the most peculiar oranges in the building, marked "Ruby;" they are of medium size, and as dark red in color of rind as the rosiest apple, contrasting vividly with the pale yellow of the lemons against which they rest.

## Tulare County

Deserves credit for sending an exhibit which, though small, is exceedingly choice, and demon-

strates what can be done in that region, perhaps as well as a great quantity of citrus fruit would have done. She occupies a corner in the room at the right of the main entrance, and attracts much attention, both by the character of the exhibit and the story told by the inscriptions. The fruit is from Porterville and was grown by W. J. Prettiman. There is a pyramid of Mediterranean Sweet running 122 to a box and placarded thus: "Prof. Hilgard's official analysis of oranges."

	Rind.	Juice.	Sugar.	Acid.
Riverside Navel	30.0	41.42	7.14	.92
Porterville Oranges	23.7	55.1	11.73	.86

A pile of noble lemons runs 88 to a box, and cut ones show that the rind is thin and the pulp fine. A pyramid of Eureka lemons is placarded, "6000 lemons like these taken from six trees." Every one is astonished, for the lemons are large. Right here I heard a single note of dissonance in the universal song of praise that echoed throughout the building. "Come here," called paterfamilias to a young hopeful, "just see this! 6000 lemons like these from six trees!" "Oh," groaned the youngster, as he complied, "I'm tired of seeing so much of this kind of thing!" His tone was indescribable, and every one shouted. Over a pile of St. Michael oranges is the assertion in great letters, "Porterville citrus belt will make a better display in several years."

## Fresno County.

Fresno county makes but one entry, but that is so meritorious as to deserve special mention. The box of White Adriatic figs sent by M. Denicke is considered very superior and wins first premium.

From the superintendent of the fair I learned that 500,000 oranges and lemons were in the building, 250,000 having been used for decorative purposes. At this writing (Sunday) over \$5000 have been taken in at the ticket office, the attendance reaching nearly 10,000 on some days. As the fair remains open three days this week, besides on Sunday afternoon (at the request of workmen who otherwise could not see it), a handsome net profit will be realized. There is a movement in favor of exhibiting the designs in either Chicago or New York, provided that a guarantee fund of \$5000 can be secured. Crowds of Eastern people have viewed them here with delight, and the general cry is "Oh, if my friends at home could only see it!"

The leading merchants up-town are displaying citrus fruits in their windows.

It has not been ascertained why Orange county did not exhibit. Riverside gave as a reason for her defection at the last moment, disapproval of the artistic design competition. While it is an open question whether such creations with citrus fruits are really artistic, and certain that they have little to do with the main point of quality of fruit, they are certainly much more attractive to the public than a plain spread upon tables can be, and such fairs as these should be made to pay.

The opening address was delivered by W. A. Spaulding of the L. A. Times, who ably reviewed the history of orange culture in Southern California. Gen. N. P. Chipman of Red Bluff read an essay the following evening on "The Fruit Interests of California," which is pronounced a valuable addition to our horticultural literature.

Wednesday evening an address upon "The Selection of the Proper Localities for Citrus Fruits," by Prof. C. F. Eaton of Montecito, was read. Every afternoon and evening a fine concert is given by the Seventh Regiment band.

The first committee appointed to judge the designs gave up in despair, and Gen. N. P. Chipman, N. A. Rideout, G. W. Harney, R. W. Skinner and J. O.'Brien Jr. of the Northern Citrus Fair management, were chosen in their stead.

Mr. H. Jay Hanchette makes a very efficient superintendent, and with his assistants, Frank Wiggins and C. D. Willard, has been more than busy.

It is not the extremes of heat and cold so much as the sudden changes in temperature that cause certain climates to be unhealthy. When, however, the system is invigorated with Ayer's Sarsaparilla, these changes are rarely attended with injurious results.

## Complimentary Samples.

Persons receiving this paper marked are requested to examine its contents, terms of subscription, and give it their own patronage, and as far as practicable, aid in circulating the journal, and making its value more widely known to others, and extending its influence in the cause it faithfully serves. Subscription, paid in advance, 5 mos, \$1; 10 mos., \$2; 15 mos., \$3. Extra copies mailed for 10 cents, if ordered soon enough. If already a subscriber, please show the paper to others.

## A HOME INDUSTRY.

All who visited the State Fair at Sacramento last year had an opportunity to view the interesting display in the pavilion of Mohr & York, the well-known wholesale butchers and packers. This enterprising firm has now in Sacramento the finest packing house in the State. They have the most improved machinery for canning, soldering, etc., and turn out from 500 to 1000 cans a day. They employ a large number of hands and the enterprise, being exclusively a home industry, it unquestionably deserves the full patronage of all Californians in preference to Eastern manufactured goods. This firm is also a large manufacturer of of Fertilizers.

## ORANGE PLANTERS

Should read the advertisement of the Aloha Nurseries. The best varieties are offered at rates so low that no one need hesitate about planting for experiment, or for investment in places where the orange is known to thrive.

## Good News!

No one, who is willing to adopt the right course, need be long afflicted with boils, carbuncles, pimples, or other cutaneous eruptions. These are the results of Nature's efforts to "expel" poisonous and effete matter from the blood, and show plainly that the system is ridding itself through the skin of impurities which it was the legitimate work of the liver and kidneys to remove. To restore these organs to their proper functions, Ayer's Sarsaparilla is the medicine required. That no other blood-purifier can compare with it, thousands testify who have gained

## Freedom

from the tyranny of depraved blood by the use of this medicine.

"For nine years I was afflicted with a skin disease that did not yield to any remedy until a friend advised me to try Ayer's Sarsaparilla. With the use of this medicine the complaint disappeared. It is my belief that no other blood medicine could have effected so rapid and complete a cure."—Andres D. Garella, C. Victoria, Tamaulipas, Mexico.

"My face, for years, was covered with pimples and humors, for which I could find no remedy till I began to take Ayer's Sarsaparilla. Three bottles of this great blood medicine effected a thorough cure. I confidently recommend it to all suffering from similar troubles."—M. Parker, Concord, Vt.

CHEAP!

## REGAN VAPOR ENGINE.

NO BOILER. FIRE. EXPLOSION. STEAM, ASHES OR ENGINEER.

Started Instantly Without Even a Match. Will Run on Natural or Manufactured Gas or Gasoline. The Moment Engine Ceases to Run, all Expense Stops.

Upright and Horizontal, Stationary and Marine Engines from 3-4 Horse Power, Upward.

Our Engines are especially adapted for Pumping and Irrigating and Spraying Fruit Trees; in fact, for any use where power is required.

OVER 400 IN USE.

POPE & TALBOT, LUMBER, Office, 204 California Street.  
SAN FRANCISCO, Feb. 25th, 1890.

REGAN VAPOR ENGINE CO.—Gentlemen: The 4 H. P. Vapor Engine I bought of you last May has been in constant use ever since, and has given me entire satisfaction. I have found the engine to be all that you claimed for it, and more too. You can use my name for reference if you so desire. I am, yours truly,  
H. TALBOT.

We Carry Thos. Kane & Co's Famous Racine Launches, fitted with our New Compound Engines.

Send for Circular.

REGAN VAPOR ENGINE CO.,

221-223 First Street, San Francisco, Cal.

## Cheaper Than Windmills for Farmers!

Our Perfected "Safety" Engines Cost to Run only 1-3 Gallon of Gasoline per Horsepower per Hour. No Boiler, Fire, Smoke, Steam, Ashes or Heat. No Engineer, No License, No Danger. Single and Double Acting. 1/2 H.P. to 20 H.P.

GENTLEMEN—The 2-H. P. Engine received and set up yesterday. We attached it to part of the machinery in my shop, and it ran my Drill Press, a small Lathe, a large 24 inch by 14-foot Lathe, and a set of Emery Wheels, all of which it handled easily, to our great surprise. Yours very respectfully,  
J. B. HENDERSON.

GENTLEMEN—I am satisfied, after running for over a month my Bean Cleaner, etc., with the 4 H. P. Engine you sent me, that it is much the best Gas Engine I have seen. The electrodes are certainly superior to all others; also your safety rotary slide valve, which is the personification of simplicity, positiveness and durability; I am satisfied it will develop much more power than we have need for. I also want a 3 or 4 H. P. for my wife and daughters to use about the house; we have a rotary clothes washer, can also do the churning, etc. I do not know of any better recommendation than to order a second engine. Respectfully yours,  
P. C. HIGGINS.

NOTE.—Both of these Engines were shipped to the parties named, and were set up by them solely by the diagram and printed directions we sent them.

- 448,467.—WINDOW SCREEN—Frank Walker, Los Angeles, Cal.
- 448,394.—SEPARATOR—F. H. Wheelan, Santa Barbara, Cal.
- 448,287.—CABLE GRIP—Wood & Fowler, Los Angeles, Cal.

The following brief list by telegraph, for Mar. 24, will appear more complete on receipt of mail devices:

California—Nicklaus Anderson, Marysville, portable elevator; Newton M. Bell, S. F., manufacturing borax; William F. Bowers, S. F., swing hose reel; James Martin, Temescal, flower holder; Sidney W. Miller, Pasadena, flush tank; Ernest Najot, S. F., gas engine; Ernest L. Ransome, S. F., illuminating panel in concrete floors; John H. Wallace, S. F., switch stand. Oregon—Arthur Conklin, Grant's Pass, fruit dryer; Evan W. Jones, Portland, lathe for turning shafts.

NOTE.—Copies of U. S. and Foreign patents furnished by Dewey & Co., in the shortest time possible (by mail for telegraphic order). American and Foreign patents obtained, and general patent business for Pacific Coast inventors transacted with perfect security, at reasonable rates, and in the shortest possible time.

## Louden Haying Tools.

In our issue of Feb. 28th we gave an illustration of a hay-stacker manufactured by the Louden Machinery Co. of Fairfield, Iowa, whose haying tools were advertised in our columns.

It is simply a pole provided with fittings, which the company furnishes, and supported by guys in such a manner that a sling load may be lifted at one end of a large rick and dropped anywhere along its center in a broad thin flake which makes it quick and easy work to build a splendid stack.

The slings are made in several different styles and sizes to suit long or short hay, and can be used with a carrier in the barn, or to take the hay from the ground when brought in with a sweep-rake. A header wagon can be unloaded at two drafts with one of these slings. The manufacturers recommend them as being well adapted for handling the hay and headed grain raised on the Pacific Coast.

The company make a complete line of haying tools for either barn or field, and will be pleased to send their large illustrated catalogue to any one applying. Address Louden Machinery Co., Fairfield, Iowa.

## Really the Cheapest Paper of All.

Compare the PACIFIC RURAL PRESS with an established or well conducted agricultural weekly in the U. S., and you will find on considering its timeliness, pertinent and ably written articles, original and correct engravings, carefully and reliably prepared market reports, the absence of trifling and misleading puffs and quack notices so damaging for family reading—found in nearly all journals—and you can readily see that this paper is the cheapest, as well as the best, for all Pacific Coast farmers and their households at the low price of \$7 for FIVE months, or the same rate for 10, 12 or 15 months.

Consider such facts, friends, before going farther and faring worse.

## NEWSPAPER AGENTS WANTED.

Extra inducements will be offered for a few active canvassers who will give their whole attention (for a while at least) to soliciting subscriptions and advertisements for this journal and other first-class popular newspapers. Apply soon, or address this office, giving address, age, experience and reference. Special inducements to old agents.

DEWEY & Co., Publishers,  
No. 220 Market St., S. F.

## Haggin Horse Sale.

The annual horse sales of J. B. Haggin have now become a regular feature. The assurance one has that all stock offered will positively be sold, and to the highest bidder (no bye bidding being allowed), give to these sales a reliability and assurance of fair dealing. The offering this year is remarkable not only for its magnitude and the variety of the choice stock, all are bred and sold just as catalogued. This is an opportunity for any of our readers that may want a horse, mule or Shetland pony to get one of good breeding, and at auction prices. See advertisement elsewhere.

For the cure of colds, coughs, and all derangements of the respiratory organs, no other medicine is so reliable as Ayer's Cherry Pectoral. It relieves the asthmatic and consumptive, even in advanced stages of disease, and has saved innumerable lives.

Use "Dead Lock" Gopher Traps. They are the best. See advertisement in this paper.

## Our Agents.

OUR FRIENDS can do much in aid of our paper and the cause of practical knowledge and science, by assisting Agents in their labors of canvassing, by lending their influence and encouraging favors. We intend to send none but worthy men.

All about the Horse, his diseases, and how to cure them; all about Buggies, Carriages, etc., and where to buy them. The "Complete Horse Book" tells all this. Send 10 cents, silver or stamps, to Pioneer Buggy Co., Columbus, O.

## FOR SALE!

PINOLITO OLIVE RANCH!!

## FORTY-SIX ACRES OF HILL LAND

In the Town of Auburn, Placer Co.

Red soil, superimposed upon upturned, friable, decomposing slate, yielding iron and alumina, thus furnishing a soil which, as Prof. Hilgard said after his analysis, will retain moisture, will not require irrigation, and will not allow the vegetable mold to leech away; thus suited to the growth of fruit trees, especially the olive, as has been demonstrated both by the remarkable growth of the tree and the yield and the quality of oil.

It is situated only 15 minutes walk from Auburn Station—the C. P. R. R. passes along one side—and is a less distance from the Court House. Thirty acres improved and planted to olives, set at long distances for permanent growth, and other fruits planted between the rows for temporary profits, mostly peaches of three best varieties, ripening in succession; prunes, mostly Petite; plums of several varieties, as Kelsey, Japan, Shropshire Damson, etc.; figs of several best varieties; a few apples, nectarines, blackberries, etc. Two acres of table and raisin grapes, never irrigated, the vines remarkably vigorous and in full bearing. The trees, especially the 1500 olive, have all been planted with regard to permanency. About one-half of them have an orchard growth of seven years; fruited last year 300 pounds, this year nearly one ton. They are mostly Mission and Piccoline, with a few trees of other choice varieties. Two crops of the olives have been pressed. The yield has been, for the first press, 14 per cent of very clear delicious table oil, and four per cent from the second press—the Piccoline yielding this, of a peculiarly clear, nutty oil.

There is on the ranch a few acres of grain sown for hay; two acres of well-set alfalfa, below the Auburn ditch, which crosses one corner of the property; also a small house of four rooms and a kitchen; a well of good water; a small barn; a strong, permanent spring of soft, cold water, which wells up through the slate; a two-inch iron pipe connects the spring with an iron-bound 20,000-gallon tank, situated on a beautiful pine clad hill, 40 feet above the spring, a point which overlooks the town and gives very charming distant views, and is one of the most lovely sites for a residence to be found. The water is pumped to the tank by a duplex pump; the power, a four-horse steam engine, which furnishes power sufficient to pump, saw wood, run an olive crusher and do all needed shop work.

The land is all suited to fruit, excepting along a rocky ridge, which furnishes three very desirable residence sites, and the olive, set promiscuously, thrives finely among the rocks. The property can be conveniently divided along a sag which separates two of the high knobs, and water from the spring can be pumped to each of them.

This desirable property is now offered for sale for less than the improvements cost. The land is fenced, the title good and unencumbered. It is connected by a roadway, which is one of the improvements made, with one of the principal streets of Auburn.

The sale will convey the entire plant, furniture in the house, all utensils, etc. If sold before April 1st the sale will include the coming crop. If later, the crop will be reserved, unless otherwise by special agreement. If desired, one-half the purchase money can remain five years, secured by mortgage at eight per cent. For price and any further information desired, address

 Will GUARANTEE SATISFACTION or Money Refunded. Price of Harness Complete for Use, \$3.00.  
 Write for testimonials from users.

## SILVER MILKING TUBES.

For Sore and Obstructed Teats and Hard Milking Cows.  
**An Entire Success**  
 For the Relief and Permanent Cure of Garget or Stoppage of Milk, or when from any cause the teat cannot be handled in the usual way. Cows' teats are frequently injured by being stepped on in the stable, or torn in the pasture; they are also liable to be troubled with cracked teats when first turned out in the spring, making milking a very painful operation; and injurious experiments are too frequently resorted to, from the results of which many valuable animals are rendered worthless, because their owners have not the means at hand to give the needed relief. The article which we offer is a simple instrument and can be applied by any person. Will quickly give relief and permanent cure in all cases without the slightest injury to the animal.  
 A single Tube can be made to answer for an entire herd and is the cheapest insurance possible against loss.  
 Don't be caught with it out; order it at once.  
 Single Tube, postpaid, 75c. Set of four, postpaid, \$2.00.  
 Also **SURGICAL INSTRUMENTS FOR DAIRY USE.**  
**G. G. WICKSON & CO.,**  
 3 & 5 Front Street, - - - San Francisco  
 346 N. Main St., Los Angeles, 141 Front St., Portland.

**APIARIAN SUPPLIES.**  
 Italian Queens, \$2.50 each; Black Queens, \$1 each. Swarms from \$2.50 each; Smoker, \$1. Comb Foundation, \$1.25 per pound; V-groove Sections, \$4 per 1000. Comb Honey wholesale and retail; Hives, etc. W. STAN & SON, The Homebased Apiary, San Mateo, Cal.

 Commission Merchants,  
 PACKERS AND SHIPPERS OF  
**CALIFORNIA FRUIT AND PRODUCE.**  
 126 and 128 J St., - Sacramento, Cal.  
 San Francisco Office, 313 Davis St.

**EVELETH & NASH, COMMISSION MERCHANTS**  
 And Dealers in Fruit, Produce, Poultry, Game, Eggs, Hides, Pelts, Tallow, etc., 422 Front St., and 221, 223, 225 and 227 Washington St., San Francisco

**WITTLAND & FREDRICKSON, Commission Merchants.**  
 All Kinds of Green and Dried Fruits.  
 Consignments Solicited. 324 Davis St., S. F.

## Go to American Exchange Hotel.

The above Hotel is situated in the midst of the Banking and Commercial houses of the city, and is by far the most home-like and desirable Hotel to stop at.

**CHAS. & WM. MONTGOMERY, Prop'rs.**

**THE KRIEBEL ENGINE**  
 And Plain Vertical Boiler.  
 Mounted on a Combined Base.  
 A very Cheap and Economical Engine.  
 Made of the very best material.  
 2 & 3 HORSE-POWER.  
 Write for Prices.  
**TRUMAN, HOOKER & CO.,**  
 SAN FRANCISCO.

## S. E. MARKET REPORT

## Market Review.

## DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, March 25, 1891.

The weather continues all that can be desired for growing crops, and as prices for products are expected to rule fairly high, a more confident feeling manifests itself among all classes. The money market is growing easier. In cereals the market shows more strength in wheat. The Eastern and foreign wheat markets are higher. The following is to-day's cablegram:

LIVERPOOL, March 25.—Wheat—Less active. California spot lots, 8s 5½d off coast, 4½d; just shipped, 40s 3d; nearly due, 4½d; cargoes off coast, strong; on passage, less active; Mark Lane wheat turn dearer; English country markets, generally dearer; French, firm; wheat and flour in Paris, quiet.

## Liverpool Wheat Market.

The following are the closing prices paid for wheat options per cwt. for the past week:

	Mar.	Apr.	May	June	July	Aug.
Thursday.....	88½d	88½d	88½d	88½d	88½d	88½d
Friday.....	88½d	88½d	88½d	88½d	88½d	88½d
Saturday.....	88½d	88½d	88½d	88½d	88½d	88½d
Monday.....	88½d	88½d	88½d	88½d	88½d	88½d
Tuesday.....	88½d	88½d	88½d	88½d	88½d	88½d

The following are the prices for California cargoes for off coast, nearly due and prompt shipments for the past week:

	O. O.	P. S.	N. D.	Market.
Thursday.....	41½d	40½d	41½d	Steady.
Friday.....	41½d	40½d	41½d	Continental demand
Saturday.....	41½d	40½d	41½d	Turn dearer.
Monday.....	41½d	40½d	41½d	Active higher.
Tuesday.....	41½d	40½d	41½d	

## Eastern Grain Markets.

The following shows the closing prices of wheat at New York for the past week, per bushel:

Day.	Mar.	Apr.	May	June	July	Aug.
Thursday.....	111½	109½	108	105½	101½	101½
Friday.....	111½	109½	108	105½	101½	101½
Saturday.....	111½	109½	108	105½	101½	101½
Monday.....	111½	109½	108	105½	101½	101½
Tuesday.....	111½	109½	108	105½	101½	101½

The closing prices for wheat have been as follows at Chicago for the past week, per bushel:

Day.	Mar.	Apr.	May	June	July	Aug.
Thursday.....	101½	100	99½	99½	99½	99½
Friday.....	101½	100	99½	99½	99½	99½
Saturday.....	101½	100	99½	99½	99½	99½
Monday.....	101½	100	99½	99½	99½	99½
Tuesday.....	101½	100	99½	99½	99½	99½

NEW YORK, March 25.—Wheat—\$1.12½ for May, \$1.10½ for June, \$1.08½ for July, \$1.03½ for August and \$1.04½ for December.

CHICAGO, March 25.—Wheat—\$1.04½ for May and \$1.02½ for July.

## Weekly Weather Crop Report.

WASHINGTON, March 21.—The weekly weather crop bulletin issued by the Signal Service says: The cold weather continued during the week generally throughout the Northern States, over which the ground is generally frozen and spring work delayed. In the Northwest the ground generally is covered with snow, which is disappearing rapidly and which will furnish sufficient moisture in the spring wheat region to assure an excellent start for the crop. The weather was favorable throughout the fall wheat region, over which the conditions are reported as favorable and the prospects excellent. In New England the weather is unfavorable for sugar making, but favorable for fruit, the latter conditions extending over the fruit regions of the Middle Atlantic States.

## Grain Supply.

NEW YORK, March 23.—The amount of grain in store and afloat Saturday, March 21st, as compiled by the New York Produce Exchange, is as follows: Wheat, 23,012,000 bushels, an increase of 113,000; corn, 2,970,000 bushels, an increase of 250,000; oats, 2,810,000 bushels, a decrease of 6000; barley, 1,435,000 bushels, a decrease of 380,000.

## English Hop Market.

London Farmer, March 9.—Consumers are still confining their attention to the middle-class Continental and the various grades of Californian hops, native produce being neglected in all cases, excepting where holders are prepared to take the lower rates offered through the medium of merchants, who continue to maintain the same unyielding attitude which they assumed four or five weeks ago, and which growers and their factors have been trying in vain to break down. The market, therefore, so far as concerns English hops, is in a lifeless condition, and holders will probably deem it expedient not to attempt to sell just yet. The limited quantity of hops in the hands of merchants and those held by planters must, it is argued, have a hardening effect on values as soon as the brewing trade revives; and another sign favorable to those who take this view is the fact that importations continue light in comparison to previous seasons. The recent dry, mild weather has enabled planters to make considerable progress in field work, and the operation of plowing up and cutting is now in full swing.

## Eastern Wool Markets.

NEW YORK, March 21.—Domestic wool shows a light condition of stocks. Best buyers at this point seem well supplied ahead, though they still stop around for possible bargains. Foreign wool is active; sales, \$50,000 pounds, mainly Cape and China, on private terms. California is scarce here, and eastward prices are generally firm. Boston sold 2,500,000 pounds, two-fifths of which were foreign, chiefly Australia; 50,000 pounds Spring California on private terms. It is noted that domestic washed fleeces are pushed aside by desirable Australian and the outlook is that they will be more or less neglected until attractive blending foreign is out of the way. Scoured wool was active, 250,000 pounds selling from 40¢ to 75¢. The latter price is for Australian lambs. Philadelphia advises say that the stock is so small it must pass into the consumers hands before the new clip is here.

## Dried Fruits.

NEW YORK, March 21.—The raisin market feels a degree of good impression by the late volume of business in bags. General prices are more con-

dent in tone, but not advanced. In fact, sellers would readily welcome another visit of round buyers of raisins or, for that matter, of all dried coast fruit with a fair guarantee of favorable rates for prompt distribution. Layers are quoted at \$1.60 to \$2; boxes, three crown, \$1.25 to \$1.50; mixed, marks two crown, 80¢ to \$1; bags, 4¢ to 5¢. The latter must favor the grocery use. Prunes are weak, though selling fairly. Four sizes of boxes at 10¢; ungraded, bags, 9¢. Apricots quiet at 14¢ to 16¢. Evaporated unpeeled peaches are unchanged.

## Hops.

NEW YORK, March 21.—There is not enough business in hops to prevent their accumulation. There has been some speculative sentiment on change but it was not of an impressive form. Home buyers in some instances obtained top grades at 29¢, and good old, 28¢. The range from common to best is 22¢ to 30¢; selected Pacifics, 31¢; California old, 5¢ to 10¢. English advices are indefinite. Exports for the week are 638,000 pounds. In New York a sale was made of 367,000 pounds.

## Local Markets.

	Buyer Season.	Seller 1891.	Buyer 1891.	Seller 1891.
Thursday.....	133½	133½	133½	133½
Friday.....	136½	136½	136½	136½
Saturday.....	135	135	135	135
Monday.....	136	134½	106	104½
Tuesday.....	134½	133½	104½	104½

	Buyer Season.	Seller 1891.	Buyer 1891.	Seller 1891.

Friday.....	150	150	149	149
Saturday.....	150	150	149	149
Monday.....	150	150	149	149
Tuesday.....	150	150	149	149

## add local markets

BAGS—The market is essentially unchanged at 7½¢ to 7¢ May-June delivery, for standard size.

BARLEY—The local sample market is fairly strong at full prices. The bears are still trying to break prices. The season is backward. New is not expected to come in in quantities under three months. On Call trading in futures has been quiet. The following are to-day's Call Board sales:

Morning Session: Buyer 1891—100 tons, \$1.32½; Buyer season—100 tons, \$1.32½; 400, \$1.32; 100, \$1.31½; 200, \$1.31½. August—100 tons, \$1.06; 100, \$1.05 ½¢.

BUTTER—Receipts are free as is the demand. With April, receipts are expected to show larger gains and as the outlet will be more limited many dealers look for lower prices; if not lower there will be no improvement. By that time if prices go off, it is quite likely many dairies will pack their surplus.

CHEESE—The market is barely steady. Receipts are only fair for the season.

EGGS—Receipts of 12,600 dozen Eastern are reported. The market for Californian after advancing slightly is a shade easier at the close. It is said that there are considerable in store for the Easter demand.

FLOUR—Millers and their agents have made another advance in prices. Owing to comparatively little outside flour coming in, the outturn of the leading mills is readily placed.

WHEAT—The market for sample parcels shows a slight gain in prices, in sympathy with better prices abroad. A press telegram reports that a corner is being run at the East. In futures, trading on Call has been light. The following are to-day's Call Board sales:

Morning Session: Buyer 1891—300 tons, \$1.51½; 700, \$1.51½; 1300, \$1.52. Buyer season—100 tons, \$1.50½. Buyer 1891, after August 1st—100 tons, \$1.48½; 1100, \$1.49 ½¢. Afternoon Session: Buyer 1891—100 tons, \$1.51½ ½¢.

## Market Information.

## Produce Receipts.

Receipts of produce at this port for the week ending March 24th, were as follows:

## Cereals.

Mark Lane Express, March 9: A well-known authority regards our total of wheat in view for the future as 1,500,000 qrs. smaller than at this time two years ago. Present holdings of wheat by English farmers are reckoned by the current number of Dornbusch's List at 3,976,935 qrs. and of the Miller at 3,936,370 qrs. As both these authorities have arrived at a closely similar conclusion, without taking any of the other's figures or even working on the same basis, it may be said that there exists a strong presumption in favor of the view that present holdings of farmers are slightly under 4,000,000 qrs. This, with supplies afloat and in granary, will make a little under 8,000,000 qrs. for the second half of the cereal year, whereas 13,000,000 qrs. will be required. A total of 5,000,000 qrs. of wheat and flour have, therefore, still to be procured from abroad, and the sense of this task having to be accomplished, is the root of the stronger and more active feeling now animating the trade. With respect to the French wheat crop, a good deal of excitement continues to be manifested; and in the course of a discussion in the French Chamber of

Deputies on Monday evening, M. Meline stated that out of 17,000,000 acres of agricultural land, nearly 5,000,000 had been a prey to the frost, causing a loss of 80,000,000 or 100,000,000 francs; that to prevent a deficit of 40,000,000 or 50,000,000 bushels of wheat the fields would have to be resown, as also other fields, for spring sowing never yielded much; and that farmers must be encouraged to make a great effort.

London Agricultural Gazette, March 9: The wheat crop of India is now moving freely to the western seaboard. In the Argentine Confederation the wheat crop is still well spoken of, and up to the present 150,000 qrs. have been shipped for the United Kingdom, a quantity much in excess of that shipped last year at corresponding date. The wheat crop in Victoria is now said to be the largest on record, yielding an average of nearly 15 bushels per acre, and affording a surplus for export of 1,250,000 qrs. The Melbourne Chamber of Commerce has called a statement to the effect that the average weight of the crop is 64 pounds per bushel. The wheat crop in New Zealand is stated to have received less damage than was at one time supposed.

To J. R. Dodge, Statistician Department of Agriculture, we are indebted for the following:

The proportion of wheat still in the hands of farmers is lower than an average of the last ten years, the range being from 26 to 33 per cent. It is 28.2 per cent, or 112,000,000 bushels. It has been lower only in two years of the last ten, after the meager crops of 1881 and 1885, which were smaller than that of 1890. Including the visible stocks, the supply is 135,000,000 bushels. The consumption of the last 12 months is estimated at 299,000,000; seed used 53,000,000, and the exports have been about 98,000,000 from March 1, 1890. Half of the present stocks of the Northwest will be required for spring seeding.

Years.	Crops of previous years.	In farmers' hands Mar. 1.
1891.....	399,262,000	112,000,000
1890.....	490,660,000	156,000,000
1889.....	415,868,000	112,000,000
1888.....	456,329,000	132,000,000
1887.....	457,218,000	122,000,000
1886.....	357,112,000	107,000,000
1885.....	512,765,000	169,000,000
1884.....	421,086,160	119,000,000
1883.....	504,185,400	143,000,000
1882.....	388,280,090	98,000,000
1881.....	498,549,868	145,000,000

An unusually large proportion of the wheat crop is required for consumption within the county, a smaller proportion being shipped. This year more than half is estimated to remain within county lines, as follows: Crop 1890, 399,262,000 bushels; consumption, 208,149,060; exportable surplus, 191,112,940. The average weight per measured bushel is 57.2 pounds. The average of 1889 was 57.7 pounds, which was the precise average of seven crops from 1883. In bushels of 60 pounds the aggregate is 381,000,000, or 90,000,000 less by weight than the preceding crop. The following statement gives the number of measured bushels, average weight, and number of bushels of 60 pounds each for nine years past:

Years.	Weight per bu.	Measured bushels.	Weight in pounds.	Bushels of 60 pounds.
1883.....	56.9	420,154,500	23,906,128,850	398,265,481
1884.....	58.3	512,765,900	29,912,761,800	495,545,863
1885.....	57.0	357,112,000	20,569,787,000	339,496,449
1886.....	58.4	457,218,000	26,686,832,000	444,772,202
1887.....	58.5	456,329,000	26,702,852,200	445,047,535
1888.....	56.5	415,868,000	23,485,068,800	391,417,782
1889.....	57.7	490,560,000	28,287,039,000	471,400,663
1890.....	57.2	399,262,000	22,854,934,200	380,915,903

The local wheat market has held strong throughout the week, with an advance toward the close. The bears are persistent in their efforts to handicap the market, but so far with only partial success. The continued unfavorable European crop returns combined with short supplies the world over, are the factors in promoting higher prices abroad. Exporters, millers and speculators would like to keep the Pacific Coast markets down or as low as possible up to next harvest, so that the season of 1891-92 will be entered on a low range of values. In furtherance of their scheme, they are crying "small supply of tonnage" and circulating other bear talk. The fact of the matter is that we will enter the next crop season with the supply of old wheat about exhausted, and while the surplus of the coast from this year's crop will be fully one-half larger than was the crop of 1890, yet there are unmistakable signs that it will be readily handled. The tonnage on the way is 50 per cent more than at this time in 1890, while everything warrants the assertion that the increase will continue to grow, so that by July the tonnage on the way will have a registered tonnage of at least 350,000. The success of marketing Eastern Oregon and Eastern Washington wheat in the Central States, will cause heavier shipments next season from those two States. This success may induce rail shipments from this State to Atlantic Coast ports. The Southern Pacific railroad is having an addition of 1000 freight cars built, to meet next seasons increased demand.

Barley has held steady under moderate receipts and a fair demand. Oregon and Washington are sending us lessened supplies. Whether the receipts from up north are due to light obtainable supplies or to the slight decline in prices it is hard to say, but from the writer's personal knowledge of Oregon and Washington, it is safe to say that nearly all of the surplus has been shipped out.

Oats have shown no material change. The demand and receipts are about even. If there is any difference between them, it is that receipts are less than the demand.

Corn, while quoted lower, has a strong, healthy tone. The high prices in the Central States preclude shipments to us, and therefore we are, for the present at least, dependent upon our own supplies.

Rye is barely steady. Crop weather is exceptionally good throughout the coast.

## Feedstuff.

Ground feed moves off fairly well, considering the improved pasture. Receipts, while not large, are ample to meet all requirements.

Hay is reported steady, with a firmer tone for the more choice grades. The higher prices ruling for wheat and barley cause considerable speculation regarding the hay crop. Many dealers believe that fewer fields will be cut for hay than there would have been had cereal values kept down. Other dealers think that while this may prove correct, yet there is a large increased acreage seeded to alfalfa and

clover that will be cut for hay, besides more bottom land utilized in that direction. The consumption of hay in this State continues to steadily enlarge.

## Fruits.

Australasia is sending us apples, which come on a fairly hungry market. The receipts of Californian are only fair, with extra choice scarce. Some extra choice mountain apples were placed last week at \$11 a barrel, but the general run is quoted at from \$6 to \$9 per barrel.

The receipts of oranges are only fair, with regular sizes of Riverside Navels very scarce. Off-sized Navels are in free supply. Seedlings are in good supply. The consumption of all kinds is not only large but appears to be enlarging. Shipments up north and also eastward are very heavy.

Fruit crop prospects are of a very encouraging character. So far as our advices go, there is not a district but reports the outlook favorable for a large yield of all kinds of fruit. Growers should by all means prune or thin the growing fruit so that the trees can produce large-sized fruits, for it now looks as if buyers will discriminate more than ever in favor of quality.

Lemons are scarce and higher for Californian. Mexican limes are strong at high prices, under light supply. Very few Californian are in the market.

Dried fruits are steadier, with stocks cleaning up. Choice grades are in light supply. Grocers are reported to be carrying light stocks.

Raisins are essentially unchanged.

A press telegram from Los Angeles says. Thus far this season's shipments of oranges to the Eastern market have been remarkably light. Growers have been holding off waiting for better prices. In order not to be at the mercy of the combination of buyers, many of them arranged to ship their own crops. Out of 4000 carloads raised in Southern California it is estimated that less than 1000 carloads have been moved thus far. The result will be that during the remainder of the shipping season the railroads will have all they can do handling the oranges left, as they require special facilities and cars to be shipped in. The effect of the growers holding back and not selling their fruit will be greatly to their advantage, as within the past ten days prices have gone from 75 cents to \$1.10 per box for seedlings on the tree. The cause of the increase in the price is the reported failure of the Italian crop and also a story to the effect that the rest of the Florida crop has been badly injured. Orchards are being sold every day now to packers, and the orange industry is at its height for the season. A great many lemons are being picked green and put through a curing process. An endeavor is to be made this year to put the California lemon on the Eastern market. It is an experiment, but no good reason exists why the lemon should not find a ready sale if it has been properly cured. More lemons will be shipped East this year than ever before.

RIVERSIDE, March 24.—The orange market is very active. There are daily shipments of about 20 cars. The prices are getting better, \$1.30 to \$1.35 and \$1.40 now being offered for seedlings. The city is filled with buyers and railroad agents. Three-fourths of all the fruit has now passed out of the hands of the growers.

VACAVILLE, March 24.—The present indications point to a remarkable fruit crop this season. Cherries are so far matured that shipments are expected within three weeks, about ten days earlier than last season. The peach and apricot trees are loaded with fruit, and thinning will have to be resorted to in order to save the crop. Such experienced orchardists as W. W. Smith and Bassford Brothers, anticipate that the cherry will exceed all other crops in proportion. The weather is magnificent for ripening fruit.

## Live-Stock.

Nevada is sending us liberal supplies of well-conditioned bullocks. From Arizona the receipts are light, Kansas buyers taking the more choice heads. From Montana our advices report the cattle having wintered well, the loss not going over two per cent. Sheep shearing is under way, causing more selling offers of mutton sheep. Hogs for the block are a shade higher.

The market for dressed cattle is quoted as follows [to obtain the price on foot, take off from the price for stall-fed one-third to one-half, according to the nature of the feed and time fed; and for grass-fed take off the price from 40 to 60 per cent]:

HOGS—On foot, light grain fed, 5¢ to 5½¢ lb; dressed, 8¢ to 9¢ lb; heavy, 4½¢ to 4¾¢ lb; dressed, 7¢ to 8¢ lb. Stock hogs, 4¢ to 4½¢ lb. BEEF—Stall fed, 7¢ to 7½¢ lb; grass fed, extra, 6½¢ to 7¢ lb; first quality, 6¢ to 6½¢ lb; second quality 5¢ to 5½¢ lb; third quality, 4¢ to 4½¢ lb; hulls and thin cows, 2¢ to 3¢ lb. VEAL—Small, 7¢ to 8¢ lb; large, 5¢ to 7¢. MUTTON—Wethers, 9¢ to 9½¢ lb; ewes, 8¢ to 9¢ lb; spring lamb, 12¢ to 15¢ lb.

## Vegetables.

Garden truck is making a better showing, causing the more seasonable to gradually recede in prices. Asparagus will soon be cheap enough for canners to take hold of. Rhubarb is in liberal supply and, as other vegetables increase in quality, it becomes more neglected. The quality of peas and string beans shows a steady improvement. The weather continues favorable for growing truck.

Onions are barely steady. Free imports from Australasia meet pressing requirements. Further imports from that country are expected to follow.

New potatoes are slow in coming. The crop promises to be very large, but early shipments overland will take large quantities. Choice good-keeping old potatoes are wanted, but sprouted and otherwise poor kinds are slow. Oregon continues to send us liberal supplies.

Nearly 500 sacks of beans came to hand the past week from Valparaiso. The market for all kinds of beans shows a stronger tone, with an upward tendency in prices.

Poultry shows a firmer tone, with large well-conditioned young fowls wanted. Poor stock is always discriminated against.

Hops are slow. This is due to light supplies and also to buyers keeping prices down so as to contract this year's crop to better advantage. Spring wool is beginning to come in, but it will not make much showing until toward the middle of April. The grade will be decidedly mixed—some localities poor to good, and others good to choice.

Honey is in fair demand. Receipts are light. Nuts move off slowly, but this usually obtains at this season of the year.

Miscellaneous.

From the Commercial News of March 25th the following summary of tonnage movement is compiled:

On the way to	1891.	1890.

THE JUDSON RABBIT-PROOF WIRE & PICKET FENCE.

cheaper and BETTER than Ever. Their 2-ft. high 3-cable fence has taken the trade. Farmers put barbed wire above it and have the CHEAPEST GOOD Fence that can be made in ANY WAY. Rabbits cannot get through. Hogs cannot break it and Horses or Cattle cannot get over it. All our fence colored RED by boiling in a chemical solution that preserves the wood. Address JUDSON MANUFACTURING COMPANY, 14 and 16 Fremont Street, San Francisco.

## Notices of Recent Patents.

Among the patents recently obtained through Dewey & Co.'s SCIENTIFIC PRESS U. S. and Foreign Patent Agency, the following are worthy of special mention:

**GATE.**—John F. A. Millerick, S. F. No. 447,013. Dated Feb. 24, 1891. This invention relates to that class of gates adapted to be opened and closed by the wheels of approaching and receding vehicle running down cranks in the roadway. The invention consists in certain novel constructions and combinations. The object is to provide an effective and readily-operating gate of this class.

**PERCH FOR BIRD-CAGES.**—John F. Sweeney, S. F. No. 447,006. Dated Feb. 24, 1891. These perches are so arranged as not to extend more than half-way across the cage and are adjustable up or down. By the construction adopted, the perches are easily supported within the cage, and in proper positions with relation to each other, so that the bird can easily fly from one perch to the other without danger of breaking or damaging his feathers, and no perch need be placed over another so as to become soiled and dirty. On that portion of the perch nearest to the side of the cage is fixed, by means of fish-glue, a compound of sharp sand and red pepper. This gives an opportunity for the bird to rub and scratch itself. The pepper acts to keep it clear of vermin, and the sharp sand will wear upon the ends of the toe nails so as to prevent them from becoming too long, which is the great difficulty where birds are confined in cages.

**CURRENT-WHEEL.**—Wm. Stephens, Santa Rosa. No. 447,915. Dated March 10, 1891. A series of floats of any suitable size and construction may be anchored in a stream or current of water and upon this are a number of wheels adapted to be turned by the force of the current. By means of belts or other conducting device the power thus derived may be transmitted to drive a dynamo to generate electricity, which may be used for power or light. The patent covers a number of details of construction and operation.

**CULTIVATOR.**—Benjamin P. Whitney, Los Alamos, Santa Barbara Co., assignor of one-half to W. F. Wickenden, No. 447,992. Dated March 10, 1891. This invention relates to cultivators which are specially adapted for weed and bean-cutting as well; and the invention consists in a triangular-shaped share or cutting point having attached to it a beam and handles substantially similar to those of a plow and adjustably connected with its rear end, and novel extension blades suitable to the requirements of the work.

**SPRING SEAT FOR VEHICLES.**—Wm. H. H. Wright, S. F., assignor of one-half to Geo. W. Lewis, Oakland. No. 447,928. Dated March 10, 1891. The object of this invention is to provide a simple and effective spring-support for the seats of vehicles which will be inexpensive in construction, not liable to get out of order and will be convenient and out of the way, dispensing entirely with the use of the elliptic springs which ordinarily support the seat and which are a decided obstruction.

**BALE-TIE FASTENER.**—David W. Gish, San Jose. No. 448,022. Dated March 10, 1891. The object of this invention is to provide a simple and effective fastening for bales-ties, especially applicable to ties made of wire, and which will permit the repeated use of the tie by its adaptability to be released without injuring the tie.

**FRUIT-PITTING MACHINE.**—James T. Ish, S. F. No. 445,753. Dated Feb. 3, 1891. The object of this invention is to provide a machine of this class in which both the flesh of the fruit and its pit are cut through and the latter removed. The fruit is placed in spring holders of an arm which, swinging upwardly, delivers it between traveling opposing cups, the cushion-holders of which retain it. The fruit is then brought into contact with the stationary knife, and a revolving knife coming up behind it at that instant, both the flesh and the pit are cut into halves. These pass on each side of and in contact with a directing plate and curve around its end branches. Then when opposite the nippers, their peculiar action extracts the severed pits.

**BORING MACHINE.**—Ammi M. Jewell, S. F. No. 446,352. Dated Feb. 10, 1891. This invention relates to the general class of boring machines, and particularly to a machine for boring the stiles of doors, blinds and sashes. The object is to provide a suitable machine for boring holes in such stiles, whereby they are adapted to receive dowel pins, which are also let into holes in the rails of the doors, blinds and sashes, whereby these articles are put together by dowels instead of mortises and tenons.

**BORING MACHINE.**—Ammi M. Jewell, S. F. No. 446,353. Dated Feb. 10, 1891. This is a machine for boring the holes in both ends of the rails of doors, blinds and sashes to receive dowel pins, whereby said rails are connected with the stiles instead of by the usual mortises and tenons.

## Don't Fail to Write.

Should this paper be received by any subscriber who does not want it, or beyond the time he intends to pay for it, let him not fail to write us direct to stop it. A postal card (costing one cent only) will suffice. We will not knowingly send the paper to any one who does not wish it, but if it is continued, through the failure of the subscriber to notify us to discontinue it, or some irresponsible party requested to stop it, we shall positively demand payment for the time it is sent. LOOK CAREFULLY AT THE LABEL ON YOUR PAPER.

### POINTS OF MERIT:

FIRST—Having two pivot wheels on the ground enables it to turn square corners like a mowing machine.  
SECOND—All of the frame work about the cylinder is the best of oak lined with sheet steel and put on with screws. Other parts built of the best of material and painted inside and out.  
THIRD—The driver is NOT isolated by a ladder from the machine, but is safely seated on the separator, where he can hear and see the working of the machine and drive to suit.  
FOURTH—The new cleaner put on last season works perfectly.  
FIFTH—The machine is so geared that the cleaner, separator or header can be started independently of each other.  
SIXTH—The header is portable. By the use of our supplemental truck we can pass a 16-foot header through a 12-foot gate.  
SEVENTH—The shaftings are all made of steel.

SIZES, 10 TO 16 FEET.

Send for Price List.

With all our Machines we furnish Straw Dump and Header Truck separate from Machine. Machines delivered on board cars or boat.

### The Date Palm in California.

We have had frequent references during the last few years to the growth of the date palm (*Phoenix dactylifera*) in California, but the subject is of constant interest over a great area of the State. The historic interest pertaining to the date palm, the commercial importance of its product and the characteristic beauty of the plant, all charm the California horticulturist. The result is that more date palms are being planted each year. The small plants are now furnished at very reasonable rates by nurserymen or are readily grown from the seed of the dried date by the planters themselves. It is well that such is the disposition of planters, for the date palm is one of the most beautiful plants, either as isolated specimens or in avenue rows, and although this generation may not see the date a large commercial product in California, the growth of the trees will in a few years introduce a new and gratifying feature into the landscape which both tourist and resident will fully enjoy.

The engraving on this page is a new view secured by the Marysville Appeal of the famous group of date palms on the farm of Mrs. S. C. Wolfskill, near Winters, in Yolo county. These trees have been frequently alluded to in our columns, and in our issues of February 3 and March 23, 1889, full accounts are given of the history of the Putah creek palms, both those shown in the picture we present this week and other trees adjacent upon the place of J. R. Wolfskill. Within the last two years date palms have come into bearing at many other points in the central and southern portions of the State. Readers will also remember the introduction of date palms from Africa by the U. S. Department of Agriculture and their establishment at the Experiment Stations at Tulare and Pomona.

In addition to the date of commerce, our planters are also paying attention to other species of *Phoenix*. The best of all for ornamental purposes is the *Phoenix canariensis*,

which is handsomer and more hardy than the *dactylifera*. The most striking plant in the editorial garden of the RURAL is a Canary date palm which was presented to the writer by John Rock in 1880. It was then in a six-inch pot and not above 12 inches high. Now it is

about 15 feet high and the same in spread of its splendid feathery leaves. It bloomed with staminate flowers for the first time last fall.

FREIGHT traffic on the lines of the Southern Pacific Company, has increased wonderfully.

cago grain houses, and stretches almost unbroken from Lake Michigan to the Pacific. It is carried into but four or five offices in all that great territory. Over it flies the latest news of the wheat crop of the coast, gathered by special agents.

DATE PALMS ON THE SOUTH BANK OF PUTAH CREEK, THE FIRST FRUIT IN CALIFORNIA.

### A Wheat Corner Rumored.

Reports of short stocks of wheat in all supply and distribution centers are followed by rumors that the corner-makers propose to get in their work again in the hope, no doubt, of doing better than they did at the last great venture. The statistics presented in our Market Review from week to week, and notably in the last issue and this, show how small the wheat supplies now are, and the advancing prices show the general effects of the supply condition. It is telegraphed from Chicago that there have been rumors on the Board of Trade for some time to the effect that a corner was being worked in May wheat, the cornerers having begun to buy when the price was about 99 or 94 cents. The rumors have variously pointed to a combination of New York and Chicago men and to a clique of Chicagoans exclusively. Now, it is asserted, it has been learned that many of the buying orders have come from New York, and chiefly through commission houses here connected by private wires with Wall street. It is said the purchases of the manipulators must now be high up in the millions. The Northwest and heavy local speculators have a shortage which aggregates 30,000,000 to 40,000,000 bushels. If the clique hold half of this and succeed in their supposed intention of working prices up to \$1.25, the profits would aggregate over \$5,000,000.

A SPECIAL GRAIN WIRE. The Park (Utah) Record is responsible for the statement that a "heavy glistening copper wire" stretches along the Western Union telegraph poles from Chicago to the Pacific Coast and "is a piece of striking private enterprise. It is for the special use of a couple of the heavy Chi-

## FLORIST AND GARDENER.

### "Old Fussy" in the Garden.

EDITORS PRESS:—"Old Fussy" is what she called me in 1854, when I was a partner with her father, in a small ranch near a thriving little mining town in one of the northern counties of this State. She was a beautiful young girl, about 14 years old, and had lately come from Vermont with her mother and two brothers, both younger than herself. She was very fond of flowers, and had brought quite a variety of very choice seeds from her old "Green Mountain" home, and now, as it was the latter part of April, and the ground just in a suitable condition to work, she asked her father to make her a nice flower bed in front of the house. He immediately complied with her request, and soon had a large bed prepared in which to sow her precious seeds. In my absence she had planted a large portion of them, and on my return she showed me the bed which she had raked off very nicely, and left it almost perfectly level. She then said: "Now I will have some beautiful flowers to look at the coming summer," but I knew she would surely be disappointed as well as very sadly grieved, and so I turned the conversation in some way. Quite a cold rain came, followed by warm days and cool nights, and although she examined the bed very carefully several times a day, she was unable to discover even one tiny plant, and even the weeds hardly managed to make an appearance, as a great portion of the soil was of the adobe order, and it had settled very solid, leaving a thick firm crust through which of course, they were unable to make their way.

Time passed, and at last she came to the sad conclusion that her choice seeds were lost, and that her flower-bed was a most wretched failure. One day she came to me and said: "Pray tell me if you can, just why my seed never came up? I know they were fresh, for I raised them last summer." I then told her that her father did not take pains enough to get the right kind of soil. On hearing this she seemed very much surprised, and said, "Will you please make a bed for me? I will thank you ever so much, and as I have some seed left I will try again."

I went out to the site of an old Indian camp, and there obtained soil that was very black as well as light and rich, as it was composed mostly of decayed vegetable matter, bones, shells, etc. I went to the creek where I procured a nice lot of fine wash-sand with some sediment; then to an old corral, where I got very fine rotten manure, and finished my search by getting a nice lot of leaf mold from the north side of some woods near by. After getting all the material together, I commenced to thoroughly mix them. While doing so, the disappointed and almost discouraged girl came out, and after watching me a few moments said "Well, I declare if you ain't an old fussy."

I told her as I was only 21 years old, I did not think I was a very old fussy, but I was considerable of a young one and that I had found out it paid to be a fussy, young or old, that the old saying was still true that "What-ever was worth doing, was worth doing well," and that she would find out as the years rolled by, that what I had told her was true.

After throwing out the dirt of her flower-bed I put in my rich light compost and the contrast between the two kinds (to use her own words) was "truly wonderful." She planted her seed very carefully, and in a short time she had the pleasure of seeing the healthy young plants making their appearance all over the bed, and she was soon kept very busy transplanting them to other beds I had prepared. In due time she was well rewarded for all her pains, as her beautiful flowers seemed to greet her on every hand.

Twenty-eight years after, in a different part of this State, I had the pleasure of visiting Mrs. C—, my friend of 1854. She had been a teacher in the public schools for over twenty years, and was a very thorough and successful one.

She said: "I have never forgotten the flower-bed you took so much pains to make for me, and it has proved to be the best lesson of my life, for I have found by a long experience in school-teaching, as well as in many other things in life, that nothing of much importance can be accomplished without taking great pains, accompanied with plenty of patience; in fact, in order to make a success at anything, one has to be, and it surely paid to be, an 'Old Fussy.'"

Before I left, she took me with her husband, into their lot that contained perhaps one-eighth of an acre. She then said to me, "I wanted years ago to have this ground prepared for the raising of flowers, strawberries, blackberries, and early vegetables, but my husband said it was of no use to attempt it, as the soil was mostly adobe, but I want your opinion about it."

I asked her what they had done with the manure from two horses, a cow, and two dozen chickens, to say nothing of the large amount of ashes they had made during the past twenty years they had lived there. She said: "Why, husband pays an old negro fifty cents every Saturday to gather it all up, and dump it into the creek."

I told her I was completely astonished; that it was worth more than that to put on her land, as

it was just what it needed, and that they could have bought adjoining land and made all of it as rich and as light as the flower-bed I made for her in 1854. I also called her attention to the fact that it cost them \$26 a year, or over \$500 in 20 years, to hire some one to throw away their valuable fertilizers. My remarks seemed to open their eyes, but as they were intending very soon to sell their place, they concluded it was too late to make a change.

#### Value of Manure Overlooked.

Yes overlooked, that is the right word, I think, for Webster says it is "To neglect by carelessness or inadvertence." The fact is that many farmers, as well as others who keep stock of different kinds, do not stop to think what they are doing in allowing their manure-piles to fire-fang in summer or to be completely leached out during the winter's rain, and consequently many thousands of wagon-loads of the best kind goes to waste every year in this State that ought to be properly cared for and put on the land. Some wide-awake farmers are now doing this, and are beginning to reap the reward for their labor. I knew a man in the mines in 1862 who kept from 15 to 20 large horses which he used on his place and in teaming; he also had quite a number of cows and hogs. His large stable was quite near to a running creek, into which he dumped all the manure and straw after it was used for bedding. I greatly wondered at it then, but heard 20 years after that he was still doing the same foolish thing, although he had several acres of land that would have made a most excellent garden with the addition of plenty of manure, and he had an abundance of natural water for irrigation. But notwithstanding all this, he had bought for many years all his vegetables in Sacramento and hauled them a distance of over 50 miles for his family and eight or ten hired men, but finally obtained them from a town near a railroad, where he had to pay a much higher price for them, and in making the trip—a distance of about 18 miles—had to go down a steep grade of over three miles and climb another mountain equally as bad, besides paying a toll of \$3. He managed some way to raise most of his hay and a portion of his grain for his stock, whereas if he had utilized all the manure that annually went to waste he could have raised all of his hay and grain on half the amount of land and saved a large amount of seed as well as labor. For aught I know to the contrary, he is still plodding along in his usual way, and there are a great many others who are following in his footsteps on a smaller scale. It is not only carelessness, but laziness sometimes—at least it is pure shiftlessness on the part of any one that owns land to let the manure go to waste every year, and I consider it sinful when it is in one's power to avoid it. Surely everybody, everywhere, should be interested in this very important matter, as there is a "bonanza" even in the manure-pile.

#### Kinds of Manure.

Ordinarily, the common farmer is chiefly confined to that made on his farm, generally consisting of cow, horse and chicken manure, which if properly composted, is about as good as any that can be obtained. A great deal of other valuable material can be added from time to time, by never burning anything that will rot. The manner of doing this, and the different kinds of material used, I endeavored to explain in my article "Care of Manures" in the RURAL, in the spring of 1886, although I did not attempt to do full justice to the subject, nor to enter into every little detail as to the relative value of different kinds, etc., as my time was very limited and I was then, and have been ever since, experimenting with different kinds and noting very carefully the results when applied to different kinds of crops.

I consider night-soil one of the most valuable kinds of manure, and I have very carefully saved and used it during the past eight years on my place. I keep perfectly dry and very fine wash-sand and sediment, that I get in a creek, at all times in my outhouse, and use it very freely as a solvent; also use a little lime and charcoal occasionally; the latter I sift out of my ashes. I made, as a receptacle, a box flaring on all sides and of the required width and length, and 20 inches deep. I clean out this box regularly every week, putting the contents into old barrels, and cover with a few inches of sand, in order to prevent any foul or offensive odors from escaping, as well as to keep the contents from the air, which would cause it to get too dry and thereby prevent rapid decomposition. I keep the barrels from the rain, as well as from the sun; by so doing, just enough moisture is retained to reduce the contents into a perfectly rotted and friable compost without any perceptible odor. This ordinarily takes some five or six months, owing somewhat to the temperature. I have at present six barrels of this valuable fertilizer, which, however, is much too rank and strong to apply in its present state. I shall, therefore, as I always have done, thoroughly mix it with three or four parts more of sand, and then use it in my squash and melon hills, around my blackberry and raspberry bushes, etc. I consider it very much superior to any fertilizer I can buy at present on this coast, and I have the advantage in knowing just what its real value is. Heretofore I have put most of this compost around my peach trees, gooseberry and blackberry bushes, with astonishing results.

I had several of my friends ask me: "How in the world do you manage to raise such mammoth gooseberries and blackberries, and so many of them on a bush; and what makes your

cling peaches so large and your trees so remarkably thrifty." They were greatly surprised when I told them the reason, and said they never heard of the like before. There are many, however, who are knowing to the fact that night soil is one of the most valuable fertilizers, but object to it, mainly on account of its peculiar nature, offensive odor, and great difficulty in handling. All these objections and difficulties are entirely avoided by using plenty of absorbents and disinfectants (lime and charcoal), as before stated, which entirely take up all the excess of moisture, and do not allow noxious gases or offensive and unhealthy odors to escape to pollute and poison the atmosphere. Neither are there any places in boxes or barrels where flies, worms and insects of various kinds can breed, but the boxes and barrels are kept at all times comparatively clean, and with but a small amount of labor involved, in comparison with the great benefits derived in many ways from such a course. It is, therefore, most certainly a commendable sanitary measure compared with the ordinary way. No deeper or even shallow vaults, should ever be allowed in close proximity to the house or well (as they oftentimes are), as without doubt, many germs of very dangerous diseases are generated in such places.

I trust that the foregoing article, written quite hastily, may prove to be acceptable, as well as of some interest to your many readers.

IRA W. ADAMS.

Bay State Garden, Calistoga.

## THE APIARY.

### Introducing Queens and Queen Cells.

EDITORS PRESS:—In introducing queens, a great deal depends upon the amount of honey coming in. If honey is scarce and coming in slowly, the more difficult it will be to introduce queens; while if honey is coming in rapidly it is no trick at all. About all you would have to do would be to catch the queen you want removed and drop the other in the hive and your introducing would be done.

But as it is only at certain times that queens can be introduced so easily, possibly in California about two months in the year, for the rest of the time we must use other methods by which queens can be successfully introduced at any and all times.

The best shipping and introducing cage is a splendid cage for introducing queens and queen cells. It may be obtained of any extensive dealer in apiarian supplies.

The principle of introducing with the Peet cage is this: Be sure to have your colony queenless in the first place; next, remove a good smooth comb containing a few cells of honey and fasten the cage over the cells of honey. In a short time the bees will liberate the queen by eating through the comb; and if, as sometimes happens, they fail to liberate the queen after a reasonable time, the cage should be removed.

Another plan to introduce with this cage is as follows: Remove the tin slide, part way; lay the cage on the frames, and the bees will soon eat the candy away and release the queen.

A few days ago I introduced successfully a couple of Carniolan queens with an introducing cage of my own construction. I took a block three inches long, one inch wide and one inch thick, and bored two two-eighth inch holes through the center of the block; I then bored a hole in the end until I reached the other two holes. On one side I tacked a piece of wire screen, and the hole in the end of the block I filled up with bee candy. After placing the queen and attendant bees in the cage, I nailed a small strip over the holes in the opposite side of the block. The cage was now ready for introducing the queen, and I placed it on top of the frames in the hive, and in a short time the bees had taken away the candy and the queen was safely introduced.

This style of cage is about as simple and cheap as I know of.

#### Introducing Virgin Queens.

Virgin queens, when two or more days old, are more difficult to introduce than fertile queens, but when first hatched, or a few hours old, you may let them run in at the entrance and they will be safely accepted—in fact the best time to introduce a virgin queen is when she has just hatched.

In introducing virgin queens two or more days old, keep the queen imprisoned at least 36 hours.

Sometimes when honey is coming in rapidly you may place a cloth in front of the hive and shake a number of bees on it, and then drop a virgin queen with them, and after they are in the hive give them a good smoking.

#### Introducing Queen Cells.

It frequently happens that you have a number of valuable queen cells that you wish to introduce among nuclei or queenless colonies. If you wish to introduce to a colony that has no queen cells started, or one from which you have just taken their queen away, it would be best to place a queen cell in a Peet introducing cage.

If you have a colony with cells already started, you may graft one of your valuable cells in place of one of the others. Great care should be taken to have the new cell honey in the same position as the old one.

In all your operations in introducing queens,

be sure and have your old colony queenless; the presence of queen cells is not always an indication that a colony is queenless, because a virgin queen is sometimes present in a colony that has queen cells. S. L. WATKINS.  
Grizzly Flats Cal.

## METEOROLOGICAL.

### Facts About Weather Forecasts.

The Pacific Branch of the National Weather Service.

Lieut. John P. Finley, in charge of the Division of the Pacific Signal Service, U. S. A. has issued a bulletin giving the following facts about weather forecasts in this region:

The branch office of the National Weather Service, Division of the Pacific, was opened at San Francisco, March 1, 1885, and is the only office of its kind in the country outside of the central office at Washington, D. C. It was established for the purpose of providing, in the most direct and practical manner an opportunity for the people of the Pacific Coast to receive all of the benefits that may be derived from the work of the Signal Service. The main object was to prepare and distribute through the press and by telegraph, weather forecasts for the Pacific Coast States, and warn vessels of the approach of storms dangerous to shipping off the coast. Also, to make special forecasts of rain, frosts, floods and local storms. Such work had been carried on at the central office at Washington many years for the eastern portion of the United States, and it was believed that the time had come for the organization of a Pacific Coast Weather Service, with headquarters at the metropolis of the coast, and at a place centrally located for the convenient receipt and distribution of telegraphic reports. To properly apply the weather forecasts to definite areas of country, the Pacific Coast was divided into three districts, designated officially as follows: North Pacific region (embracing Western Oregon and Western Washington), Middle Pacific region (embracing the western portion of California, north of parallel 37 degrees north, or an east and west line cutting the northern edge of the bay of Monterey), South Pacific region (embracing the western portion of California south of parallel 37 degrees north). On May 1, 1886, an order was issued from Washington changing the districts to State areas, and thereafter the weather forecasts were made for the following regions: Washington (embracing the entire State), Oregon (embracing the entire State), Northern California (embracing that portion of the State north of the latitude of 36 degrees, or an east and west line passing through the central portion of Lake Tulare), Southern California (embracing that portion of the State south of the latitude of 36 degrees). There have been several changes in the hours at which the forecasts have been prepared for issue, dependent upon the hours of meteorological observation and the convenience of the press. Observations are now taken throughout the United States at 8 A. M. and at 8 P. M., 75th meridian time, which corresponds to 5 A. M. and 5 P. M., Pacific time. The weather forecasts are issued from the San Francisco office about 9:30 A. M. and 6:30 P. M. daily. An earlier hour cannot be selected because of the want of telegraphic facilities in concentrating the reports at San Francisco from all parts of the Pacific Coast States. The language of the forecasts must largely conform to the official instructions issued from the central office at Washington.

Forecasts of higher or lower temperature are made each morning with reference to the expected minimum temperature of the following morning, and each evening with reference to the maximum temperature expected on the following afternoon. The forecasts of stationary temperature indicate a change of four degrees or less from March to October inclusive, and six degrees or less for the remaining months of the year. In the case of higher or lower temperature a change of one degree or more is sufficient to verify the forecast. A cold wave, in general terms, is defined to be a fall in temperature over an extensive area of 20 degrees in 24 hours, or 28 degrees in 48 hours and to the freezing point or below. Warnings of cold waves are issued when it is expected that the area affected will exceed 100,000 square miles in extent, and in well defined cases for a lesser area. Forecasts of fair weather mean an entire absence of rainfall, but not necessarily an absence of clouds. Forecasts are usually made for a period of 24 hours, but whenever the meteorological conditions are so decided as to dominate the present, and are expected to materially modify coming weather over any extensive part of the country, forecasts may be made for periods of 36, 48 and 72 hours. Generally speaking, it is more difficult to forecast accurately the weather of summer than that of winter, because of the absence in the former season of well-defined storm centers, most of the precipitation being the result of local changes in temperature and wind direction. For a similar reason it is more difficult to forecast the changes of a moderate storm than of those which attend a severe one, because in the latter case the laws of cyclonic development and progression are more closely adhered to, which permits the principle of weather forecasting to be applied with greater success.

DO STORMS MOVE IN CYCLONES? — The

Eureka (Humboldt county) Times of Feb. 26, under the head of "Reminiscences of Former Anniversaries"—Feb. 22—gives an interesting article showing a remarkable regularity in the recurrence of severe storms on or about Feb. 22d, occurring at regular intervals of ten years, from which we extract as follows: Thirty years ago, Feb. 22, 1861, we find by consulting the files of the Times, a fierce storm was threatening which three days later culminated in a thunder-storm, which the Times says equaled anything experienced in the "most tempestuous climate." Thirty years later—the recent anniversary—the thunder-storm was a little "previous" instead of being "tardy" in celebrating Washington's Birthday. Twenty years ago a fierce storm also prevailed all over the State, and became a regular tornado in some districts, uprooting trees, unroofing houses, etc. It caused much suffering and loss among the stock of this county. Ten years ago the coast was also just recovering from a great storm. An item appears in the Times of the 23d, saying that only one bridge remained on the mail route between Arcata and Weaverville.

## SHEEP AND WOOL.

### A Good Outlook for Wool.

EDITORS PRESS:—Without reference to our views of the tariff, etc., we think you will be interested to know of the developments attending the woolen manufacturing industry in the East.

Many months ago there was a movement on the part of English and German manufacturers of cloths and yarns to start plants in this country. Advocates of high tariff on wool and woollens used this inclination on the part of foreigners to prove it, the first desirable effect of the expected tariff against goods of foreign manufacture. They claimed that these foreign plants were to be started in this country because they could no longer profitably manufacture the goods abroad. Protectionists threw much weight upon the fact that these new mills could not bring their employees with them but must hire American labor.

Whether or no the cause assigned for this movement on the part of foreigners was a true one, the prediction has become a reality, and at least one-half dozen new mills finely equipped as to capital, machinery, etc., are now in full operation. It would be interesting to note the number of hands employed by them, which would unquestionably run up to some thousands.

Another feature noticeable among the manufacturers is the starting up and occupation of much machinery that has been silent for a period of time, in some cases as long as two or three years; thus the amount of labor in active employment is increased, and there is no evidence that the foreigners who are at work here are hurting our domestic mills by their competition, but rather imparting new life into the industry.

One prominent fact is, that manufacturers are not able to secure any higher prices for their goods (with the exception of some fancy lines) than before the Tariff bill went into effect, and the people at large are paying no more for their clothing than heretofore. In other words, competition has kept prices down, and there is no probability that the competition will be decreased.

We cannot see how this condition of things can fail to benefit the growers. No one can question that the coming clip will meet with a more active demand than for some seasons past. Undoubtedly some growers looking only at one side of the question, and thinking that the tariff should influence much higher prices for their wool than last season, will hold their clips off the market.

In our opinion those growers who take the most clear and impartial view of the situation will hurry forward their clips to the seacoast markets, and it would seem that such early shipments would bring the highest prices that will rule this season, as they will meet the demand from the manufacturers which is bound to result from the stock of wool on hand, being at present low, and constantly becoming more thoroughly depleted of desirable wools.

New York Wm. McNAUGHTON'S SONS.  
[We publish the above wholly upon the authority of the writers and without endorsement. We do not desire to assume the responsibility of advising a producer as to the time he should market his product. Every man must decide that for himself.—EDS. PRESS.]

ENGLISH OPINION.—It is rather satisfactory to learn that British naval architects entertain a good opinion of some of our recent additions to the navy, conceding that they quite equaled and sometimes surpassed European constructions of a like nature. There is no doubt that if Fate should decree that the 7300 ton commerce-destroyer, which Secretary Tracy regards as the ideal naval vessel, six of which could sweep the commerce of any country from the seas, should be constructed at this port, she would make a speed of more than 21 knots and have boilers that would give better satisfaction than some of the cruisers on the other side of the Atlantic have been giving recently.

## HORTICULTURE.

### Importations of European Grapes.

The importations of European grapes into California have thus far included but a few of the varieties grown in Italy; France, Germany and to some extent Spain being the countries most largely represented in our vineyards. Yet the classic land of the orange and lemon would naturally seem to be entitled to the most particular consideration within the "citrus belts" that form the special pride and source of profit in this State. It is hardly reasonable to expect that the wines of the Rhine, and even those of the Garonne, will be characteristically reproduced alongside of the orange, olive and fig.

Our investigations of the changes undergone by northern grapes in the hot interior of this State, coincidentally with the evidence afforded by the wines to the taste, show that a deficiency in acid and an excess of tannin is the almost invariable result. With the deficiency in acid comes difficult fermentation, and a lack of the "bouquet" that forms the particular merit of the wines of cooler climates; and the result is, hot, tasteless and astringent products of little commercial value, and poor keeping qualities. It is quite otherwise with varieties adapted to the warm climates. Both in Spain and in Northern Italy, excellent dry wines are made, and the grapes which produce the latter have received our special attention during the past three or four years.

So far as I am aware, the only Italian wine grape that came with the early importations was the one now generally known as "Crab's Black Burgundy," and further misnamed "Petit pinot," since the leaf is the only point in which this variety even remotely resembles the true Burgundies or pinots. For it is remarkable for deep color and a good proportion of acid and tannin; qualities in which the true Burgundies are notably deficient. This grape is definitely shown to be identical with the Italian "Refosco."

The next importation of Italian grapes was made in the early eighties by John T. Doyle, Esq., who obtained small numbers of cuttings by mail, and partly rooted, partly grafted them, in his vineyards at Menlo Park and Cupertino. Among his earliest importations were the Nebbiolo, boding in Northern Italy the place that the Cabernet Sauvignon holds in the Bordeaux region; the Barbera fina of Asti and its neighborhood; also the Freisa, the "strawberry" grape, the wine of which resembles not a little that of the Zinfandel. Later importations brought the Aleatico, several Bonardas, the Provanter, Corba barba gelata and Montepulciano; of white grapes the Vernaccia bianca, the Lignaga and Pizzutello.

The publication of the book of Dr. Springmühl on the "condensed must" industry, about this time called my attention to the remarkably high acid (and sugar) contents of the Piedmontese grapes as compared with those of southern Italy; and the study of the varieties imported by Mr. Doyle confirmed the fact that in these grapes we have a group which may probably be relied upon for the making of good dry wines of excellent keeping qualities, under climatic conditions in which those of more northerly origin lose character, and fail as dry-wine grapes.

The detailed record of our results in this line of study will be given in the report for the past four years, now being elaborated for publication, which has been thus delayed by the extra labor incident to the establishment of the new Experiment stations. Meanwhile the promise of this class of grapes was thought sufficiently good to call for the importation of a larger number of varieties. It was intended that this should have been done last winter; but untoward delays in correspondence frustrated the plan. It has now, however, been consummated by the arrival, in excellent condition, of cuttings of 48 varieties of wine and table grapes from the collection of Count Giuseppe Rovasenda, the distinguished ampelographer of Italy, residing at Turin; with whom correspondence has been carried on for some time past by Assistant Paparelli. We are thus placed in possession of an authentically named collection, which will be partly rooted, partly grafted for more rapid propagation, and future distribution.

The following list gives the names and brief general notes regarding these grapes:

- 1—*Aspiran noir*.—This variety is especially cultivated in Southern France, where it is chiefly consumed as a table grape. It makes also a bright-colored and delicate wine, very good for table use, but somewhat thin for the trade.
- 2—*Cipro nero*.—Variety from the island of Cyprus, where it makes the best wines, called "la Commanderia." It is also a very nice table grape but of late maturity.
- 3—*Cipro*.—Under this name we received a few cuttings that we suppose to belong to the white variety.
- 4—*Cesanese nero*.—Variety from the "Campagna di Roma," where it is most abundantly cultivated and gives a fine and strong wine.
- 5—*Grisa di Piemonte*.—A late variety adapted both for wine and table use in Piedmont.
- 6—*Negro amaro*.—Variety from the "Puglie" region (Italy). It is a good bearer and makes good wine.
- 7—*Negro dolce*.—According to Pulliat, this seems to be a synonym of *Dolcetto nero*.
- 8—*Paga-debito*.—A black variety from the "Puglie." Good for wine, abundant bearer.
- 9—*Morica*.—A black grape. Its wine is one of the best made in Sardinia.
- 10—*Neiretta*.—This black variety is very much cultivated at the Saluzzo vineyards, Piedmont. It is a heavy bearer.
- 11—*San Giove*.—A Tuscan variety, which,

\*No description available.

blended with *Canajolo* and *Malvasia bianca* (without perfume), makes the majority of good Tuscan wines. According to Count Rovasenda's experiments, it would make a good blend with *Freisa* and *Barbera*.

12—*Tadone*.—A Piedmontese variety, bearing large bunches and making a strong and dark-colored wine. It requires long pruning but is a somewhat irregular bearer.

13—*Bolgnino* or *Nebbiolo di Dronero*.—This is also a Saluzzo variety, but different from the true *Nebbiolo*. It makes however, a good wine.

14—*Neiretto grosso canavese*.—From Piedmont. A grape of abundant acidity and of fairly deep color.

15—*Croatina*.—Especially cultivated at Voghera, Piedmont. It has a round, black berry larger than the *Bonarda*. In deep soils produces a well-colored wine.

16—*Danque*.—A Southern French variety, identical with the *Gros Guillaume* from Nice, possessing large berries, but of late maturity.

17—*Antibo*.—Large-berried, black; cultivated at Saluzzo for table use.

18—*Quagliano*.—Table grape with large black fruit of great delicacy, especially if cultivated in light soils.

19—*Ocu di bove*.—Black variety from Sardinia, very large-berried, late maturity.

20—*Bermestia violacea*.—Grape variety from Piedmont. It has very large berries.

21—*Pelaverga*.—Another Saluzzo variety, cultivated especially for table use. It is an abundant bearer; bunches reddish-black and large berries. In the Saluzzo county it is also used to make a special carbonated sweet wine.

22—*Crocto* or *Moretto*.—Another Piedmont variety, giving a dark-colored must.

23—*Corbeau*.—This variety is already known in California.

24—*Chenin noir*.—A French variety giving a well-colored wine.

25—*Mammolo toscano*.—A Tuscan variety of late maturity in northern exposures. It is little colored and possesses a violet bouquet.

26—*Barbarossa di Finalborgo*.—Another one of the several Barbarossa varieties of Italy. It is good both for wine and table use and also as a keeper for winter use.

27—*Favorita*.—According to Count Rovasenda, is identical with the "*Vermellino di Liguria*," a good white variety both for wine and table use.

28—*Vernaccia sarda*.—A white variety from Sardinia. Large bearer; good for wine. In Count Rovasenda's collection it gives an immense crop.

29—*Olivette de Cadenet*.—A white table-grape variety from France. Late maturity. It seems identical with the *Crujidero*.

30—*Cuarattu a la Porta*.—A White Sicilian variety for wine. It is a heavy bearer, with large and yellow-colored berries, but matures late. The Catarattu varieties are used in making the famous Marsala wines.

31—*Malvasia di Brolio*.—A Tuscan variety for wine. It is a heavy bearer.

32—*Erbabus di Caluso*.—A Piedmontese white variety especially used for "vins de liqueurs."

33—*Picpoule*.—A variety from France. Grape of good acidity but of late maturity.

34—*Malvasia Rovasenda*.—A seedling obtained by Baron Mendola, the Sicilian ampelographer. It is a good and reddish-black colored grape which deserves to be propagated.

35—*Lambrusco di Gorbato* (perhaps di Sorbara).

36—*Gorbo*.

37—*Malvasia de la Cartuja*.—A white Spanish variety.

38—*Bellino*.—A Piedmont black variety, fine for table use; identical with "*Imperial nero*."

39—*Negrara di Gattinara*.—A black, good variety, but it is very much attacked by "Oidium."

40—*Passaretta*.—A variety cultivated in Piedmont both for wine and raisins. Their berries are very like a bird's-eye.

41—*Crujidero*.—A Spanish white variety, good for table use. It is fine-looking, but of late maturity.

42—*Pis-de-chèvre*.—A variety cultivated in France, but obtained from Hungary; it has pointed and ellipsoidal berries. There are two varieties—one white and one red.

43—*Torok goher*.—A black Hungarian variety. It seems to be a valuable grape.

44—*Cobutam Cucco Bitondo*.

45—*Neiretto di Collucello*.

46—*Bersan*.

47—*Trivati*.—A good black variety from Sicily.

48—*Zinzillosa*.—A black variety resembling somewhat the "Mourastel."

Information has been already asked from Count Rovasenda in regard to the Nos. 3, 35, 36, 40, 42, 44, 45, 46, the labels being somewhat obliterated, or incomplete as to white or black variety.

### Importations of Olives.

The following varieties of olives have lately been imported from the highly reputed nursery of R. Pecori of Florence, under the auspices of Prof. E. Becchi, the director of the Agricultural Station at Florence:

1—*Bella de Spagna*.—Its oil is very fine, but it is generally used for pickling.

2—*Lecchino*.—On account of its hardness ought to be propagated in those regions frequently subject to damage by frost. The fruit is pretty large and fleshy, but not rich in oil; it is, however, a heavy bearer.

3—*Olivio piangente* (weeping olive).—This beautiful variety is somewhat delicate, therefore it requires mild regions, where it will be a good bearer. Its fruit yields a very agreeable and sweet oil, but it is also good for pickling purposes.

4—*Santa Caterina*.—Bearing large fruit very fine for pickling.

5—*Infrantoio*.—One of the best olive-oil varieties from Tuscany; large bearer.

6—*Correggiolo*.—According to Prof. Caruso is the same as the *Infrantoio*.

7—*Morinello*.—This is widely cultivated in Tuscany because it stands cold weather and the action of the wind very well. The fruit contains more flesh than the *Infrantoio*, but the oil is not so fine.

8—*Ascoli*.—Bearing large fruit, very fine for pickling purposes, of high value both for Italian and foreign markets.

These trees are now growing finely on the grounds of the station at Berkeley, and will be propagated as rapidly as possible for distribution to the sub-stations, and thereafter to olive culturists at various points within the State.

### Walnuts in Ventura County.

EDITORS PRESS:—For the past year there has been a growing sentiment in favor of the walnut as a profitable tree to plant in Ventura County.

The few orchards already in bearing have been so remunerative that the demand for trees has been very great. Probably 1000 acres have been set to walnuts since Jan. 1st. Some bearing orchards having a water right have sold for \$500 per acre.

The prevailing opinion among those who have raised the walnut in this section seems to be that good bean land is good walnut land; and that 25 miles from the coast they would not be profitable, owing to the dryness of the atmosphere, and the hot sun, which would prevent the nuts from filling well.

In apparent contradiction of this accepted theory is the experience of Mr. E. H. Decker of Cienega, who has an orchard of 500 trees fully 30 miles from the sea. The soil here is a sandy loam with water close to the surface. His trees have borne the past four years an average of 100 lbs. per tree. This orchard is but 12 years old.

On being asked if the nuts filled well, Mr. Decker replied: "You shall judge for yourself. Sacked walnuts usually weigh 60 pounds per sack. Mine this season weigh 76 pounds."

Mr. Decker says his trees are perfectly healthy, with no diseased tops—another contradiction of the generally accepted opinion that if the tap-root of the walnut finds too much water it will become affected with diseased top. Mr. Decker's theory about the matter is that the water on his place is pure, and that it is alkali that destroys the tree and not water.

If the top is unhealthy, it indicates diseased root, and in Germany they cut off the diseased and decayed tap-root to cure the tree.

Mr. M. Cannon, President California Alliance, two years since successfully transplanted 430 walnut stubs 13 years old without the loss of a single tree. He considers they make the best tree in the world; and this orchard does certainly present a very fine appearance, every tree as straight as an arrow. Mr. Cannon expects a crop from these trees in another year.

He says he would most decidedly not plant the nut where he wished the tree to grow, as some have advocated. First, because it is too much trouble to care for them when small; second, the trees would not grow straight on account of prevailing winds, and for the latter reason he would never transplant a walnut tree less than three years old. In conclusion, Mr. Cannon remarked: "I would much rather pay \$10 for a tree ten years old than ten cents for any other."

Mr. C. has 12 acres in walnuts already in bearing. These trees were set out 14 years since and have been in bearing four years. This season the crop brought him \$1400.

Mr. C. Barnes, a neighbor of Mr. Cannon, thinks he should prefer to plant the nut where he wished the tree to grow, but would plant assorted nuts from the largest bearing trees, as they would produce much sooner. He had trees bear at six years old when set out by a hearing orchard; says that when trees bearing catkins are near a young orchard, the trees fruit much earlier.

Mr. Peter Barnett, on the Avenue two miles from the sea, has 17 acres of land, for which he paid \$11,000 three years since, 12 acres of which are in walnuts. His trees are 12 and 14 years old, and this year produced ten tons of nuts, which sold readily at ten cents per pound.

Ventura. M. E. DUDLEY.

### The New Olive Oil Law.

The following enactment has received the Governor's signature and is now in force in this State.

An Act to Regulate the Sale of Olive Oil:

SECTION 1. Every manufacturer or dealer of olive oil shall place upon every bottle or can filled with olive oil, and exposed or offered for sale as such, a label stating clearly the name and address of the manufacturer or dealer, and the place of manufacture, and shall file with the State Board of Horticulture a copy of said label, accompanied by an affidavit that it is pure, and that this Act has been complied with.

SEC. 2. Whoever adulterates olive oil, sells, or keeps for sale, oil not olive oil, and exposed or offered for sale as olive oil, within the State of California, is guilty of a misdemeanor, and upon conviction thereof before any Justice of the Peace of any township of legal jurisdiction, shall be fined in a sum not less than fifty dollars nor exceeding one hundred dollars, and cost of the action, for each offense, or may be imprisoned not less than fifty days nor more than one hundred days, or by such fine and imprisonment as the judgment of the Court may direct.

SEC. 3. This Act shall take effect and be in force from and after its passage.

## PATRONS OF HUSBANDRY.

In our Rural Press Official Grange Edition, issued every week, will be found additional matter from this and other jurisdictions, of interest and importance to Patrons. Any subscriber who wishes can change free to that edition.

### The Master's Desk.

R. W. DAVIS, W. M. S. G. OF CALIFORNIA.

Don't be surprised to hear of the organization of some more Granges. The wind is in our direction. People want something conservative, yet outspoken, something with a history yet not moss-covered; something purifying but not partizan; something earnest but not too haughty. They appreciate thoughtfulness, and the thoughtful farmer says: "I know the Grange; it is true, it is tried; it is sincere; it is progressive; it will do me; enroll my name, for I want to be a Granger and with the Grangers stand."

Put on your spring suit and start to work for the Grange! At this season, surely, the Grange cause ought to flourish, for the Grange is purely an agricultural organization, and agriculture is now in its growing and blooming season. Help the Grange! Get one new member to join, and by so doing, you will honor yourself and benefit a neighbor.

What do you think of having a five-minute "Conversation meeting" at your next Grange session? Perhaps such an effort might induce some of your diffident members to come to the front with a neat little talk.

It will be for the Good of the Order to have more good public schools and a larger attendance at each school; to have more legislation for the industrial interests and less for the corporations; more sociability, with more confidence and less unbusiness and less diffidence; more economy and more perseverance; more members and more unity of action; a better understanding of the rights and duties of farmers, and a much more emphatic way of condemning and punishing wrong and wrong-doers. More work by the present membership will insure a great gain of power, of confidence and of membership.

Merced Grange had a unique and profitable Basket Social a few evenings since. Each sister of the Grange prepared a lunch-basket for two persons. These baskets were sold at auction to the highest bidder for cash. A maximum limit of \$1.50 was put on each basket. This was done to prevent any excessive price being paid by rival bidders. Each basket contained a card on which was written the name of the sister who prepared the basket and its contents. The lucky buyer thus knew whom he was to dine with, for the one who bought the basket understood he was to invite the lady whose name was on the card to eat with him. Thus the boys found out who the good cooks of Merced Grange are, and, if reports be true, several of the fair sisters of Merced are about to accept positions for life, and the Grange treasury is "flush" accordingly just the same.

There is a bright prospect for an excursion to the Oregon State Grange, which meets May 26, 1891. How many would like to go, provided the railroad company will give reasonable rates, tickets to be good for 60 days? By next week's RURAL we hope to be able to give full particulars.

Picnics are announced, under Grange auspices, at Loomis, at Tulare, at Bennett Valley, at Elk Grove, at Yuba City and at Merced. Grange reunions and the Harvest Feast are announced at Enterprise, at American River, at Two Rock, at Bennett Valley, and the good work goes on.

The youngest child of the Grange family in this State organized last Saturday at Plainesburg, Merced county. Sister Nettie Brown, with her untiring energy, is entitled to the credit and to the money. There are 23 names on the charter list.

Promptness, yes promptness; that is what this paragraph is about. How about it; are you always prompt? Do you meet your creditors promptly? Do you attend your Grange promptly? Does the Grange meet at the hour named? Is the Master a man noted for promptness? Are his assistants as prompt as they ought to be? Are the members more prompt than the officers? Who is the most prompt person in your neighborhood? Does he belong to the Grange? If not, you ought to have him join. He will make a useful and model member. But to conclude: Be prompt in all things; teach promptness to your children, both by precept and example; encourage the old and the young to be prompt, for life is too short for one, or a body of people, to wait for somebody else. Promptness is a virtue; yes, a cardinal virtue.

### Farmers' Picnics.

Everybody likes them. They benefit wives, children and all. Let them be held in every county and hamlet. Send announcements as early as possible to the RURAL PRESS. If speakers are wanted, write to the Master or Secretary of the State Grange.

## Legislative Anti-Reform Voters.

### Record of Ayes and Nays on Reform Bills

EDITORS PRESS:—At the request of the Legislative Committee of our State Grange, I have remained in Sacramento city since the 19th of February, laboring to secure the passage of those measures recommended by the committee. From your letter bearing date Feb. 23, 1891 and other sources, I find that the Grange has indorsed such legislation as shall be necessary. First: To secure the reassessment and collection of taxes on such property as may have escaped taxation since and including the year 1883. Second. To provide for the Australian system of voting. Third. To elect United States Senators by direct vote of the people. Fourth. To provide for the organization of mutual fire insurance companies, and Fifth. To provide for the collection of taxes semi-annually.

Bills to accomplish these objects have been introduced in the Legislature and pressed with energy by the Grangers and their friends. The bill to provide for the reassessment and collection of back taxes, known as the reassessment bill, introduced by Senator Berry of Tulare, and which, had it become the law, would have compelled certain railroad corporations in this State to pay into the State Treasury something over \$4,000,000, found but few friends in the Senate. On the 10th of February, on the question of final passage, the roll call shows 10 ayes as follows: Berry, Crandall, Goncher, Heacock, Langford, McGowan, Mead, Ostrom, Shippee, and Wilson. Nays: Baily, Banks, Britt, Broderick, Byrnes, Campbell of Solano, Campbell of Siskiyou, Carpenter, Dargie, DeLong, Denison, Dray, Everett, Frazer, Hamill, Harp, Maher, Mahoney, McComas, Ragsdale, Simpson, Sprague, Streeter, Voorhies, Welch, Wm. H. Williams and Geo. H. Williams—27.

This vote demonstrated the fact that no law could be passed at this session of the Legislature by which the lordly railroad corporations of California should be compelled to pay their taxes, and made to bear their just proportion of the burdens of Government, as other tax payers are compelled to do.

The bill to provide for the Australian system of voting met with but little opposition in the Senate. In the Assembly, however, the opponents of the measure, under the leadership of Assemblyman Dibble, backed by a powerful lobby, first determined it should not become the law, and resorted to all manner of parliamentary tactics to secure its defeat; but recognizing the universal demand for the purification of the ballot-box, for improved methods of voting and a trial of this Australian system, they became alarmed and the measure passed with but three dissenting votes—Dibble, Bruner and Galbraith. After a careful examination of this law, I am led to believe that when the people come to understand its provisions and familiarize themselves with its workings, they will appreciate the difference between a secret and independent ballot and a ballot cast under the eye and direction of the bosses.

I believe our law is the best guarded and most complete in detail of any yet enacted in this Union. This Act will do much to atone for the many sins of omission and commission of this very, very bad Legislature.

A bill has passed submitting to a vote the proposition of electing U. S. Senators by direct vote of the people instead of by the Legislature, as now. The only good to be accomplished by this will be to demonstrate the unanimity of opinion upon the subject. I believe when the vote is had it will be substantially unanimous, and if so, should be regarded by our Senators and Representatives in Congress as a demand that they labor for an amendment to the Constitution of the United States to provide for the election of U. S. Senators by the direct vote of the people. The bill introduced by Senator McGowan of Humboldt providing for county mutual insurance companies was carefully prepared, and on the whole a good measure. Farmers could have organized under its provisions and insured their property at less than half the cost now imposed by the insurance ring. The bill, however, was defeated through the influence of the well-organized insurance companies.

The bill prepared and approved by the Grange Committee and introduced by Senator Ragsdale of Sonoma county, and known as the Grange Mutual Insurance bill, came up on third reading March 6th and was refused passage by the following vote: Ayes—Baily, Berry, Carpenter, Crandall, DeLong, Denison, Dray, Flint, Heacock, McComas, Ostrom, Preston, Ragsdale and Shippee—14. Nays—Banks, Britt, Broderick, Byrnes, Campbell of Siskiyou, Dargie, Everett, Frazer, Goncher, Hamill, Harp, Maher, Mahoney, Simpson, Sprague, Voorhies, Welch, Wm. H. Williams and George H. Williams—19. Ostrom changed his vote and gave notice of a motion to reconsider the vote by which the bill was refused passage. On the 13th inst. Ostrom's motion to reconsider was lost by the following vote: Ayes—Crandall, DeLong, Dray, Flint, Heacock, Langford, Mead, Ostrom, Preston, Ragsdale, Shippee and Streeter—12. Nays—Banks, Britt, Broderick, Byrnes, Campbell of Siskiyou, Carpenter, Dargie, Denison, Everett, Frazer, Goncher, Hamill, Harp, Maher, Mahoney, McComas, Simpson, Sprague, Voorhies, Welch, Wm. H. Williams and George H. Williams—22. Thus the Grangers and producers of this

State were denied the right to organize and mutually insure their property.

The names of the Senators above, who, by their votes, refused to relieve us from the merciless extortion of the insurance ring, should be marked by every Granger and Alliance man in the State, and held in remembrance. I am informed that this insurance combination, during the last year, divided among themselves \$6,000,000 in dividends, drawn from the productive industries of the State, much of which could be saved to the producer under the proposed legislation.

The bill providing for the payment of taxes semi-annually has passed the Assembly and is now on the Senate special file, and possibly may pass that body and become the law. [Passed]

The contest now raging at the Capital to determine who shall fill the unexpired term of Senator Hearst overshadows all legislation, and when that question is settled the prevailing opinion is that adjournment *sine die* will soon follow.

The per diem of members was out off on the 5th of March by the Constitution; hence, every day they remain in session is money out of pocket to all honest members, and all snob, long to face homeward.

Sacramento, March 19, 1891.

### Tulare Grange & F. A. Picnic.

Worthy Sec'y and Bro.:—The last meeting of Tulare Grange was largely attended; besides the regular business, the tramp question was ably discussed. At a previous meeting the Grange voted to hold a picnic this spring and invite the Farmers' Alliance to participate. The Alliance has accepted and the date of picnic set for May 9th. The Grange will offer an address of welcome for the Alliance to respond to. It is proposed to invite able speakers for the afternoon—one a Granger and the other an Alliance member, each Order to secure its own speaker. It is proposed to make the salt-grass dance with joy, while the snow-capped Sierras reflect a brighter smile than ever before over this valley and the old and young then gathered under the old oaks. Come all Patrons who can, including ye editors of the RURAL. I will write you further after our next meeting. The Alliance holds its county meeting April 1st. I think the County Alliance will be with us. While I am not a member of the Alliance, I am on the best of terms with them and hope I may always continue so while I am an officer of the Grange. Fraternally,

E. C. SHORMAKER, W. M.

Visalia, Cal., March 25, 1891

### San Lucas Picnic and Barbecue.

EDITORS PRESS:—San Lucas Grange has made arrangements to celebrate May Day in the good old style by having a public picnic and barbecue enlivened by a cornet band, dancing and a ball at night. We will not orate or specify, as we are going in for fun. We will be pleased to welcome members of the Grange, but trust they will not forget to bring with them the A. W. and a few necessary signs of recognition.

On the 14th of March we adopted resolutions regretting the death of W. Treasurer C. J. Cressey and voted that our charter be draped for 30 days.

I am glad the Executive Committee have made business contracts with S. F. firms on the trade-card system. I think it will materially aid the Order. The only drawback is the fact that we grain farmers receive our cash only once a year, and have to run on credit in town between times.

An organ has been added to our Grange furniture. We expect more music when we sing "In the Sweet By-and-by." Fraternally, San Lucas March 29. S. SHERWOOD, M.

### San Joaquin County Pomona Grange.

There will be a special meeting of San Joaquin County Pomona Grange in Stockton Grange hall on Saturday, the 25th day of April, commencing at 10 o'clock A. M. The order of the day is discussion of the practicability of the Stanford land loan.

Is there to be a meeting of the Executive Committee of the State Grange April 14th? Fraternally yours, J. D. HUFFMAN, Sec'y. Lodi, Cal., March 31, 1891.

[There will be a business meeting of the Executive Committee April 14th.—EDS.]

SAN JOSE GRANGE.—At a regular meeting of the San Jose Grange March 28th, E. T. Pettit presided and S. P. Saunders acted as Secretary. Resolutions of respect to the memory of C. J. Cressey were adopted unanimously. A selection, entitled "Widow Brown's Christmas," was read by Prof. J. W. Worthen. Some of the lady members suggested as the subject for discussion next week the advisability of allowing women to hold the position of school trustees. Next Saturday was appointed for reading the Grange paper.

HON. C. C. COOLEY of Cloverdale, formerly of the State Grange Executive Committee, and Mrs. Cooley are on their way East. They will visit friends in Topeka, Kansas, and also in Ohio, and we hope our readers will receive some interesting notes from Bro. Cooley's always welcomed pen.

## Government Land Loans Constitutional.

EDITORS PRESS:—The report of the Senate Finance Committee against the constitutionality of the land loan bill has not surprised Senator Stanford or the friends of the measure. The political history of our country furnishes many instances of official and private opinion on the constitutionality of proposed action or legislation of the Government.

Salmon P. Chase supplied the sinews of war, legal-tender government notes, in spite of the opinions of eminent lawyers that the Government had no constitutional power to make any money, except gold and silver coin, legal tender for debt.

Abraham Lincoln met the official opinion of Attorney-General Black, "that a war upon seceding States was unconstitutional," with the declaration that war made these United States a sovereign and powerful nation.

To save the Union, he freed the slaves, notwithstanding the gratuitous legal advice of eminent constitutional lawyers "that as slaves were recognized as property, it would be unconstitutional to take them from their masters without due process of law and without compensation." The writ of freedom was issued and was executed by the army with victories.

The Supreme Court of the United States at first seemed to incline to the close-construction opinion, that the Government's authority to make greenbacks was derived from the "war power" rather than a grant of constitutional power, and that as a consequence, the legal-tender notes issued since the close of the war were not a legal tender for debt, but the Supreme Court, during Grant's administration, with a full bench and some new stalwart American judges, decided that Congress had the implied constitutional power to issue treasury notes and make them a legal tender for debts at any time when deemed advisable. Thus is established in the Government of the United States the exclusive power to make money and to supply the country with money as a circulating medium when needed for that purpose, which is a correlative duty to the governed. Money is the lifeblood of business, and enriches the Government that supplies and the people who use it.

The supply of gold and silver is now inadequate to the world's demand for coinage, and some new currency is needed to take the place of the National bank currency issued by the Government on United States bonds as security that is being rapidly withdrawn, owing to the redemption of the bonds. In this emergency, Senator Stanford simply proposes a currency based upon lands, a coinage of land value, the same as gold and silver are deposited, and certificates of deposit issued as money, or as United States bonds are now coined for National banks. His aim is to place the land-owner on the same footing as the bond-owner, and have real property used by the Government as security for the redemption of the currency. The forces of the industrial world are his allies, while the world of politics and finance is in opposition by reason of self-interest.

This is a Government of the people and for the people, and never fear, the right, the reasonable and the lawful will prevail in the battle of ballots that is not far off. The bullets settled a good many constitutional questions, and ballots will settle the rest of them in favor of the best interests of the voters. As precedents for Government loans, I cite the following: National bank notes are signed and issued by the United States Treasury to the National banks upon the United States bonds as security for their redemption, and are, as a rule, redeemed by the Government out of the United States Treasury. The fact that they are signed and redemption guaranteed makes them National bank notes, and it is not true that the Government simply authorizes the banks to issue them.

The distribution of the supplies to national banks was practically a loan by the Government to banks on call and without interest, and they still have most of the money in spite of the demand of the present administration for its return to the treasury, it not being convenient for the banks to do so, as substantially the Secretary of the Treasury has reported.

The Central and Union Pacific Railroad companies borrowed, and the Government loaned to them, more than \$60,000,000 in United States bonds in aid of building the roads, and the Government received from the companies as security for the loan a mortgage on their property. Senator Stanford has stated and further testified that the bonds so received were sold at a discount for gold. The present chairman of the Finance committee was then in Congress, and evidently thought that a loan of United States bonds to a corporation upon security of what resulted in a second mortgage on railroad property, already mortgaged for all its cost and more than it was worth, was a safe constitutional loan of the nation's money.

Now, when the people ask for onerousness based on the security of twenty billions of dollars worth of real estate, yielding an annual income of more than five billions of dollars, the chairman scents the idea and condemns the measure as "unsafe, unsound and unconstitutional."

In this argument I have not knowingly misstated any facts or drawn any false conclusions.

W. H. AIKEN.

Santa Cruz.

## FARMERS' ALLIANCE.

SUBSCRIBERS wishing fuller information of the Alliance can have their names changed to the Grange Edition of the RURAL PRESS free, much to their advantage, this department being continued in the same.

## Shenandoah Valley Alliance.

Bro. S. C. Wheeler, an old worker and writer in the Grange cause, writes from Plymouth, Amador county, March 26th, in his usual faithful manner, as follows:

The Farmers' Alliance seems to strike the average farmer like a pretty severe electric shock, and there is a general rush, by our farmers up this way, to secure membership. Shenandoah Valley Alliance, only recently organized, has a membership of 32, and quite a number have their applications for membership before the Alliance. I like the aggressive character of the Order, and I believe that it will secure to the farmer and the laboring classes generally what the Declaration of Independence secured for the Colonies. They secured freedom from British tyranny.

## Freedom from Tyranny.

Ours will secure freedom from the tyranny of bossism in politics and the freedom from class legislation that grants to the aristocratic moneyed power all they require and refuses to recognize the demands of farmers and laborers. Most of the States have enacted laws to protect their own citizens, by prohibiting the indiscriminate carrying of deadly weapons.

## \$100,000,000 for a Navy.

Congress has appropriated more than \$100,000,000 of the people's money to arm and equip the navy. It is claimed that all this warlike preparation is purely to defend our own possessions. The most reasonable inference, however, is that the ultimate designs are aggressive. Moses commanded his 12,000 soldiers to destroy the Midianites and take for their own use all their possessions, because the Lord commanded him to do so. Can Congress claim that the American people are in danger of invasion and have required of them to enact laws authorizing such immense appropriations? No; it is the demand of Wall street and the millionaire U. S. Senators. The ultimate designs are not for protection, but for invasion. If I desired to raise a family of boys of an aggressive, intolerant and avaricious nature, I would arm them with the latest approved pattern of fire-arms, teach them to demand respect from their associates and to enforce the demand at the rifle's mouth, just as I conceive the Congress of the United States is endeavoring to do with the American people.

S. C. WHEELER.

## The Alliance in Butte County.

Subordinate Alliances have been formed at Moore's Station (called Honcut Alliance) with J. N. Armstrong, Pres., and Allen Wright, Sec.; at Central House with Uncle Jimmie Robinson, Pres., (our informant couldn't give names of other officers); at Gridley with George Thresher, Pres. and Frank Campbell, Sec.; at Biggs with D. Hurlbut, Pres. and A. K. Baker, Sec.—Oroville Mercury, March 27th.

Delegates from the five sub-Alliances of this county met here March 24th, and organized the Butte County Farmers' Alliance, with the following officers: Pres. J. S. Crain; Vice-Pres., Geo. Thresher; Sec., Jas. Myers; Treas., J. W. Long; Chaplain, Mrs. G. D. Wickman; Doorkeeper, J. I. Lewis; Assistant, Mrs. E. J. Robinson; Sergeant-at-Arms, C. W. Thresher; County Business Agent, D. Streeter. D. Hurlbut of Biggs was recommended for County Organizer. The next meeting of the County Alliance will be held at Biggs in July. Localities not yet organized are requested to confer with the county organization. The following delegates were present. Liberty Alliance, No. 1, J. V. Moore, C. D. Gridley and Jas. Myers. Honcut, No. 2, Mr. and Mrs. J. N. Armstrong, H. A. Hearing, Dr. Hucksins, and Mrs. M. D. Abby. Biggs, No. 3, Daniel Streeter, E. D. Smith and W. N. Winn. Central, No. 4, Jas. Robinson, P. Heiner, Jr., Mr. and Mrs. R. Chester. Gridley, No. 5, J. S. Crain, V. P. Richards, J. W. Long, G. W. Wickman, Mrs. C. W. Thresher.—Gridley Herald, March 26th.

## Alliance Notes in Washington.

At Tekoa the Farmers' Alliance purposes building a mammoth warehouse which will be twice the size of any building in the city. It will be finished in time for storing this season's crop and will be of vast benefit to the members of the Alliance. These buildings, owned by farmers will be quite numerous throughout the country by next fall.

The Industrial Federation of Washington was organized March 20th at Oakesdale. It forms an Alliance between organized labor and the Farmers' Alliance. It is proposed to hold the first regular meeting the second Monday in December at Ellensburg.

James Sliver has resigned the position of manager of the Alliance implement establishment at Oakesdale. He is succeeded by Mr. John L. Wolever. The stockholders of this company met here last week and voted to increase its capital stock from \$10,000 to \$20,000.

On March 21st the State Alliance and trades councils from different points met at Oakesdale and transacted unimportant business.

## Encouraging from Brighton Alliance.

EDITORS PRESS:—Not having seen any notice of our Order, Brighton Alliance, No. 252, in your valuable paper, I wish to advise you and the Alliances throughout the county and State that, despite general sickness in our midst, we have made rapid and steady progress since our organization. We organized with only 13 members, but we have grown to 33 members, with 12 applications on file. This growth has been made within six weeks, and during a time when every one had la grippe. As sickness has almost disappeared and the weather become pleasant, we expect a large increase in membership during the next few weeks. Indeed, it will not be long until every desirable person in the neighborhood will be in the ranks.

We have an earnest, intelligent and enthusiastic lot of brothers and sisters, and it is certainly gratifying to see the avidity with which they are entering into the work of the Order.

If every district schoolhouse in the Union had just such an Alliance as ours, it would not take as much as time to cleanse the present corrupt and foul legislation and administration of the laws of our free country. At last the farmers and workingmen have lost the former political enthusiasm (deception) and have settled down to study and reason for themselves. True, they have been led by politicians, but that time will soon be past; they see too plainly that no matter which party (they are as one) is in power the farmer goes on paying more and more taxes and never gets a grain of the promised and expected relief. We have tired of this—been fooled too long, and are undergoing a radical change.

In our Alliance are the leading men of both old parties, men who have worked and voted for the Democratic party and men who have worked and voted for the Republican party for years to their own detriment and disgust. But time has wrought a change, and it is certainly encouraging to see the people of both parties consulting and discussing with earnestness the deplorable situation of our country.

"Rome was not built in a day," neither do the working classes expect to transform the corruption and oppression of the present time without an opposition and a determined resistance; but by a deliberate,

## Determined and Persistent Movement

Along the line we are going to win and restore that prosperity and happiness enjoyed for years after the Civil War and before the laws became intricate and the Government came under control of the depraved and moneyed power of the nation.

We had a lively meeting two weeks ago, when four ladies and one gentleman were initiated. The County Lecturer, Bro. Krull, was present and added animation and wisdom to the session. Bro. Burns of Oak Park Alliance was also on hand with his usual earnest and instructive address. Last Friday evening we held another interesting meeting, when delegates were elected to the county meeting which is to take place on April 3d at Elk Grove. We anticipate an interesting and encouraging meeting at "The Grove," and hope some of the organizers and leaders of the movement will be present to assist and encourage the work.

I thank you, Bro. Dewey, for the directory, which is duly appreciated and was much needed to assist in carrying out the Secretary's work.

## A Noble Man Gone.

By Dr. Manlove's death, Brighton Alliance lost her ablest member and the County Alliance an efficient officer. Suitable resolutions are being drafted by our committee and will be presented at the next meeting. I will forward a copy in due time. A. D. MURPHY, Sec.

Perkins, March 24, 1891.

## Alliances in Oregon.

SALEM, March 27.—Col. D. J. Cole, National Organizer of the Farmers' Alliance, arrived in Oregon a few weeks ago. The Colonel has organized eight local Alliances, five in Lynn and three in Marion. This entitles Lynn to a County Alliance, which will soon be organized. The Organizer thinks he can organize a local union in Salem to-morrow, and is anxious to form a County Alliance. He will visit the entire State.

Forest Grove Times, March 13: Col. Cole, from Kansas, is now in this State for the purpose of organizing Farmer's Alliances. The friends of the movement are anxious to form a State Alliance as soon as it can be done. If the organization grows as rapidly in this State as it has done in other States, it will soon be a factor that will be consulted with respect by the ambitious office-seeker. Many of its principles are such as the friends of good government can heartily indorse, and with a little experience many men will be brought out of the ranks who will enact laws that will be so plainly worded that there will be no need to send them to the Supreme Court for an interpretation. The country needs a little honest sense at the head of affairs, and the Farmer's Alliance may yet furnish us this greatly needed element.

CONTRA COSTA COUNTY FARMERS' ALLIANCE. A Farmers' Alliance has been organized with the following officers elected: Pres., Nathaniel Jones of Lafayette; V. P., A. F. Boney of Diablo valley; Sec., H. C. Wetmore of Clayton; Treas., Aaron Samuels of Concord; D. K. William Stone of Walnut Creek; Steward,

Wm. Hemme of Alamo; Chaplain, Mrs. Toney of Antioch; Business Agent, R. O. Baldwin of Danville. On April 1st the County Alliance will meet in Byron, which will be the first regular quarterly meeting. The meetings will change around among the five different Alliances in the county. Farmers predict a good future for the movement.

## Humboldt County Alliance Notes.

The Farmers' County Alliance will convene at Eureka on Tuesday, April 7th. Bro. H. C. Hanson, President, in Eureka Watchman, says that a full delegation from all the sub-Alliances is earnestly desired, as a thorough and complete organization will be necessary to dispose of such business as may come before the Alliance.

The sub-Alliance at Table Bluff held a rousing meeting on March 21st, at which six new applications for membership were received.

County Organizer John R. Smith has addressed the citizens of Dow's Prairie and Blue Lake on the objects and principles of the Farmer's Alliance.

BYRON ALLIANCE.—F. R. of Byron, Contra Costa, in Livermore Herald: On Thursday, the 5th of March, ten men from around Byron started a Farmers' Alliance. Mr. Burdette Cornell, a young man from the East, now a member of a Santa Barbara Alliance, was the organizer. Although a young man of but 20 years, he knew what he was talking about and met with success. He organized in Antioch, Lafayette, Walnut Creek and Concord, besides Byron. The officers of Byron Alliance are as follows: J. C. Preston, President; Alonzo Plumbly, Vice President; M. Grover, Treasurer; W. J. Caseellmann, Secretary; J. Antrun, Doorkeeper; W. Chilson, Assistant Doorkeeper; L. A. Chilson, Chaplain; F. E. Collins, Steward; Volney Taylor, Lecturer. On Friday, the 13th, another meeting was held, and Mr. Cornell, being again present, delivered a very able speech, and 15 more candidates joined. The next regular meeting came off yesterday, March 21st, when three more candidates were admitted and five or six others made application.

## THE VINEYARD.

## Grape-Growers' Meeting.

The meeting of grape-growers in the Saratoga Wine District took place on Tuesday afternoon, March 24th. It was held in the H. V. A. hall, on the Mountain View and Saratoga road. The attendance was quite as large as was expected, about 75 having responded to the call. Colonel Hall was elected temporary chairman and Mr. Sontheimer, Manager of the Pacific Winery, San Jose, secretary. The chairman briefly stated that the object of the call was to afford the grape-growers of the west side of the valley an opportunity of organizing for self-protection against the wine-makers and wine merchants combinations. It was pointed out that the wine merchants, and chiefly those of San Francisco, have been enabled for several years to fix the prices which the local wineries should pay the grape growers for their grapes. By combination they have forced grapes down in less than seven years from \$25 to \$9 a ton. The grape-growers, as stated, cannot make any money at these low prices—to many of them such prices mean loss and not gain. The grape-growers have therefore been forced to the conclusion that their only chance of escaping the ruin that the wine-makers were forcing on them was to combine and form themselves into an association which would be empowered to guard and protect their interests in forcing grapes up to living prices.

The meeting being but the initiatory one of the movement, the proceedings were of a somewhat informal character. Colonel McGlinicy, a large fruit-grower near Campbells Station, and who was present by special invitation, addressed the meeting. His remarks were chiefly devoted to outlining a plan of organization and pointing out the best methods for acquiring the desired results. Part of the proposed scheme is to permit wine-makers who own their own vineyards to join the association and to suggest and encourage the organization of similar associations in other sections of Santa Clara county, as also in Napa and Sonoma.

Mr. Bozo Radovich spoke of the profits that should and could be derived from the wine industry under proper management. As proof that there was plenty of money in growing good grapes and making good wine, he cited the results of his shipments to London, England, adding that if care were taken to make a blend of wine suitable to the English palate, a large and profitable trade could be done with the wine merchants of London.

Captain Crossley, Mr. Sontheimer and others spoke, after which the chairman appointed the following committee on organization: Colonel McGlinicy, A. Malpas, Peter Ball, J. P. Bubb, Bozo Radovich, Captain Hawes.

The committee was instructed to formulate a plan of organization, and report the same at the next meeting, to be held at the same place next Thursday week, April 2d. Prior to that date the committee will meet Friday at the residence of Mr. J. P. Bubb and draw up the plan of organization. Captain Crossley was instructed to draft an address in the form of an invitation to the grape growers in other parts of this State to attend the next meeting,

and requesting their co-operation in the movement.

One thought suggests itself in connection with this movement; how do the grape-growers propose to reconcile their differences with the wine-makers, if the latter are allowed to become members of the association? The grape-growers have a good cause, but it is difficult to see how any results can be reached if they allow those whom they are combining against to join their camp. The line should be drawn at wine-makers who are owners of their own vineyards. These latter would be just as desirous to sustain the price of grapes as would grape-growers who do not own wineries.

A suggestion was made to have the grape-growers on the east side of Los Gatos organize so that the two associations could work in harmony.—Los Gatos News.

## Ramie Culture.

The interest in ramie culture seems to be increasing as the weeks go by. A special meeting of the Sacramento Grange was held at their hall on Saturday of last week, for the purpose of further considering the subject. The Sacramento Record, in noticing this meeting says:—

W. H. Murray, Secretary of the California Ramie Company, addressed the Grange at considerable length. He stated that his company would take pleasure in establishing a ramie-culture station at any place in Sacramento county that should be chosen. It should be remembered, he said, that fully 50 acres should be planted by the farmers to make it profitable to send a machine, engine and baling-press to the station. If, however, a less number of acres were planted, the stalks could be sent to some other station for working.

After Mr. Murray had concluded his remarks, the Grange appointed a committee, composed of the following named, to wait upon Governor Markham, and urge him to sign the bill to encourage ramie culture, recently passed by both houses of the Legislature: Erskine Greer, H. W. Johnson, C. E. Mack, Jr., Mrs. C. A. Hull and Mrs. G. T. Rich.

## The Governor Favors It.

This committee proceeded immediately after the adjournment of the meeting to the Governor's office, and succeeded in gaining an audience with the Executive. After a short consultation, the Governor said he felt convinced that the bill was a good one, and he intimated that he would in all probability sign it.

There is but little doubt now that ramie culture will progress rapidly in Sacramento county. Already a large number of prominent farmers—among them being ex-Senator William Johnston, Myron Smith, Charles Hull and Charles J. Jenkins—have signified their intention of engaging in the industry as soon as practicable. It promises to be a profitable industry both for the growers and the manufacturing interests. When the fiber is produced it should never be allowed to find its way to France. It has been suggested that with water power at Folsom, a factory could be built, and the fiber manufactured into threads that are very valuable—worth not less than \$1 per pound.

The Oakland cotton factory will probably make the first attempt at manufacture from this fiber. Grain bags for the farmer can be made of it in all probability, cheaper and far more durable than the imported material for their manufacture now being used at the Folsom State Prison. It will also enter into many other forms of cheap manufacture. The bill which has passed both branches of the California Legislature offers a premium of one cent a pound for the merchantable fiber, and also makes an appropriation to aid the farmer in purchasing ramie roots for replanting. Any further information in regard to the matter may be obtained by addressing Wm. H. Murray, Secretary of the California Ramie Company, 433 California St., San Francisco.

## Oregon State Horticultural Society.

The next quarterly meeting will be held in the Senate Chamber, State House, Salem, on Tuesday, April 14th, 1891. The following papers are announced: The Lessons of 1890.—R. D. Allen, Silverton. The Strawberry and its Culture.—E. Hofer, Salem. Pruning and Training the Peach.—M. Scheydecker, Fulton. Notes from Newberg.—C. E. Hoskins, Newberg. What I know about Drainage.—J. F. Beatty, Chemawa. What Shall the Harvest be from a Horticultural Standpoint.—Rev. A. Rogers, Forest Grove.

Other papers are promised, but not having titles we are obliged to make an apparently short program. It is hoped that a good attendance may be had at this meeting as business of considerable importance is to come up before the society for discussion; one important matter will be the adoption of a scheme for the exhibits and premiums thereon and the standing committees will be announced at this meeting.

E. R. LAKE, Sec. S. H. S.

Corvallis, Oregon.

## Arroyo Grande Notes.

EDITORS PRESS:—The season has been perfect so far; grain is looking fine, almonds, apricots and peaches are in full bloom. Strawberries will be plentiful in a few weeks.

Oranges and lemons of Arroyo Grande growth are hard to heat. The "Arroyo Grande Pride," a seedling lemon, has no equal that I've seen. Our olives, prunes, apricots and apples are first-class. We have taken more prizes for vegetables than any other locality in the United States.

D. F. NEWSOM.

[The lemons received with the above are very handsome. We will take time to test them and report results later.—EDS. PRESS]

### I Sat Alone With My Conscience.

Concerning the authorship of the following famous, deep-souled poem, (read March 14th, before San Jose Grange), a recent exchange writes: "As these verses appear in a volume of poems recently published by Chas. W. Stubbs, there can be little doubt that he is the author."

I sat alone with my conscience,  
In a place where time had ceased,  
And we talked of my former living  
In the land where the years increased.

And I felt I should have to answer  
The questions it put to me,  
And to face the answer and question  
Throughout an eternity.

The ghost of forgotten actions  
Came floating before my sight,  
And things that I thought were dead things  
Were alive with a terrible might.

And the vision of my past life  
Was an awful thing to face,  
Alone with my conscience sitting  
In that solemnly silent place.

And I thought of my former tremblings,  
Of the judgment day to be,  
But sitting alone with my conscience  
Seemed judgment enough for me.

And I wondered if there was a future  
To this land beyond the grave;  
But no one gave me an answer,  
And no one came to save.

Then I felt that the future was present,  
And the present would never go by,  
For it was but the thought of my past life  
Grown into eternity.

Then I woke from my timely dreaming,  
And the vision passed away,  
And I knew the far-away warning  
Was a warning of yesterday.

And I pray that I may not forget it  
In this land before the grave,  
That I may not cry in the future,  
And no one come to save.

So I sit alone with my conscience  
In the place where the years increase,  
And I try to remember the vision  
In the land where time will cease.

And I know of the future judgment,  
How dreadful so'er it be,  
That to sit alone with my conscience  
Will be judgment enough for me.

### The Queen of the Hearthstone.

[Written for the RURAL PRESS by KATHERINA BRYANT NOLAN.]

She rules the world, and yet she persists in considering her sphere a limited one. "The ills of life" come to one and all, rich and poor alike, and they are trials requiring all the coolness of a stoic if one would rise superior to them and grow old gracefully. No matter how often we rail at the Fate, they keep on spinning relentlessly and uniformly and the threads are out off with certainty and evenness at appropriate seasons.

The highest ideal of earthly bliss is the well-regulated old-fashioned family hearthstone, where the wife and mother reigns in seclusion and banishes discord with a firm yet kindly hand.

It may be difficult for the young wife to assert herself, and there will undoubtedly be many a one ready to criticize her noblest efforts and brightest aims. The beloved Charles or John or James may not understand her, but none of these disheartening occurrences should discourage any woman, as she has simply to go on in her quiet, gentle, unobtrusive style until she proves in an experimental way that she knows what she is about.

Charles and John and James are likely, practical, every-day sort of fellows and they go by experience rather than intuition, and consequently value the advice and ideas of experienced people. They see things from a logical standpoint and it takes a deal of time to toil up to the eminence which commands this broad view of life.

A good counselor is the friend who listens sympathetically and with understanding to all troubles and devises the methods of extrication; so woman with her quickness of perception and wit gets at the root of a matter directly and is well fitted by nature, generally speaking, for this important position. It requires courage and resolution to climb, when the logical mountain becomes a volcanic and dangerous top, and the masculine element is fond of hardening itself to platitudes. Many a wise counselor "preaches" too much and too often and wears herself out needlessly, but it is a self-sacrificing effort nevertheless, as women understand that success depends upon trifles and are ever on the watch for the turning-point which leads on to fortune.

The women of the middle and lower classes are too heavily burdened with cares and anxieties and should be chary of accepting untold

responsibilities, yet any outlook which suggests relief can certainly be contemplated, and this should be done without prejudice.

Many of the woes betrayed to a cold and unfeeling populace arise from trivial misunderstandings that roll and roll and gather force, even as a little snowball increases in strength and size as it rushes down the hillsides.

It is the fashion of the time to prate of the wonderful strides women have made toward complete liberty and emancipation, but in the discussions, some of the cold, hard facts, lie forgotten beneath the surface, like bladders, dangerous rocks in a rushing river. They are old-fashioned things but it will hardly do to lose sight of them entirely and some sort of a banner should be flung to the breeze, to indicate their reality. "Nothing succeeds like success," but the reefs must be avoided by an intrepid mariner or he will go down for all his bravery.

All the big boys and little boys, fat boys and lean boys, tall boys and short boys, are jolly good fellows generally speaking and appreciate fair play whether they demand it or not. If the "queen of the hearthstone" persists in believing that the unhappiness and misery of the world rests upon the broad shoulders of husbands, sons, and fathers, and quotes masculine arrogance, manly independence, and the selfishness of men in general, there is a cold question underneath, and the reminder is a blow aimed directly toward the feminine world, viz.: Who trains the boys from the nursery to the threshold of life?

The masculine heart is usually big enough to bear his troubles with an appearance of nonchalance, and he halls all assertions, denominating him a cold and callous youth, with exuberant joy, as it enables him to rightfully and lawfully enornat himself in that armor of the stoic, which is a relic of bygone ages. When he raises a war-ory it is a chivalrous one, lest some member of the fair sex wreck her canoe on an unseen boulder.

If women are to stand on a plane of equality they should not shirk the responsibilities simply because they are women, and they must shoulder a due share of the arrogance, pride and selfishness afloat or meet with contempt.

Bellamy has planned out the complete emancipation of women from domestic and even artistic drudgery, yet an imaginative mind shrinks from developing into an automaton and prefers to dwell under the ban of being non-progressive and of excoiting retrograde movements tending toward the further enslavement of women. There is not one bit of romance in the idea of walking under everybody's umbrella as one must, to become a true disciple of "Looking Backward," but some one body's umbrella is a fairy canopy when held by a ohlvalrous hand, even though a tempest be raging overhead and a torrent rushing underneath one's footsteps.

"The world was made when a man was born; He must taste of the joys of forbidden springs; He can never take warning from old-fashioned things."

Yet he clings to his traditions, and as Eve was given Adam to cherish and protect, he naturally dislikes to have what he considers the right of inheritance ruthlessly taken from him by modern innovations, especially when his eagle eye and poetic soul sees and feels the ruthless destruction of the quiet and happy domestic hearthstone that the poets have immortalized. Men have abused the sweet privileges granted them most shamefully in individual cases, and so have women, but in the main, man fulfills his arduous duties gracefully and woman moves in her sphere with all the energy and decision of a Roman matron.

The girl of the nineteenth century is a fortunate being, as there are many professions open to her in which she can carve out her own fortune. If she considers any of the details of domestic life beneath her, she should set her face against matrimony, gird on her armor, and go forth into the battle of life. She will be able to reach the lofty plane on which her brother stands if she eschews domestic cares, with considerable ease, and the man who now looks with scorn on the "pots and pans" may betake himself to their society with alacrity in order to earn his daily bread.

In short every woman should fill her sphere and be proud of her kingdom, and honestly desirous of advancing its interests after having chosen a vocation, if she wishes to accomplish great things, and to unlock the box which holds the wonders of our modern civilization in its mystical keeping. It is a woful mistake to become a "queen" without going into all the details of government, even to the best and easiest way of washing a blackened saucepan. The future of the nation depends upon the babies of the day and woe betide the baby who gets a draught from an unwashed bottle.

Money is powerful and waves a fairy wand in a wise hand and dispels the ills of life marvelously sometimes, but a warm heart sensitive to sorrow, must guide and counsel, else the gold is cold and sordid; the "queen of the hearthstone," who rules an impoverished kingdom cannot be governed by the love that actuates her rich contemporary.

A bright woman, ambitious for a career, can emancipate herself in a way that challenges Bellamy's airy structure, if she has the requisite courage to bew on her pathway.

"I'm going into the newspaper line, by way of variety," said one of these undaunted souls to a bachelor acquaintance once upon a time.

"You don't want to do that, it's man's work," he answered, impatiently.

"Can't help that. I've just got to do it. I

must be independent, my boy," she rejoined. The "boy" subsided and snubbed her, still he kept an eye out to see how she "got on." He observed that she "got on" with man's work very successfully, so he gradually thawed out, but he did not take back the insinuation of the impropriety of venturing beyond the confines of domestic life, and one day she observed that he was minus a button on his usually immaculate coat.

"You must let me sew that button on for you child. I will sew it good and strong with a ready hand and a steady hand," said the undaunted.

"I'll take the coat to the tailor. He'll sew the buttons on all right," the gentleman answered in a studious, docile, gratified way that spoke volumes.

"I was delighted," she wrote. "I would not take one hundred dollars for that speech. I think of copyrighting it. Wasn't it graceful of him?"

It seemed proof that men will encourage women when they have logically and experimentally demonstrated that they can avoid the dangerous rocks under the swift currents of the modern stream that floats the frail barks of our nineteenth century maidens.

Mankind is shrewd and sharp and skilled in warfare. He takes the "bull by the horns," and the maidens must stand shoulder to shoulder, keep the ranks closed up, define their duties sharply, and attend to methods both logical and illogical, if they would attain the best results in the shortest space of time, so say the oracles.

Many brilliant forerunners have been quenched under banne matrimonial, even gay and jaunty bachelors have been impressed into service and have laid down their freedom as a trophy to the "queen of the hearthstone," and possibly in order to prove that old-fashioned ways are good and seemly.

### Gum-Chewing.

[Written for the RURAL PRESS by MARIE.]

Not long ago I saw an article in one of our leading papers commenting on gum-chewing in America. It does seem such a pity to me that so many of our girls do themselves injustice by this vulgar practice, and I can but wonder how so many beautiful and otherwise well-bred girls indulge in this habit. I cannot think that they derive pleasure enough from it to rob themselves of the name of lady, and yet I would say for one that a girl who does it is not a lady, although I know many who would not agree with me, but I am not writing in a spirit of criticism, but only to defend my country and our dear girls from comment, as other countries must necessarily think the gum-chewing at least peculiar.

When I see a beautiful girl going down the street (I am sorry to say it) chewing her gum, I long to stop her and say, oh my dear, how can you spoil the effect of your graceful figure, your bright and happy winsome face and intelligent looks by that constant ungraceful motion of the jaws. Oh, mothers! teach your daughters better, and girls, scorn this habit if your mothers are careless.

### Small Fortunes for Flowers.

The most expensive dinner decoration I ever had charge of, says C. F. Klunder, the New York florist, in *The Ladies' Home Journal*, was on the occasion of a banquet given to General Cutting, at Dalmonico's. The whole outlay for flowers alone was \$3000. But even this does not approach the lavish extravagance of the Roman Emperor Nero, who gave a feast where \$100,000 was spent in roses alone!

For a dinner of twelve people, it is an ordinary thing to spend from \$50 to \$500 upon flowers. For a banquet, \$1000 to \$3000 is usually laid out. But these latter outlays are seldom made, because of the unfrequency of large dinners. \$150 is an expenditure of everyday occurrence. In the large cities, like New York, it is a common thing for wealthy people to spend from \$100 to \$500 a week in flowers, exclusively for home use. Where do they put all these flowers, you ask? You are wrong if you think there is a large quantity of flowers. Whenever I have been asked to decorate a house, or furnish flowers for daily use, I have selected quality rather than quantity.

Among wealthy people, the choicest flowers for the dinner-table are orchids. These flowers exhibit a remarkable variation; in fact, it is difficult in some species to find two flowers exactly alike in size and color. A boutonniere for the gentlemen should be made of a "Philanopsis," and about three "Catalpas" tied with a cluster of narrow ribbons to match, for the ladies. This is the most beautiful manner of table decoration, if well-arranged and properly carried out. But it is also the most expensive.

HIGH SCHOOLS.—The new law providing for the establishment of high schools is as follows:

Any city or incorporated town of 1500 or more inhabitants may, by majority of vote of the qualified electors thereof, establish and maintain a high school; or two or more adjoining school districts may unite and form a union high school district, for the purpose of establishing and maintaining a high school therein, at the expense of such city or incorporated town, or union high school district.

### From Darkness into Light.

[Written for the RURAL PRESS by C. HAIN.]

Out upon the dark world looking,  
I am longing for the light,  
I am longing for the sunshine,  
To give warmth and color bright.

Soon I know the dawn will glimmer  
In the far-off eastern sky,  
Soon the sun, in all his splendor,  
Will the gloom of night defy.

So my soul, though clothed in darkness,  
Mid the dreary night of sin,  
Will be brighter in the morning,  
When the light of heaven shines in.

Then will vanish all my sorrows;  
Wrapt in joy, I'll heavenward climb,  
Climb till in the arms of Jesus,  
I have found sweet rest divine.

Mulberry, Cal.

### The Pacific Coast Women's Press Association.

[Written for the RURAL PRESS by MAUDS S. PRASLER.]

Of the nine hundred writers on this coast, more than one-third are women. Feeling strongly the possibilities of an organization of these workers for mutual benefit and improvement, Mrs. E. T. Y. Parkhurst took the task upon her own brave shoulders. Aided by many noble-minded and public-spirited women, she issued a call for members, and then, with marvelous executive ability, placed the organization on a working basis. A constitution and by-laws were adopted that reflected much credit on the leading spirits of the movement.

The scope of the association includes much more than does any other Press Club in the United States. A list of the books written by the different Pacific Coast writers has been made and a library formed. The W. P. A. purpose to help educate the younger writers of the association and to extend practical help to all who may need it. The interests of the writers are looked after, the sale of their books and articles pushed, and good-will shown in every possible way to the members. The sick members would be shown every attention and the bonds of the organization strengthened. Much work has been planned for the future, and as soon as practicable a suitable club-house will be erected for the exclusive use of the association. The subject of international copyright will receive some attention as well as the matter of writing without compensation. All writers will be encouraged and stimulated to take more pains with their work and make it worth good paying rates. Efforts will be made to uphold the moral tone of the literary work done by members. An exhibit of the work done by the Pacific Coast writers will be prepared for the World's Fair in 1893.

The association holds regular monthly meetings at the residence of the corresponding secretary, Mrs. E. T. Y. Parkhurst, 1419 Taylor street, San Francisco. To her all letters regarding the movement may be directed. On each Monday afternoon the president and secretary may be found at the above address for the purpose of transacting business relating to the organization.

During the third week of March, the 16th, 17th and 18th, the first semi-annual convention of the W. P. A. was held in San Francisco, at Union-Square hall. Each morning the meetings were exclusively executive, and full reports of what had been done were read. Working plans were made for the next six months. Each afternoon and evening an open social meeting was held, and during the time a highly instructive and entertaining program was rendered, extending through the three days.

Much courtesy was shown the association, especially the visiting members. A luncheon was given the body on Tuesday by Mrs. J. W. Bruner of the Elmore, and on Wednesday the association was magnificently entertained by Adolph Sntro at his home on Sntro Heights.

Many thanks are due the press and the Southern Pacific Railroad Company for courtesies shown.

The convention closed on Wednesday evening with a banquet, to which a few outside friends were invited.

The association decided to accept the kind offer of Mr. E. S. Babcock, and hold their next semi-annual meeting at Hotel Coronado, in San Diego, next September. The Ladies' Annex of that city will also welcome the members of the convention, and much pleasure and profit are anticipated.

The good resulting from the personal contact of these brilliant minds cannot be easily estimated. The stimulus received by the enthusiasm shown on every hand, will leave its impress on the future work of each one present.

It is safe to assert that some of the members grew more in those three days than they had before in as many months.

The exchange of working methods, and of practical aids to writers will be given much attention in the future.

There are now more than one hundred and twenty-five members, scattered over the Pacific Slope from Central America to Alaska. It is expected the number will be doubled by next September.

THERE are two reasons why some people don't mind their own business. One is that they have't any mind, the other that they haven't any business.

## A Plea For the Ugly Girls.

It does not matter much to a boy whether he is good looking or the reverse. He is not obliged to wait for somebody to ask him to dance, and his matrimonial prospects don't appear to suffer any serious discount from personal shortages that would send a girl's stock away down below par, or even put her out of the market altogether. One never sees a man so hideous or repulsive but that some woman is ready to marry him, if he will only ask her; but men are less philanthropic, and so the ugly girls are generally left to rot to waste as unappropriated blessings. The "handsome is as handsome does" theory won't hold at all after we get out of the nursery, and a little experience soon convinces us that it is a fraud and a delusion, like that other domestic fiction, about the drumstick being the choicest part of the fowl, with which our elders used to impose upon the unsuspecting simplicity of our childhood.

We ugly girls never get any drives in the Park, nor free seats at the theatre; and as for ice-cream and French candy, no matter how handsomely we deposit ourselves, we shouldn't know the taste of either if we waited to have it bestowed upon us as a reward of merit. Indeed, the expensiveness of being an ugly girl is one of the worst things about it; there are no perquisites. We get none of the plums out of life's pudding, for under present conditions men do all the carving, and, as one of them says, "All the fine things we think and say about women apply to those only who are tolerably good-looking or graceful."

Now, suppose the same rule applied to men, and that only the good-looking ones could hope to attain to wealth and distinction; suppose, for instance, that that famous war on Oliver Cromwell's nose had been sufficient to condemn him to obscurity, as it inevitably would have done had he been a woman; suppose Grover Cleveland's too ample girth of waist had kept him out of the White House, as it certainly would have kept Mrs. Cleveland out had she been the unlucky possessor of that inconvenient superfluity; or suppose David B. Hill's bald pate had rendered him ineligible to the office of Governor of New York, as I have not the shadow of a doubt that a bald head would render any woman in America ineligible to the office of governor's wife; suppose, in fact, that a bald head was sufficient to blast any man's prospects in life as effectually as it would any woman's—I think most of the middle-aged men, at least, into whose hands this paper may fall, will admit that that would be a little hard. And, in fact, isn't it just a little hard that anybody's destiny in life should be made to depend irrevocably upon an accident over which they have no control, such as having been born with a red head or a pug nose? But this is the law under which women have lived since the beginning of time, and it doesn't give the ugly girls a fair chance. From an article by E. F. Andrews, in April Lippincott's

## Mothers as Match-Makers.

There is a kind of match-making which it is a mother's duty to attempt, writes Amelia E. Barr, in *The Ladies' Home Journal*. But it has strict limitations. It resolves itself into the simple duty of introducing to her daughter young men whose moral character is good, who are in a position to marry, and who, physically, are not likely to repel her. The young people may then safely be left to their own instincts. There should be no attempt to coerce; no moral force used to make even a suitable marriage; though extremities may lawfully be used to prevent an evil marriage. A mother's match-making really begins while her daughter's education is in progress. And it is one of the strangest of facts that mothers generally force this education in the direction of those qualities likely to amuse young men—music, dancing, singing, dressing, playing games, chaffing wittily, etc. Now, such attractions are likely to procure plenty of flirtation; but young men rarely marry the girls they flirt with. And why do not mothers consider, most of all, that approaching period in their daughters' lives when they will, or ought to, cease being made love to? Why should the preparation for young ladyhood absorb all the girl's education? How many curriculums contain any arrangement for education for wifehood or parenthood? Yet, what man wishes to pass his life with a woman whose only charm is the power to amuse him? He might as wisely dine every day upon candy sugar.

## Chaff.

THE detective has his "dog days" all the year round.

EVERYBODY seems to despise a hypocrite—God, man, and the devil.

TO the young maid marriage is a lottery, but to the old maid it is a grab-bag.

MARRYING rich widows, like drinking liquor, is often done solely for the "effects."

THE world owes every man a living, but it is a debt that he has to hustle to collect.

JACK—"A friend in need is a friend indeed." TOM—"Um—ye-es—if he doesn't need too much."

WIFE—"What do you suppose the baby is thinking about?" THE nurse—"I s'pose he's thinking what to cry about to-night."

## YOUNG FOLKS' COLUMN.

## Celia's Cross Time.

[Written for the RURAL PRESS by Mary E. Bamford.]

Celia was washing her face in an iron skillet. People always washed their faces in skillets. Nobody ever had such a thing as a tin wash basin at this time. The skillet she was using had three legs and a handle.

Celia had just got up this morning, and she was cross. She had been cross ever since the forenoon of the day before at school. The scholars had to knit or sew at school, and Celia was knitting a white wool stocking. She dropped a stitch, but she did not notice it until she had knit three or four rows more around. Then she saw the hole and she pressed the place down with her thumb. She hoped that the teacher would not notice the stitch. But all the scholars had to go up and show their work to the teacher before recess, and when Celia went Miss Healy saw the place in the stocking the first thing.

"Did you know you had dropped a stitch?" asked Miss Healy.

Celia hung her head. She did not dare to tell the teacher anything that was not true.

"Yes," she said.

So Celia had to go to her seat, and ravel out the rows she had knit, till she came back to the dropped stitch, and then she had to take up all the stitches on her needles and begin knitting again. And it was almost recess time. Every scholar who did not have her "stent" done by recess had to stay in.

Celia knit as fast as she could, but recess came before she had knit one row around the stocking, and instead of going out and playing with the other girls she had to stay in and knit and knit and knit all recess time. She was oh! so cross about it! And her being cross lasted all the afternoon and night, and this morning she was cross still. Cross times will last so long if you don't stop them right off!

Celia went into the kitchen. The big fireplace was there, with the crane hanging over the fire and all the long hooks and the short hooks hanging on the crane, and there was the kind of hook they called a trammel that could be drawn out or made shorter, whichever folks pleased, so as to hang the kettles nearer the fire or farther up from it. The crane could be swung back against the jamb of the chimney when folks pleased.

Celia's mother had made a johnny-cake for breakfast. There had been a good fire and she had put some of the coals on the hearth and baked the johnny-cake there. There were some roast potatoes for breakfast, too. Celia's mother had opened the hed of coals in the fireplace and had put the potatoes in there to roast. The mother had been up before the very first bit of light. She always worked hard all day.

The johnny-cake was as light as could be, and the potatoes were good, but Celia was oh so cross! She jerked her little sister so that she almost fell against the big wheel that was at one end of the room. There was a big wheel and a little wheel and some "swifts" that Celia's father made and a "spooler" and other things for making cloth. Part of the things Celia's father made, and such things as he could not make, as the wheels, a wheelwright made. The little sister cried and Celia did not care. Cross people are just so!

Celia's mother took a kettle and brought it to the fireplace. Celia looked quickly, for she hoped it was the beautiful little kettle that was smooth inside. Her mother always kept that kettle to fry cakes in or pies or whatever she wanted to fry. Celia hoped that her mother was going to fry something good to eat.

But it was altogether another kettle that her mother brought and set on the hearth. Then her mother brought a four-quart cake of tallow and put it in the kettle. Celia's father had bought the tallow of a man who had killed a cow. There were no stores anywhere around, so the father could not go to such places to buy tallow.

Celia's mother was going to make some candles out of the tallow. Everybody always had to make candles to burn at home, for no one had oil or gas. Celia's mother made candles every week or two. She had some candle-molds to run the tallow in after it was melted. Celia had to spin the tow-yarn for the wicks. Her mother had a stick to fasten the top of each wick to in the molds, and then she would point the other end of the wick, just as you do when you are going to thread a needle, and would run it through a hole in the other end of the mold and tie a little knot to keep the wick there till the candle was done.

But first, before the wick was put in at all, the mother would make a little blaze and would take the tow-yarn wick and run it through the blaze in a hurry, so as to singe off all the little hairs that stood out every way; for, if the little hairs were not singed off, they would spread all through the candle and it would spatter while it was burning and the tallow would keep dripping down every time a hair came.

Celia hated spinning the tow-yarn for the wick. She hated making candles, too.

"I thought you were going to fry cakes," she said; "I think you might!"

And then she was crosser than ever, so cross

that her mother was glad when Celia went to school. And there Celia made fun of a poor girl whose dress was almost worn out, and the poor girl cried. And Celia slapped Tommy Gordon and stuck her knitting needle in Bessie Gordon's hand, and quarreled with four boys that she knew, and said "Red-head! Red-head!" to a little girl named Maggie till she cried.

Celia's cross time just lasted and lasted! The reason was she didn't try to stop it.

When she came home there were the candle molds hanging outdoors by a string. Her mother always hung the candles outdoors to cool after making them.

There was a little girl with Celia, and they had been talking together very crossly, and the little girl said to Celia, "You don't dare jump up and catch on to that string that holds the candles!"

Celia was so cross she said, "I do too dare!" and she jumped and caught the string, and it broke and the candle molds tumbled down, and every one of the candles broke!

The other little girl was so scared she ran away, and Celia's mother told her she would have to go to bed in the dark for a whole week because she broke the candles. The other folks could use them, but Celia should not be allowed to, because she was so cross and broke the candles on purpose.

Celia sat down and cried and said "Oh! Oh! Oh! I have the worst time of anybody in this world!"

But she never thought how many other people she had made unhappy. Her mother and her little sister, and the poor girl and Tommy and Bessie, and the four boys and the red-headed girl. Ten people! Ten people that one little girl made sorry, when she might have made them happy instead! Cross people do make so many bad times for other folks! Oh, let's you and I never be cross any more!

## The Story of a Lost Cat.

[Written for the RURAL PRESS by Mrs. F. W. Welles.]

You must know it is a very sad thing to be a stray cat, especially in the city. I assure you it is and I speak from my own experience.

I was once a very fortunate cat. My coat was as soft as plush and I was quite fat enough for comfort. All day I lay near the stove or in mistress's lap, unless she herself placed me on the rug made for my especial use.

I think I must have grown thankful with so many comforts to enjoy, for one morning, when I found my mistress had given me milk a little sour in place of that fresh from the milk wagon, I made a very unpleasant noise about it and the first time I left the outside door open, I slid out and ran away.

For some time I ran along not daring to look up, for fear of seeing the angry face of cook, and when I did look about me I did not recognize the streets where so many busy people were hurrying along.

I own I was a little frightened when a coupe came near running over me, but I dodged to one side into a yard where I hid under a rose bush. Here, I could see without being plainly seen.

I had been here some little time, at least I had been asleep and had awakened feeling very hungry. I now wished I had the saucer of milk I left standing on the kitchen floor. I was still wondering which road would take me home, when two boys, with very ugly faces and wicked looking eyes caught sight of me. I know I must have trembled.

The agony that filled the next hour of my life I am sure would be hard even for an educated cat like me to tell. They tied ugly tin cans to my tail and put paper stockings on my feet. Later, they tied my feet together and laughed loudly at my efforts to walk. Surely I never had been so abused before and am thankful every day of my life that I belong to a well bred family where other amusements are furnished than the torture of a poor cat.

After I had been thus shamefully treated for some time, and was so hungry I could hardly walk, the boys ran away and once more left me to the shelter of the rose bush.

Here it was that a gentleman found me and placed me kindly under his arm and walked away. I have since been very sorry for a spiteful little dig I gave him with my nails, but I assure you it was before I knew how really kind he was and how well disposed toward all cat kind.

He stroked my fur and talked very gently—manly while he walked rapidly toward a good sized house with a hell on the front door. While he rang the bell and waited for some one to let him in, I read—for I am an educated cat and have often studied the printed page with my mistress's little son—"Home for stray pets," printed in big letters on the front door.

In a few moments I was in a large room where there were ever so many cats in cages and looking O, so hopeless.

Beyond this room was one for dogs, and but for a certain little pug, a prisoner there, I might never have written this story.

I was placed in a large cage, with ever so many other cats, all of whom had been brought there that day. A little striped kitten told me this and we were friends right away.

When I had finished the little scraps of food, that I am sure my mistress would never have been guilty of calling a meal, my friend, the pug, came slowly through a crack in the open door and commenced talking. If he had not

turned his watery goggle eyes full upon me, and seemed sadder than even his words expressed, I might have doubted him; as it was, every word he uttered went straight to my poor catfish heart. I could not keep back a bit of moisture from gathering in the corner of my right eye, though many a cat in my position might have been more dignified. He told me that no inmates of the "Home" live longer than three days, and if my mistress did not come for me by that time I would be put in a room where I would instantly fall asleep and never, never wake up. I was very glad when the keeper came and put this agonizing pug in his own room.

All that day I watched for some one to come and take me away. How many good resolutions I made and how often I made pledges of future good behavior.

I can scarcely tell how the night was passed but I awoke in the morning feeling the little gray kitten lick my face. Then and there I promised to do all in my power to rescue my humble friend.

After another painful visit from the pug, which so nearly distracted me that I was forced to m—e—o—w, the door opened and the keeper entered with a lady. How I jumped against the sides of the cage and mewed and purred with all my might, for this was my own mistress and little Charlie was with her.

Soon she saw me and I was taken out and once more felt the loving embrace of my mistress's arms. While I was still curling myself about and trying to make my mistress know how very glad I was to see her, she said, "why then's Debby's little gray kitten, I will take her." Debby is a little girl who lives next door.

It is needless to say that since my experience, I have been a very well behaved cat and eat my food without complaint, but often I sit in the back yard and talk over my experience with the gray kitten and we both agree to be very good natured cats and stay about our own homes.

"Good gracious, Tommy, where have you been?" "I fell into the pond, papa." "And with your nice new trousers on." Well papa, I hadn't time to take them off before I fell in."

## DOMESTIC ECONOMY

APPLE FILLING.—Two grated apples, one egg, one lemon (rind and juice), one cupful of sugar; scald all together; when cool put between the cakes, and cover the top with whipped cream flavored with lemon and slightly sweetened.

OATMEAL CRISPS.—One cup oatmeal, nearly one-half teaspoonful salt, mixed together dry, cover with cold water and let it stand half an hour. Drain off any water remaining; drop by spoonfuls on a tin, spreading as thick as possible. Bake until brown and crisp, but not scorched in the least.

PORTLAND PUDDING.—One cupful of beef suet (chopped fine), one-half of a cupful of sugar, one-half cupful of molasses, one cupful of sour milk, one cupful of chopped raisins, three cupfuls of flour, one teaspoonful of saleratus, one egg, nutmeg and cloves; steam in a well greased two-quart basin two hours.

FRIED OYSTERS.—Wash the oysters, drain, sprinkle with salt and pepper, and let them stand twenty minutes. Roll first in seasoned crumbs, and then dip in beaten egg mixed with one tablespoonful of milk, roll in crumbs again and fry one minute in smoking hot lard. Drain on paper and garnish with sliced pickle.

ALMOND TAFFY.—This is the latest "sweet." Boil together half a pint of water and a pound of brown sugar for ten minutes; blanch and slice through the middle 1½ ounces of almonds; stir them in the syrup with two ounces of butter; let it boil hard for ten minutes; pour on a well-buttered dish to the thickness of half an inch.

LONG BAKED INDIAN PUDDING.—Stir into a pint of cold milk seven even tablespoonfuls of Indian meal. Add a teaspoon of molasses, a half-teaspoonful of salt and a large tablespoonful of butter. Pour another pint of milk scalding hot over the other ingredients and stir it well. Put the pudding into a thick, earthen pudding dish; the old-fashioned yellow ware seems the most appropriate to serve it in. It should be begun early in the morning in order to be served at three o'clock dinner. After it has baked for one hour, stir in another pint of cold milk and the same in another two hours. This makes a jelly like pudding.

DETECTING OLIVE OIL, BUTTER AND OLEO-MARGARINE.—The reagent employed is a solution of silver nitrate at 25 per 1000 in ethylic alcohol at 95°. About 12 c.c. of the oil in question and 5 c.c. of the reagent are placed in a test tube. The tube is then set in a beaker of boiling water, and the changes of color which take place in the liquids are watched through the glass. Unless the oils are perfectly limpid, they must be previously filtered. Olive oils sooner or later take a fine green color, which is lighter in the superior qualities. Pure cottonseed oil is turned completely black. Oil of earth nuts (*Arachis*) takes first a red-brown color and finally turns green, losing its transparency. Oil of sesame takes a deep red color and remains reddish. Oil of colza takes yellowish-green colors and becomes turbid. Natural butter preserves its natural color. Oleo-margarine becomes a brick red, which color may be detected even in samples containing as little as five per cent of margarine—*Raoul Brulle*.

## TABLE OF CONTENTS.

EDITORIALS.—The Week; New Laws Affecting Agricultural Interests; Grain Bags at the Prison; Exports of Live Stock; Agricultural Statistics; Miscellaneous, 316.

ILLUSTRATIONS.—Date Palms on the South Bank of Putah Creek, 309. The Choco, or Chayota, as grown in Santa Barbara, 317. The New Building of Weinstock, Lubin & Co., Sacramento, Now in Course of Construction, 322.

PATRONS OF HUSBANDRY.—The Master's Desk; Farmers' Picnic; Legislative Anti-Reform Voters; Tulare Grange and F. A. Picnic; San Lucas Picnic and Barbecue; San Joaquin County Pomona Grange; San Jose Grange; State Executive Committee; Government Land Loans Constitutional, 312.

FARMERS' ALLIANCE.—Shevadoah Valley Alliance; The Alliance in Butte County; Alliance Notes in Washington; Encouraging from Brighton Alliance; Alliance in Oregon; Contra Costa County Alliance; Humboldt County Alliance; Notes; Byron Alliance, 313.

THE VINEYARD.—Grape Growers' Meeting, 313. FLORIST AND GARDENER.—"Old Fussy" in the Garden, 310.

THE APPLAUX.—Introducing Queens and Queen Cells, 310.

METEOROLOGICAL.—Facts About Weather Forecasts; Do Storms Move in Cyclones? 310. SHEEP AND WOOL.—A Good Outlook for Wool, 311.

HORTICULTURE.—Importations of European Grapes; Importations of Olives; Walnuts in Ventura County; The New Olive Oil Law, 311.

THE HOME CIRCLE.—I Sat Alone With My Conscience; The Queen of the Hearthstone; Gum Chewing; Small Fortunes for Flowers; From Darkness into Light; The Pacific Coast Women's Press Association, 314. A Plea for Ugly Girls; Mothers as Match Makers; Cbaff, 315.

YOUNG FOLKS' COLUMN.—Celia's Cross Time; The Story of a Lost Cat, 315.

DOMESTIC ECONOMY.—Sundry Recipes, 315.

THE BOTANIST.—A New Food Product; Blossom Time, 317.

ENTOMOLOGICAL.—Pests of the Apple and Pear, 317.

AGRICULTURAL NOTES.—From the Various Counties of California, 318-320.

MISCELLANEOUS.—State Appropriations for the Fair, 320. Fashion Notes, 324.

THE DAIRY.—Teosinte as a Forage Plant; Silos in California, 327.

## Business Announcements.

[NEW THIS ISSUE.]

Combined Harvesters and Traction Engines—Benicia Agricultural Works, Benicia.  
Mowers—Deere Implement Company.  
Windmills—R. B. Sin Clair, Alameda.  
Mowers, Rakes, Etc.—H. C. Shaw, Plow Works, Stockton.  
Drapers, Etc.—White, Cooley & Cutts, Marysville.

## The Week.

The beautiful weather continues, and all reports from the country are of fine growth of seed and cereal crops. The wild-flowers are coming along rather late, but in full form and color, and are spreading beauty everywhere. There has been, however, a continuance of cool, drying winds, and apprehension—or at least strong desire for rain before long—is widely expressed. We certainly need a good supplement to the winter's rains in order to bring crops through in good shape.

At the south there is unparalleled activity in

the orange trade, and special trains are going forward not singly but in groups. Prices of oranges have sharply advanced, and much money will flow into the orange regions as the result of present activity.

By the omission of decimal points in the table in the census report on the grape interest in last week's *RURAL*, the yield of grapes per acre was lifted clear beyond even the most exuberant real estate agent's limits. Inserting the decimals, and the rate per acre for California becomes ridiculously low. We shall refer to the matter at another time.

## New Laws Affecting Agricultural Interests.

Since the adjournment of the Legislature, Gov. Markham has applied himself assiduously to the consideration of the bills sent to him from the law-makers, and has affixed his signature to many of them. Some of those affecting agricultural interests have been fully set forth in our columns, and others will appear later as we can obtain authenticated copies of those of wide application. At this time we select from the lists of those approved by the Governor, those which have special reference to our constituency.

The semi-annual payment of taxes is now provided for by law. The taxes on all personal property and one-half the taxes on all real property are payable ten days after the second Monday in October, and will be delinquent on the last Monday in November. The remaining one-half of the taxes on real property is payable after the first Monday in January, and becomes delinquent on the last Monday in April. All the taxes can be paid when the first installment is due.

A group of laws applies to drainage, reclamation and irrigation. Amending the Drainage Act and directing the Board of Commissioners to meet as a Board of Equalization. Amending the Irrigation Act in the matter of the omission of assessments and public notices, also providing that no informality shall invalidate election of officers or issue of bonds. Relating to the collection of assessments made in reclamation districts. Defining the powers and duties of Boards of Trustees in reclamation districts. Providing for the correction of errors or mistakes in the assessment of swamp-land districts. To determine that lands in this State are swamp and overflowed when returned as such by the United States Surveyor-General.

Horticulture receives most attention of any of the branches of agriculture, and laws now exist amending the Acts to protect and promote the horticultural interests of the State; authorizing Boards of Supervisors to appoint either one or two members of the Examining Commissioners under the Horticultural Board; appropriating \$5000 for the purpose of sending an expert to Australia, New Zealand and adjacent countries, to collect and import into this State parasites and predaceous insects. The law for the protection of olive oil appears elsewhere in this issue.

In addition to these enactments, the Legislature provided for the continued support of the commissions dealing with horticulture, viticulture and forestry, and provided for the culture of ramie, as has already been noted in the *RURAL*.

The stock farmer has thus far secured the enactment of a law fixing a bounty on coyote scalps; also creating a lien in favor of owners of hells, jacks, stallions, etc., need for breeding purposes. The hop grower will have a law fixing the amount of tare on a bale of hops.

Laws affecting the general interests of the State include one making it illegal to advertise for obtaining divorces, and making train-wrecking punishable by death. There is also to be a board of arbitrators to arrange differences between employers and employees.

Another measure which should be held steadily in mind provides that at the next general election the people shall vote whether or not the United States Senators shall be elected by popular vote instead of by the Legislature. Recent experience in this State and in other States argues strongly that the present method is wrong in theory and outrageous in practice.

The Governor is still engaged in the consideration of bills, though his ten days from the adjournment of the Legislature is drawing to a close. We shall give later whatever may appear in the agricultural line.

## Grain Bags at the Prison.

One of the last official acts of Mr. John McComh, before retiring from the wardenship of the State Prison, was to issue the following notice to leading dealers in grain bags:

Please notify other intending purchasers that our stock of bags is exhausted, and further orders cannot be accepted until the State Board of Prison Directors decide whether to accept orders for bags not yet manufactured, the delivery of which cannot be guaranteed positively, and even if they should decide to do so, we have applications on hand to cover about all the bags we can manufacture during the season.

The above indicates that the supply of State Prison bags went into distribution at an early date, which gives the impression that the bags give satisfaction. The manufacture of grain bags at San Quentin penitentiary has contributed not a little in breaking the bag ring that so unmercifully controlled the price of bags in years past. Probably no one thing is watched with more interest at this season of the year, by our leading grain-growers, than the grain-bag market, and nothing appears to be left undone by them, through their organizations, to keep a ring from forming a corner to unduly advance the market price. This feeling is clearly set forth at the last meeting of the State Board of Prison Directors, when, as reported by the *San Francisco Call*:

J. D. Huffman, W. L. Overhiser and C. H. Wakefield, a delegation from the Pomona Grange of San Joaquin county, addressed the board at length, asking, in view of the tariff reduction on raw jute, a reduction in the price of sacks, which are now sold to farmers at 6½ cents each. Upon being informed that the jute now on hand had been purchased under former high tariff regulations, the request was withdrawn.

The attention of the board was next drawn by the delegates to the imperfect sewing of the jute bags, and the fact stated that merchants order sacks through farmers, securing the benefit of farmers' rates, and then retail them at regular market prices. As a remedy for this abuse of the board's rates to agriculturists, the delegates suggested that all orders for prison sacks should be accompanied by an affidavit stating that the sacks are for use by the purchaser on his own land.

It is well for producers to keep close watch of the proceedings of the prison directors in the matter of bag manufactures, and those who come forward to insist that the output be furnished to actual producers at the lowest possible rates are entitled to the thanks of the agricultural public.

STANFORD UNIVERSITY.—The public will be interested to learn that preparations for the opening of this institution are progressing. After due deliberation, Senator Stanford has selected for president of the University, Dr. David Jordan, who has been for the last seven years president of the Indiana State University. Dr. Jordan is comparatively a young man, as he is but forty years of age. He graduated from Cornell University in 1872, and has reached high position by his studies in natural science, chiefly in his specialty, ichthyology. He spent some months on this coast in studies of our fishes and fisheries about ten years ago, and made many acquaintances both among our citizens and among our finny tribes, for he added many new species to science during his stay on this coast. Dr. Jordan has an excellent reputation for organizing and executive ability, and these talents will be invaluable in the work before him. He will be warmly welcomed as a permanent resident of this State.

RAIN RECORDS in various parts of the State show not only great variations in different and distant localities, but also important variations in quite near localities and under the same topographical conditions. Even different portions of a large field, without any marked differences of elevation show quite a difference in rainfall. This is accounted for from the fact that the rain does not fall equally from all parts of a cloud. The condensation proceeds diversely in different parts. Rain gauges under different portions of the same cloud would record variously. The edge of the cloud might pass over one instrument, while the center would pass over another. Then again, rain falls from different heights, under which conditions there would naturally be varied amounts of condensation.

WITHOUT NAME.—We have received a letter from a gentleman who mentions himself as clerk of a school district in San Diego county, but we cannot reply, as the writer forgot to sign his name to the letter.

## Exports of Live Stock.

Those who are interested in the export trade of American live cattle will doubtless be glad to know that among the laws enacted during the closing days of the Fifty-first Congress was one by which the Secretary of Agriculture, through his inspectors at the ports of export, is authorized to examine all vessels which are to carry the cattle to foreign countries and to prescribe rules and regulations as to accommodations to be provided for the cattle as to space, ventilation, fittings, food and water supply, and such other requirements as he may deem necessary for the safe and proper transportation and humane treatment of such animals. The violation on any vessel of the regulations made by him may be punished by the prohibition of such vessel from again carrying cattle from any port in the United States for such length of time not exceeding one year as the Secretary of Agriculture may direct.

Secretary Rusk feels confident that, armed with such authority, he can secure to American export cattle such necessary care and humane treatment as will not only conduce greatly to the profit of the shippers but also effectually offset the agitation aroused and maintained in Great Britain by the opponents of the American export cattle trade on the ground of the inhuman treatment of the cattle.

## Agricultural Statistics.

The Statistician of the Department of Agriculture has prepared a new series of statistical illustrations, called an Album of Agricultural Graphics. It relates to values per acre, on the basis of values of products in the hands of the farmer. To eliminate annual fluctuations and obviate the unfair showing of a single year of extremes of yield or value, the average of ten years is taken, making the most equitable possible basis of comparison.

In the plan of illustration the main idea, that of value per acre, is presented geographically, the differentiation being shown both by the density of color and distinct peculiarity of mechanical drawing, by groups of States, while the differences within these groups are seen in the table of State averages on the margin. As a prominent element of value per acre, the yield per acre is conspicuously indicated on the field of each State, as well as in the marginal table.

The crops which are the subjects of this graphic illustration are corn, wheat, oats, rye, barley, huckwheat, potatoes, tobacco, cotton and hay. The album is especially intended for reference and study in Farmers' Institutes, colleges, schools and public libraries.

SNOW WORMS.—We alluded in a recent issue to the appearance of what were called "snow worms" in Randolph county, West Virginia. The crest of the snow was covered with them. The *Scientific American* wrote to Prof. Riley, the agricultural entomologist at Washington, for an explanation of the phenomena, who replied as follows: "You send two distinct larvae. The small species, of which there were 8 to 10 specimens, is the common Pennsylvania soldier-beetle (*Chauliognathus pennsylvanicus*), a carnivorous species which in the larva state destroys plant lice, bark lice and the eggs and young larva of a number of injurious insects. This insect hibernates in the larva state and has occasionally been observed, both in Europe and in this country, fairly swarming upon the surface of snow, having been driven from its hibernating quarters by some peculiar weather combination. It hibernates at the roots of grasses, under stones and logs, and under the loose bark of stumps, logs, and old trees. The other and larger larva, of which there was only one specimen in the box, seems to be a variety of the bronzy cutworm (*Nephelodes violans*), an insect which also hibernates in the larva state, and has also been observed occurring in large numbers on snow."

FOUR LEGS AND FOUR WINGS.—Mrs. Joseph Townsend, No. 2324 Folsom St., San Francisco, has a Black Spanish chicken hatched March 12th, with four perfectly developed legs and wings. It peeps, runs about, eats and grows like ordinary chickens, and bids fair to be a most extraordinary and valuable curiosity. It is seldom we see a case of *lusus naturæ* with extra parts so completely formed, and the creature's natural operations so effective.

FOREIGN GRAPE VARIETIES.—The articles on imported grapes and olives, on page 311 of this issue, should have borne Prof. Hilgard's signature and been credited as a part of one of the university bulletins. The varieties described were imported by the university for trial at the experiment stations.

## THE BOTANIST.

## A New Food Product.

[Written for the RURAL PRESS by DR. LORENZO G. YATES, F. L. S.]

The Chocho Plant [*Sechium edule*].—This plant, which has been introduced into cultivation in Florida, where it is growing in favor, and is, perhaps, better known there than elsewhere in the United States, is being tested in Santa Barbara county by Mr. Kinton Stevens of Montecito, who obtained the seed from Samoa, and has one very thrifty vine that promises a large yield of the curious squash-like fruits. *Sechium edule* is the botanical name of this plant, but it is perhaps better known as "Chocho," "Chocho," "Chayota," and "Portuguese Squash." It belongs to the order Oncharitaceae, and is a perennial vine, resembling in growth and fruit our summer squash or vegetable marrow. It is a very prolific bearer. Both the fruit and the great yam-like tuber are used as food by man and beast in the West Indies, where it is considered a wholesome article of diet. The roots often weigh as much as 20 pounds. They have a flavor similar to the yam, and are considered a greater delicacy than the fruit which in a raw state resembles the chestnut in flavor, and under favorable conditions weigh over three pounds.

A few of these plants, which in our dry seasons could be easily supplied with water, would furnish a family with an abundant supply of food, and such valuable food plants should be cultivated all over the State, as is being done by the Government in India as a provision against famine in dry seasons and failure of other crops.

Although a native of Tropical America, judging from the plant I saw, it does not seem to be particularly as to soil nor require special care.

One peculiarity is that the fruits sprout while growing on the parent plant. The proper way to grow them is to plant the whole fruit, as they have but one seed, and they produce fruit in three months under favorable conditions.

In an illustrated report of the Botanic Gardens of Bangalore, India, there is a figure of the fruit of this plant, but it does not show the sprouting of the fruit, which is shown in the accompanying illustration made from the plant grown near Santa Barbara, nor is this peculiarity mentioned in any publications which have come to my notice; whether this is its normal habit or is due to climatic conditions, I am unable to state. It may arise from the fruits being left too long on the vine; it would probably be advisable to pick them before they sprout.

Santa Barbara, Cal.

[Our engraving is made from an excellent sketch of the fruit and vine made by Dr. Yates. Eds. Press.]

## Blossom Time.

EDITORS PRESS:—Under date of March 2d, Bert Hickok of Capay Valley sends Baby Eyes and Spring Beauty (*Calandrinia Menziesii*) and California lettuce (*Claytonia perfoliata*).

March 7th, "Cholone peaks," Monterey county, sends *Gilia diobotoma* (Satin star flower) and several blue-flowered *Gilias*, a small-flowered *Nemophila*, the woolly, thistle-leaved sage (*Salvia* var) and two other species of the mint family. *Mulla maritima* (a white-flowered plant of the lily family) was found by the roadside near Soledad. *Hosackia strigosa*, a little yellow-flowered, pea-like plant, *Orthocarpus densiflorus* (Soldier Plumes or Pompons) and the tany-leaved *Phacelia* were found in the same vicinity. Near Gonzales a beautiful form of *Madia elegans* was very abundant, and an erect form of the pretty blue-flowered *Phacelia ramosissima* var *hispida* (the Rough-haired Phacelia). In the hills near Pajaro, *Trillium sessile* (the Wood Lily or Wake Robin), *Anagallis arvensis* (the pimpernel), *Nuttallia cerasiformis* (see berry or bear berry) and a pretty wild pea (*vicia* Cal.) were plentiful, and a lot of white-flowered Spring Beauties made a pretty contrast with their brilliant red flowered sisters.

"B. F. L." in your issue of the 14th, touches on the true cause why so few people are able to keep their Dutch bulbs over from year to year. After bulbs have blossomed, they need a period of rest which they cannot get if the ground is kept moist by irrigation. I would suggest that "B. F. L." favor the readers of the PRESS with items in the line of plants suited to plant with bulbs.

A. L. LIANCE.

## One Week Later.

EDITORS PRESS:—March 15th, several species of *Gilia*, particularly *Gilia micrantha* and *G. densiflora*, were very plentiful near the Cholone Peaks, Monterey county. A pretty yellow *Mentzelia* was also abundant, and *Ellisia membranacea*, several *Phacelia*s sages, and other species of the mint family were very plentiful. *Solanum nigrum* (commonly called Black Nightshade) was noted. Manzanitas were blooming sparsely in the hills east of Pajaro valley on the 10th and were open generally by the 20th.

On the 28th, from the same section, came *Stachys bullata*, *Fritillaria parviflora*, *biflora*,

*liliacea* and *lanceolata gracilis*. These plants, though frequently found doing well in shady places, bloom very well even on the tops of sandy hills where there is an underlying stratum of heavy soil. *F. lanceolata* growing in loose sand rock. *Calochortus Benthami* and *cerulea* were seen in blossom here.

From the hills west of Petaluma come *Nemophila insignis* and *Menziesii*, *Fritillaria lanceolata*, *Zygadenus*, a *Sanicle*, and several others too incomplete for identification.

From the foothills of Marinosa county, March 20th, come *Nemophila insignis* (Baby Eyes) and a fine form of *N. maculata*, *Brodiea capitata*, some hutchings, a white forget-me-not, *Dodecatheon media*, two colors (Shooting

## ENTOMOLOGICAL.

## Pests of the Apple and Pear.

[Read by H. A. Brainard before California State Horticultural Society.]

The apple and pear crop of this State is now recognized as of increasing importance every season, and yet it is no more than five years ago that every apple tree seemed doomed to be uprooted in consequence of the destruction of fruit by codlin moth.

In 1885 or 1886 the writer caused experiments to be made with Paris green and London

appearance—I do not now remember the exact quantity of flour used—and to this water add one pound of Paris green to every 200 gallons, first mixing the Paris green into a thick mud with a little water, when it will dilute and mix easily, and will be retained in suspension much better than in pure water. From several observations made last year, this method seemed to give better results than when the Paris green was dissolved in ammonia. The spraying should be done for the first time when the petals have pretty nearly all fallen from the blossoms. In the case of pears, the time of blossoming varies so much, that in an orchard of several sorts, many of them will require separate spraying. Apples are more uniform, and the whole orchard can generally be done at the same time.

For very early fruit this one spraying will generally do very well, but for later fruit it will be necessary to repeat the operation two or three times; the last time well into the month of July. The danger from poisoning is almost nothing, no case ever coming to our knowledge of any injurious results. Mixed no stronger than one pound to 200 gallons, there is seldom any material injury to foliage. We have seen it used as strong as one pound to 50 gallons without injury, but there is always danger of burning the leaves when mixtures stronger than one pound to 160 gallons are used. Mr. Block of Santa Clara, who follows this method substantially, assures me he seldom has a greater loss than five per cent from codlin moth.

The efficacy of the older methods, bands, traps and lights used in connection with vessels of sweetened water is so small that they may be neglected without material loss, though some will be caught under the bands and traps.

## Spraying for Fungus.

Another serious trouble with the apples and pears is the black scab (*Faricladum dentriticum*), which attacks and ruins the fruit not only in its early growth, but sometimes seems to attack the fruit when near maturity, and it may be gathered and boxed as pretty nearly perfect fruit; but when opened a few weeks later the scab has been found developed to such an extent as to destroy the value of the fruit. Dry sulphur alone applied as to the grape has some effect, and sulphur and ashes a still greater effect, but the best form in which to apply sulphur seems to be made up in solution with some alkali. Sulphur may be boiled up with caustic soda and applied. We have used the sulphuret of potassium made in St. Louis at the rate of one pound to 35 gallons of water, and applied just as the fruit is beginning to form. Have mixed Paris green in this solution and treated codlin moth and fungus at one operation. The I. X. L. compound, which is made principally of sulphur and lime, will also destroy this fungus, and the manufacturers claim it will also prevent any injury by codlin moth. I have never experimented with it for that purpose, but shall do so this season.

Copper solutions are very effective against all kinds of fungus and particularly so against this black scab. The most simple of these is made with six ounces of carbonate of copper dissolved in a quart of ammonia, and then diluted with 25 gallons of water. If the carbonate of copper is not readily obtainable, take one pound of sulphate of copper, common bluestone, and dissolve in two gallons hot water, and into this pour two pounds of carbonate of soda; this will dissolve in 1½ pints of ammonia, and may then be diluted to 22 gallons. We have tried it for mildew and scab made up with 50 per cent more water, and found that it did the work. Probably if this mixture could be applied to the trees before the buds start, the spores of the fungus would be nearly all killed and the scab prevented. Here in California when the scab is not very bad, one application is generally enough, but if it comes on late in the season it must be repeated. We once knew an orchard where the crop of pears was destroyed for several years in succession by the black scab. At our suggestion it was treated with sulphuret of potassium as before described and the crop sold for \$300 per acre that year.

## Summer Spraying for Scale.

For the San Jose scale, when it appears on small trees and the twice stabbed Ladybird has not yet put in an appearance, spraying twice during summer with kerosene emulsion carefully made and applied, the first time very soon after the scale begins to hatch and again about October, has been very successful. For old trees covered with moss, we would first use some strong winter spray to clean the trees, and if the scale shows any after that, use the summer spray. For the brown apricot scale one good thorough spraying in summer as soon as the scale is all hatched out, generally toward the last of June, but varying with the locality, will generally eradicate them. If this is followed by another spraying in September, October or November, the destruction will be pretty complete. A very weak kerosene emulsion will kill the scale when just hatched out, and the strength should be increased later on. The olive scale, which sometimes also infests prune trees, does not seem to hatch all at once, as does the brown apricot scale, and no one spraying will clear this out. The twice-stabbed ladybird seems to make better headway against the olive scale than against the brown apricot scale, and under favorable circumstances will destroy them both; but my experience has been that they cannot be relied on in every case. A rosin soap wash,

THE CHOCO OR CHAYOTA AS GROWN IN SANTA BARBARA.

Star), Gold ferns, two *Calandrineas*, *Platystigma Cal.*, *Orthocarpus luteus*.

I expected to add some notes on a thermal belt on the east side of Salinas valley, similar to that on the west side, but the heavy frosts of the past three mornings (28th, 29th, 30th of March) caused me to wait till I see their effects.

A. L. LIANCE.

Box 90, Gonzales, Monterey Co., Cal.

It has been found, says the *Evening Post*, by careful experiments on plants grown in a confined atmosphere that they abstracted nitrogen from the air around them to the extent of 30 cubic centimeters.

THE MYSTERIES OF NATURE.—The telescope enables us to gaze through the boundaries of the stellar universe; the microscope enables us to look through the stratum of living forms and see the expanse of unappropriated mineral elements. Life even in its minutest forms is superimposed on matter. Strange life! The animalcule a million times smaller than the finest point that can be broken from a cambric needle manifests instincts as remarkable as are observed in higher animals. \* \* \* No words can describe, no pencil paint the wonders revealed in a single drop of stagnant water,

purple. A little block of trees divided by an avenue was sprayed on one side of the avenue and the other side left untreated. The result was an almost perfect crop of fruit on the sprayed side and an almost total destruction on the side left unsprayed. The same result in varying degrees of success resulted from the other experiments.

As soon as the results were known, we set out by publication and personal visit to save many apple trees that had been marked for removal. We saved many thousand trees. One fine orchard, small it is true but of trees 16 years old, we induced the owner to spare, though he stood with ax in hand ready to begin the work of destruction. That year there was only one box of good fruit to 150 boxes of wormy fruit. It was treated the next year and the wormy fruit was only one box in fifty. The only really reliable way of operating against codlin moth seems to be to spray with Paris green. We formerly preferred London purple, for the reason that it remained more perfectly suspended in water, but of late the London purple is so variable and unreliable in its composition that we now greatly prefer Paris green.

The best results have come from mixing flour paste with the water to make it quite milky in

made either with tallow or fish oil (we have used tallow, and with so good success that we believe in it), can be also used in summer; it does not hurt apricots or prunes when sprayed directly on the fruit. The I. X. L. compound can also be safely used in summer, and does not hurt either apricots or prunes.

For all sorts of leaf-eating worms, Paris green may be used the same as for codlin moth. It does not always act as promptly as one could wish, and in the case of canker worms, they will sometimes eat considerable before they die, but it is generally efficacious.

An orchardist who watches carefully his trees and is ready with his spray-pump to attend to a single tree even, if anything is observed upon it, will succeed with the mild summer washes in keeping his orchard clean and will never require the wholesale winter operations. A word on the subject of parasites may not be out of place. The idea is being taken up with many, to abandon spraying and leave the work to the parasites. Before adopting this plan it is well to consider that the parasites do not usually exist till the injurious insects have become so plentiful as to cause great injury, and that with orchards perfectly clean there will be no parasites. Orchards badly infested will also breed the parasites most rapidly and will sometimes be cleaned up by them more quickly than orchards comparatively clean, and from this the orchardist may jump at a very unwise conclusion that he who sprays has "more bugs" than he who entirely neglects it. For holding the insects in check and keeping orchards constantly clean, there is no better plan than watchfulness and prompt summer spraying.

## AGRICULTURAL NOTES.

### CALIFORNIA.

#### Butte.

**MAGNIFICENT ORCHARD AT PALERMO.**—*Register*, March 26: One of the largest and finest young orchards in California is that at Palermo, owned by the Hearst estate and Mr. B. R. Taylor. The tract of land embraces 760 acres and it is intended to put every acre of this under cultivation. Up to the present about 690 acres have been planted as follows: Ten acres of summer apples, 15 acres of lemons, 30 acres of Tragedy prunes, 60 acres of French prunes, 60 acres of apricots, 60 acres of grapes, 60 acres of peaches, 90 acres of pears and 240 of oranges, with enough other fruits to make up the total of 690. Of this acreage 15 are planted to a mixed household orchard, which includes all varieties of fruit. There are 22 acres devoted to alfalfa. It was intended to put all the land under cultivation this winter, but owing to the season having been dry during a part of January and February the soil could not be worked, and now it is too late to plant deciduous fruits. About 20 acres of olives will be set this spring, and next winter 70 more acres will be devoted to the same fruit. We think that the 240 acres of oranges constitutes the largest orange orchard in California, and if we are wrong we hope some of the Southern California papers will correct us in this particular.

**FORAGE PLANTS.**—*Oroville Register*, March 26: M. V. Rowe of Nimeshew has grown two crops of alfalfa without irrigation. He says that if he desires to raise a third crop the same season he has to irrigate his land. Two crops of this fine grass on land that can be bought for \$15 or \$20 an acre ought to satisfy most any one. Mr. Rowe tells us there are thousands of acres now covered with timber that can be bought all the way from \$10 to \$15 an acre that would grow two crops of this grass without any water. He has been experimenting with a number of the foreign grasses and finds that the Australian rye grass starts with the first rains in the fall and grows all winter, giving fine pasturage for stock. He has been testing the Bulletin forage plant and finds that it succeeds well. He planted it in April and it remained green up to Christmas. When it comes up it looks like Egyptian corn, but gives fully three times as much fodder as this corn, and he thinks that it will be quite valuable for stock.

**LARGE ORANGE GROVE IN BUTTE COUNTY.**—*Oroville Mercury*, March 26: Steadily the community forges ahead. Colonel Frank McLaughlin intends to set 100 acres to oranges to Thermalito, on a beautiful tract, east of the olive grove owned by himself and Mr. Fogg, and right at the entrance to the grade leading to the bridge crossing the river. The Colonel intends to make his grove one of the finest in the State. Grubbing and surveying has been already commenced.

#### Contra Costa.

**THOROUGHBRED CATTLE IN CONTRA COSTA.**—*Antioch Ledger*, March 28: J. H. Schneider, one of the proprietors of the Hyde Stock Farm, was in Merced county, last week, looking for thoroughbred cattle. As a result of his visit, three carloads of thoroughbred Durham bulls and heifers arrived at Cornwall station, one day this week.

#### Fresno.

**VINE AND TREE PLANTING.**—*Editors Press*: The John Brown Colony of Madera have put out a large acreage of vines and fruit trees. They have set out over 2700 acres this season; their large nursery of Muscat outtings have been all put out. This immense nursery of outtings contains 82 acres and is all set to this one variety. These outtings were put out in 173 days

with or by the use of a machine invented by their nurseryman. The number of outtings put out in this nursery was 2,500,000. Their 1920 acres of vines set last year made a fine growth last summer. Owing to the working of this colony new life has been given to this community. New houses are going up on every side. Between 6000 and 8000 acres of vines have been set out in this vicinity this winter. The Borden Farm Colony have set very largely also of the Muscat Grape. The Howard & Wilson Colony and the Fresno Fruit and Land Co. are setting largely of Muscat vines.

The growing looks fine, but is rather backward. We have had a good share of rain. Ranchers are jubilant.—J. L. B. Madera.

**APPLE CULTURE AT DUNLAP.**—*Dunlap Cor. Reedley Exponent*, March 26: Apples have been tried here with success. J. W. Todd set out trees three years ago, and he realized quite a profit from them last fall. He is putting out 1100 this spring. He has 700 already out and will be through in a short time.

**SHEEP SHEARING IN FRESNO COUNTY.**—*Centerville Cor. Exponent*: Bob Woods began shearing his sheep Monday morning. He has about 3000 head at the foot of Tivey mountain, but hopes to get through by Friday.

#### Humboldt.

**AGITATING FOR A CREAMERY.**—*Enterprise*. The dairymen of the Grizzly Bluff, Coffee Creek and upper Salt River sections in Humboldt county are seriously considering the project of erecting a creamery at some point in that neighborhood. A couple of meetings have been held to discuss the question, and if a satisfactory understanding can be arrived at the move will be a go.

#### Kern.

**EARLY BARLEY.**—*Bakersfield Echo*, March 26. The first sample of the grain grown from the early barley distributed by the *Echo* last fall was brought in by W. H. Walker whose ranch is on the Summer plains. He says that it was sown on December 20th. It was out in good head and about ready to cut for hay. The straw is about three feet in length and carries a good amount of leaves—an item of some importance in hay making. The heads are not large, nor are they particularly small. The sample shown us was gathered just three months from the day of sowing the seed. If this weather continues, the crop will be ready for hay by April 1st. The land on which it grew was cultivated before and has not, we believe, been irrigated. The only merit we claimed for this barley over other varieties is its earliness. It seems probable that our claim will be sustained. If it proves really true that in this we have a barley that will mature in 90 to 100 days, or by the first to the middle of April, the question of grain-raising on the unirrigated plains and hills will be nearer solution than heretofore. It is the long warm days after the middle of April which try the vitality of grain generally in this part of the State.

**CHANGE FOR THE BETTER.**—*Bakersfield*, March 26. In many places it is noticeable that the stately poplars that have grown along the public highways are being felled and fruit or nut-bearing trees—generally the fig and walnut—are being planted in their stead. Imagine the grandeur of the country when the highways are overspread with branches of these noble trees. A small effort and a little time will suffice to make our country roads the most attractive of any in the State.

#### Los Angeles.

**MARKET EAST FOR EARLY MATURED POTATOES.**—The following, a part of a private letter from Major Truman in Chicago, is taken from the *Santa Ana Press*: "I am of the opinion that if your farmers could rush some potatoes to maturity early, there would be big money in it. There are no potatoes, hardly, in the East, and none can be planted until May, when new ones should come, and big ones, in June. I throw this out as a suggestion. I bought some potatoes a few days ago at eight cents per pound. Again, I paid 35 cents for half a peck, just what I have paid five cents for in Southern California many a time."

**ORANGE-GROWERS PREPARING TO FIGHT.**—*Pomona Times*, March 24: Joel Parker of Orange is in town. He is a committee of one appointed by the orange-growers of his county to visit the orange-growing sections of other counties and organize the growers in opposition to the patent of the gas treatment for insect pests. His mission has so far been successful wherever he has gone, and ought to be so here. The patentees propose to charge a royalty of ten cents per tree for the use of the gas treatment. An effort will be made to have the patent annulled, as the treatment was perfected by a Government official and was in general use in this country before the patent was applied for.

#### Monterey.

**THE BONE INDUSTRY.**—*Salinas Index*: Quite an industry is growing up in portions of the country gathering bones for sugar refineries. They are worth \$10 a ton, and in some places, where anthrax ravaged the herds some years ago, the labor of gathering is well paid. The bones are calcined before use and all danger from infections is taint is burned out.

#### Mendocino.

**HOW THE HOR-HOUSE INCUBATOR WORKED.**—*Ukiah*, March 26: The 6000 eggs put in the hor-house, to see if it would answer as an incubator, hatched out about 2000 chickens. The *Petaluma Imprint*, referring to it, says: This is not a very good average for a first-class mod-

ern incubator, but all the same it demonstrates that with the usual care in the selection of eggs and the maintenance of proper temperature, all of which is mere detail, the scheme is entirely practicable. As an evidence of its practicability, our informant told us that a second set of 24,000 eggs is now on and will be out in about two weeks more.

#### Sacramento.

**CROP PROSPECTS.**—*Sacramento Bee*, March 25: As the season advances, it becomes more than ever evident that California has entered upon one of the most prosperous years ever known in the history of the State. A large grain-grower from the vicinity of Knight's Landing said that in the many years he had been engaged in farming in the Sacramento valley he had never seen grain on the uplands look so well at a corresponding season as it does now. "Of course a considerable acreage on the lower lands has been drowned out by the overflow, but in comparison with the entire area sown in grain, it is comparatively small. The increased product, if present promises are fulfilled, will swell the total product to the top notch." The acreage of hop-fields in this county will be largely increased this year. A number of farmers are adding to their yards by a few acres, while there are some very large increases. Thos. Loydal, a large farmer on the Yolo side, near Washington, will plant about 160 acres more of the roots, which will give him over 200 acres in vines, and make him one of the principal growers in the State. The occupants of the submerged farms across the river are not greatly damaged, as at first feared. The rapid subsidence of the waters have enabled them already to begin replanting and their heaviest loss will be in the seed destroyed. It is held by some that the flood was a benefit in the main, for many of the low places have been filled in by the inflowing debris and sediment, and the general ennobling of the soil will be more than compensated by the temporary loss.

**HISTORY OF A DATE PALM.**—*News*: The late John F. Swift, author and Minister to Japan, was no small traveler in his way and could interest an audience equally with Stanley. We have in our city a living monument to Swift's travels in the Dark Continent. Once while travelling in Algiers, Aïr, Mr. Swift became fatigued under the burning rays of the tropical sun and resolved to take refuge for a few hours under the friendly branches of a magnificent grove of date palms which he saw in the distance. Upon arriving at the grove he found that they not only afforded shade but were abundantly provided with refreshing fruits. He found the berries to be the most delicious he had ever eaten, and while reclining at the trunk of one of the largest trees he thought himself of his old Sacramento friend, B. B. Redding. He immediately collected several of the date seed and enclosed them in an envelope which he afterward forwarded at the first opportunity. Mr. Redding received the seed in good order, planted them, and three tiny date palms rewarded his efforts. One he gave to Dr. G. C. Simmons, who planted it on the corner of Tenth and N streets, where it has flourished for 14 years. It may now be seen there, the largest and finest specimen of date palm in the city. Last year it bore the first fruit, but Dr. Simmons plucked it. cluster before they ripened, fearing that the tree might be injured by early bearing.

#### San Bernardino.

**SUGAR BEET PLANTING AT CHINO.**—*Champion*, March 27: There are now planted and under contract to plant, 2400 acres to sugar beets on the Chino ranch; and as far as heard from, about 350 off, the latter mostly at Ontario and El Monte. This is an excellent showing. Planting can and will be continued till June 1st or later on the Chino ranch. There has been no difficulty in renting land to parties anxious to grow beets. The fact that planting can be advantageously extended over from three to four months of time, is an important one in every respect. The farmer can care for more beets at all stages—from plowing the land to marketing the crop. At this writing over 1000 acres have been planted, and the work goes on, on every side.

**POTATO PLANTING.**—*Cosumonga Cor. Ontario Record*, March 25: "Spud" planting is in full blast. The ground is in good condition to work and is moist enough to sprout the seed in good shape.

#### San Diego.

**GRAIN CROP PROSPECTS AT VALLEY CENTER.**—*O. McIndy in Escondido Times*, March 26: The abundance of rain removes all doubt as to the chances for crops in 1891, and hopeful harvests are assured. People should bear in mind, though, that Southern California is practically independent of regular rainfall, and that even a long protracted drought would cause comparatively no apprehension, because our irrigation systems are so extensive and reliable. Some crops might be damaged in some of the drier localities by an entirely rainless season.

**SILK CULTURE IN SAN DIEGO.**—*S. D. Union*, March 26: Mrs. Fannie Parks, formerly of Kent, England, has placed an interesting exhibit of spun silk in the Chamber of Commerce rooms. Mrs. Parks is an enthusiast on the subject of silk culture, and has succeeded in interesting a number of San Diego ladies in a project to start a "silk culture" in this city. An association was formed by about a dozen prominent ladies, among whom may be named Mesdames Parks, Williams, Gilday, Biles, Buck and Stevens, with the object of actively

engaging in the raising of cocoons and the manufacture of silk. A building was rented in the Whitney addition, and two experienced Japanese were engaged to superintend the venture. A request has been sent to Washington for silkworm eggs, and a number of nurserymen and others who have mulberry trees have promised a supply of leaves for the food of the young worms. Mrs. Parks has had considerable experience in an amateur way in the making of silk from cocoons and thoroughly understands the business of handling the worms. She sees no reason why the enterprise should not prove successful here, as the climate is exactly suited to the silkworm, and its natural food—mulberry leaves—may be had in plentiful supplies.

#### San Luis Obispo.

**LARGE GRAIN AT SUNSET.**—*Sunset Cor. S. L. O. Tribune*, March 27: The farmers are jubilant since the last rains. There will be the finest crops harvested that were ever seen in this locality. But the question that is agitating our Grangers is, how are the crops to be handled to market? It is estimated that there will be from 150,000 to 200,000 centals of wheat raised that will have to cross the San Juan and Estrella rivers.

#### San Joaquin.

**SONG BIRDS FOR SAN JOAQUIN.**—*Stockton Mail*, March 27: H. H. Hewitt has received a letter asking him to secure subscriptions for stocking San Joaquin county with song birds. The only wild songsters here are the canary and the Starling, the latter being commonly known in America as the meadow lark. The letter comes in pursuance of a general movement to stock the whole State with song birds, each county to subscribe money for the purchase of as many pairs as it desires. The expense is estimated to be as follows for 20 pairs of each:

Sylarks	80
Mocking-birds	110
Bull-finches	80
Nightingales	110
Gold and green finches	50

Total.....\$430

The foregoing represents the expense of getting the birds to San Francisco. The cost of bringing them to this city would be \$20 more, making a total of \$450 for the hundred pair represented in the selection. It will be noticed that the list embraces nightingales. There are occasionally a few to be heard here now, but they come rarely. It is said that birds will home where they are turned loose. They will migrate, it is true, during the migration season, but will return home to nest.

**SECOND-CLASS GRAIN BAGS.**—*Lodi Valley Review*, March 26: Pomona Grange has brought 500 bags from San Joaquin for inspection by the farmers of this neighborhood. The bags are second-class and are made to supply a demand for a cheaper grade of sacks for barley. The 500 which they will have here to-day will be sold at 5½ cents. Farmers who wish to order a lot of these bags can have them furnished by J. D. Huffman, who has the sample lot here in charge.

**LARGE SHIPMENTS OF HAY.**—*Stockton Mail*, March 25: It is said that the shipment of hay from this city to San Francisco has never before been so large as now. The cause is supposed to be the promise of a good year, which has resulted in holders letting their hay go to supply the present demand. Some of the hay being shipped is of very poor quality, and was evidently ordered as stuff to be worked into better lots.

#### San Mateo.

**EDITORS PRESS:**—Our county (San Mateo) has not in the 20 years I have known it presented so flattering a prospect as at present. Our early rains gave the very best opportunity to plant all crops seasonably. Our milk supply to your city from one-half score or more of the very best dairies will be amply rich in cream from the abundant natural pastures. No milk inspectors are required now.—J. T. Hoyt, *San Mateo*.

#### Shasta.

**LARGE ORCHARD IN SHASTA COUNTY.**—*Anderson Enterprise*, March 26: In company with Mr. D. Z. Hawkins, Superintendent for Walter Frear of Oakland, and E. F. Woodward, of Santa Rosa, we visited the 465 acre farm of the two latter gentlemen. Soon after arriving we wended our way across a 200-acre field of growing grain under ponderous oaks, to the 100 acre orchard planted this season. Where last fall was a grove of oak trees, some measuring 10 feet in diameter at the base, is now a beautiful stand of peach, prune and Bartlett pear trees. Mr. Hawkins planted his trees 25 feet apart giving 69 trees to the acre; 775 trees were planted, or a total acreage of about 102½. The varieties of trees planted this year are the very choicest, and will bear the most marketable fruits. They are as follows: peaches, Orange oling, 910, Foster 490, Salway 175, Muir 620, Mary choice 345, Brice early 6, Waterloo 6; French prunes 2450, Oregon silver prunes 350; Bartlett pears 1400; Shingehanna peach 350. Messrs. Frear and Woodward have about 350 acres, which it is their intention to clear and plant to fruit as early as possible, probably adding 150 acres next spring. About 35 acres of low land next to the river, covered with a growth of underbrush and trees, will not be disturbed but kept as a pasture for stock.

#### Sonoma.

**A NEW AGRICULTURAL INDUSTRY.**—*Healdsburg Tribune*, March 18: Coffee corn, a variety (Continued on page 320.)

# COMBINED HARVESTERS AND TRACTION ENGINES.

WE HAVE

**THE LARGEST  
TRACTION  
ENGINE  
EVER BUILT  
ON THIS COAST.**

WE HAVE

**THE BEST  
TRACTION  
ENGINE

Sole Agents for California for the Celebrated

### TRIUMPH MOWER,

SIZES, 4-foot 3-inch Cut, 4-ft. 6-in. Cut, 5-ft. Cut, 6-ft. Cut.

### TRIUMPH REAPER,

5-Foot Cut.

Hundreds in Use and all giving  
Perfect Satisfaction in  
Every Way.

It has the Lightest Draft,  
It has the Most Positive Cut,  
It has Ease of Management,  
With Perfect Adjustment.

SEND FOR CIRCULARS.

Unquestionably the Best  
Mower and Reaper  
Sold on the Coast.

### CHAMPION RAKE.

WHY IT TAKES THE LEAD.

It has our patent tooth to PREVENT SCRATCHING.  
It has NO SPRINGS to get out of order.  
It RUNS BACKWARD as well as forward.  
It has NO JAR ON THE THILLS in dumping.  
Its thills work as freely as those on a carriage.  
It will NOT SCRATCH UP FINE SEEDING in harvest field.  
It has an OSCILLATING CLEANER THAT KEEPS THE HAY FROM ROLLING and working out at both ends into the wheels.

It costs more than Rakes with ordinary teeth, but is WORTH TEN TIMES THE EXTRA COST.  
It will run over trash lying on the ground, and leave it there.  
It will rake barley, rye, oats, Hungarian and millet free from dirt.  
It is so easily managed that a boy who can drive a horse can use it as well as a strong man.  
It can be held down to MAKE VERY LARGE WINDROWS, or bunch them up.  
It has an OSCILLATING CLEANER THAT KEEPS THE HAY FROM ROLLING and working out at both ends into the wheels.  
It will rake "scatterings" perfectly, because the cleaner keeps the hay from rolling.  
It is very easy to keep up the teeth after going over a windrow.  
It packs the windrow, leaving it in good shape for rolling up or pitching.  
It dumps DAMP PART OF WINDROW ON TOP, and saves use of hay tedder.  
It can rake the heaviest grass that grows, as soon as cut.  
It will give better satisfaction than any other rake sold in this country.

EL DORADO STREET, STOCKTON, CAL.

## Agricultural Notes.

(Continued from page 318)

some two years ago imported from the wilds of Africa for ostrich feed and transplanted in various parts of America, is being grown in Dry Creek valley by J. R. Reynolds, who reports it a big success. This species of *granum* is smaller than pop-corn, but it is much more luscious, grows thicker on the ear and bears three crops a year. With a few pounds of seed, which Mr. Reynolds planted two seasons ago, he now has several acres planted to it from that small quantity, and an average of three tons of the Caffre corn can be produced to the acre. It makes a most beautiful foliage, and as for fodder, dry or green, for stock, is far superior to any other vegetable. Mr. Reynolds says that the flour made from this corn is equally as good as wheat and recommends it as a most profitable article for agriculture.

**THE SAN JOSE SCALE.**—W. N. Gladden in *Healdsburg Tribune*, March 18:—In my examination of orchards I find those in the vicinity of Healdsburg and in Dry Creek valley, north-west of town, the worst infested with the San Jose scale. Some orchards in those localities have trees that are dying from the work of this insect. It is getting late in the season to spray with the lime, sulphur and salt compound, as it may be used only when the foliage is off the trees, when no injurious effect will result to the trees or fruit buds. It is not too late yet for apple, pear, prune and some varieties of plum. Examine your trees, and if infested spray them if possible. Old apple orchards are nearly all infested and covered with moss and look sickly. Such orchards should be sprayed even if no scale is found. It will invigorate the trees and clean them off, effectually destroying the moss.

## Tulare.

**FRUIT GROWING AT LEMOORE.**—*Visalia Times*, March 26th: The fact having been demonstrated that this is a fruit country has given a stimulus to fruit and vine planting. It is estimated that 3000 acres in this immediate vicinity were planted last year, and that 4000 acres will be set to trees and vines this season. These figures do not include any lands that would be tributary to adjoining towns.

**CHEESE - MANUFACTURING AT VISALIA.**—*Times*, March 26: The Visalia creamery is now receiving milk enough to manufacture about 300 pounds of cheese per day. A number of farmers who have not heretofore supplied milk to the manufactory have signified their intention to do so very soon, whereby the output of cheese will be considerably increased.

**SAN JOAQUIN VALLEY SETTLING UP RAPIDLY.**—*Travis Advocate*, March 25: The rapidity with which the San Joaquin valley is settling up is remarkable; although the boom three years ago brought more people during that length of time than ever before, it did not bring as many actual settlers. The present immigration is the kind wanted.

**DINHA FRUIT NOTES.**—*Dinaha Cor. Advocate*, March 25: Eighty acres on Section 22, two miles from town, were bought last week by produce merchants in Boston, Mass., and New York City. They are planting it all to vines and trees. They will make Dinaha a point to ship fruit from to Eastern markets. Miss M. Parr of Warrington, England, is planting out 20 acres to vines and trees. Miss N. R. Armstrong is planting out 15 acres to vines and trees, and beautifying it with needful and ornamental trees. Mr. A. Carey will start to England in April to bring 40 or 50 families to make homes on his large tract of land two miles from Dinaha.

**EXPERIMENTS WITH ALKALI.**—*Register*, March 20: Experiments are being made at the culture station with a view to ascertaining what may be done toward washing the alkali out of soil. Some of the worst alkali spots there are being worked on. Trenches are dug two or three feet deep leading to a sump dug to a depth which brings the bottom below the surface water stratum. In these trenches are placed inverted V troughs, after which they are filled in, channels thus being left. The alkali spot is then flooded with water, which seeps into these channels and is carried to the sump, conveying the alkali from the soil. It is thought this plan will succeed on small tracts where there is plenty of water.

**AGAINST PLANTING SMALL POTATOES.**—*Farmersville Cor. Visalia Times*, March 20: If the size of the potatoes keeps on lessening during the next ten years as it has during the last 15 years, the merchants will have to cease handling them and ship from San Francisco, as they will be too small for cooking. There is no question but what we have as good potato land as there is in the State, but we have small potatoes. I cannot account for it in any other way but that the principal cause is on account of planting little potatoes every year. Small potatoes, like many other kinds of seed, have a tendency to produce a similar product. It will not be noticed much in one crop, but it will be materially noticed in a few crops. I have noticed in the Eastern States that the farmers plant the largest potatoes the same as selecting the largest wheat grain, etc., for seed. I see no way out of this matter but to improve the seed by shipping in large Early Rose potatoes from the bay and continue to plant large potatoes thereafter.

## Yuba.

**HOW THE LIEN LAW AFFECTS FARM MACHINERY.**—*Marysville*, March 15: An action was begun last October by John McWilliams and others against E. B. White to recover pay-

ment for work done for the latter on a threshing-machine. The machine was owned by James O'Brien, but had been leased by White. Plaintiffs claimed that according to the lien law they could hold the machine for the payment of their wages, no matter whom it belonged to. They brought suit and recovered judgment, and the sheriff was ordered to sell the property. Mr. O'Brien, the owner, asked for an indemnity bond, so the sheriff refused to sell the threshing-machine until such bond was given by the court. The court ordered that officer to appear and show cause why he should not make the sale. Judge Grady took the matter under advisement and sent his decision ordering the sheriff to proceed with the sale without an indemnity bond. The judge holds that the lien law protects laborers from being swindled out of their wages, and that it matters not to whom the property belongs, it must be held good for payment. He holds that so long as the machine belongs to Mr. O'Brien he should have seen that the men received their pay.

## ARIZONA.

**WILD HOGS OF LERDO, ARIZONA.**—*Yuma Times*, March 25: Roaming over the lands of the Lerdo colony, 70 miles south of Yuma, are droves of wild hogs, variously estimated at from 1000 to 3000 in number. They are descendants of tame hogs placed on the ranch when Thomas H. Blythe was part owner, about 13 years ago. After Blythe's decease and subsequent reversion of his interest to Gen. Andrade, the hogs were turned loose and allowed to go at will over the rich bottom lands of the Colorado river. As the wild hog became tame under restraint and kind treatment, so the tame hogs of Lerdo rapidly became wild when allowed to run at large. A few generations transformed them into savage beasts, who would attack and eat a man if they had the opportunity. They subsist chiefly on the wild potato, a tuber which grows the size of a walnut and in great profusion. The present owner of Lerdo, Gen. Andrade, conceived the idea of having the hogs caught and the meat cured for the use of the colonists. Operations were begun about a year ago, and though not conducted on a large scale, have proven successful. The hogs are caught in a circular corral about 30 feet in diameter, having a trap door. Plenty of bait in the shape of corn and potatoes is scattered about the entrance and also hurled in the corral. A band of hogs are attracted by the bait, enter the corral, commence rooting for the buried corn and potatoes, and when the right spot is struck by them, the trap door falls and they are prisoners. The hogs are fed awhile before slaughtering. Their meat is of fine quality and the lard sweet and delicious.

**A NOVEL IDEA TO OUTDO THE TARIFF ON EGGS.**—*Yombasone Prospector*: Since the duty on eggs has been the ruin, many devices have been thought of for manufacturing them. The idea of a Nogales man is, however, the only feasible scheme up to date. His proposition is to feed hens on the cheap grain of Mexico and have them lay in the United States. For this purpose a long building will be placed on the line, half in Mexico and half in the United States. They will feed and water in the Mexican end, and when they want to lay they go to the farther end of the building, and in that way escape paying the duty. The projector of this enterprise came from Maine.

## A Worthy Institution.

One of the most needful and well conducted homes for the sick and unfortunate on this coast is that of the Pacific Hospital, conducted by Dr. Asa Clark and Sons at Stockton.

There has been no other private retreat for weak and temporarily diseased minds so well established on this coast. It is also by far the largest, most complete and best conducted of any, Dr. Clark senior having maintained the institution through his successful practice and management for over 20 years.

It is very conveniently and pleasantly located within a mile or less of the southern suburbs of the city. The premises are ample, with beautifully shaded grounds in front of the comfortable appearing buildings.

The able and long-experienced senior physician has received grateful personal acknowledgements from thousands of convalescent patients, and but for the nature of the afflictions cured, (brain difficulties) his rare and good accomplishments would no doubt have made his home and hospital household words all over the coast through grateful newspaper correspondence.

It is largely for this reason we have taken particular pains to mention the merits of this deserving institution, believing that giving a more wide-spread knowledge of its existence and true status will be an act of justice and great benefit to many unfortunate persons.

## WHAT HE DID WITH IT.

He bought the Buggy of the Pioneer Buggy Co., and then took Maud for a drive. But he kept on the good side of the father, by presenting him with a copy of the "Complete Horse Book," which we send free for 10 cents in stamps or silver. Pioneer Buggy Co., Columbus, O.

\$500,000

TO LOAN IN ANY AMOUNT AT THE VERY LOWEST market rate of interest on approved security in Farming Lands. A. SCHULLER, Room 8, 420 California St., San Francisco.

## State Appropriations for the Fair.

Bills have been presented in the Legislatures of the various States and Territories as follows, for appropriation to the World's Fair at Chicago:

Alabama	\$30,000
California	300,000
Connecticut	25,000
Colorado	150,000
Idaho	20,000
Illinois	1,000,000
Indiana	75,000
Iowa	50,000
Kansas	50,000
Maine	40,000
Massachusetts	75,000
Minnesota	100,000
Missouri	100,000
Montana	100,000
Nebraska	150,000
Nevada	20,000
New Jersey	20,000
New York	250,000
North Carolina	25,000
North Dakota	25,000
Ohio	100,000
Oregon	100,000
Pennsylvania	300,000
Texas	300,000
Vermont	5,000
Washington	240,000
West Virginia	40,000
Wisconsin	250,000
Wyoming	30,000
New Mexico	25,000
Oklahoma	7,000

Total \$4,002,000

Bills have been introduced in the following Legislatures and entirely failed:

Arkansas	\$100,000
South Dakota	25,000
Total	\$125,000

Both houses in these two States voted against the bills and refused any appropriations.

In the following States the World's Fair appropriation bills have been passed by both houses of their Legislatures and been signed by the Governors and are in force:

California	\$300,000
Idaho	25,000
Indiana	75,000
Iowa	50,000
Montana	100,000
New Mexico	25,000
North Carolina	25,000
Oklahoma	7,000
Oregon	100,000
Pennsylvania	150,000
Vermont	5,000
Washington	100,000
West Virginia	50,000

Total \$1,007,000

**VAUGHAN'S CATALOGUE.**—We have before us an artistic work of about 200 pages with illuminated covers, colored plates and hundreds of illustrations, many of them made from photographs. This is the catalogue of Vaughan's seed store, Chicago, for 1891, and is by far the most beautiful and instructive yet sent out by this thoroughly enterprising and reliable house. All the novelties and a very complete list of garden, flower, field and farm seeds are offered together with as fine a collection of choice greenhouse plants, palms, cannas, dahlias, gladioli, lilies, etc., as can be found in the country, embracing many new things never before catalogued. The Vaughan potato is introduced by this house this season. All garden supplies, plows, cultivators, harrows, seed drills and fertilizers are carried in stock. It will pay you to get this book; it is a good thing to have around. Sent free to all who desire to purchase.

## Successful Patent Solicitors.

As Dewey & Co. have been in the patent soliciting business on this Coast now for so many years, the firm's name is a well-known one. Another reason for its popularity is that a great proportion of the Pacific Coast patents issued by the Government have been procured through their agency. They are, therefore, well and thoroughly posted on the needs of the progressive industrial classes of this Coast. They are the best posted firm on what has been done in all branches of industry, and are able to judge of what is new and patentable. In this they have a great advantage, which is of practical dollar and cent value to their clients. That this is understood and appreciated, is evidenced by the number of patents issued through their SCIENTIFIC PATENT AGENCY (S. F.) from week to week and year to year.

## Commends It to All.

R. D. Cruickshank, foreman of the Experiment Station in San Luis Obispo, in renewing his subscription to the *RURAL* kindly remarks: "Feeling well pleased with your paper as regards its moral tone and the instructive articles which it constantly contains, I have taken pleasure in commending it to all I come across."

THERE is very little ebb or flow of the tide in the Arctic, but occasionally there are very strong currents. All winter there is a general flow of tide and ice toward the south, while in summer this flow is northward.

# DRAPERS, GRAIN CARRIERS, AND STRAW CARRIERS,

For Headers, Threshers and Combined Harvesters.

We have manufactured the MARYSVILLE DRAPER for 15 years, and our trade extends all over the Pacific Coast.

Excellence of workmanship and the use of the best materials are appreciated by farmers, as indicated by our large and growing trade.

Encouraged by the great success of our draper trade, we have begun the manufacture of GRAIN and STRAW CARRIERS, and feel confident that the same attention to detail and careful management, if applied to these goods, will soon place them in the same high position as our drapers.

\$35

Has a seat wide enough for two, with box underneath for parcels. The body has been lengthened, is securely framed and strengthened by making the panels in one piece. Seven wheels, steel axles, and curved dash. Finished in scarlet lake or brewster green. The "Blue Ribbon" has proved to be the best built, most popular and best selling low-priced Phaeton Cart ever brought to this market. With Patent Spiral Spring Lazy Back. Shipped securely crated. Weight, 175 pounds.

### FRANK BROTHERS, 33 & 35 MAIN STREET SAN FRANCISCO.

THE NEW BUILDING OF WEINSTOCK, LUBIN &amp; CO., SACRAMENTO, NOW IN COURSE OF CONSTRUCTION.

The new building of Weinstock, Lubin & Co. of Sacramento, now in course of construction, will present many unique features, which, collectively, will make it quite different from any other building on the coast, or, for that matter, in the country. The sketch herewith presented is from the drawings of Mr. Wm. H. Hamilton, architect, and gives a good idea of what the effect of the exterior will be when completed.

The front rests on a series of massive arches supported by columns 20 inches in diameter. The show-windows set back under the arches ten feet from the sidewalk, permitting an

arcade walk between them and the main sidewalk. This idea of arches and arcade is new on the coast and solves in a most satisfactory way the question of protection from sun and rain without the use of objectionable awnings.

The main doorway will be in the center of the building and of imposing character, its width being 22 feet and height 35 feet. The large windows seen in the second story of the building are each seven feet square.

The interior of the building will be of even more unusual character than the exterior. Contrary to the idea which the sketch gives of a three-story building, the interior will be simply

one vast sales-room the full size of the building, and extending from ground floor to roof. This main sales-room will be surrounded by three rows of galleries on all sides.

The second row of galleries will be connected by steel bridges starting from the corners and running diagonally across the open space of the store. These bridges and the second row of galleries will be devoted to the filling of mail orders.

Offices, schoolrooms, innkeepers, etc., will be located on the third row of galleries, while the first row of galleries, also the basement and spaces under the sidewalks, will be used for

the storing of goods. Thus it is seen that the entire building will be devoted to the business of the house.

Everything about the building, from the broad foundations up, will be of the most substantial character, and the fittings will include elevators, electrical appliances and all other modern conveniences that will tend to the quick and satisfactory dispatch of business. The counters and shelvings will be finished in ash, and it is expected, with a ceiling 65 feet high and windows on all sides, that the light will be of the finest character for the display of goods.

## WHEN YOU BUY, — BUY — THE BEST! — THE — **H. H. H.** Horse Liniment

Is certainly the best preparation of its kind in the market. Ranchers, Stock Raisers and Horse Owners of every description will tell you that it does good work every time.

Messrs. H. H. Moore & Sons, Stockton, Cal.—GENTLEMEN: In answer to your inquiry, would state that I used your H. H. H. Liniment on my Holland prize-winning cow, "Lena Menlo," for a wrenched shoulder, and it relieved her very much. She calved the next day, and while still suffering from the sprain gave the largest authenticated quantity of milk ever given on this coast (10½ gallons per day), showing conclusively the great relief received from your remedy. I consider it a necessity in my stables, and when away from home feel perfectly safe, as inexperienced men can do no harm with it, as they can with the more powerful blisters. Respectfully yours,  
Breeder of Registered Holsteins and Berkshires.  
Menlo Park, Cal., January 22d, 1889.

## REGAN VAPOR ENGINE.

NO BOILER. FIRE. EXPLOSION. STEAM, ASHES OR ENGINEER.

Started Instantly Without Even a Match. Will Run on Natural or Manufactured Gas or Gasoline. The Moment Engine Ceases to Run, all Expense Stops.

Upright and Horizontal, Stationary and Marine Engines from 3-4 Horse Power, Upward.

Our Engines are especially adapted for Pumping and Irrigating and Spraying Fruit Trees; in fact, for any use where power is required.

OVER 400 IN USE.

POPE & TALBOT, LUMBER, Office, 204 California Street, }  
SAN FRANCISCO, Feb. 25th, 1890. }

REGAN VAPOR ENGINE CO.—Gentlemen: The 4 H. P. Vapor Engine I bought of you last May has been in constant use ever since, and has given me entire satisfaction. I have found the engine to be all that you claimed for it, and more too. You can use my name for reference if you so desire. I am, yours truly,  
H. TALBOT.

We Carry Thos. Kane & Co's Famous Racine Launches, fitted with our New Compound Engines.

Send for Circular.

REGAN VAPOR ENGINE CO.,

221-223 First Street, San Francisco, Cal.

## Cheaper Than Windmills for Farmers!

Our Perfected "Safety" Engines Cost to Run only 1-8 Gallon of Gasoline per Horsepower per Hour. No Boiler, Fire, Smoke, Steam, Ashes or Heat. No Engineer, No License, No Danger. Single and Double Acting. 1/4 H.P. to 20 H.P.

GENTLEMEN—The 2-H. P. Engine received and set up yesterday. We attached it to part of the machinery in my shop, and it ran my Drill Press, a small Lathe, a large 24-inch by 14-foot Lathe, and a set of Emery Wheels, all of which it handled easily, to our great surprise. Yours very respectfully,  
J. B. HENDERSON.

GENTLEMEN—I am satisfied, after running for over a month my Bean Cleaner, etc., with the 4-H. P. Engine you sent me, that it is much the best Gas Engine I have seen. The electrodes are certainly superior to all others; also your safety rotary slide valve, which is the personification of simplicity, positiveness and durability; I am satisfied it will develop much more power than we have need for. I also want a 2 or 1-H. P. for my wife and daughters to use about the house; we have a rotary clothes washer, can also do the churning, etc. I do not know of any better recommendation than to order a second engine. Respectfully yours,  
P. C. HIGGINS

NOTE.—Both of these Engines were shipped to the parties named, and were set up by them solely by the diagram and printed directions we sent them.

Pumping Plants, Yachts & Launches, Street Cars, Fire Engines, Water Works, Etc. **ELECTRIC VAPOR ENGINE CO.** Complete Plants of all kinds, Stationary or Mounted on Wheels. 218 California St., San Francisco. U. S. AND FOREIGN PATENTS.

OFFICE, 28 CALIFORNIA STREET, SAN FRANCISCO.

FIG. 1.—MISSSES' DRESS.

## Fashion Notes.

## Misses' Dress.

FIG. 1.—This illustrates a Misses' Dress. In the present instance the dress is pictured developed in sapphire-blue cashmere and velvet and white China silk. The full, round skirt falls in natural folds from gathers at the top. The lower edge which is deeply hemmed, is daintily trimmed with a broad band of velvet surmounted by an effective heading formed of silver braid; and the upper edge is joined to the body and bodice, a row of the braid concealing the joining. The full fronts and backs of the body are arranged over a smooth lining that is closely adjusted by the customary darts and seams and closed at the back with button-holes and buttons. The full portions are gathered at the neck, and the fulness below is becomingly drawn toward the center and regulated by gathers at the lower edge. The full shirtsleeves rise with a pronounced curve over the shoulders, and the wrists are finished with wristbands. The standing collar is concealed beneath a full, box-plaited ruching of China silk. The shapely bodice is slightly pointed at the top at the center of the front and back and is shaped to fit the figure accurately; the center seam is opened some distance from the top and the flaring edges connected by silk laces drawn through eyelets. A slash made at each side of the center seam is similarly laced, and the closing is made at the back in a corresponding manner.

Many dainty combinations of colors and textures may be effected in the development of a dress of this kind. The mode is extremely picturesque and will make up with good effect in a single material. Garnitures of lace, embroidery, rows of velvet or grosgrain ribbon, metallic or soutache braid, or feather-stitching, may be added.

The stylish felt hat is handsomely trimmed with ostrich tips and loops of ribbon.

## Boys' Suit.

FIG. 2.—This consists of a Boys' Shirt and Trousers. Striped and two shades of plain Jersey cloth are here united in the suit. The shirt is shaped by shoulder and underarm seams, and the front is cut away in V shape to accommodate a shield, which is permanently sewed at the right side, and

FIG. 2.—BOYS' SUIT.

fastened invisibly beneath the left side. The sailor collar falls in regulation style at the back, and its tapering ends extend to the end of the V, where a bow of ribbon is ornamentally applied. The sleeves have each but one seam, and the wrists are plainly completed.

The trousers extend a trifle below the knee, and are shaped by the customary seams along the inside and outside of the leg and the center of the front and back. They close with a fly, and pockets are inserted in the side seams.

Eider-down flannel, Jersey flannel, silk Jersey webbing and other elastic fabrics may be employed in developing the shirt, and for the trousers similar material or corkscrew, diagonal, serge, or any other plain or fancy suiting may be used. Machine-stitching or braid may be used for a completion, or a perfectly plain finish may be adopted.

The cap is of the darker Jersey cloth.

## Little Girls' Dress.

FIG. 3.—This illustrates a Little Girl's Dress. The dress is here portrayed made of China silk and velvet. The full round skirt is finished at the bottom with a deep

hem, and the top is drawn by shirrings, and joined to the fanciful body, which has a smooth front and backs of lining. The jacket fronts are cut in low, round outline at the top, and below the busts they flare prettily to reveal the full front, which is disposed at the top in a series of tucks of graduated depth. The backs are arranged in three tucks at each side of the closing, which is made at the center with buttons and button-holes; and sash-ties, the gathered ends of which are fastened at the under-arm seams, are prettily bowed at the back. The round collar is in two sections; it rolls prettily over the jacket fronts and is bordered with a unique arrangement of silver soutache braid and the front and lower edges of the jacket fronts are trimmed to correspond. The full sleeves are mounted upon smooth linings and rise well over the shoulders, and the rounding edges of the dainty cuffs are ornamented with soutache. At the lower edge of each cuff is a dainty frill of edging, and a ruching to match is at the neck.

Numerous effective combinations of fabrics may be developed by the mode, or, if preferred, one material may be used throughout, with stylish results.

## Ladies' Costume.

FIG. 4.—Portrays a front view of a costume made of Kursheedt's embroidered mousseline de soie flouncing. The foundation skirt, which is in the accepted four-gored style, is concealed beneath a drapery that is disposed with slight fulness at the front and sides, while at the back, stylish fan-plaits flare gradually to the edge, which is finished with a deep hem; and a small bustle may be worn, if desired.

The full fronts of the shapely basque are disposed at each side of the center in deep, overlapping plaits that flare becomingly upward from the point at the lower edge, and at each side of the plaits a smooth effect is obtained by a single bust dart taken up with the second dart in the lining front. The

mere, percale, etc., will develop attractively by the mode. Scotch gingham, cambric and other washable fabrics will make up with especially good results, and so will drapery nets, gauzes, India or China silk, Bengaline, etc. Lace or embroidered edging, velvet, ribbon, gimp, Persian bands, etc., may be applied for garniture.

**CARBONIC ACID IN FOGS.**—Experiments made by a professor of University College, Dundee, has shown the high percentage of carbonic acid in the atmosphere during fogs. At a time when the fog was densest, eight volumes in 10 000, or more than double the normal amount for the particular locality, was found. In London and Manchester the percentage is much higher. The circumstance thus noted is readily accounted for by the fact that the dispersion of the products of combustion and animal respiration is hindered by the stagnation of the air during the continuance of a fog.

If your cough keeps you awake and restless at night, take Ayer's Cherry Pectoral and obtain immediate relief. This remedy allays inflammation, heals the pulmonary organs, induces sleep, and restores health. The sooner you begin the better.

## Don't Fail to Write.

Should this paper be received by any subscriber who does not want it, or beyond the time he intends to pay for it, let him not fail to write us direct to stop it. A postal card (costing one cent only) will suffice. We will not knowingly send the paper to any one who does not wish it, but if it is continued, through the failure of the subscriber to notify us to discontinue it, or some irresponsible party requested to stop it, we shall positively demand payment for the time it is sent. LOOK CAREFULLY AT THE LABEL ON YOUR PAPER.

## Unitarian Literature

Sent free by the CHANNING AUXILIARY of the First Unitarian Church, cor. Geary and Franklin Sts., San Francisco. Address Mrs. B. F. Giddings as above.

FIG. 4.—LADIES' COSTUME.

FOR INFORMATION, our readers are referred to H. A. Deming, No. 124 Post St., S. F., a leading and well-established house, for paper patterns of plates illustrated in our present issue.

## THE DAIRY.

## Teosinte as a Forage Plant.

EDITORS PRESS:—Over a year ago I stated in the PRESS that I had found Teosinte (*Reana luxurians*, or as Dr. Vasey has it, *Euchlana luxurians*), a very productive forage plant. In a footnote to that communication, you said that it had been grown in some parts of California with little satisfaction. This induced me to try it again last year under special care. My experiment was made 7000 feet above sea level, on good, well-fertilized, irrigated soil, so situated, however, in a narrow ravine that a steep hill on the west shut off the sun for two hours every afternoon even of the longest days.

On the 11th of April, I sowed four seeds six inches apart. During May and June, the weather was cold for the season and the plants seemed only to spread out horizontally. When hot days came with July, the stalks began to grow erect very rapidly. As a cold wind about the middle of September stopped its growth, I cut the crop, with the following aggregate results—small fractions being dropped:

No. of Stalks.	Length. feet.	inches.	Total Length. feet.	inches.
15	8	3	123	9
38	7	5	281	10
33	6	6	247	00
7	5	3	36	9
16	4	6	72	00
8	3	6	28	00
31	3	0	93	00
Total.....			882	4

I measured the extreme length of each fifth stalk as it came to hand, and was careful to make a just average. It will be noticed that each seed produced 38½ stalks, the total length of which was 220 feet 7 inches. In other words, if each plant had sent only one stalk skyward, the top of that stalk would have been the number of feet stated above the earth.

The 153 stalks accurately weighed came to 68½ pounds, and after they had been kept in a shed for two months their weight was 15 pounds. This great reduction shows how full of juice the forage is when green, and how unlikely it is to succeed without being irrigated. The ground occupied by the four plants was about a square yard, but as the tops—though tied up—hung over adjoining plots, I will allow two square yards as the land made use of. The green fodder at this rating came to 82 tons 1770 pounds, and the hay to 18 tons 300 pounds to the acre.

If there is any known grass or clover, which with generous culture will yield more choice food for stock than the plant named I have not heard of it.

Granting that my test was on a very small scale, the fact still remains that the yield was great.

If the weather had been as favorable as that of the year before, I think the product would have been considerably increased. I believe, too, that if the seeds had been put farther apart, the return would have been better.

In a damp, cool climate Teosinte will fail, but in hot, dry localities, where the soil is deep and rich, it is sure to do well.

JOHN DARE EMERSLEY,  
Dos Cabezas, Cochise County, Arizona.

## Silos in California.

EDITORS PRESS:—Will you please ask through the columns of your valuable paper if any one on this coast has used a silo; and if so, does he think it a success. Will ensilage keep as well here as in the East? Also, if they have been used. Does stock thrive on ensilage?

I am greatly interested in silage and want to use it largely in the future if it has proven itself. I should like to hear from several that have used them. We depend more and more each year on the RURAL PRESS. Find it just fills the place. "BAY VIEW,"  
Florence, Cal.

[We have had a number of letters describing success with silos in California, and we trust that we shall hear more in this line, for there is deep interest in it. We regret deeply to record the death of Isaac R. Jewell of Petaluma last week. He was, we believe, the first to report success with the silo in this State.—EDS. PRESS]

## An Acknowledgment.

EDITORS PRESS:—Permit me, through your columns, to express my obligations to those who have so kindly responded to my call and offered to act as correspondents from their respective sections. I trust that, with the help so freely offered, I will be able to do justice to the agricultural and horticultural interests of the State. I shall be glad to have, besides the special information asked for in the circulars, such interesting facts as may come to their notice under the head of general remarks. The resources and industries of this State are so manifold and varied, and so different from most of the Eastern States, that they well deserve particular attention.

GEORGE HUMANN,  
Statistical Agent, Dept. of Agriculture,  
Napa, Cal.

## Sespe River and Vicinity.

EDITORS PRESS:—This part of Ventura county is settling up and improving with a rapidity that would seem to indicate all absence of the pernicious boom, now, and in the past. I have been here but two months, but in that time I have seen more signs of substantial improvement among the farmers and fruit-growers than in any place I have visited in years. Old ground is being plowed; new ground being prepared; oranges and lemons, figs and grapes and prunes being set; barley and potatoes being put in; plowing for corn and other crops, in all directions. Even the town site of Sespe, in the absence of houses, is to be utilized for corn. This is a prairie country, we can see houses and orchards and barley fields in various directions, for many miles over the plains of the Santa Clara river. We were up Grand Avenue (this name may sound a trifle grandiloquent just now, but from the pepper trees, the walnuts, the eucalyptus, etc. on the Avenue; the orange orchards, the prune orchards, the grape, fig, lemon, and apricot adjacent, it will not be long before the name is quite appropriate) a few miles the other day. This Avenue is a road up the Sespe river, and we were surprised to see the improvements going on. Every one has enough to do; every one is busy.

There is abundance of water for irrigation, the heat of soil, surface nearly level, orchards and grain fields look superb. We stopped to purchase a few onions out of a four-acre onion field, and saw other onion patches still larger. We went to buy some strawberry plants, but the owner had just plowed up large quantities of them, some with ripe berries on them, and would take no pay. Here was a beautiful schoolhouse, and still farther up, the oil works. The oil is piped to Santa Paula in a two-inch pipe, which is now being changed for one of four inches diameter. There has been grading done from some miles up, to take a large volume of water from the Sespe, to irrigate many thousands of acres of the plain below; when it will be completed I do not know. Feed in the mountains is abundant and cheap. Most farmers have good teams, plenty of horses and other stock and good implements to work with. I saw, the other day—in fact used it myself a short time on my own land—the best harrow I ever used. It is called Brown's self-cleaning, rotary harrow. It covers six feet (for larger work, two or three can be placed side by side), and once going over the ground puts nearly every grain of barley under the ground, leaving all trash behind and the soil smooth and fine as a garden bed. There are three horizontal wheels, plentifully supplied with teeth—50 in all—on a pivot not quite perpendicular, so there is a slight dip on one side of the wheels, which causes the rotary motion, and the teeth are constantly moving in every direction. It would doubtless be fine for orchards and vineyards, as the wheels would strike with little force against trees and vines. Mr. F. A. Sprague has the right for several of the southern counties of the State. The railroad company claiming every alternate section is quite a detriment to this vicinity, as settlers are unwilling to put valuable improvements on lands the company claims, lest they should have to pay for them twice over. It is to be hoped that this vexed question, which has been in abeyance, I believe, 14 years, will now soon be settled. Large quantities of a beautiful brown stone are being hauled down the Sespe and shipped to Los Angeles for building. This is an excellent hese region—best and whitest honey. There are two bee ranches in sight, besides mine. Mr. McIntyre, a man known, I believe, by Eastern beekeepers, is located on the Sespe. I think he has corresponded with the RURAL PRESS. He is, or has been, inspector of bees for Ventura county. The air is drier, being 20 miles back from the ocean, and is doubtless better for some diseases—as throat and lung troubles—than the immediate coast, as would seem to be the case from my own experience. S. P. SNOW.

POISONOUS WALL PAPER—Since the poisoning in the house of the Mayor of Boston has become known, it is said that experts are making it a business to test the wall paper in the houses of nervous people in that city.

FABIOLA HOSPITAL OAKLAND, CALIFORNIA.

THE FABIOLA HOSPITAL is healthfully and pleasantly located on high ground in the suburbs of Oakland, accessible from every part of the city, the street cars passing the door.

THE APPOINTMENTS of the institution are of the best class; the building thoroughly warmed with Harvey's system of hot water heating; rooms large and sunny; neatly furnished with all the comforts of a private home for the sick and the convenience of a first-class general hospital. Sewerage perfect.

WELL TRAINED NURSES are in attendance, and patients will receive all nursing and care required for any ordinary case without extra charge; but patients in private rooms, requiring a special nurse in constant attendance, will be charged extra.

MATERNITY CASES are given special care, and large sunny rooms are set apart exclusively for such use, with most skilled physicians and careful nurses.

BOTH HOMEOPATHIC AND ALLOPATHIC PHYSICIANS are in regular attendance at the hospital, and patients may choose the school of medicine they prefer.

Should patients desire to employ a physician other than those on the hospital staff, they are allowed to do so at their own expense.

Address S. J. FENTON, Resident Physician, Fabiola Hospital, Oakland, California. Telephone No. 943

Place name and address on back of picture and it will be returned in perfect order. We make any change in picture you wish, not interfering with likeness. References, Wells, Fargo & Co's Express or any Bank in Sacramento.

MELVIN'S ART GALLERY, 718 K St., Sacramento.

FOR SALE!

PINOLITO OLIVE RANCH!!!

FORTY-SIX ACRES OF HILL LAND

In the Town of Auburn, Placer Co.

Red soil, superimposed upon upturned, friable, decomposing slate, yielding iron and alumina, thus furnishing a soil which, as Prof. Hilgard said after his analysis, will retain moisture, will not require irrigation, and will not allow the vegetable mold to leech away; thus suited to the growth of fruit trees, especially the olive, as has been demonstrated both by the remarkable growth of the tree and the yield and the quality of oil.

It is situated only 15 minutes walk from Auburn Station—the C. P. R. R. passes along one side—and is a less distance from the Court House. Thirty a res improved and planted to olives, set at long distances for permanent growth, and other fruits planted between the rows for temporary profits, mostly peaches of three best varieties, ripening in succession; prunes, mostly Petite; plums of several varieties, as Kelsey, Japan, Shropshire Damson, etc.; figs of several best varieties; a few apples, nectarines, blackberries, etc. Two acres of table and raisin grapes, never irrigated, the vines remarkably vigorous and in full bearing. The trees, especially the 1500 olive, have all been planted with regard to permanency. About one-half of them have an orchard growth of seven years; fruited last year 300 pounds, this year nearly one ton. They are mostly Mission and Picholine, with a few trees of other choice varieties. Two crops of the olives have been pressed. The yield has been, for the first press, 14 per cent of very clear delicious table oil, and four per cent from the second press—the Picholine yielding this, of a peculiarly clear, nutty oil.

There is on the ranch a few acres of grain sown for hay; two acres of well-set alfalfa, below the Auburn ditch, which crosses one corner of the property; also a small house of four rooms and a kitchen; a well of good water; a small barn; a strong, permanent spring of soft, cold water, which wells up through the slate; a two-inch iron pipe connects the spring with an iron-bound 20 000-gallon tank, situated on a beautiful pine clad hill 40 feet above the spring, a point which overlooks the town and gives very charming distant views, and is one of the most lovely sites for a residence to be found. The water is pumped to the tank by a duplex pump; the power, a four-horse steam engine, which furnishes power sufficient to pump, saw wood, run an olive crusher and do all needed shop work.

The land is all suited to fruit, excepting along a rocky ridge, which furnishes three very desirable residence sites, and the olive, set promiscuously, thrives finely among the rocks. The property can be conveniently divided along a sag which separates two of the high knobs, and water from the spring can be pumped to each of them.

This desirable property is now offered for sale for less than the improvements cost. The land is fenced, the title good and unencumbered. It is connected by a roadway, which is one of the improvements made, with one of the principal streets of Auburn.

The sale will convey the entire plant, furniture in the house, all utensils, etc. If sold before April 1st the sale will include the coming crop. If later, the crop will be reserved, unless otherwise by special agreement. If desired, one-half the purchase money can remain five years, secured by mortgage at eight per cent. For price and any further information desired, address

Kingsley, Portland, device for moistening the gum on envelopes.

NOTE.—Copies of U. S. and Foreign patents furnished by Dewey & Co., in the shortest time possible (by mail for telegraphic order). American and Foreign patents obtained, and general patent business for Pacific Coast inventors transacted with perfect security, at reasonable rates, and in the shortest possible time.

Our Fruit Book in Southern California.

The sale of our book "California Fruits and How to Grow Them" has been very large in Southern California, and it seems to meet the needs of growers in that region. A special effort was made by the author to make the book as broad as the State, and to reflect the best practice in all regions, and it is very gratifying to know that this has been accomplished at least to a degree which satisfies purchasers of the book. Of many good words which we have received from the south end of the State, the following which comes this week is unique as well as emphatic:

I think Wickson's book on California Fruits of great value, and if our Legislature would buy an edition of 10,000 copies and give one to every person who cultivates too fruit trees, they would benefit the State more than by all the "junketing" that ever has or ever will be done.—WM. PORTER, *Joan-hoe, Los Angeles, Cal.*

Large 8vo, 575 pages. Price, \$3, postpaid. Dewey & Co., publishers PACIFIC RURAL PRESS, 220 Market St., San Francisco, Cal.

Springer, Secretary American Berkshire Association, Springfield, Ill., sends the following transfers of recorded Berkshire: Robin Hood, 25,395 and Lady Rhyford 25,396, by John Craig, Macleay, Oregon to Chas. Miller, Jefferson, Oregon; Earl Fame 25,828, by John Craig to H. W. Cottle & Son, Salem, Oregon; Stanley 25,661, by C. A. Coffman, Rilvera, Cal. to J. E. Pleasant, Santa Ana, Cal.; Duke of Eden 25,769, by Henry P. Mohr, Mount Eden, Cal. to Samuel D. Prether, Montague, Cal.; First Choice of Eden 25,771, by Henry P. Mohr to Daniel Culp, Hayward, Cal.; Arizona Belle 25,824 and Arizona Queen 25,825, by B. F. Dorsey & Sons; Perry, Ill. to Harry Fulton, Flagstaff, Arizona, Amour II. 25,826, by H. W. Cottle, Salem, Oregon to H. C. Dunn, Corvallis, Oregon; Slitting Bull 25,827, by H. W. Cottle to U. S. Nichols, Riddles, Oregon; Preston's Royal 25,843 and Pocahontas 25,844, by Alex. A. Arnold, Galesville, Wis. to C. C. Willis, Plains, Montana.

Mother Bickerdyke Still Active.

NO. 1015 CLAY ST, OAKLAND, CAL.,  
March 30, 1891.

EDITORS PRESS:—Recently many inquiries are made about the health and whereabouts of Mother Bickerdyke. She is with her dutiful son James R. Bickerdyke at his home in Russell, Kansas. This grand woman is not only well, but still happy in directing her efforts in behalf of her "soldier boys"—all (as she claims) who wore the blue and fought for the starry flag in its days of peril.

MRS. J. G. LEMMON.

THE MODERN CEMETERY.—The first (March) number of this magazine, for the dissemination of modern ideas in cemetery management, contains the following: "Modern Cemeteries" from the writings of Adolph Strauch, the father of the lawn plan in cemeteries. The first of a series of articles on "Preliminary Work in Laying Out Cemeteries," "Cemeteries from a Sanitary Point of View," "Suggestions to Cemetery Lot Owners," "Wearing Hats at Funerals," etc. Published monthly at \$1 a year. R. J. Haight, publisher, 243 State street, Chicago.

The Leading Sanitarium.

There is no question but that the Rural Retreat, situated within three miles of the beautiful and healthful town of St. Helena is now far in the lead of all health resorts on this coast in point of facilities for the treatment and cure of worn-out and sick people.

The system of baths (electric and nearly all other at present approved kinds) has never before been equaled in California.

Dr. W. P. Burke, who has had a large practice for some ten years in connection with this and a kindred institution at Napa City, has had an extensive experience and a reputation for success unequalled by but few practitioners on this coast. The success and popularity of his work and that of his capable and faithful assistants, seem still increasing.

The Retreat is some feet above the level of the sea, on the west slope of a well-shaded spur of Howell mountain. It overlooks a rarely beautiful portion of Napa valley and picturesquely bordering hills and mountains forming a most charming landscape view.

The main building and three-room hillside cottages afford accommodations for over 100 guests and patients.

A large boiler-house furnishes steam for heating baths and rooms. A commodious gymnasium and chapel are also among the substantial buildings adjoining the central edifice.

And yet another more commodious than the larger four-story center building is to be erected this spring to meet the steadily increasing patronage of this favorably conducted home of the afflicted.

The institution is carefully and conscientiously conducted by an incorporated association of Seventh Day Adventists, somewhat after the plan of that older institution of their brethren at Battle Creek, Michigan, the largest sanitarium ever successfully established in the United States.

John Fulton is Superintendent; Mrs. J. L. Ings, Matron. The Board of Trustees are Dr. W. P. Burke, W. A. Pratt, A. B. Attwood, R. A. Underwood, Jos. Laninger, Wm. Saunders, J. Fulton.

Calisthenic exercises, free to all inmates of the Retreat, are led by Mr. Hughes, accompanied with appropriate music, and add real pleasure and benefit to those who participate in the same.

Twenty acres of wood, vine, fruit, pasture and villa land is embraced in the home tract, besides 80 acres of still higher land, which affords an abundant supply of water.

The purest, clearest, and best of drinking water flows from the well-famed Crystal Springs close by the Retreat—the springs which gave the place its first start as a sanitarium.

Carriages meet all passenger trains except those arriving between sunset of Friday and Saturday.

This prosperous institution has been well filled every month in summer and winter during the past year, while many offers of guests have had to be declined.

Being acquainted personally with the merits of this sanitarium, we have no hesitancy in recommending it to the sick and afflicted.

Coronado Beach.

The southern part of the State appears to be entering on another boom, or at least a correspondent, who has returned from that section, says the cities and large towns are crowded with tourists and would-be farm or land buyers. He says that the Santa Fe Railroad Company's lines are crowded with passengers, particularly those in use between Los Angeles and Coronado. Many go to the latter place to enjoy the delightful scenery, which is a beautiful panorama of nature's loveliest pictures. The town of Coronado has claims to the beautiful. It is situated on the peninsula forming the bay of San Diego, and commands a view of the Pacific on one side and of San Diego on the opposite side of the bay. A few years ago, Coronado had not a human habitation. Now there are upon it many miles of streets and avenues lined with ornamental trees and shrubs, also fine parks and the best race-track in the State. Handsome villas and cosy cottages gladden the eye at every turn, and the sanitary arrangements are perfect. For the accommodation of visitors, whether transient or permanent, the extensive and elegant Hotel del Coronado, with its magnificent appointments, many luxurious comforts and beautiful surroundings stands unrivaled. The management leave nothing undone to add to the delights and pleasures of the hotel patrons. Probably one of the most attractive features is its inexhaustible supply of natural mineral-spring water, supplied free to all guests. The quality of the water can be better judged from the following statement, showing comparative analysis of the Bethesda Springs, Waukesha, and Coronado natural mineral water:

One pint contains 8750 grains.

BACK FILES of the PACIFIC RURAL PRESS (unbound) can be had for \$2.50 per volume of six months. Per year (two volumes) \$4. Inserted in Dewey's patent binder 50 cents additional per volume.

BAROMETRIC PLANTS.—A recent little work on barometric plants published in France, gives, among other interesting facts, the following: If the stalks of clover and leguminous plants stand upright, there will be rain; if the leaf of the wood sorrel turns up, it is a sign of a

storm, as is also the closing of the convolvulus flower, the expanding of the lettuce flower, and the turning upside down of the flower of the pitcher plant; but if the last named stands erect it will be fine, as it will be if the flower or the sorrel opens.

MACLEOD'S "GIANT" CULTIVATOR, ROLLER AND RAKE.

MACLEOD'S "SIMPLEX" CULTIVATOR.

The Macleod Cultivators.

Mr. Malcolm Macleod, a mechanical engineer of Los Angeles, has recently brought out three styles of cultivators which have proved so well adapted to the work for which they were designed, that "we take pleasure in calling attention to them as important California inventions. The engravings used herewith show very clearly the design of the inventor and how many useful treatments of the soil he effects by his devices.

All of these styles may have Macleod's steering gear, by which a machine can be driven up-hill. They all have Macleod's adjustable weed-cutter, which cuts any depth by moving hand lever; also removable and adjustable cutters so that any number can be used any distance apart. All rubbish drops from the cutters by simply moving the hand lever. All these cultivators can be fitted with seeders or planters.

Of the three styles we introduce the following condensed descriptions from Mr. Macleod's circular:

The "Simplex," as shown in ont, is six feet wide and weighs but 160 pounds. Both ends outside the wheels can be taken off at will, thus making the six-foot machine into a five-foot or four-foot machine when desired for nursery or other purposes. But in the case of cultivating under trees, the extension can be put on sides only of the machine with spring tooth if desired. The clevis can be set to counterbalance this side draught. As in Macleod's other cultivators, all the teeth are removable and adjustable, so any number any distance apart can be used, and are self-cleaning. The wheels are shown with two cutters outside of them at each end, but the wheels may be readily placed anywhere on the shaft, and the cutters be placed in any position. The advantage of this novel

MACLEOD'S "UNIQUE" CULTIVATOR AND RAKE.

arrangement is apparent to every practical agriculturist.

The "Giant" cultivates rakes and rolls at one operation; also furrows, weeds and plants. It has extension arms to cultivate below trees, water-weighted rollers for all soils—field or orchard. The teeth are movable and adjustable; any number can be used and any distance apart. All cutters (or weed knives) cut any depth by moving hand lever.

The "Unique" is a one-horse machine, convertible into a two-horse cultivator and weed-cutter; also harrow and roller may be attached at rear. The teeth are movable and adjustable; any number can be used, any distance apart. All weed knives cut any depth by moving hand lever. It has extension arms to cultivate below trees; a three-foot machine may be made to cultivate or weed 42, 60 or 72 inches by operator.

All these implements can be seen at Macleod's seed and implement store, 245 South street, Los Angeles.

The Pacific Hospital,

Stockton, Cal.

Private Hospital  
For the Care and  
Treatment of  
Mental and Nervous  
Diseases.

The proprietary institution known as the Pacific Hospital is especially devoted to the care and treatment of mental and nervous diseases.

The buildings are capacious and comfortable, having been constructed for the accommodation of over 200 patients, and are pleasantly situated in the suburbs of Stockton, and are surrounded by attractive grounds of 40 acres in extent, with cultivated gardens and pleasant walks. Its advantages over public institutions in facility of admission and procuring extra accommodations, if required, are obvious. For terms and other particulars, apply to the Proprietor and Superintendent, DR. ASA CLARK, Stockton, Cal.

RICE'S PATENT

**WEANER**  
—AND—  
**MUZZLE.**  
Sucking Cow  
Prevents Calf or Cow from Sucking Themselves or Each Other.  
Thoroughly Tested and Endorsed by All. No Hindrance in Eating and Drinking. No Pain. Complete Success.  
No. 1, for Calves, 75 cts. ea., by mail postpaid. . . \$ .55  
No. 2, for Yearlings, 75 cts. ea., by mail postpaid. . . 80  
No. 3, for full grown animals, \$1, by mail postpaid 1 10

**FUNK'S PATENT CALF FEEDER.**  
Also for Colts and Lambs.  
Raises better calves than any other method. Better than the cow, because can feed prepared feed and give all the calf can eat. As soon as the calf feels the nipple it tastes the milk and is glad to suck; as it gets older it weans itself. No air swallowed; no fingers chewed; no ears sucked. Less trouble; greater success; easy to clean. Sample Feeder mailed postpaid, \$1.00; per dozen, \$9.00. There are Great Advantages in REARING YOUNG CALVES BY HAND over rearing them with the cow. It takes less time and trouble, because they are easier handled, depend on themselves and winter better; get to eating sooner by putting milk-stuff in the milk; make better calves, because plenty of skimmed milk and slop to spare; make more butter because the cream is saved; can run in the same pasture with the cow, never have to wean them, and the cow does no fretting for the calf. Will send trial Weaner and Feeder, postpaid, \$1.50. Don't fail to give them a trial.  
**G. G. Wickson & Co.,**  
3 and 5 Front St., San Francisco,  
346 N. Main St., Los Angeles,  
141 Front St., Portland, Oregon.

THE GIANT POWDER COMPANY.

PATENT OWNERS OF

## S. E. MARKET REPORT

## Market Review.

## DOMESTIC PRODUCE, ETC

SAN FRANCISCO, April 1, 1891.

The weather continues favorable for growing crops. Trade in farm products is active, with prices generally higher for everything except garden truck and dairy products. In Europe and also at the East the wheat market has strengthened and ours moved up in sympathy. The following is to-day's cablegram:

LIVERPOOL, April 1.—Wheat—Fair inquiry, California spot lots, 8s 6½d; off coast, 4½s 6d, just shipped, 4½s; nearly due, 4½s 6d; cargoes off coast, held higher; on passage, higher prices asked but no advance established; Mark Lane wheat and maize, very strong but not quotable dealer: Wheat and flour on passage to Cork, U. K., 2,791,000 qrs.

## Foreign Grain Review.

LONDON, MARCH 30.—The *Mark Lane Express* says: English wheats are strong at an advance of 1s; foreign showed an average rise of 9d. The prospect of the wheat crops in Russia, Austria and Hungary gives the hope of an increased export surplus amounting to 4,000,000 quarters. Against this may be set the certainty of a heavy import demand from France, Italy, Belgium, Holland and Germany. The deficiency in those countries, combined with the wants in England, is expected to absorb the surplus wheat of America, Austria and Russia, thus causing a decidedly higher mean value during the cereal year 1891-92.

## Liverpool Wheat Market.

The following are the closing prices paid for wheat options per cwt. for the past week:

	Mar.	April.	May.	June.	July.	Aug.
Thursday.....	8s4½d	8s4½d	8s4½d	8s4½d	8s4½d	8s4½d
Friday.....	.....	.....	.....	.....	.....	.....
Saturday.....	.....	.....	.....	.....	.....	.....
Monday.....	.....	.....	.....	.....	.....	.....
Tuesday.....	8s4½d	8s4½d	8s4½d	8s4½d	8s4½d	8s4½d

The following are the prices for California cargoes for off coast, nearly due and prompt shipments for the past week:

	O. C.	P. S.	N. D.	Market.
Thursday.....	41s6d	40s3d	41s6d	Firmly held.
Friday.....	.....	.....	.....	.....
Saturday.....	41s6d	40s3d	41s6d	Firm.
Monday.....	.....	40s3d	.....	.....
Tuesday.....	41s6d	40s3d	41s6d	Very strong.

## Eastern Grain Markets.

The following shows the closing prices of wheat at New York for the past week, per bushel:

	Day.	Mar.	April.	May.	June.	July.	Aug.
Thursday.....	11½	11½	11½	11½	11½	11½	11½
Friday.....	.....	.....	.....	.....	.....	.....	.....
Saturday.....	11½	11½	11½	11½	11½	11½	11½
Monday.....	11½	11½	11½	11½	11½	11½	11½
Tuesday.....	11½	11½	11½	11½	11½	11½	11½

The closing prices for wheat have been as follows at Chicago for the past week, per bushel:

	Day.	Mar.	April.	May.	June.	July.	Aug.
Thursday.....	103	103	103	103	103	103	103
Friday.....	103	103	103	103	103	103	103
Saturday.....	103	103	103	103	103	103	103
Monday.....	104	104	104	104	104	104	104
Tuesday.....	105	105	105	105	105	105	105

NEW YORK, April 1.—Wheat—\$1.12½ for May, \$1.10½ for June, \$1.08½ for July, \$1.04½ for August and \$1.05½ for December.

CHICAGO, April 1.—Wheat—\$1.04½ for May and \$1.02½ for July.

## Russia's Wheat Crop.

ODESSA, March 27.—The winter wheat crop in South Russia is very unpromising, and small farmers are in a hopeless condition in consequence.

## Pacific Coast Crop Reports.

PORTLAND, March 28.—Oregon Weather Bureau. The week has been cloudy, cool and showery. There was frost on the 24th, but it did no damage. The ground is very wet, delaying the spring seeding. Winter wheat has a good stand and color and promises well. Peach, almond and apricot buds are swelling or in bloom. The fruit prospects were never better. The backward spring delays the fruit and insures it against a possible late frost. Warm sunshine is needed. Grass is growing and stock is in good condition.

SACRAMENTO, March 28.—Weekly crop report of State Agricultural Society, acting with Sergeant Barwick, Signal Service Observer: In the northern portion of the Sacramento valley the crop prospects were never better, although frequent showers have somewhat retarded plowing and planting. In the San Joaquin valley the crop outlook is good, but showery weather would be beneficial. There were light frosts in the coast counties, but no damage was done. Sacramento valley prospects for a large crop were never better. In the foothills the prospects for a large yield of fruit are the best in many years. The rainfall and temperature in Northern California are slightly below normal. In Southern California clear weather prevails, with temperature about the average and rainfall somewhat below. Grain is growing well, except that more rain is needed in the vicinity of Riverside and San Diego. Peaches, plums and apricots are in full bloom and early vegetables are abundant.

## Visible Supply of Grain.

NEW YORK, March 16.—The visible supply of grain in store and afloat, as compiled by the New York Produce Exchange, is as follows: Wheat, 22,745,000 bushels, a decrease of 267,000 bushels; corn, 2,988,000 bushels, an increase of 18,000; oats, 2,809,000 bushels, a decrease of 1000; barley, 1,328,000 bushels, a decrease of 166,000.

## Eastern Wool Markets.

NEW YORK, March 20.—Bradstreet's says: "A quiet trade is reported from all the leading wool markets. The demand is confined almost wholly to Australian. Territories and pulled wools are scarce and manufacturers have to take foreign fleeces in place of them. Sales have been made of small lots of Ohio and Michigan X and XX, and full prices have been obtained. Manufacturers do not want inferior wools, as they are making the finest grades of goods their mills can turn out. Texas wools are in fair demand, but the supply has become so reduced that the movement is light and fine territories are taken as fast as they arrive. Manufacturers are securing good results by mixing them with Australian wools. Pulled wools are in strong demand and prices are firmer because of reports from pullers of the scarcity of skins. Some large lots of

choice Australian wools are due to arrive within the next few days. The supply of these wools, it is thought, will be ample. A freer movement of Carpet wools is expected by dealers. Manufacturers are reported to have very light stocks, and are looking around for supplies.

NEW YORK, March 30.—The light condition of Eastern wool stocks gives New York a good share of the demand. Little unsold California here. The sales of domestic are 597,000 lbs. A heavy movement in imported, a million and a half to arrive. Washed wool somewhat improved in demand. A quarter of a million of Ohio X sold at Boston for 29¢@30¢. All mixing wools will have only second place to Australian, while quality and price can be duplicated; fabrics have fair call for fall goods. Heavy wear drags. Delaines, firm, active; ruling seaboard rates. Boston reports a steady trade. Sales, 775,000 lbs. foreign; 1,885,500 lbs. domestic. Market unusually clear of Territorial and kindred wool for season; Philadelphia, quiet. The chief demand for Worsted mill grades easily filled at the moment.

## Fruit Crop Prospects East.

Missouri State Horticultural Society reports the condition of the fruit crop on March 12: Apples—From all parts of the State come flattering reports, and only where the orchards held a very full crop last year is there any doubt about the prospect. Pears—We find some injury in the northern part of the State, and in very many portions damage is done to the LeConte. Peaches—In the northwestern part of the State they are killed, and very badly injured all along the northern portion, until you come to the eastern portion where the prospects are 50 per cent. The injury seems to drop down below the Missouri river in the western portion into Jackson, Cass and Johnson counties, where it ranges from 50 per cent to 70 per cent. The injury seems to be lighter as you go East, and the line of injury recrosses the river below Boone county, and the counties near St. Charles seem to be all right again. The southern part of the State seems to be free from injury and the prospects bright. I fear that the cold of about March 1 has done more injury than has been reported, and that we will find other places injured when closer examination is made. But when we take into account that there are ten times as many buds as we want peaches on the trees, and we can easily lose that many and still have a good crop of peaches of better size and quality than ever—we see that we must not get frightened too soon. Plums—the Wild Goose varieties are also badly injured as well as the Kelsey and Prunes Simoni. Cherries—seem to be very little injured yet, and prospects good.

## Dried Fruits East.

NEW YORK, March 28.—California raisins have had a rather freer movement the past few days, but with irregular prices. Three-crown, loose, are selling at \$1.25@1.50 per box, as to brand and condition. Fine lines were picked up at \$1.75, some very good stock at \$1.60 and inferior as low as \$1.45. Three-crown in bags sold in moderate quantities at 5½¢@6¢ here, the latter for very choice, and 5¢ in Boston.

NEW YORK, March 30.—The market is now bare of bag raisins. Inquiry lively; dealers refuse to pay full 5½¢ for best, laid down here. Any advance to that figure would promptly turn attention to Valencias, which are quoted low in view of possible shipments from the west owing to the reputed soft condition of cheap grades. Buying will be cautious as warmer weather approaches. Boxed crowns and layers quoted as before.

Prunes.—Flat, unsettled; influenced by easier French, four sizes of which can be landed here at 8½¢, against 10½¢ a month ago.

Evaporated apples losing money; 12½ is now the top price. Some holders of canned peaches losing heart, offering good standard at \$2.25.

NEW YORK, March 30.—Unpeeled California peaches, boxes of well-known brands, are quoted at 14¢. Evaporated California apricots were offered Saturday at 16¢ spot. Choice California dried wine grapes are quoted at 5½¢ spot.

## Orange Shipments.

SACRAMENTO, March 29th.—To-day and to-night ten special orange trains passed eastward from the southern part of the State, comprising 60 carloads. P. E. Platt, who returned from Los Angeles, says: "California oranges are now taking possession of the markets of the United States to a greater extent than was deemed possible earlier in the season. Large shipments are made daily to all parts of the Union, even as far east as New York and Boston. The Florida crop being virtually out of market, the field is open for California." The W. R. Strong Company of Sacramento to-day forwarded East the first full special train shipped by one firm. It was from Los Angeles, and consisted of seventeen cars. Railroad men pronounce it a model train. It is composed of new cars of uniform pattern, with passenger train trucks and air-brakes. It is expected to reach New York in eight days.

## Miscellaneous.

NEW YORK, March 30.—All strictly choice hops are firmer in tone, but the sales are limited. Numerous rumored sales of a speculative character have no direct bearing upon actual hops, which range common to best nineties, 24¢@31¢.

Honey is weaker, as the Jewish demand has subsided. Amber, 6½¢@7¢.

Pure, clean, yellow Pacific Beeswax is quoted at 30¢.

Mustard seed is quiet and steady; good supply at 3½¢@4½¢ as to color.

Wholesale Limas are not above \$2.60 spot.

	Buyer Season.	Seller 1891	Buyer 1891.
Thursday.....	131	129	129
Friday.....	131	130	130
Saturday.....	134	133	133
Monday.....	134	133	133
Tuesday.....	134	133	133

BAGS—The market is steady at 7½¢ for May-June delivery. The warden at San Quentin notifies us that prison bags are sold up for the season. It looks as if dealers are trying to form a corner.

BARLEY—The sample market is higher, due to light stocks and good demand. In futures, trading on Call has been nearly altogether "wash sales." Operators on Call make wash sales for the purpose of influencing the market in the direction calculated to help them. The reported sales on to-day's call are as follows.

Morning Session: Buyer Season—100 tons, \$1.35½; 400, \$1.36. 100, \$1.35½; 100, \$1.35½; 100, \$1.35½. Afternoon Session: Seller 1891—100 tons, \$1.04½; 100, \$1.04½. Buyer Season—200 tons, \$1.35½; 100, \$1.35½. 100, \$1.35½.

BUTTER—Heavy receipts and a restricted outlet are causing stocks to accumulate. The market is weak at lower prices.

CHEESE—The market is tending down under free receipts and only a fair demand.

EGGS—The market is lower and weak at the decline. The receipts are large while the demand is only fair.

FLOUR—The market is strong with an advancing tendency.

WHEAT—The market for sample parcels is very strong, but then this we have steadily stated would be the case. This opinion was grounded on the statistical position the world over. In futures trading, wash sales and cross-orders have been light, but with prices upwards.

The following are to-day's reported Call board sales.

Morning Session: Buyer 1891—200 tons, \$1.54½; 100, \$1.55½; 200, \$1.55½; 600, \$1.55; 200, \$1.55½; 100, \$1.54½. Buyer season—1200 tons, \$1.54½; 800, \$1.54½; 100, \$1.54½; 900, \$1.54½; 100, \$1.54½. Seller 1891—400 tons, \$1.46. Buyer 1891, after August 1st—100 tons, \$1.51½; 500, \$1.51½. Afternoon Session: Buyer 1891—400 tons, \$1.54½; 500, \$1.54½; 200, \$1.55. Buyer season—600 tons, \$1.54½; 100, \$1.54½. Seller 1891—100 tons, \$1.46½. Buyer 1891 after August 1st—500 tons, \$1.51½; 100, \$1.51½. 100, \$1.51½.

## Cereals.

The local wheat market has held strong throughout the week with a slight advance on the previous week's prices. Buyers are still bearish, only taking wheat when compelled; in this course, as we have heretofore stated, they are actuated with the sole purpose of keeping values so as to enter the season of 1891-92 at a low range of values. It now looks as if buyers will not be able to force prices down to the low figures they expect, for the next season may be entered at not less than \$1.40 or \$1.45 per cental for No. 1 white shipping, and it may be that the price will be from 5 to 7½ cts per cental higher than named. There is no doubt of large lines of short sales put out owing to glowing crop report. If this market before July next is very heavily shorted, it may make some of the sellers do considerable "rustling" to make deliveries at a profit. The quantity of old wheat in the State is estimated by the secretary of the Produce Exchange too high; this the writer knows from his returns. The stocks in country warehouses are exhausted, or so nearly as to cut no important figure in estimating on the available supply up to harvest. In Oregon and Washington, under heavy shipments, there is comparatively little to draw from.

Crop advances from all parts of this State are uniformly good. The plant is making a strong growth. While the straw generally is reported of medium average height for this month, yet the plant has stood out better than for years, and will undoubtedly give a large out-turn.

Barley has ruled fairly strong throughout the week with an advance established toward the close. The light available supplies on this coast combined with free consumption, make the market sensitive. When wheat was lower, considerable of that cereal was fed, but with higher prices it does not pay to feed it instead of barley.

Oats have fluctuated very little. The tendency of the market has been to higher prices under limited receipts. Feeders and dealers buy sparingly, only taking for immediate wants. It is claimed that the crop prospects in this State are of the best.

After declining, corn shows a slight advance at the close with a fair demand. The outlook for the crop is all that can be desired. An increased acreage is reported.

## Grain in Call-Board Warehouses.

According to the report of George A. Abel, official Grain Inspector of the San Francisco Produce Exchange Call Board Association, the stock of grain, etc., in all city call-board warehouses on April 1, 1891, compares as follows with the stock on hand March 1st.

	March 1st.	April 1st.
Wheat.....	5,898	6,904
Barley.....	8,948	7,997
Oats.....	2,394	2,030
Corn.....	2,009	1,638

The stock of wheat in all Port Costa warehouses is 83,030 tons, and in Stockton warehouses 36,557

tons, making the total stock in all Call Board warehouses 126,491 tons, as compared with 164,734 tons on March 1st.

## Feedstuff.

Ground feed is fairly strong at full figures under moderate receipts. The demand is light yet enough to keep prices strong. Rolled and ground barley is taken for shipment and in fair demand for home use.

Hay continues to hold strong for the more choice grades; poor or off grades are barely steady. New hay will soon put in an appearance, but of course the demand at first will be slow for city use. The crop in this State it is claimed will be large.

## Fruits.

H. Harris & Co, Boston, forwards us a catalogue of sales of California oranges made at auction by their firm on March 20: 28 boxes fancy Konah \$3 to \$4.37½ a box, 233 boxes fancy seedlings \$3 to \$4.37. Over one-half of the latter fetched over \$4 a box. The sales of California lemons aggregated 55 boxes at \$2.75 to \$3.25 a box.

The first strawberries of the season came to hand yesterday (Tuesday) and sold at \$1 a box. G. P. Craig of Mayfield was the shipper.

The apples coming in are more or less defective, and consequently they are poor keepers. So far as we are able to learn, all received have to be overhauled.

The receipts of oranges are barely up to trade requirements. Choice to fancy seedlings and navels letch an advance, and even \$5 to \$5.25 a box for 150 to 175 Riverside navels. The supply is light. There is both a local and outside distributive demand. Shipments to the east continue very heavy, and yet the Eastern cry is for more. The improved fruit cars meet with praise from consignors and consignees.

Lemons are in light receipt, and as the weather grows warmer the demand enlarges and the market strengthens. Limes are strong.

Crop advances for both vine and tree fruits, continue of the most favorable character.

The receipts of dried fruits show a slight increase. They consist of odds and ends which show that the supply is cleaning up. There is a fair demand.

Raisins if choice fetch full prices, but poor stuff is slow of sale.

## Vegetables.

Seasonable garden truck is coming in, in increasing quantities, causing lower ranges of values in peas, asparagus, beans, celery, rhubarb and early cabbages. The quality of both peas and beans does not average the best, which causes a wide range in prices. With continued free receipts, canners will be able to enter the market soon. Los Angeles tomatoes received the past week were more or less frost-bitten, causing them to come to hand in poor condition and necessitating forced sales.

Onions are strong under moderate receipts and a fair inquiry.

New potatoes are slow in coming to band. It is said that the southern part of the State is making free shipments east instead of to this market. Receipts it is thought, will soon begin to show steady increases.

Old potatoes are firm for good keepers of the more choice varieties, but poor stuff is hard to sell.

## Live-stock.

Bullocks are strong with a slight advance obtainable for desirable sized that cut up with little wastage. The improved pasture causes less disposition to sell, while range cattle in Nevada and Arizona are lessening in numbers. Western Oregon is still drawing from us, but late advices from up north report that shipments will soon come forward from ranges east of the Cascades. Mutton sheep for delivery after shearing are offering more freely; prices it is claimed will soon shade off, but then this is problematical and depends largely on the weather and beef supply. Hogs are higher. Milch cows and horses are in good demand.

The market for dressed cattle is quoted as follows [to obtain the price on foot, take off from the price for stall-fed one-third to one-half, according to the nature of the feed and time fed; and for grass-fed take off the price from 40 to 60 per cent]:

HOGS—On foot, light grain fed, 5½¢@5¾¢ lb.; dressed, —@—¢ lb.; heavy, 5½¢@5¾¢ lb.; dressed, —@—¢ lb. Stock hogs, 4@4½¢ lb. BEEF—Stall fed, 7½¢@—¢ lb.; grass fed, extra, 6½¢@—¢ lb.; first quality, 6@—¢ lb.; second quality 5@—¢ lb.; third quality, 4@—¢ lb.; bulls and thin cows, 2@3¢ lb. VEAL—Small, 7½¢@8½¢ lb.; large, 6@7¢. MUTTON—Wethers, 9@9½¢ lb.; ewes, 8@9¢ lb.; spring lamb, 10@12¢ lb.

## Miscellaneous.

From the *Commercial News* of April 1st the following summary of tonnage movement is compiled:

On the way to	1891.	1890.
San Francisco.....	242,486	172,216
San Diego.....	14,717	17,048
San Pedro.....	10,669	7,001
Oregon.....	27,720	24,822

Totals.....87,759 92,367

To get the carrying capacity, add 65 per cent to the registered tons as given above.

From July 1, 1890, to March 27, 1891, the following are the exports from this port:

Wheat, cts.....	9,824,190	10,744,284
Flour, bbls.....	896,811	846,619
Barley.....	212,802	901,601

Eastern poultry coming in sparingly with wild game out of market causes California poultry to fetch better prices. Well conditioned, healthy, large sized young poultry is wanted, and fetches even higher prices than we quote.

Hops are stronger and to buy gilt-edged 40 cts. would have to be paid. Crop prospects continue favorable.

Nuts are neglected.

Wool is coming in more freely. Buyers are beginning to look around. It is conceded that the market will open higher than ruled last year. Our quota,

tions are nominal. They will be changed next week. Under stronger selling, bean-buyers are offish and are not disposed to pay outside quotations. The distributive demand is free. Honey meets with only fair inquiry. Receipts are light, but crop prospects are said to be good. Exports by sea the past week aggregate as follows: Wheat, cils, Havre, 207,714; Cork, 87,894; Falmouth, 56,427; Hull, 61,360; Fleetwood, 57,302; Flour, bbls, Petropaulofski, 700; Kahului, 305; Barley cils, Honolulu, 458; Mahukona, 1406; rolled, Honolulu, 559; Mahukona, 564. Bran, sks, Honolulu, 1200. Hay, bales, Honolulu, 726; Santa Rosalia, 576. Wine, gals, Mexican ports, 4876; Santa Rosalia, 2516; Mazatlan, 625. Beans, lbs, Victoria, 19,511. Dried fruits, lbs, Mexican ports, 2355; Victoria, 1656.

Domestic Produce.

Extra choice in good packages fetch an advance on top quotations, while very poor grades sell less than the lower quotations.

THE JUDSON RABBIT-PROOF WIRE & PICKET FENCE.

fence colored RED by boiling in a chemical solution that preserves the wood. Address JUDSON MANUFACTURING COMPANY, 14 and 16 Fremont Street, San Francisco.

**SHORT-WEIGHT GOLD COIN BECOMING COMMON.**—Short-weight gold coins are becoming annoyingly common in the Eastern States. A "shortness" is due to a species of robbery familiarly known as "sweating coins." From a careful examination of light pieces which are now being found, it is evident that the thief is not doing his work by the old hand method of shaking the coins in a bag and then gathering the dust by means of quicksilver, but that he has brought into requisition the agency of electricity. The service of an ordinary galvanic battery and some cheap acid is all that is necessary to conduct the operation by the electric process. The scheme is similar to that employed in plating with gold by electricity. The coin is placed in the fluid and attached to it are wires from the poles of the battery leading to another piece of metal prepared to receive, in the form of plating, the metal to be removed from the coin. The battery being set in motion, sufficient gold to form a plating is quickly transferred, and as it is removed uniformly from all parts of the coin, the liability of disfigurement is reduced to a minimum. The only effect is to blur the character slightly. About 50 cents' worth of gold can be removed in this way from a ten-dollar gold piece, without exciting the suspicion of the casual observer. To the skilled eye of an expert, however, the effect is generally apparent at a glance.

**A WARNING TO DOG OWNERS.**—Professors of canine pets will do well to take warning, says the London *Lancet*, from certain recently reported observations of Prof. Nothnagel. These go to prove that the development of cysticerci in the human subject is in some cases to be attributed to contact with the saliva of lap-dogs which have been allowed to lick the face and mouth of their owners. The explanation is a feasible one, and adds a noteworthy contribution to our knowledge of morbid etiology. The *taenia echinococcus*, as is well known, inhabits the small intestine of the dog, and it is highly probable that the ova occasionally find their way into the animal's mouth; for example, in vomiting. There are various esthetic reasons why the kiss of even the most cleanly and most friendly pug or terrier should be dispensed with. We have now, thanks to the Viennese observer, a still stronger argument to urge against this practice. It may, indeed, like the others, fail to daunt the too-devoted master or mistress, but we cannot do less than avail ourselves of this opportunity to forestall, if possible, by a timely warning, the sharper teaching of experience.

"Gentle Spring" loses many of its terrors when the system is fortified by the use of Ayer's Sarsaparilla. With multitudes, this wonderful tonic-alternative has long superseded all other spring medicines, being everywhere recommended by physicians.

#### ORANGE PLANTERS

Should read the advertisement of the Aloha Nurseries. The best varieties are offered at rates so low that no one need hesitate about planting for experiment, or for investment in places where the orange is known to thrive.

Use "Dead Lock" Gopher Traps. They are the best. See advertisement in this paper.

## CHILDREN

Are always liable to sudden and severe colds, to croup, sore throat, lung fever, etc. Remedies, to be effective, must be administered without delay. Nothing is better adapted for such emergencies than Ayer's Cherry Pectoral. It soothes the inflamed membrane, promotes expectoration, relieves coughing, and induces sleep. The prompt use of this medicine has saved innumerable lives, both of young and old.

"One of my children had croup. The case was attended by our physician, and was supposed to be well under control. One night I was startled by the child's hard breathing, and on going to it found it

### Strangling.

It had nearly ceased to breathe. Realizing that the child's alarming condition had become possible in spite of the medicine it had taken, I reasoned that such remedies would be of no avail. Having a part of a bottle of Ayer's Cherry Pectoral in the house, I gave the child three doses, at short intervals, and anxiously waited results. From the moment the Pectoral was given, the child's breathing grew easier, and in a short time it was sleeping quietly and breathing naturally. The child is alive and well to-day, and I do not hesitate to say that Ayer's Cherry Pectoral saved its life."—C. J. Woodriddle, Wortham, Texas.

For colds, coughs, bronchitis, asthma, and the early stages of consumption, take

## THE CYCLONE

## PULVERIZER!

For Fine Surface Cultivation in Orchard, Vineyard or Field.

Will leave the ground in much finer condition than any other tool.

The Cyclone has two gangs of knives attached to malleable iron heads, and hung separately, so they can be set at any desired angle with reference to side cut; each knife cuts its own furrow, and moves all the earth between it and the next, so that the entire surface is worked. The knives are followed by a hardwood plank, which

Crushes the Clods and Levels the Ground.

Attached to the plank by means of hinges and lever (so that it can be adjusted to its work) is a gang of teeth one and one-half inches apart and about five inches long. These teeth are sharp on lower edge, and after being properly adjusted by the lever, they will cut and crush all clods escaping the knives and planks, and are of great advantage over any other form of roller or drag, as they will not clog when the ground is moist, and are easily freed from rubbish by working the lever, and will not pack the surface, thus leaving a perfect tilled soil. The highest success can only be obtained in the preparation of the soil through tilling and pulverizing. For this purpose there is no tool equal to the above. Any one who uses it will be repaid a hundred fold, as the finely pulverized soil acts as a mulch, preventing to a great extent the loss of water by evaporation, and in some localities it will save the expense of irrigation, as well as presenting many other advantages.

658 THIRD ST., OAKLAND, CAL.

DOMOTO BROS. CO., ON ACCOUNT OF REMOVAL, offer Great Bargains in Mandarin Oranges, Mammoth Chestnuts, Persimmons, Plums, Ornamental Plants, Camellias, Azaleas, Magnolias, Tree Peonies, Palms, Wisteria and Bulbs; also 500 different varieties of Choice Chrysanthemums and 800 new varieties from Japan, Roses, etc. For sale at Lowest Prices.

# MOUNTAIN NURSERY.

## Fine Budded Orange and Lemon Trees.

First Class, 4½ to 6 feet; Second Class, 3½ to 4½ feet.

SEEDLING TREES,  
SEED BED ORANGE PLANTS,  
LISBON LEMONS,

WASHINGTON NAVELS,  
MEDITERRANEAN SWEETS,  
EUREKA LEMONS,

AND A FULL LINE OF OTHER NURSERY STOCK FOR SALE.

FOR PRICES AND TERMS ADDRESS THE PROPRIETOR,

**T. S. INGHAM, San Bernardino.**

## TREES, PLANTS AND VINES

For the Season of 1890-91.

Having decided to re-establish the GENERAL NURSERY BUSINESS at Oakland, Cal., I have purchased the ENTIRE NURSERY STOCK grown by Mr. James Shinn at Niles, Cal., embracing a most complete assortment of unusually fine stock, grown without irrigation, that I am offering at reasonable prices.

All the Leading Varieties of APPLE, PEAR, CHERRY, PLUM, PRUNE, APRICOT, NECTARINE and ALMOND.

Fine Stock of ORANGES, LEMONS, OLIVES, NUT TREES and FIGS.

The Only Stock of PERSIAN WALNUTS (Kaghazi) on the Pacific Coast.

300,000 GRAPE VINES (Strong Roots). Small Fruits, Berry Bushes, Etc., Etc., in Large Quantities.

ORNAMENTAL and SHADE TREES, Roses, Standard Roses, Clematis, Trailing Vines, Plants, Etc., Etc., in Great Variety.

Packing Grounds at Niles, Cal., Unsurpassed Facilities for Shipping. Correspondence solicited.

**W. P. HAMMON,**

Business Office, 960 Broadway,

OAKLAND, CAL.

## E. C. CLOWES, STOCKTON NURSERIES.

500,000 ROOTED MUSCAT VINES

Can be Delivered from Fresno or Stockton.

Special Prices on Lots of 50,000 or more.

## White Adriatic and San Pedro Figs UMBRELLAS.

A Full Line of Fruit and Ornamental Trees, Shrubs, Vines, Palms, Roses & Small Fruits.

ESTABLISHED 1858.

WRITE FOR CATALOGUE AND PRICE LIST.

Stockton. - - - - - California.

## NOW READY PLANTS, PLANTS, PLANTS! NOW READY

We have now ready for shipment a choice assortment of Transplanted Vegetable Plants, well grown and well packed to stand shipment to distant points, embracing all the leading varieties of Tomato, Cabbage, Egg, Pepper, Sweet Potato, Cauliflower, Celery, etc. Send for Illustrated Catalogue and Special Plant Circular. Trade prices on large orders. ADDRESS

**W. R. STRONG COMPANY,**

SACRAMENTO, CAL.

## W. H. WOOD & CO., COMMISSION MERCHANTS, AND WHOLESALE DEALERS IN CALIFORNIA FRUITS AND PRODUCE.

ALFALFA SEED 117 TO 125 J STREET, A SPECIALTY. SACRAMENTO, CAL.

## ORANGE AND LEMON TREES.

NORTHERN GROWN.

WASH. NAVEL AND MED. SWEET ORANGE. EUREKA AND LISBON LEMON. Free from Scale. We NEVER have had any pests at our nurseries. Prices from 50 cents up.

CALIFORNIA FAN PALM.—All sizes and prices from five cents up.

ALOHA NURSERIES, - - - FRED. O. MILES, MANAGER, Penryn, Placer County, Cal.

## FIELD AND GARDEN SEEDS

OUR ILLUSTRATED CATALOGUE SENT FREE.

Send 4c. in stamps and we will send a packet of the great novelty, THE PERSIAN MONARCH MUSKMELON, the finest flavored melon grown.

Box B.

**BOUK & HUPERT, Greenwood, Neb.**

(Mention this paper.)

## GUM TREES

\$8.00 PER 1000.

BLUE AND RED GUM TREES, all transplanted, healthy, hardy stock. Will send any size required, from 6 to 10 up to 12 to 18 inches high, at above price. Any size of Monterey Cypress at low rates. Send stamps for sample boxes. The best trees, for the least money, in the State. GEO. R. BAILEY, Park Nursery, Berkeley, Cal.

Six days earlier than any variety tested at the Agricultural Ex. Grounds at Geneva, N. Y. Color greenish white—pulp tender, sweet and delicious. The only grape that ranks first both in earliness and quality. Each vine sealed with our registered trademark label. Send for circulars giving further information. Agents wanted. Address STEPHEN HOYT'S SONS, New Canaan, Ct.

**CALIFORNIA NURSERY CO.,**  
NILES, ALAMEDA COUNTY,  
CALIFORNIA.

Fruit Trees,  
Nut Trees,  
WINE, RAISIN and TABLE GRAPES,  
SEMI-TROPICAL FRUITS, OLIVES  
ORANGE AND LEMON TREES,  
Shade Trees, Evergreens, Shrubs, Roses, Climbing Plants, Etc.

Send for Our New Catalogue. **CALIFORNIA NURSERY CO.,** NILES, ALAMEDA CO., JOHN ROCK, Mgr.

#### A Notable California Peach.

Peach growers have long desired a fine yellow freestone peach, which should be somewhat earlier than Crawford's Early. The Yellow St. John, a New Orleans peach, has this early season, but it is usually small and therefore less desirable. For the last ten years we have known that W. W. Smith of Vacaville has been on the search for a large, early, yellow freestone, and failing to find it in the varieties brought out by others, he set about developing it for himself. His aim was to combine the size and quality of Crawford's Early with the earliness of the Yellow St. John, and this he attempted to do by grafting the Crawford into a tree of the St. John, allowing the branches of the two to intermingle in the hope of a satisfactory chance hybrid of the two varieties. He planted hundreds of pits from this double tree, fruited the seedlings, and finally secured what he sought. Mr. B. M. LeLong, in his report for 1890, made the first wide announcement of this new variety, and from his report we quote as follows:

This peach ripens at least two weeks ahead of the Foster and the Early Crawford; indeed, it is the earliest yellow freestone peach ever originated. It is most beautifully colored, and, what is more, is free from onch leaf. So far it promises to be a good bearer and a thrifty grower.

Mr. I. H. Thomas, State Horticultural Commissioner for the San Joaquin district, writes: "I fruited the Early Imperial peach this season on a tree that had a one-year-old top graft. The peach was very highly colored, almost a dark red on a yellow ground peach, and very firm, and I believe it will be a good shipper. The time of ripening with me is about two weeks ahead of the Foster or the Early Crawford, and near the time of Hale's and Parson's Early. The great value of this peach is that it prolongs the time of drying two weeks. It dries fairly well. I consider this peach to be the most valuable acquisition that has been made to the peach family for the past 20 years."

Mr. Thomas of Visalia is strong in his belief in this new variety and has, we believe, made an arrangement with Mr. Smith by which he will propagate it largely by June budding this summer. We shall have further reference to this variety as we note its date of bearing and other characteristics for ourselves this summer.

#### California Fruits—Second Edition.

The publishers are pleased to announce that the demand for "California Fruits and How to Grow Them" by Mr. Wickson, has been so large that preparations for the issuance of the Second Edition must proceed forthwith. The reception of this work by fruit-growers, not only in California but in distant regions, has been exceedingly gratifying and encouraging to author and publishers. They have the satisfaction of knowing that the book has proved a valuable guide in directions where such guidance was greatly needed, and their energies will now be exerted toward a second edition which shall still more fully meet public and private needs. To this end the friendly aid and co-operation of all readers of the RURAL who have the book are earnestly solicited. Will not every one who has discovered an error in the book, or who finds it does not agree with his observation or experience or who can con-

THE EARLY IMPERIAL—A NEW CALIFORNIA SEEDLING.

tribute information on any subject later than that which the first edition embodies, kindly call our attention to it? All such favors will be fully considered by the author, and every suggestion which can be practically made use of will add to the value of the next edition, and thus prove of public benefit by making the book a truer reflection of California experience and observation which is what it claims to be. It is desirable that kindly assistance of the character outlined should be rendered at once, for as stated above, the work must proceed at once.

DEATH OF BARNUM.—P. T. Barnum, the great showman died at his home in Connecticut April 7th. He left an estate of five millions.

IRRIGATION ENTERPRISES.—Irrigation enterprises seem to be progressing vigorously at the South. It is telegraphed from San Bernardino that the pipe line to Alessandro is nearly completed and the water will be turned on next week. Nearly 500 laborers are at work putting in distributing pipe on the Alessandro tract, 80 miles of which is being laid. The Arrowhead Reservoir Company, organized in Cincinnati, with a million dollars capital, will commence work soon putting in a system of reservoirs in the mountains north of San Bernardino on the head waters of the Mojave river. Half a million will be put into the enterprise this year, and 80,000 acres or more will eventually be irrigated.

#### Wheat Advancing.

Our course of comment has been toward a higher value for wheat, and we are glad to see the tendency realized. It seems too late to rest upon a firm basis. The London Standard of April 6th, as reported by cable, publishes a long review of the agricultural outlook, in the course of which it says the steady rise in wheat revives the hopes of the English farmer and adds that wheat will probably reach the highest price in many years, the principle cause for the rise being the failure of foreign crops. The wheat crops of France and Russia, according to the Standard, are much below the average, and it says the deficiency will be at least 20,000,000 quarters. The same paper says: It is reported that the cold winds and frosts have almost destroyed the French crop. Germany, Holland, and Belgium all furnish pessimistic reports. In Roumania there is a decreased wheat area, and in India there has been a bad wheat season. The only exception is Hungary, where there are better prospects. But it is almost certain that the world's wheat consumption will exceed the production as computed.

Of whatever magnitude America's crop may be, it will not be sufficient to cover the European deficit, thus compelling an extensive draft upon the reserves for the third year in succession. The Standard, in conclusion, says: Increased home consumption and the decreased wheat area, owing to the spread of population, and a recourse to scientific tillage in order to repair the waste of the first settlers, thus increasing the cost of production, must inevitably remove the American farmer's formidable competition in the European markets and allow the English farmer to look forward to a prosperous future.

Thus the British farmer is content to compete with American producers and expects a good market for both. But what a happy time the British producer will have when America eats all of her own wheat which the publicists say will soon happen. In any event it looks as though wheat was destined to become a valuable commodity again and we are glad of it.

RAIL SHIPMENTS OF GRAIN.—The large movement of grain from Washington and Oregon overland by rail suggests the question of whether our grain-growers are doing all that can be done to look into the possibility of rail movement of California grain. Can we use the rail instead of the ship or in competition with the ship? It is somewhat uncertain, too, what amount of shipping we shall have available here during the coming harvest. This is a subject which grain-growers' organizations should look into. We have no special information on the subject to offer. We merely suggest it as worth looking into by those who have talents in that direction.

AMERICAN PORK ABROAD.—It is announced that Germany has definitely resolved to withdraw the embargo upon American pork. The official notice will probably be delayed some time in view of certain negotiations going on between Germany and the United States.

SADDLE HORSE BREEDERS.—At a meeting of 75 horse-breeders held at Louisville April 8th, looking to the organization of a Saddle-Horse Association, it was proposed to keep a register and have a standard as with trotting horses.

## THE STOCK YARD.

## The Cattle Outlook.

"Why do beef and stock cattle continue so low?" This is the question that stockmen are now seriously considering. The interest is so vast and so widely extended that this continuing depression of 30 to 40 per cent below what ought to be par value is viewed with the gravest apprehension. The very life of the cattle industry seems to be at stake, and while it is trembling in the balance through its vast ramifications, it depresses many kindred interests. It is proper, then, to ascertain the causes of this depression and suggest a remedy. There are four principal reasons for this era of low prices, and, unfortunately, many local causes which seem to have combined to jump upon the cattle business while it is down. First, then, the agricultural and horticultural interests are rapidly encroaching upon the stock range. For example, a few years ago the whole State of Kansas was practically a stock range. Now it is fenced, dotted with homes, and such a thing as a stock range is exceptional. We of California well know, and many even rejoice over the fact that stock ranges are giving way to vineyards, orchards, gardens and comfortable homes. It is safe to say that in the last ten years the range has been diminished at least 40 per cent by the advance of settlers and civilization.

Second, clearing and settling any given locality raises the taxable value of all adjacent lands, so when the tax reaches, say 25 cents per acre, at the old rate of six acres of range to each head of stock, there comes an annual charge of \$1.50 per head. At that rate, still more at an increased taxation, the load becomes too valuable for range and stockmen get.

Third, it is beyond question that the continual ranging of cattle over land diminishes its food product. There is one great ranch in Kern county upon which sheep have never trod, that has been exclusively devoted to stock cattle, which ten years ago well supported one head of stock on each five acres, yet now 15 acres are none too much per head. A very slight tax per acre will effectively drive stock cattle off the range.

Fourth, and most serious of all, the ranges are overstocked, and every cattle man exerts himself to turn as much stock as possible into beef, and sell it, no matter what the market price is. It must be remembered that if stock cattle increase only an average of 25 per cent annually, this is at least four per cent greater than the annual demand for beef, so that in spite of the closest management a range is bound to become overstocked, while bulls and passable beef cattle are forced upon the market to the certain depression of selling prices. Again on many ranges there are more steers five, six, or seven years old, and they could have been driven from a poor range to a better one—a thing now out of the question. They have been held over in the hope of higher prices, have got out of the market condition and are still on hand like a lot of shop-worn goods and encumber the range. Yet in spite of all this, there is a strong hope of at least a temporary rise in beef cattle within two years. The losses of stock cattle from the inclement winter two years ago on the ranges of the middle North averaged fully 40 per cent, almost entirely cows and heifers. It only reduced the stock cattle to the capacity of the ranges, except in comparatively few cases, which have since been resupplied. But the calves which would have been beef cattle two years from now, did not materialize by reason of the storms, and hence there is a chance that the market will not then be overloaded. But this is only temporary. There is but one method of permanent relief, and that must be by diminishing the supply. Hence, the cows will have to go, or the bull be made to stay away, and that is not bull nature. Fortunately, there is an easy and proper way to treat these gentle animals, and it seems strange that stock raisers in general have not more extensively availed themselves of it. Here are the conditions confronting a stock raiser: range overstocked; market depressed; annual increase of supply over demand of at least four per cent, and a lot of old cows, each year getting older, and rarely becoming fit for beef. What is to be done? Spay the cows. The remedy is so simple and the advantages are so great, that he is indeed a poor business man who will not adopt it. A cow not with calf if spayed in the spring, will be good beef in the fall, and will weigh at least 50 pounds more than an open cow. The functions of nature are suspended and all she has to do is to eat and grow fat. She will feed unmolested right along with steers, and can be shipped with them without any trouble. This is not the case with open cows. The beef of a spayed cow is equal to that of an average steer, while a spayed heifer with its small bone and good flesh, makes meat of superior quality. Spayed heifers will dress as high as 56 pounds to the hundred, and cows 50 pounds, while open cows in prime condition will go from 42 to 45 pounds at the most. Then when a spayed cow is fat it is beef and sure of market, while an open cow may be in good condition, and yet with calf, and unsalable. Of 2969 cows spayed in Kern county during the last two years 79 died from the operation.

The outcome figures like this; gain on 2890

cows at 50 pounds each 144,500 pounds of beef. Loss 79 head averaging say 525 pounds each 33,575 pounds; net gain 110,925 pounds. At 5 cents a pound this represents \$5,546.25 at an entire cost for spaying, handling, etc. of say \$2000, making a net gain of \$3546.25. This, however, does not fairly represent the gain, for stock cows by spaying were turned into beef cattle with a market value. A case occurring in Stanislaus county three years ago, better illustrates the profit. 2500 cows were purchased at an average cost of \$7 each, or for \$17,500. Of these, 2460 survived spaying, and were sold at an average of \$23 per head, making a net profit, all due to spaying, for \$7 a head; without spaying would have sooner or later laid down and died, leaving their bones to grace the range, while by spaying they became beef cattle and valuable in market. The wise stockman does not want to overstock his range. By spaying he can weed out his scrub stock, keeping it all down to this grazing capacity and turn what is otherwise unproductive property into marketable and profitable beef. *Hanford Sentinel.*

## Eastern Beef and Mutton in Washington.

A carload of Eastern beef and mutton just received by —. First shipment of Eastern meat. Tender and juicy steaks, chops and roasts guaranteed all customers.

The above advertisement has been the means of stirring up considerable strife among the butchers in this city. Some time ago a few of the local butchers concluded that the native beef sold them by Spokane county ranchers was most too tough and stringy to suit the delicate taste of their better class of customers, and they accordingly sent East for their supply of beef, mutton and pork, the first shipment of which was received only a few days ago. The reasons given to a *Chronicle* reporter yesterday, as the cause of their refusing to use native beef at this time of the year is practical, if not satisfactory to the Washington cattle men.

Said E. T. Ansel & Mitchem, East End meat market: "We have just received our first carload of meats from Omaha. We pay a higher price for it than we would for native beef, but it is so superior in quality that our customers are eager to pay the difference in price. Eastern beef is all corn fed. Cattle are carefully attended to, and their growth is rushed with all speed. They are never allowed to rustle on the range for their food, and consequently when killed they make the best beef to be found. The grain of the beef is finer and the bones smaller. The ranchers in Washington and Idaho must put up their cattle and feed them during the winter months. They could turn their money twice by caring for their stock, and until they do improve the quality of their meat, they can never compete with Eastern packers." — *Spokane Chronicle.*

## A Large Slaughtering Concern.

Rodeo is the name of a creek on the east side of the bay of San Francisco, which flows through a valley made famous for many years as a favorite spot for roundups. Rodeo is now the name of a proposed town in that valley. The town is to be built around one of the finest stockyards and meat-packing establishments in the world. The site is 20 miles distant from this city and is on San Pablo bay. Corrals and sheds have been built. They cover 12 acres of ground. The sheds are spread over one-half the plot. A hotel has been erected. It is 175x125 feet in size and three stories high. The offices of the company are in the hotel building. Already five miles of railway have been built, connecting with the Southern Pacific system. About 20 miles of railway in all will be constructed. A wharf will also be built. It will extend out 2000 feet. A mammoth reservoir will be constructed. It will hold 3,500,000,000 gallons of water. The formation of the shores is especially favorable for the construction of the reservoir.

In connection with the stockyards, two large packing houses will be operated. One will be leased by William H. Silberhorn of Chicago, and the other by R. A. Harris of Omaha. A large number of residences will be built for the small army of workmen that will be employed. The company has about 2000 acres in the town site of Rodeo and will have it blocked out this summer. The new enterprise will in all probability be in operation by next November. The name of the company is the Union Stockyard Company of San Francisco. The capital stock is \$2,500,000, of which over \$1,000,000 has been subscribed. Only \$2,000,000 worth of stock will be sold.

The company is as follows: A. D. Sharon, Pres.; J. F. Bigelow, V. P.; R. A. Harris, Manager; William H. Silberhorn, W. S. Wood, P. Tormey of San Francisco, E. J. Wilson of Vallejo and A. S. Garrison of Sioux City, Directors; R. M. Hoffman, Sec. and Director.

Director Silberhorn said to a *Post* reporter this morning: "The Eastern directors have been here for the past few days to complete arrangements for pushing the enterprise through as quickly as possible, and, except myself, have gone home. I will remain for a short time to acquaint myself more fully with the wants for my meat-packing house. Our purpose is to give the Pacific coast a central market for live stock,

just as Chicago has given the West a central market. In fact, we will make San Francisco a second Chicago in the meat-packing business. We are not a combination or a trust, and have no intention of endeavoring to choke all opposition in our business. We want the buyers and sellers in live stock to have a central market on this coast, where a cash business will be transacted. We want to establish a place where slaughtering can be done for any and every person who wishes such work done. We will make our meat-packing houses and other factories consume all that portion of the carcass which is generally thrown away.

"There is no better part of the United States for hog raising than here in California. We understand that there has never been much of a market here for hogs. We intend to make the hog industry a lively one in this state.

"You can be certain that the effects of our enterprise will be felt in the balance of trade between the East and California. We will keep here several millions of dollars every year that have been sent East for canned meats and pork. We will also export a considerable amount of our production to South America and across the Pacific. We have come to stay and do a big business, and we have the capital and resources to assure success." — *Evening Post.*

## THE FIELD.

## Truck Farming in the United States.

From a census bulletin just received from Washington, we compile the following interesting information: For the first time the industry known as truck farming has been made a subject of census investigation, and the bulletin alluded to is a preliminary report thereon, prepared by Mr. J. H. Hale, special agent, under the direction of Mr. Mortimer Whitehead, special agent in charge of the Division of Agriculture "B" of the Census Office.

Truck farming, as considered in this report, is distinct from market gardening; the former is carried on in favored localities at a distance from market, water and rail transportation being necessary, while the latter is conducted near local markets, the grower of vegetables using his own team for transporting his products direct to either the retailer or consumer.

A summary of the number of acres under cultivation for truck-farming purposes and the products raised, given by districts, is herewith appended:

Districts	Acres.	Value of products.
New England	6,838	\$3,184,218
New York and Philadelphia	108,135	21,102,521
Peninsular	25,714	2,413,648
Norfolk	45,375	4,892,869
Baltimore	37,181	3,754,696
South Atlantic	111,441	13,583,516
Mississippi Valley	36,180	4,982,579
Southwest	36,889	4,979,783
Central	107,414	15,482,223
Northwest	1,083	1,004,791
Mountain	3,833	531,976
Pacific Coast	14,357	2,024,345
Totals	534,440	\$76,517,155

Upward of \$100,000,000 are invested in this industry, the annual products reaching a value of \$76,517,155 on the farms, after paying freights and commissions, realized upon 534,440 acres of land. There are employed in this industry 216,765 men, 9254 women and 14,874 children, aided by 75,866 horses and mules and \$3,971,206.70 worth of implements.

The following paragraphs are taken from Mr. Hale's report. Our space does not allow the reproduction of the detailed data relating to the products of the Southern States. We append the more general deductions. No doubt any reader who desires the full report can secure it by addressing Mr. Whitehead at the Census Office at Washington.

The production of fruits and vegetables for market has always been prosecuted with great success, in earlier days as a branch of general farming, and more recently as a specialty, known as market gardening. The business is usually carried on with a few highly enriched and thoroughly cultivated acres of ground and a rotation of crops, so grown that there may be a daily supply throughout a considerable portion of the year. The farms are usually within a reasonable driving distance of cities and towns, and the products are generally sold to the retailer, and in many cases, especially in the smaller towns, directly to the consumer.

Truck farming, although it also consists in the production of green vegetables for market, is distinguished from market gardening by the fact that, while the market gardener lives near a market and delivers his products with his own teams, usually producing a general variety of vegetables, the truck farmer lives remote from market, is dependent upon transportation companies and commission men for the delivery and sale of his products, and usually devotes himself to such specialties as are best suited to his soil and climate.

Previous to 1860 truck farming was an infant industry, unknown except to a very limited extent along the steamboat and railway lines leading out 50 miles or so from a few of the larger northern cities. Long Island, New Jersey, Delaware, and southern Illinois appear to have been at that time the leading truck centers of the country.

The rapid growth of cities and towns, however, and their consequent demand for a greater quantity and variety of vegetables throughout the whole year, the changed conditions in

the south after the close of the war, and the extending of old and building of new lines of railway, all combined to extend the business, until a very considerable portion of the vegetables consumed in cities and towns are produced from 500 to 1500 miles away. Instead of having vegetables in their respective seasons, by drawing upon the various sections of the country nearly all the standard vegetables are produced throughout the year. Late in the fall and early in the spring Florida and the lower Mississippi valley supply the eastern and central cities, and California those of the far west and mountain section, until the advancing season starts the growth and consequent supply up along the Atlantic coast and the great Mississippi valley, when the full season of midsummer in the north continues the supply until autumn frosts once more compel a return to the south, where a fresh crop awaits the demand of the market. While throughout the year, California, out of her abundant store, sends products to her own large cities and those of the Rocky Mountain region, and even as far east as Denver, Kansas City, St. Louis, and Chicago, the greenhouses of New England in early winter and spring supply the more tender vegetables that do not well withstand the deterioration of transportation, or are profitable enough to pay for the extra expense of their culture under glass. New potatoes, cabbage, cauliflower, garlic, and tomatoes have thus far been about the only products received at St. Louis, Kansas City, and Chicago from California, and these only in limited quantities in seasons when there has been a partial failure in the lower Mississippi valley and in Florida. During December and February of the present winter, snapper tomatoes came from California, and sold at prices that left a small profit to the grower, after paying the enormous express charges that must of necessity be charged for so long a haul but, with the further development of railways, faster trains, and lower freight and express rates, that State will be in a position to compete sharply for much of the trade beyond the Mississippi, for, besides the natural fertility of a soil that will grow almost every vegetable to perfection, she has a climate where winter vegetables are not likely to be occasionally cut off by frost, as in the south.

Being of so comparatively recent origin, and never having been brought within the scope of census statistics, there has been little or no guide in making the present investigation, which reaches out to thousands of farms and homes in every State of the Union, and while nearly all have been furnished special schedules upon which to make individual reports, and many of the leading truck sections and farms have been visited by special agents, it has not been possible at this time to gather as full and complete statistics as will be shown in the final reports; and yet, even these must, of necessity, lack some essential points of completeness, as many of the parties engaged in the business of truck farming keep little or no record of their business, and are not able from memory to furnish all the information desired. However, there has been a cheerful co-operation on the part of planters, marketmen, and transportation companies, and it is thought that valuable facts and figures have been obtained that will at least blaze the way for workers in future years.

Nearly 75 per cent of the truck in the United States comes from a belt of country along the Atlantic coast lying east of a line drawn from Augusta (Maine) to Macon (Georgia); from southern Georgia, Alabama and Florida; along the north and south lines of railroad in the Mississippi valley from the Gulf to Chicago, St. Louis, and Kansas City, and from the celery districts of Michigan and Ohio.

On the truck farms of the United States in 1889, by the labor of 216,765 men, 9254 women and 14,874 children, aided by 75,866 horses and mules, working \$3,971,206.70 worth of implements, upon 534,440 acres of land, valued at \$70,156,293.59, there was produced truck valued at \$76,517,155 on the farms after paying freights and commissions.

The following table shows the total acreage of leading vegetables grown upon truck farms of the United States:

Vegetables	Acres
Asparagus	37,970
Beans (string or snap)	19,807
Cabbage	77,094
Kale	7,062
Spinach	20,195
Irish potatoes	28,466
Beets	2,420
Celery	15,881
Cucumbers	4,721
Watermelons	114,381
Other melons	28,477
Peas	56,162
Sweet Potatoes	28,621
Tomatoes	22,802
Miscellaneous vegetables	82,601
Total	534,440

The gross income on truck farm products, after deducting commissions and charges for transportation, was \$76,517,155; the cost of labor (\$9,474,825.58), the cost of fertilizers (\$9,919,307.89), and the cost of seeds (\$1,419,633.50) being deducted, the net income is shown to be \$51,909,265.06, leaving a difference between the gross and net income of \$3,794,122.97 more than is accounted for. This difference is caused by various local expenses not reported on special schedules, but no doubt is nearly all for shipping packages.

The figures of gross income (\$76,517,155) are based upon those given by the regular census enumerators. Investigation through special schedules show that the income reported was

in nearly every case that received from the commission men, who deducted from 15 to 40 per cent from the gross value of products sold to pay costs of transportation and commissions on sales. Had charges for transportation and commission been included, the total gross income would have been in the neighborhood of \$95,000,000.

Taken in its entirety, this comparatively new industry is found to be in a healthy, prosperous condition. New sections are being developed from year to year that to a certain extent affect the prosperity of some of the older ones, and there is likely to be more or less shifting of trucking centers every few years, all upon advancing lines, however. New and better methods of culture, with the further invention of labor-saving machinery, must of necessity reduce the cost of production. Better transportation facilities will place the products of these farms in cities and towns more promptly in better condition and at less cost, while the ever-increasing population and wealth of the cities and towns insure a greatly increased consumption at satisfactory prices for first class productions.

### Bermuda Grass on Alkali Soils.

At the Fresno Farmers' Institute, held last week, Capt. J. G. Dawes read an essay, illustrated by specimens, concerning the growth of Bermuda grass on alkali spots upon which nothing but worthless "alkali plants" thrive. The essay is as follows:

"The question of alkali—what to do with it, how to neutralize it, and what will grow in it, which is now engaging your attention—is one second only to irrigation in importance to the people of this valley. It has been suggested to me, in this connection, that a statement of my experience with Bermuda grass upon alkali soils would be acceptable to you. My attention was first called to Bermuda grass by reading an account of its use in some of the Southern States in protecting and strengthening levees and river banks; also of its hay-producing qualities under favorable circumstances. I afterward read an account of its success upon the ranch of General Bidwell at Chico, and wrote to him for seed. He answered that he did not think it could be propagated from seed, but from the roots and stolons. I procured some of the roots and set them about three feet apart on the water-line of my ditches, the banks of which were continually breaking, causing me much damage and discomfort. The banks are now covered with a close, strong sod.

"I discovered that it would grow on the strongest alkali spots, and I soon had it growing over places near my house which were unsightly and as hard as a brick. These spots are now covered with a smooth green sod of Bermuda grass.

It is early in the season for me to show you large growths of the grass, for it does not start to grow till the frosts are over and warm weather sets in. A month from now the grass will be a foot high with stolons from one to three feet long. It does not, like the salt grass which it much resembles, spread underground and send up grass from the joints of roots, but spreads on the surface, sending down roots from joints of stolons, thus supporting itself as it pushes out, spreading in every direction from each new base of supply or hold which it takes upon the ground. On soil that bakes hard after being irrigated, its growth may be facilitated by covering such places with a thin layer of light soil or fine manure. The fine rootlets at each joint have then something to take hold upon.

It is valuable as a forage grass. Stock eat it freely; horses particularly like it and graze it close to the roots and even paw up and eat the roots. It will not afford as much food per acre as alfalfa, but it will grow where alfalfa will not, and is nutritious. As a lawn grass it is unequalled. Water does not injure it. Drouth does not kill it. Frost turns the grass yellow, but does not injure the roots. A few warm days without frost at night and it begins to turn green. It stands tramping upon better than any other grass, and should, therefore, on account of this, find a place in every play yard of the public schools.

Its hay-making qualities are not extremely good, but it may do better on better soil. I have tried it only on soil where nothing else will grow so well. I wouldn't recommend Bermuda grass in or near orchards or vineyards, for it spreads rapidly and is very difficult to eradicate, though if covered thoroughly, so as to shut off all air, it dies. With care, it can be kept within bounds as it spreads above ground and not under.

It does not, as far as I have observed, spread from the seed. I find it on my ranch only where it has spread from the roots or stolons. In planting the roots or stolons, it is necessary to have a part projecting above ground, or it will not grow. I am not able to say to what extent Bermuda grass will redeem alkaline soils, for I do not know which of the various plant foods it draws mostly upon, but I do know that alkali does not stand much in its way. I have but one fault to find with it—that is its sensitiveness to frost. The first frost turns it yellow, and it remains so until warm weather again starts it to growing.

In the discussion which followed, Prof. Hilgard remarked that in loose sandy soil, the grass was not so particular about surface running as it was on hard alkali spots. Other speakers also emphasized the need of care not

to allow Bermuda grass to get access to soil which was needed for other purposes, for experience had proved it well nigh impossible to eradicate it.

### Grass and Its Mission.

Next in importance to the divine profusion of water, light and air, those three physical facts which render existence possible, may be reckoned the universal beneficence of grass. Lying in the sunshine, among buttercups and dandelions of May, scarcely higher in intelligence than minute tenants of that mimic wilderness, our earliest recollections are of grass; and when the fitful fever is ended and foolish wrangle of the market and the forum is closed, grass heals over the scar which our descent into the bosom of the earth made, and the carpet of the infant becomes the blanket of the dead.

Grass is the forgiveness of Nature—her constant benediction. Fields trampled with battle, saturated with blood, torn with the ruts of cannon, grow green again with grass and oarage is forgotten. Streets abandoned by traffic become grass-grown, like rural lanes, and are obliterated. Forests decay, harvests perish, flowers vanish, but grass is immortal. Beleguared by the sullen hosts of winter, it withdraws into the impregnable fortress of its subterranean vitality, and emerges upon the solicitation of spring. Sown by the winds, by wandering birds, propagated by the subtle horticulture of the elements which are its ministers and servants, it softens the rude outlines of the world. It evades the solitudes of deserts, climbs the inaccessible slopes and pinnacles of mountains, modifies the history, character and destiny of nations. Unobtrusive and patient, it has immortal vigor and aggression. Banished from the thoroughfare and field, it bides its time to return, and when vigilance is relaxed, or the dynasty has perished, it silently resumes the throne from which it has been expelled, but which it never abdicates. It bears no hlazonry of bloom to charm the senses with fragrance or splendor, but its homely hue is more enchanting than the lily or the rose. It yields no fruit in earth or air, yet should its harvest fail for a single year, famine would depopulate the world.

## PUBLIC AFFAIRS.

### Village Improvement in California.

Dr. B. G. Northrup of Olnton, Conn., is well known throughout the country as an eloquent public lecturer on several themes, but probably his greatest work lies in the promotion of village improvement, in which he holds acknowledged leadership. We are glad to know that a new pamphlet of his on this important subject is likely to appear soon, and of it President D. C. Gilman of the John Hopkins University writes to the N. Y. Tribune as follows: "If a word from me will in any way promote its distribution and perusal, you are quite at liberty to say that I should like to have his pamphlet sent to every village and school district in the United States."

Dr. Northrup visited California last year and lectured to delighted audiences at several points. He also took opportunity to look up our progress in village improvement, and in a circular recently published by Hiram Orcutt of Boston, we are pleased to see this allusion: "Dr. Northrup has visited 42 States and Territories and aided in organizing over 400 Village Improvement Associations, which have done much in improving and building up towns. This movement has spread across the continent so that no State in the Union is now showing greater interest in village improvement than California."

In the Hartford, Conn., Herald of March 19th, we find an article by Dr. Northrup in which he makes the following reference creditable to California:

In California for more than a dozen years village improvement has been in the air—a wholesome epidemic. Various forces combined to intensify it, so that borough organizations did the needed work in many cases. Proofs of its prevalence long since reached me, in requests for plans and advice, to which the easiest and most effective replies were papers and pamphlets—prepared for that purpose—sent to individuals and prominent journals. Senator Stanford is responsible in part for this healthful "oreza," both by the adornment of his own homestead and town—Menlo Park—and the expenditure of \$10,000,000 on the great university, for which much more is pledged. It was a joy, even to a stranger, to observe the enthusiasm and gratitude which this unprecedented munificence has awakened throughout the State.

Berkeley's "Association for the Encouragement of Neighborhood Improvements," formed a dozen years ago, was the pioneer. The San Francisco journals strongly advocated this movement. In July, 1881 Edward J. Wickson, editor of the PACIFIC RURAL PRESS, gave an admirable address at the annual meeting of this association, which was printed and widely circulated. A letter just received from a professor in the State University says: "This association, though short-lived, was alert and vigorous, and introduced many changes, and, most of all,

implanted the idea of village improvement in the minds of all our Berkeleyites. It left us this most valuable double legacy—first, the implanted idea, and second, the visible result, that now gladden the eye and attract visitors."

Pasadena 16 years ago was a wild ranch and its only streets were sheep-paths. A "Village Improvement and Library Association" was organized ten years ago, which helped in forming wise plans for its future. It now has fine avenues and broad streets, without front fences, lined with palms, fern-leaf peppers, English walnuts and other choice trees. The little village has become a city of 10,000 population. The beautiful library building just completed by this association is henceforth to be liberally supported by taxation. The 40 miles of stone sidewalk, averaging eight feet in width, built within the last three years, are the best I have seen in a town of its size. It has no saloons, but so many improvements and so choice a community that it is fitly regarded as the model town of Southern California.

Among the many charming towns of this State others would be specially described did space permit, such as Santa Cruz, Alameda, San Rafael, San Mateo, Pomona, Riverside, St. Helena, Napa, Santa Rosa, San Jose, and Redlands last because the youngest. In 1882 F. E. Brown, a graduate of Yale, now an eminent hydraulic engineer, discovered the possibilities of the Bear Valley reservoir, which, in the face of enormous difficulties and cost, has become an accomplished fact, containing the greatest stored supply of water for irrigation in this country. This reservoir, together with the attractions of soil and climate, has already brought a great influx of industrious and intelligent people from the East, owning and cultivating small holdings devoted chiefly to the production of citrus fruits and raisins. Its population, already 2500, is rapidly increasing. The main work of the "United Workers for Public Improvement," formed less than three years ago, besides adorning homes, has been the erection of a fountain in the "Public Square," and improvements around it, and beautifying the "Garden" at the railway station.

Trees and ornamental plants have been set out on miles of streets, Mr. Brown's firm furnishing them at one-fifth the ordinary rates, and if need be, free. Similar liberality by friends of town improvements has been often shown, both East and West, and most of all by Adolph Sutro, who, in 1886 and 1887, gave 90,000 trees (45,000 each year) to the children of San Francisco (one each) requesting that they be planted in flower-pots, and later set out in open ground. These were small seedlings—of kinds best suited to the climate—chiefly pines, cypresses, acacia and eucalyptus. It was a privilege to see the young forests of this great tree-planter of the Pacific Coast, who has set out about 2,000,000 trees in and near San Francisco, and whose homestead grounds attract throngs of visitors. His interest in this work may be inferred from a single sentence in a letter giving the above details: "I hope you will succeed in encouraging tree-planting all over the United States, especially among the growing up generation."

## HORTICULTURE.

### State Horticultural Society.

The State Horticultural Society met yesterday in regular session at 220 Sutter street, the headquarters of the State Board of Horticulture. I. A. Wilcox of Santa Clara presided. Prof. C. H. Allen of San Jose, Timothy Hopkins of Menlo Park and Judge Tilden of Niles were elected members. The committee appointed to draft a memorial of the late W. G. Klee reported as follows:

Resolved, By the State Horticultural Society of California, that we have learned with deep regret of the death of Waldemar G. Klee, late Inspector of the Experiment Stations of the University of California, and for many years an active member of this society. Inheriting a slight physique, he sought in his youth, in the garden and amid plant-life, the strength that our common mother earth gives so freely to all who seek. Endowed with rare discernment, Nature's mysterious processes were his study and delight. At the University experiment grounds' order, system and thoroughness illustrated his ability and fitness for the duty so faithfully performed at the New Orleans Exposition for the State of California, in charge of the exhibit of her plant and floral wealth. Upon his election, unsought, as Chief Executive Officer of the State Board of Horticulture, he entered upon a broader arena of labor and observation. His enthusiasm and presence awakened horticulturists to the imminent danger of impending destruction to fruit interests and the grand possibilities of the future, and thoroughly organized efforts were initiated that have resulted in incalculable value to the State. Mr. Klee was the first in the United States who discovered the existence of parasites for the destruction of the dreaded cottony cushion scale (*Icerya purchasi*), which so long threatened the entire destruction of the citrus interests of California, and his investigations and correspondence in foreign countries inaugurated the mission of Mr. Albert Koebele to Australia, that produced such magnificent results.

His untiring zeal, fidelity and courtesy in the discharge of his official duties won for him many enduring friends; but above and beyond his public worth was the grand integrity of character, the pure and spotless life and tenderness of soul that blesses home and exalts our manhood. His childhood was rocked by the tempests of a foreign shore, but over his peaceful grave at Santa Cruz will flow forever the murmur of the boundless sea. In his death,

California has lost a valued adopted son, and the horticulturists of the State one of its most efficient and tireless workers. To his afflicted family we tender, from the horticulturists of California, our sympathy and consolation.—E. KIMBALL, EMORY E. SMITH, LEONARD COATES, Committee.

### Organization for Fruit Marketing.

Edwin F. Adams, of a special committee appointed at the last meeting, presented for consideration a plan of organization as follows:

Mr. President and Members of the State Horticultural Society: Your committee to whom was referred the subject of an organization for the purpose of securing uniformity of grading and packing dried fruits, and protecting its members by a trademark, respectfully desire that the following "plan" be read and discussed at this meeting. The plan has not been considered by the committee, who of course express no opinion upon it. The object of having it read at this time is to ascertain how much interest is taken in the subject, and to obtain for the committee the benefit of whatever ideas a discussion may evoke, before it engages in any formal consideration of the matter. Before spending a large amount of time on the subject, your committee desire to become assured that the fruit-growers of the State realize the importance of some action in the proposed direction and are prepared to give careful consideration to a matured report by the committee. A short discussion ought to give us some light on this point. Respectfully submitted, EDWARD F. ADAMS, Chairman.

Plan for an organization of fruit-growers and packers, for the purpose of securing to its members uniformity in grading and packages, the advantage of the advertising done by the association, and protection from fraudulent practices affecting the standing of California Dried Fruits.

An incorporated association, sustained by annual dues and by fees for the use of brands and stencils, which shall not buy or sell fruits, but whose sole objects shall be as follows:

1. The establishment of grades, by accurate description for all grades of California dried fruits.
2. Such advertisement of those grades, in Eastern papers, as from time to time may be found necessary to make them familiar to the trade and the country.
3. The ownership of a patented trademark, for use by members only, under such regulations as may best tend to secure it from improper use, and ensure that the name and address of the members packing the fruit shall accompany each package to the consumers hands.

These regulations might be something like the following:

1. Sell no brand or stencil to any member. Rent them only.
2. Require from each member obtaining a brand or stencil, a written pledge, to send out no fruit under the association trademark except in accordance with the rules of the association.
3. Make these rules very simple; let them be only, A. Grading according to association standard. B. Member's name and address on outside of each package. C. Two copies of the advertisement of the association, containing member's name and address, with full description of the established grades of all dried fruits, as fixed by the association, to be placed in each package, so separated that both cannot easily be removed from the package till the contents are used.

Such advertisements to be furnished to members at the cost of printing in such members' names.

The penalty for misuse of the trademark to be expulsion from the association, withdrawal of stencils and brands, and such legal penalties as may be found possible.

4. The sale, to members only, of fruit sacks of standard size and quality, printed with the association trademark and the member's name and address.

5. The prosecution to the full extent of the law and at whatever cost all fraudulent practices calculated to injure the standing of California dried fruit.

It was agreed to discuss this subject of organization at the next meeting, April 24th. All growers or packers having views on this subject are asked to communicate them at that time or before to Secretary E. J. Wickson, Berkeley.

It was also decided upon motion that Prof. C. H. Allen of San Jose be requested to submit to the society the results of recent investigations into the sale of fruit alleged to be Californian at the East. This subject was presented in part to the society at its December meeting.

### Insect Pests.

Capt. H. A. Brainerd of the Santa Clara Valley, San Jose, read an essay on the treatment of fruit pests, which was published in last week's RURAL.

Judge Stanley asked for advice concerning his orchard of three-year-old prune trees, the roots of which were badly affected with knots. A discussion followed in which many took part, the conclusion being that trees which have knotted roots, if not badly enough affected to arrest satisfactory growth of the top, may still become good bearing trees. Judge Stanley was advised not to nuproot his trees, but to take good care of them, and the chances are good for the orchard to prove profitable in spite of the disease.

E. M. Ehrhorn, President of the newly organized State Entomological Society, announced that the society would hold its first quarterly meeting on April 24, following the meeting of the Horticultural Society, and invited the horticulturists to attend the meeting, which it is believed will be very interesting. On motion of E. E. Smith, the society decided to adjourn at 2:30 on the afternoon of April 24th, to give members an opportunity to meet with the entomologists.

## PATRONS OF HUSBANDRY.

In our Rural Press Official Grange Edition, issued every week, will be found additional matter from this and other jurisdictions, of interest and importance to Patrons. Any subscriber who wishes can change free to that edition.

## The Master's Desk.

R. W. DAVIS, W. M. S. G. OF CALIFORNIA.

In essentials unity! Never before in the history of this Government was there better opportunity for the farmers of America to protect themselves than right now. The Grange, with its 24 years of work, has done more than any one organization to educate the farmers to a full knowledge of their rights. The Grange has done its full share in exposing the tyranny of corporations, thus bringing to the attention of Congress and the world the wrongs which have been written in our laws, whereby the rich are protected while the poor are down-trodden by the laws. If the farmers of America will but stand by their colors, for the next two years, and not be deceived by party politicians, there will be such a change in affairs political as will surprise the oldest inhabitant. The members of the Grange will be advised, from time to time, of these important measures. Stand by the ramparts, Patrons, and when election day comes, don't vote for any men who have ever betrayed a promise, or who are not the outspoken friends of the industrial classes. We don't mean the men who favor communism or socialism, for those men are not friends of soil-tillers. But vote only for men to hold office who are identified with the bone and sinew of the land. Remember, "In essentials unity."

Bro. Don Mills, Past Master of Bennett Valley Grange and formerly Assistant Secretary of the California State Grange, has been engaged to go to the "front" in the work of planting Grange seed. He is duly authorized to organize new Granges and to reorganize dormant ones. In the name of the State Grange of California, I ask that every courtesy be shown and all possible assistance given him by the members of the Grange, and thus aid in the work of building up the Order we all love so well.

Do you want to go to the Oregon State Grange next May, *provided the round-trip fare is reasonable*? If so, send me your name and P. O. address, so that you may be further advised in due time.

Be generous; be cultured; be positive; be polite; be sincere; be just; be honest; be loyal to right; be guarded in words; be sincere in all you do or say; be temperate; be zealous; be industrious; be economic but not stingy; be a worthy man or woman, and you will have a hold on humanity that no enemy can destroy and no foe but death undermine; and even when called from earth your friends will be left to class you with the blessed—aye, an honest man and a pure and spotless woman are jewels in any sphere. Be one; you can if you so will.

The paper on "Truck Farming," by J. H. Hale, P. M. of Connecticut State Grange, is a valuable contribution to the census of 1890. His work has been faithfully and intelligently done, and reflects credit both on Bro. Hale and the Order of Patrons of Husbandry.

The press throughout the land all agree that the Grange is not dead. Who ever thought the Grange had died? Surely not any one who reads! It is true some subordinate Granges have surrendered their charters, but not one State Grange has given up its organization—oh no, the Grange is not dead nor yet sleeping. It is the most successful farmers' organization in the world, and you, kind neighbor of the farm, ought to belong to the Grange. If there is no Grange in your vicinity, organize one! Send for Declaration of Purposes and other documents. They will be furnished free on application.

The Trade-Card system seems to be favorably received. Do you understand your privileges and your duties under this new arrangement?

Bro. F. B. Logan, who is at the front in Yolo and Solano counties, reports the outlook cheering and promises some new Granges soon.

You should begin now to arrange to attend the next session of the State Grange. Unless signs fall, it will be one of the most pleasant and profitable sessions ever held in the State. Remember, Haywards, Oct. 6, 1891, and not Oct. 1st, as printed on cover of Journal of last year's session.

The love of country is one of the important lessons taught in the Grange. It is impressed by both precept and by example. Patriotism is a cardinal virtue.

Before you are entitled to a trade-card your dues must be paid in advance, otherwise the Secretary has no authority to issue the card.

Sonoma County Pomona Grange will confer the 5th degree in full form at next meeting, April 15, 1891.

Miss Maggie Burns, Worthy Flora of Eureka

Grange, at Auburn, Placer county, deserves especial praise for her efforts to celebrate the season of flowers. She has kindly and wisely agreed to take charge of affairs at the meeting in May. We know Sister Maggie will make a success, for she does not know the word fail. Won't the Worthy Flora of each Grange do likewise? Call on Sister Flora of the State Grange for suggestions. A short program suggested by Worthy Flora of the State Grange might prove helpful to each Flora in California. In due time we expect to hear that Pomona and Ceres in each Grange will have their day. Meanwhile suggestions from State officers will be in order.

## Organize a new Grange in your county!

The Grange is not a new candidate for your favor. This organization is 24 years old, and is noted for conservative, honest, progressive, straightforward conduct.

When the tide runs strong, or when the storm rages fiercest, the men at the oars have to "pull together." If they make any headway. Farmers have the oars in their hands, and they can right many wrongs if they will pull together. Why should the farmers not have seats at the first table? They furnish all the supplies; they pay the cook; they dig late and early; they are sober, industrious and economical. Then, by consent of action, let's be at the front, claiming what is right for ourselves and for others, and opposing oppression from any and every source. Right wrongs no honest man, while wrong injures both the weak and the strong. Farmers, man the lifeboat, she is a part of the Grange fleet, and let's all pull together and pull for the shore! Join the nearest subordinate Grange, and get private instruction in the use of the oar.

Santa Rosa and Merced Granges have taken the necessary steps to form juvenile Granges. Merced sends a charter list of 22 juveniles of the farm. Full particulars for organization of juveniles will soon be ready. In the meantime, get up your lists.

Are you a Keystone in the Grange Arch of your section?

The Rough Ashler, you know, was refused by some of the builders, but it afterward became the corner-stone of the structure. Moral—Don't refuse any good material, no matter how rough it may seem.

Fellow-farmer, the Grange is your friend. Are you its friend? If not, why not?

## Organization means success.

Producers must co-operate if they will advance.

Black-list the men who voted against the bills presented to the Legislature in the interests of the industrial classes.

Do you know what the Grange has accomplished? If not, don't say "it has not done anything."

Do you believe in moral, social, political and financial reforms? Do you want better men in official stations? If so, join the Grange, and help bring these reforms to your door, so that you and your children may get the benefits thereof.

Do you want a Grange Organizer in your county?

## For Oregon.

Our Worthy Master is making a splendid effort for a fraternal visit to the Oregon State Grange, which meets at Hillsboro, May 26th, 21 miles from Portland, the metropolis of that grand State. It will be a delightful trip going and coming. A ride through the Willamette valley in May and June is equal to a summer jaunt among some of the most delightful, verdant hills and vales of New England.

A stop should be made at Salem, the capital city, the home of Oregon's universally esteemed Past Master, Bro. R. P. Boise and family.

Let all who can send their names to Worthy Master Davis for the trip, confident of a truly good time.

## Yuba City Grange.

Yuba City Grange had a rousing meeting on Saturday last. Degree work had been set aside for business of which a large amount was transacted. Complete arrangements were made for holding the

## Annual Reunion of the P. of H.

In Yuba City to take place on Friday, May 1st. The Master of the State Grange has been invited, and will doubtless be present; other prominent speakers are also expected. Of course, everybody is invited, and all that come will have a good time as these gatherings have always been very successful. EUREKA.

Yuba City, April 6th, 1891.

TULARE PICNIC.—We understand good progress is being made in perfecting arrangements for one of the best picnics of the year by the Grange and Alliance of Tulare county. Able speakers have been invited. Further announcement will be made in due time.

## Help Our Nebraska Brethren.

Dear Sister Matrons of California:—One of the beautiful features of the Grange is to freely dispense charity to all mankind, not necessarily in dollars and cents, though that is also implied, but in that spirit of forgiveness that spreads its mantle of whiteness over the misconceptions of mind and heart of our brothers and sisters and guides them from the brink of error and selfishness into the humble paths of benevolence and progress.

Now comes a call for material charity, and if ever the cause to be pursued for woman's work in the Grange was dim or uncertain, that uncertainty is now dispelled by the wall of sorrow of our brothers and sisters from unfortunate dronth-tortured Nebraska—a cry which cannot fail to touch the heart of every true Patron in the land, and while it touches the heart, let it sink deep enough to also touch the pocket.

It is earnestly requested and fervently hoped that every Woman's Work Committee in every subordinate Grange in California will devise their own ways and means of contributing at least something for the relief of those suffering Patrons, who, after exhausting their best efforts, could only stand idly by and witness the annihilation of their last hope by a dronth so vindictive as to shed not even one tear of sympathy.

E. Z. ROACHE,

Chairman Woman's Work Com. Cal.

[Further information on this subject appeared in the RURAL of March 21st.—EDS.]

## For Tulare and Way Places.

When Bro. Roache, W. O. of S. G., visits Tulare picnic May 9th, a good opportunity will be afforded Granges at Merced, Plainsburg and Selma to receive a visitation, if they speak in season. We hope our Worthy Overseer will also have time to spend several days at various points on the line to assist in working up new Granges, if his services are requested. Now that the trade-card system has been adopted, it seems easier to secure new Granges. Also to revive old ones. Will some Patrons of Lacerne and Hanford Grange call Bro. Roache on such a mission? Both Granges are located in a rich and progressive section of the State, have excellent members, and should become large and prosperous bodies. No matter how many other organizations exist in any farming district, the want is not filled without a good Grange. Do not forget this.

## Overseer Roache for Tulare Picnic.

EDITORS PRESS:—I see by the last PRESS that the Tulare picnic is set for May 9, which will be as convenient, I think, as the date I mentioned. We have just had a splendid rain, which makes all things beautiful.

Watsonville, April 7. A. P. ROACHE.

[Bro. Roache's attendance at the picnic insures a good Grange and patriotic address. In the above note from Bro. Roache, he remitted money for several new subscribers for the PRESS, which shows his kindly appreciation of our effort in making the paper the farmers' paper of the coast. Bro. Roache's example is deserving of being followed by others.—EDS. PRESS.]

## Waterloo Grange.

EDITORS PRESS:—At its last meeting, Stockton Grange elected, initiated and conferred the second degree on one member.

Waterloo Grange, at its regular meeting Saturday evening, balloted on 13 applications, and all were elected. The class was initiated into the mysteries of the Order, and the second degree conferred on them. I have never seen the work done better than it was done that evening; the young Master of the Grange surprised the members and visitors by his manner of rendering the work, while most of the other officers had their work committed to memory. They will confer the third and fourth degrees on Tuesday, April 14th, the first anniversary of the Grange. W. L. OVERHISER

## Grange Picnics.

Name.	Place.	Date.
Enterprise.	Perkins.	Thurs., Apr. 16.
San Lucas.	San Lucas.	Friday, May 1.
Tulare.	Visalia.	Sat., May 9.
Sutter Co. Granges.	Yuba City.	Friday, May 1.
Placer Co. Granges.	Loomis.	Thurs., May 14.
Sonoma Co. Granges.	Bennett Val.	Sat., June 27.

Notices of other picnics will be added to the above list when received.

## Woodland and Vacaville.

From Bro. F. B. Logan we have word of a meeting to be held at Woodland on Friday, 11th inst, and an expected meeting at Winters on Thursday, 9th, looking toward the formation of new Granges; and from Vacaville he writes: "I have sufficient encouragement to warrant the announcement of a meeting for Saturday, April 18th, at 1 P. M., for the purpose of reorganizing Vacaville Grange."

LODI GRANGE, San Joaquin county, held a meeting in their hall on April 1st, and a large number of Grangers were present.—Lodi Valley Review.

## Depravity of California Politics.

Arthur McEwen in Oakland Times, March 15, gives the following interesting dissertation on California politics:

Yet, after all, why should the depravity of Elwood Bruner excite anybody's surprise? He comes of a good family to be sure; his father is a clergyman, and all his connections are respectable. But he has been in California politics from his youth up. That California politics are worse than politics in other States, I am not ready to affirm, but I do know that California politics are criminal. Bruner is a lawyer, and early manifested an inclination for public life. Of necessity he soon learned that the path to distinction, to office, was not a clean one. He has been the District Attorney of his county, has been elected to the Assembly and became one of its leaders because of his superior intellect and acquaintance with political methods. But for this exposure he would doubtless have reached Congress. He was "on the inside" and being so he knew all about how men far more prominent than he attained their ends. He has seen gentlemen of wealth and undisputed social position deliberately making use of the vilest instruments. He has seen elections bought and the buyers held in honor. He has seen the Senatorship sold time and time again as openly as the Praetorian Guard of Rome sold the purple, and the purchaser enjoy the respect of his fellow-citizens. As a resident of the Capital and a politician, he has known that at every session many legislators sell their votes habitually. He has seen daily around the lobbies of the Capitol men whose trade it is to corrupt members, and whose transactions are as universally known as if they were brokers in a stockboard.

Why should a young man with this knowledge, this education, think when setting out on a public career that common honesty was a necessary part of his equipment?

Bruner is the natural, the inevitable product of the conditions in which he has lived.

Because of his eloquence he was chosen to place Stanford in nomination for the Senate a few weeks ago. He was aware that he was addressing a Legislature that had been elected by Stanford's money. He was rewarded with warm applause when he attributed to that great and good man every grace of mind and quality of heart that a Senator of the United States should have; but he could not himself have been under any illusions as to the ability and character of California's foremost citizen. He saw no member of the opposing party with the courage or sense to rise and challenge any of the laudations in his eulogy. He knew that the majority of the people of the State regarded the subject of his panegyric as a model of manhood, although the facts of Stanford's career are burned into the history of California.

On the whole, Assemblyman Bruner is not to be unreservedly condemned for thinking that he would be guilty of yielding to childish scruples had he refused to take that \$400. He is aware that very few of his fellow-members would have hesitated an instant under like circumstances. Many persons, now that Bruner is caught (the majority of the Investigating Committee found Bruner guilty of having received a bribe.—EDS. RURAL PRESS) express astonishment that he should have taken the money when he knew rumors were abroad that he was willing to sell his influence with the San Francisco Police Commissioners. That he should have run the risk merely proves how customary a thing bribery is at Sacramento. The rat which goes into the trap a thousand times and comes out safely with the cheese can hardly be called stupid if at the thousand and first visit it gets caught.

## The State Picnic.

Watsonville Grange has suggested a plan for organizing a State picnic to be held this year. No better project for an early benefit to the Grange and farmers, seems entirely practical.

In order to assist Watsonville Grange in its laudable movement, its communication will be considered by the Executive Committee and the best steps possible taken to start the ball rolling. There has never been so good a time to start a State, or Interstate, picnic and farm exhibition on this coast as the present, from our outlook.

## Executive Committee Meeting.

The regular quarterly meeting of the Executive Committee of the State Grange on Tuesday, 7th inst., was adjourned to Tuesday, the 14th inst., when a full attendance is expected and desired, at which time the regular business for the quarter will be considered. Any business Patrons desire to have brought before the Committee should be forwarded at once, or, preferably, present it in person.

PLACER COUNTY GRANGE PICNIC.—A Granger's Union picnic will be held at Loomis on the 14th day of May, and preparations are already being made therefor. The general Committee of Arrangements consists of Messrs. E. C. Badell, A. J. Spragne and S. Pilcher.—Auburn Herald.

WOODBRIDGE GRANGE, San Joaquin county, will confer third and fourth degrees at their hall on Tuesday, April 7th. The Patrons will enjoy a grand feast, and all members of the Order are invited to be present.—Lodi Valley Review.

## FARMERS' ALLIANCE.

SUBSCRIBERS wishing fuller information of the Alliance can have their names changed to the Grange Edition of the RURAL PRESS free, much to their advantage, this department being continued in the same.

From a San Joaquin Alliance Member.

EDITORS PRESS:—As the picnic time has arrived, who will take a hand and where will it be held in this county? At its meeting in Stockton on April 2d, the County Alliance appointed a committee to confer with the Patrons with a view of having a joint picnic in this county, so that the time and place will be definitely settled upon in the near future. The Alliance also appointed a Committee on Equalization of Assessments in this county which is to co-operate with the Grange Committee.

It would seem from an article that appeared in the Stockton Independent of April 4th that some of the merchants in Lodi are very much alarmed at the work of the County Business Agent of the Alliance in this county. They claim that he is taking orders and sending to San Francisco for goods and the merchants do not get a chance to shave the consumer, and consequently they would be compelled to leave the town when there would be nothing left but one or two blacksmith shops and the shoe-maker. It does seem pretty hard on the merchant that he cannot make from 10 to 50 per cent profit on the goods; but if the farmer has anything to sell, the merchant fixes the price on the product. Yet if the farmers attempt to fix a price on the merchant's goods, then there is a howl. I presume they will live through the terrible ordeal and that it will be all right when they get used to it, for the farmer has been used to this rule all his life.

AN ALLIANCE MEMBER.

Stockton, Cal., April 4, 1891.

## San Diego County Alliance.

EDITORS PRESS:—We have just closed the San Diego County Quarterly Alliance, held at Winchester (on the old San Jacinto plains). It was a large, enthusiastic meeting, where every one seemed full of determination to do business, and if possible at the same time make his neighbor happy. There were some good strong resolutions passed. All members present expressed a willingness to do all in their power to make the resolutions become a part of the laws of the fairest land on earth.

I will send the proceedings in time for the next issue of the PRESS. If there is anything in them that is not sound, I hope you or some one will point it out to us before our next meeting, to be held on July 7th, at Escondido, at which time we want one or more of our State Lecturers to be present and help us make it one of the grandest meetings that has ever yet convened in the southwestern corner of this great nation where the sun is ever shining, the people prosperous, and will be happy when the Alliance has accomplished its mission.

## A Prosperous Section.

It would be an injustice in a communication of this kind not to say to the readers of your most excellent paper that the people of Menifee and Winchester are a big-hearted, generous, industrious, thrifty community of farmers, and well may they be proud of their broad acres of fertile soil set to fruit, cereals and with an occasionally inclosed pasture, green with that native succulent alfalfa. Winchester and Menifee are each well located and have good schools and churches and everything that is required to make prosperous cities, except the population and manufactures which will be certain to come soon. Their irrigation system is fairly under way, and when that is done there will be but little more to do; all else will come.

Elsinore, April 3

L. J.

## Stanislaus County Alliance.

EDITORS PRESS:—Stanislaus County Alliance met at Good Templars' Hall, at Modesto, April 2d, President Vital Bangs in the chair. All local Alliances were well represented. We had a large meeting and there were many interesting discussions among the lecturers and others. At 12 M. the meeting adjourned to meet at 2 P. M. The ladies soon spread a bountiful dinner, which all partook of with keen relish. As soon as possible the hall was made ready for the afternoon session, and promptly at 2 P. M. the President's gavel sounded. All seemed to be in good earnest to work for the cause and much interest prevailed.

The meeting closed at 5 P. M., when the members left for their homes feeling that a pleasant and profitable day had been enjoyed.

MRS. JAS. KINNEAR.

Modesto, April 6th

## Orange County Alliance.

The Orange County Alliance held its quarterly meeting at Santa Ana last Saturday. There was a large attendance of the representative soil-tillers of the county, including their wives. A profitable meeting was had and a good social feeling was developed among those present. The importance of education was urged, especially through the reading of our State and National official Alliance organs.

D. EDSON SMITH, Lecturer.

Santa Ana, April 6.

## The Alliance in Santa Clara County.

We regret to learn from Sister Kate L. Squire, under date at San Jose April 5th, that she has been sick, but it is with pleasure that we receive from her the information that she is convalescing. From her letter we excerpt the following: The only time I have seen or heard anything of Alliance matters since I wrote you from Santa Rosa was when I attended the Santa Clara County Alliance at Gilroy on the 3d and 4th of April. It would have done your heart good to have met the earnest and interested workers in the good cause. I am not able as yet to go on with business, but am so much better that I am laying plans in the hope that I may soon be able to continue; but if I am not, I hope there will be found plenty of earnest workers ready to take my place. Almost every place where I have been so far my work took me among those who were subscribers for and enthusiastic admirers of the RURAL PRESS, otherwise I might have done more for you in getting subscribers.

## Peter Roth, Vice-President.

Bro. Roth, Vice-President of the Farmers' Alliance and Industrial Union of California, was born in Pennsylvania in the year 1848. When only 17 years of age he came to this State, settling in Yolo county, where he has lived since, engaged in farming and stock-raising. In his chosen industrial pursuit, he has been quite successful not only in worldly goods, but in surrounding himself with hosts of friends.

PETER ROTH, VICE-PRESIDENT  
F. A. & I. U.

The Alliance, in Bro. Roth, finds a staunch friend and a strong advocate.

Like his Bro., Hon. John Roth, Ex. State Senator of Tulare Co., he is of large stature, pleasing address, and evidently enjoys a large share of confidence in his own community.

## Niles Alliance.

EDITORS PRESS:—Niles Alliance, No. 258, was organized Jan. 29, 1891; meetings are held every other Monday evening. New members have been added at each meeting.

There are only about 115 heads of families, or voters, in the district, and of that number probably not more than half are eligible for various reasons.

The Alliance feels assured that within another quarter, the membership, which now numbers but 17 or 18, will have doubled.

Burdette Cornell visited the Alliance this week. In an hour's talk he ably handled the different questions or sections of the platform of the Order. He will visit our Alliance within the next ten days to give a free public lecture in the town hall.

At each meeting a paper is read by some one of the members upon questions of importance to the whole Order, or of local interest. The reading is then followed by a general discussion.

MRS. L. E. THANE, Sec.

Niles, April 2d

## Appointments by Col. Barbee.

The following list of appointments by Alliance State Organizer Col. Barbee came too late for last week's issue:

Place.	Day.	Date.
Lincoln	Tuesday	April 7
Sheridan	Wednesday	" 8
Rocklin	Thursday	" 9
Loomis	Friday	" 10
Newcastle	Saturday	" 11
Auburn	Monday	" 13
Roseville	Tuesday	" 14

## FARMERS' INSTITUTES.

## The Institutes at Tulare and Fresno.

According to announcement, a Farmers' Institute was held on Thursday of last week at Tulare, following the meeting of the County Alliance. At the afternoon session, Rev. N. W. Motheral of Hanford and I. H. Thomas of Visalia spoke concerning recent investigations they had made into the reduction of the San Jose scale by predaceous beetles, the *Chilocorus bifulvius* (or twice-stabbed ladybird), and the *Scymnus*, a very small black beetle which is preying upon scale insects in many parts of the State.

W. H. Murray of S. F. addressed the meeting on ramie culture, explaining the new bounty law for California grown ramie, and the aims of the company of which he is secretary. After discussion it was decided to appoint the following committee to investigate the subject further: Maj. T. J. McQuiddy, Hanford; Henry Hunsaker, Woodville; W. A. Simes, Farmersville; A. J. Woods, Wankena P. O.; E. M. Dewey, Porterville P. O.

On Thursday evening, Prof. Wickson gave an informal talk on entomology, illustrated with specimens. It was decided to hold the next Institute at Visalia, the subject to be fruit drying. Mr. I. H. Thomas of Visalia was chosen President and J. W. Mackie, Secretary of the Institute, with the object of making the organization permanent.

## Institute at Fresno.

The Farmers' Institute at Fresno on Friday

in different parts of the State. Kings river is freer from alkali than any river in the State, and the water is nearly pure.

Alkali comes to the surface by evaporation of water from the surface; if it remained at the bottom of the soil, it would do no harm. All damage from alkali is done by the accumulation near the surface.

Carbonate of soda is the most injurious ingredient contained in alkali, and is what is known as black alkali. The other ingredients—Glauber's salt and common salt ("white alkali")—are comparatively harmless. Hence the transformation of "black" alkali into "white" is the first thing needful wherever the former exists. This can be done by the use of gypsum or land plaster on the land, followed by irrigation.

This change, and the effect of black alkali on soils, were illustrated by experiments. Red litmus test paper is instantly blued by black alkali, but when the latter is first mixed with gypsum the paper remains unchanged in color. A dark-tinted soil shaken up with solution of sal-soda is discolored and the solution turns black, showing the injurious action of "black alkali" in dissolving the humus of the soil; but when this black fluid is mixed with gypsum the humus is again rendered insoluble, and remains in the soil. Again, a clay or adobe soil is rendered untillable by black alkali; gypsum, by destroying the latter, again renders it tillable. It also serves to retain the soluble phosphates in the soil. Hence, it is highly important to use gypsum on black alkali soil before attempting to get rid of the alkali by washing out by means of flooding and under-drainage.

There is but one way to rid the soil of white alkali, when that is necessary, and that way is under-draining. But when there is not much alkali, deep and thorough tillage may do all that is required. The formation of surface crusts must be prevented at all hazards. Sometimes there is only a trifling amount of alkali, but which keeps going up and down in the first three or four feet of the soil, by the alteration of rain and evaporation, and so perpetuates the damage.

At Fresno, the situation is somewhat peculiar. In early days there was no alkali far and wide; now the rise of bottom water has leached upward all the natural alkali of 40 feet of previously dry soil, and thus alkaline bottom water is found, especially where there is hardpan at three or four feet depth, from which alkali may rise to the surface and cause injury. For this there is no possible remedy but under-drainage at a sufficient depth; and this should be done on a comprehensive plan. It may be possible locally to drain into wells or sumps; this is now being tried at the Tulare Experiment station.

All through his lecture the professor was interrupted by members of the institute asking questions, all of which were cheerfully answered. His lecture was concise and free from technical terms, so it cannot fail as being of incalculable value to all his hearers.

"Bermuda Grass for Alkali Soils" was the subject of an interesting illustrated essay by Capt. J. G. Dawes, which is published in full on page — of this week's RURAL.

## Permanent Organization.

After due consideration, it was decided to permanently organize the Fresno County Farmers' Institute, with the purpose of co-operating with the representatives of the State University and of arranging Institute meetings quarterly. O. P. Laird was elected President; Mrs. L. H. Hatch, first vice president; R. B. Harlan, second vice-president; John G. Dawes, treasurer, and Mrs. M. B. Stewart, secretary.

On Saturday morning, committee reports were heard and the session enlivened by delightful vocal music from an invited quartette. Prof. Wickson delivered an address upon Entomology. On Saturday afternoon, the ramie discussion was continued, and Mr. Motheral gave an interesting lecture upon beneficial insects.

SILK CULTURE IN SAN DIEGO.—The members of the San Diego Silk Culture Society met April 1st. Arrangements for the opening of the cocoonery were duly discussed and in a most practical way. The necessary lumber for racks and trays was purchased by the appointed committee. The bill was paid by a pro rata assessment on the members. The Japanese who co-operate with the society in this experiment thoroughly understand the business and are very anxious to show to the world what San Diego can produce in silk. It is hoped the silk worm eggs will be here from Washington in a few days, as also some few from San Francisco. It is asked as a special favor that any person who either has or knows of any mulberry trees in the city or near it will let it be known to the society, if they will permit it to gather the leaves. A number have been engaged but more are wanted. The society will continue to meet weekly at the usual time and place, the home of Mrs. Carrie Williams, 445 Olive avenue.—San Diegoan.

FOR WORLD'S FAIR COMMISSIONER.—We notice that the Tulare Register and Fresno Republican are commending Capt. Thomas H. Thompson of Tulare county for appointment by the Governor as one of the California World's Fair Commissioners. The Fresno paper concludes its endorsement with these emphatic words: "He would worthily represent the valley and the State."

and Saturday of last week was conducted by Prof. Wickson of the State University with J. W. Mackie of Tulare as Secretary. Excellent preparations had been made by the local committee and a good attendance was secured; the members during Prof. Hilgard's lecture on Friday afternoon rising to 250 or 300. De Witt Hall, secured for the meetings is light, warm and agreeable. A pleasant hall is a great factor in the success of the Institute.

Prof. Wickson opened the meeting on Friday morning with an address upon the history, characteristics and accomplishments of Farmers' Institutes. The remainder of the morning session was occupied with discussions on sulphuring vines and blue-stoning wheat, in which many gave their experiences and observations.

At the opening of the afternoon session, Mr. Murray presented the subject of raisin culture, and the following committee was appointed to consider his propositions: T. C. White, John S. Dore, A. A. Weber, J. G. Dawes and J. H. Larue.

## Prof. Hilgard's Lecture on Alkali.

The chief topic of the Institute was "Alkali: its Causes and Remedies," by Prof. E. W. Hilgard of the State University.

Prof. Hilgard commenced his lecture by a chemical description of alkali, which is composed of three ingredients—common salt, Glauber's salt and sal soda. These ingredients are always in different proportions; very often any one of them may be missing entirely. A number of minor but highly important and useful ingredients are frequently found in alkali, such as potassium, saltpeter and phosphate.

The professor gave a graphic description of the manner in which alkali gets into the soil. Alkali is formed during the process of the formation of soil out of rocks, and exists near the surface only in countries where there is a deficient rainfall, being elsewhere washed into the country drainage.

By a carefully prepared chart, Prof. Hilgard illustrated the ingredients to be found in water

## Placer.

[Written for the RURAL PRESS by L. H. S.]

Over hill and dale, over knoll and hollow,  
This is the way the white sheep follow;  
The grass is tender, the clover is sweet,  
The mourning doves their woes repeat;  
This is the way while the spring is cool  
The children come to the hillside school.  
Treading the sun-bright waves of flowers  
Or breasting the west wind wet with showers;  
The oaks are putting their new leaves on;  
The lark is bursting his throat with song:—  
This is the way of Placer.

Under hill and height, down vale and hollow,  
This is the way the clear streams follow,  
Where the thirsty boy bends down to cool  
His crimson lips in the pebbly pool.  
The buckeye stretches its umbrous shade  
The timorous bunny seeks the glade;  
The orchard spreads in the little dale  
The pink and white of its fragrant vale;  
The young pines lean to the red hillside,  
And the white clouds over the blue peaks ride;—  
This is the way of Placer.

Over ridge and vale, over hill and hollow,  
This is the way the white sheep follow,  
The blue-grey collies trotting after;  
The woodcock shrieks with mocking laughter,  
He knows the rock where the eagles nest  
And the sly coyote seeks his rest,  
But the grass is tender, the clover is sweet,  
And the horse and rider follow fleet;  
The cow bells tinkle down the glen;  
And all is sweet for the haunts of men;  
This is the way of Placer.

## "Befo' de Wah."

## A Heroine of the Old South.

[Written for the RURAL PRESS by MALIK STAFFORD.]

"O missus! dey done sole 'im, dey done sole 'im, en dere ain't no help for it."

The words came quick, and sharp with agony, from the lips of a servant-woman of the light mulatto type, who rushed into her young mistress' room in a large and spacious planter's mansion in the southeastern part of Missouri. Throwing herself at her mistress' feet, she covered her face with her apron and rocked backward and forward in the intensity of her anguish.

"Sold who, Aunt Tilda?" inquired the girl, laying down her book and looking questioning at the woman, who seemed wild with grief.

"My po' Fred. Mars' done sole 'im to dat nigger-trader. Oh, my po' hoy!"

"Not Fred sold?" said the girl, discrediting the import of the woman's words.

"Yes Fred, honey, my own Fred, sole! He's down at de wauf, wid dat gang o' niggers, in da ole war-house, g'wine to take de boat fur New Orleans in de mawnin'. Jim, he's a-keep-in' watch o'er 'em an' Fred tole him to tell his po' ole mammy, so I could see him onct mo'. He kep' it mighty sly, did ole mars'; but I jes' felt it in my bones dat suttin' drefful was gwine to happen when I seed dat 'skulkin' nigger-trader at dinner wid ole mars', I did, honey."

The girl had risen, and stood as if transfixed with horror as she listened to this recital; then, with clinched hands and face glowing with excitement, she said:

"He shall not be sold, Aunt Tilda. He shall never be taken down South, not while there is a whole bone in my body. Where's papa?"

"Gone away, chile. O Laud!" rocking herself in her deep grief.

"Gone where? Do you know?"

"Yes, missus; he's done gone away down to de ole plantation on de hayon, wid dat 'test-able nigger-trader. Dey won' he hack 'fo' mawnin', when de boat starts."

"Not before morning? But are you sure he's gone?"

"Yes, Miss Sophie, chile; dey's hofe gone shore. Didn't I see 'em wid my own two eyes, an' didn't ole mars' tell me he's gwine to de ole plantation?"

"It would be too late when they return to appeal to papa," murmured the girl.

"Dat won' do no good, honey," said the woman, despairingly. "We kan't help it; he's done sole, an' in de mawnin' goes down Souf; will neber see po' Fred, no more, neber."

"Who did you say had the negroes in charge?"

"Jim, Sneas's Jim. Dat 'skulkin' houn' of a nigger trader, hired him in to watch and keep yard over 'em till he comes back to-morrow mawnin'."

A sudden thought struck the girl; she stooped low and whispered something in the ear of the grief-stricken mother.

"Only keep quiet," said she, reassuringly.

In a moment the dark face was lifted, a sudden flash of joy illuminating it, but the next minute it vanished.

"O chile, we mought be foun' out," in a hoarse whisper.

"I don't care!" was the reckless reply, so we save him."

"I doan keer what comes o'me, honey, ef dey break every bon in my ole body, hut you, chile, ole mars' would be drefful; he'd turn you out o' doaz; he'd 'herit you, or sumfin, would ole mars'."

"Never mind. I'll risk it," aloud; then in a whisper: "If the old yawl's at the willows, we're all right; only be quick. Go up stairs to the garret and bring down two old coats and hats."

"God bless you, Miss Sophie," murmured Tilda, as the door closed on her retreating figure.

Since the death of Major Wilmot's wife, when Sophie was but a babe, the octocon, Aunt Tilda, occupied more the position of mother to the young girl than that of servant, and Fred, her only child, a bright mulatto, with large dark eyes and curling black hair, was only a few years younger than Sophie, and had been her sole youthful companion, if we except the recent years spent by her in school in a Northern city.

It is therefore not to be wondered at that this sudden and overwhelming news brought out those heroic resolves that sometimes in the mildest and gentlest natures need only the circumstance and hour to kindle into activity?

"Oh this terrible, terrible traffic! Slavery! slavery! Would to God it could be blotted forever from the face of this earth. If it should ever be my fate to inherit the ownership of these human bodies and immortal souls, I'll free them every one; I will if I have to work and drudge like they do for my daily bread."

She looked every inch the heroine as she stood thus, her face set in its grand resolve and her superb figure tall and erect.

A soft step was heard in the hall. It was Tilda, who, with two long frock coats and two slouch hats, proceeded without delay to robe her young mistress first, then to envelope her own form in the large coat. Having done this, they noiselessly proceeded out through the long hall down the winding staircase and into the starlit night.

The old clock in the hall rung out ten as they passed out, and taking an unfrequented path in silence wended their way toward the steamboat landing, dignified by the name of "de wauf" by Aunt Tilda, which was half a mile down the river.

There was not a person abroad on the lonely hy-path at this time of night to intercept or question their movements, and a brisk walk of a few moments brought them to their destination.

A dim light was showing faintly through the wide crack of the old building, and halting under the dark shadow they listened. Some restless prisoner was tramping slowly up and down, the heavy and mournful footfalls and the clanking of his chains making ghostly echoes in the vast silence. There was no sound of cheerful conversation, and no ripple of mirth to mingle with the reverberating echo. Now and then a groan or a sob broke on the heavy night air. Sleep had not yet lulled to unconsciousness the miserable and grief-stricken inmates, torn as they were from home and friends and everything that made life dear.

They must do something to attract Jim's attention. "Keep quiet," whispered Sophie, then giving a low whistle they waited.

Some one came cautiously to the door and a voice said,

"Who dar? Dat you Sam?" Tilda put her lips to the wide crack of the door and whispered, "It's me Jim, kan't you let me in?"

"I kan't let no body in, Aunt Tilda ef twas de gubner hisself," dat's my awders.

"Yes hut Jim, Miss Sophie, she here and we just wants to see Fred. Open de doa Jim dat's a good hoy." "What Miss Sophie come down here in de night fur?"

"We want to see Fred, Jim, open de door a moment—you must, do you hear? said the clear voice of the young mistress.

Accustomed to obey, Jim carefully unbarred the door, and closing it behind him shuffled out.

"I dasset let none of de prisoners out, Miss Sophie—I dasset," protested that worthy.

"Prisoners," said she, "you miserable 'nigger!' You bring Fred out here, I tell you. Don't tell me you 'dasset.'"

"Yes'm," said he in haste, hut you'll hab to wait till dem ornery, pestiferous black fiell han's quits a walkin' and gits fas asleep.

"And Jim," she added vehemently, her eyes blazing in the darkness. "You dare ever tell that we, either of us, were down here to-night, do you hear?" With this she slipped a silver coin in the negro's hand, and chuckling he said:

"No, Miss Sophie, I'll neber kno nuffin' 'bout dis affair—no, not ef dis nigger gets whaled till de blood runs; neher, shore i'."

Stepping in, he barred the door as cautiously as before. A moment more the light was extinguished. They waited; it seemed hours. The night air grew chill, hut they could afford to wait if the end was finally gained. At last all was quiet, and the sonorous breathing of some of the prisoners told that some at least of the weary and heart-sick band had found temporary rest.

The deep silence was broken by a stealthy stir and a grating sound on the inside of the door like the gnawing of a rat. Their hearts beat fast; soon the heavy door creaked slowly open—enough to let out the slight figure of a youth. Aunt Tilda clasped him in her strong arms, and almost carrying him, led by Sophie,

the three sped swiftly from under the shadow of the house down the bank and under the willows. Here, as they had previously ascertained, the old yawl lay moored at its accustomed place.

"Jump in," said Sophie, casting a glance anxiously out on the broad and silent river. "There's not a moment to spare; shove off, Auntie, and you row while I steer."

With alacrity the youth, whose bewildered mind now took in the situation, obeyed, while the mother, with quick but trembling hands, untied the rope that held the boat, and giving it a hasty push, jumped in and grasping the oars began to pull away.

"Oh," said Fred, "I wanted so to see you before morning. How did you find out? It was so sudden. Jim said they were going off with us in the morning; he, that old trader, was going with us down South to sell us in New Orleans."

"Hush, speak low," said Sophie. "They'll not do it now, I fancy. But, Fred, you'd better get under the seat; some boat might come along."

"No, Miss Sophie, not this time o' night. Let me take the helm."

"No, I say, get under the seat. We can't be too careful."

"Bress de Laud, we's safe, 'pears like," was Tilda's pious ejaculation.

"Not quite," replied the young mistress, "we're off hut not over. Keep quiet and work for dear life."

"And freedom," murmured the voice under the seat. Teed, in a tone of entreaty, "Miss Sophie, do let me get out an' have holt of de oars. I'm stronger'n mammy."

"No," was the firm reply, "we can't take such a risk as that. You keep quiet. Some boat might come along, and we might be questioned. If we should, remember, I'm old Jim Biles, that lives down on Crow Point been over to Toblin's mill to get a grist, and Auntie you are drunken Sam Skinner, too drunk to talk, do you hear? said the young mistress, striving to smother a hysterical laugh that would bubble up spite of the critical circumstances.

"That's good," said the muffled voice under the seat.

"Sh! sh! sh! whispered Sophie, with a peremptory kick at the invisible voice. "There's a canoe as sure as I'm alive! Bend to your oars!"

"My Gaud, we're lost," murmured Aunt Tilda.

"Row," said the girl, "row for dear life, and don't you say a word. I'll do the talking."

The canoe had suddenly shot out from the bank on the same side of the river they had quitted. It came like an arrow through the opaque waters, a figure in each end of the craft.

In spite of her bravery, Sophie's heart was in her throat, and though she steered with a vengeance, the oars were powerless in mammy's nerveless grasp, and the big yawl drifted with the current. This brought the canoe close across her bows, and one of the men oiled out.

"Who goes thar thile time o' night?"

"Jim Biles o' Crow Pint. Who goes thar, yerself," was the gruff and rude rejoinder.

"Who ye got w' y'e, ole man?"

"Sam Skinner, too drunk to paddle. Sam, set up thar, you owdays'hus ole drunk. Can't ye paddle, so's to keep outen a feller's canoe?"

By this time the canoe had skimmed across and was nearly in the middle of the river. Both women, weak and trembling with excitement, rested a moment on their oars.

"Hurray!" ventured the voice in a smothered tone, hut ain't you a hero, Miss Sophie!"

"Sh, sh! he careful. I'm a coward, that's what I am."

"O Miss Sophie, you's jes a merole. De actnest actor as eber I seed. I clarf ore de good Laud, I neher would a knowed dat voice myself, neher!" hurriedly said Aunt Tilda.

But gathering strength, horn of hope, they bent themselves to their task, the regular noise of the oars in the negro woman's hands alone breaking the stillness on the wide and smooth waters. It was not long before the boat glided under the willows of the Illinois shore, and the prow touched the bank when all three sprang out.

"Now, said the girl, there is not a moment to be lost—the road due north, Fred, will take you to Judge Hilton's place, a large white mansion on the left side of the road. You will reach it about daybreak, if you travel briskly. Ask for him and tell him I sent you, and he will tell you what to do. Good-by, now. Make a man of yourself. Look sharp, for you're not out of danger yet."

The weeping mother threw her arms around the youth's neck and with many a "God bless you" and murmured word of endearment, pressed him again and again to her loving bosom.

"O Miss Sophie," whispered the grateful youth, "how can I ever thank you enough?"

"Here, wait a moment," said the young mistress, and taking from her pocket a silken purse, emptied the contents into the boy's hands. You may need this."

"O Miss Sophie," was all the bewildered youth could murmur. Then with a hurried but tender farewell to his mother, he sprang up the bank, and pausing once more to wave a last farewell, turned and was off in the direction of the road indicated.

The two women—one at least with tears in her eyes—stood watching the slight figure till it was almost lost in the deep shadows of the forest, then brushing the tears away, and sigh-

ing, said to her companion: "Don't watch him outen sight, chile. It's onlucky."

"Oh! fie, Auntie," said the girl assuming a light air, hut with heavier hearts than either could have thought possible under the circumstances, they stepped into the yawl, pushed out into the stream and were homeward bound. Each was busy with her own thoughts. Each was sensible of a loss—one of her willom playmate and faithful friend, the other of a treasure that made bondage endurable, and as he disappeared in the darkness of the woods, so had he disappeared from the horizon of their earthly lives, perhaps never again to meet face to face. How somber and lonely looked the dense darkness! How solemn and lonesome sounded the murmur of the ever-flowing river!

Sophie cast her eyes away across the river, the black shore with its fringe of slumbering trees, looking dreamy, dark and uncertain in the faint starlight. How broad rolled the vast flood from bank to bank, the bright orbs of night alone reflecting on its black and flowing bosom! How ohill the night air grew! How deep and dark the water seemed! She shuddered.

"O Auntie! how I wish we were across!" she murmured.

"We soon will be, honey," was the hearty and encouraging reply, and heading to her oars, she added: "I ken jes' row now, so I ken," and with hearty strokes she sent the yawl flying across the deep dark waters.

Neither Sophie nor Aunt Tilda were early risers the following morning; indeed it was not until after the sun was well up that Sophie having made a careful toilet descended to the breakfast room, where to her surprise, her father still lingered over his coffee; he in company with Finlay the trader having returned home an hour before.

She was not slow in perceiving a look of uneasiness and perplexity on her father's face and divined the cause. He merely looked up as she entered, saying, "Good morning my daughter," and continued to sip his coffee.

Some moments later, a hasty step was heard in the hall, and a man stopped before the door. He was a burly red-faced man with small black eyes, and disagreeable expression of countenance, with an abrupt and insolent manner he said:

"It's true, Major; that dod-rotted yellow nigger's gone."

"You're an're of it?" questioned the Major.

"Shore? Shore as death. He's clean gone, out for good, no whar to be foun'. I'll set the bloodhounds on his track. You don't keer 'em, I reckon?"

"Bloodhounds!" thundered the Major rising. "Do you mean to insult me, sir? I'll let you know I have more regard for my people than to keep such beasts."

"Oh, I didn't mean nothin'," said the intimidated Finlay. "I just thought you mought —." But the remainder of the sentence was cut short before the advance of the irate and insulted Major.

Sophie waited to hear no more. Hastily rising, she quitted the room. The Major, turning, marked with a puzzled expression the abrupt and unceremonious exit of his daughter, hut was too deeply immersed in the affair of the runaway to think long on the subject.

"Umph!" thought he; "the oraven! Wonder it he thinks I'd see him hurting my people with bloodhounds. He's mine yet—not a dollar paid on him! I hope to the Lord he'll escape, and I guess he's smart enough for that. With these thoughts, the Major arose and, lighting a cigar, sought the veranda. He did not seem at all anxious for the finding of the runaway, nor did he order the servants to assist, and if one could have read his thoughts, they might have been matter for surprise. Anyhow, as he walked slowly up and down, there crept into his face a pleased expression, a restful expression that had been a stranger to it since the transaction of the sale the day before.

While Sophie stood watching events from the window of her chamber, for Finlay would not abandon the search as long as there was hope, and had employed men and boys, on horseback and on foot, to scour the neighborhood and the river bank for miles along—while she stood thus, her mind in a state of restful thankfulness, she heard a gentle step on the floor, and the next moment was folded in the motherly arms of Aunt Tilda.

"Oh, chile, God bless you, you'e a angel on dis earth, shore!" Then, lowering her voice, "It's jest been awful, honey, ever aense dey come home. Dat ole rapscallion had all de niggers on de ribber tarin' np jack; hut it's all right, honey, we're at rest."

"Dey's been a tumin' an a foam' down by de ribber, in de quarters, in de woods, everywhere."

"De niggers all declar'd dey knowed nuffin' 'bout it. Jim said he was asleep; some of em said dey heerd de doa' open an seed a big light, an den dey covered thet faces an' quaked with fear. Ole mars' doan seem to trouble hisself much. He doan make our boys jine in de hunt. I guess dat old rapscallion of a trader won't come round here any mo' for likely yellor boys he be!"

Aunt Tilda could not conceal the satisfaction she felt. Her face was aglow with triumph, albeit there lingered in the corners of her mouth and the deep circles around her eyes traces of sadness and pent-up tears that her sore loss and consequent loneliness had brought.

Miss Sophie made no reply, hut her clear eyes reflected the anhlime resolve that the

night's adventure had only served to strengthen.

It was about a week after the affair of the runaway, and the excitement had abated and things had settled down in their well-oiled channels—that as Major Wilmot sat alone one day on the veranda, he saw the negro Jim shuffling across to the stables.

"Come here, Jim," called the Major. The negro reluctantly ambled near. "Now," said the Major, abruptly, "I want to know what you know about that runaway—Fred, I mean. How did he get out?"

Clar fore de good Land Mars Wilmot. I doan know nuffin bout it, "asserted Jim in the blandest earnestness.

"O you black rascal, don't tell me that; you know something?"

"Well mars, ef you won't kill pore Jim, I'll jes tell you all I knows."

"Go on you unmitigated liar."

"Well, when de niggers was all a hnttin an a raisin Ned, I stole down to de ole yawl. I seed footprints, jes made, an she was run hang inter de san; and de rope onfasten; I knows dat somebody tuck dat yawl, an went across dat ribber dat night. Dar was a right smart o' footprints. Dey tuck somebody ober, an den fotoh de yawl back. Dats all I knows."

"All?" said the master. "Yes sah! Yon may sink me plim inter de yearth if it ain't de trufe, de whole trufe an nuffin but de trufe," replied Jim piously rolling his eyes heavenward.

"You can go," said the Major. "It's just as I thought," continued he, after Jim had shuffled away. "Somebody set him free; somebody did what I ought to have done long ago, but who was it? Who was it?"

It was not until several months after this that Sophie made a full confession to her father of the night's adventure, and the important part she played in Fred's mysterious disappearance. She was prepared to meet her father's surprise, she was not prepared to meet the smile of pleasure and admiration with which he listened to the heroic adventure.

A long year of waiting on the part of good Aunt Tilda was at last rewarded by news of the free man. One day a letter in a quaint, unknown hand was received by Sophie. It bore the postmark of Canada, and the signature of Fred. In substance it was to the effect that after many wanderings and narrow escapes, he had gained the Dominion, and by the aid of a letter of introduction from Judge Hilton to a friend, had found employment and a home. Here as a free man, he was on the upward stride, his earnest ambition the freedom of his people, particularly that of his dear mother, which latter cherished desire was consummated a year later, when Aunt Tilda, accompanied on her journey by her beloved young mistress, sought and found with a heart overflowing with joy and thankfulness, the lad now grown to early manhood, whom she had watched with an aching heart disappear from view on that memorable night. Without lingering over the details it is enough to say that the "end found justified the means;" that the youth with a soul capable of the highest development, grew and expanded under the kindly light of freedom, and in after years when the down-trodden millions of his people cried out for the assistance of such as he, they found him foremost in the ranks for aid and counsel.

It was many long years after this event that as Sophie Wilmot having come into the possession of her father's estate, his goods and chattels, and having according to her grand resolve, freed every one of her people, she was won'to linger over the events of that never-to-be-forgotten night, and with her grandchildren gathered round her knee, would close with the words, her soft eyes gazing into the dreamy past: "Yes, children, that was the one grand adventure of my life!"

Chaff.

LOVER (doefully pointing to a piece torn from his trousers)—"Look at that, Your dog bit me." Sweet Creature—"did he? Poor little Fido; I suppose he is jealous."

FRIENDLY ADVISOR.—Cholly—"Aw, I wonder will the governor kill the fatted calf when I go home?" Maud—"If you value your life you hadn't better run any risks."

LIZZIE—"I ontend that tobacco degrades any man who uses it." Kate—"Well I don't know. I know lots of men who use it, and I don't think tobacco could degrade them."

AMERICAN MILLIONAIRE (in Paris proudly)—"My daughter is being waited upon by a Duke." Old Traveller—"Well, Dukes make excellent waiters. There are several of them in our restaurant too."

AN IRISHMAN was asked why his countrymen were so remarkable for blundering. "Faith," said Pat, "there is something in the air of Ireland, and I dare say if an Englishman was born there he would do the same."

"HENRY," cried Mrs. Von Toodle, grasping her somnolent husband by the arm; "Henry, there are burglars in the house. Get right up and go down!" "Utter nonsense, my dear, returned Henry. "You wouldn't have a man of my social position associating with burglars, would you? You astonish me."

DID your wife listen to your excuses for staying out so late last night?" "Oh, yes, she listened to me and then—" "then what?" "I listened to her."

YOUNG FOLKS' COLUMN.

Essay on Prohibition.

[Written by a Boy Eleven Years of Age.]

DEAR FRIENDS:—The subject on which I am going to address you is that of prohibition.

The bright star of temperance has risen in the East, and is now beginning to illuminate the West. It will never set in the West, but will hover over it, a mighty power that (in time) will have destroyed the saloon, and brought peace and prosperity to the land.

We boast that ours is the land of liberty, we say that we are free. The blood of every patriot thrills as he reads of the brave and gallant deeds of our forefathers in freeing themselves from tyranny. We children read of the deeds of the boys in blue, through the long and bloody years of the Civil War. The motto of our forefathers was liberty, equality and free and equal rights.

On these principles they made the Constitution of the United States. Our forefathers did the best that they were able, but it was like tempering a piece of steel. First it is not tempered right; then it must be tried again and again until it is perfect. So with the Constitution. It was not perfect at first; then amendments had to be made, and more and more until it is perfect. [We need a new clause in our Constitution, that of prohibition.] The defenders of temperance urge that prohibition is unconstitutional. How can that be, when everything is governed in this country by the popular will of the people? The friends of prohibition propose to crush the saloon by votes at the ballot box.

The men in this wicked business, engaging in the race for the almighty dollar, never stop to think how many souls they are dragging to ruin, how many men are staggering along the streets at night under the baneful influence of their own intoxicating liquors, how many weeping wives and widows, how many desolate homes, how many frightened children are awaiting the approach of their brutal fathers!

The saloon-keeper has his license framed in gilt and hung in plain sight on the walls of his saloon, showing that he is allowed to destroy and humiliate American citizens. He defies the star spangled banner by draping it on a whisky barrel, and disgraces the big national eagle by forcing him to stand on one of the hoops.

They tell us if a man wants to drink, let him drink and take the consequences; but he don't take all the consequences, the innocent suffer with the guilty. The mothers, wives, brothers, sisters and children suffer over the sad condition of their relatives, and they are not the only ones that suffer—the hard-working, sober, industrious citizens have to toil to erect jails and prisons, and to support the trials of men whom intemperance has made criminals.

The saloon grinds up 20,000 boys in the big cities of the United States of America. Do you contribute your share of boys to the saloons?

GORDON P. STAFFORD.

Hans' Golden Eggs.

Gretchen and Hans were the little children of a German widow. She was a good Lutheran, and her husband had been a preacher of that faith; but he had died soon after coming to this country. He had bought with his scanty savings a little place in a small town, and the wonderful vegetables that the mother and children coaxed out of the one-acre garden, and sent to the great city near by, were their main subsistence.

Mrs. Meyer had had a bad cough all winter, and could not do her usual amount of sewing and knitting, so that spring found the family unusually destitute.

In October, Mr. Flack moved into a house beside them, and his only child, George, soon made acquaintance, through the garden palings, with the rosy-cheeked German children, and they were back and forth all winter; but as Mrs. Flack was quite an invalid, the children played in the nursery, under the care of the nurse, and she had never known much of them.

The day before Easter, the nurse-girl being gone, the three came to play in Mrs. Flack's room, and she heard the following conversation:

"I am going to have such nice Easter eggs to-morrow," said George.

"Ah, but when mine fadder was not dead, we too had the nice Easter eggs!" exclaimed Gretchen, sighing.

"I wish the old black hen would lay a golden egg the morrow morning, as you read to me," spoke up Hans.

"That was a fairy story, and it was not the true story," answered Gretchen.

"But the good Lord could make her lay one if he wanted to," persisted Hans.

"Ah! he could, but he does not any the more."

"In the Book, this morning, our mntter read that he make the money in the fish's month to pay the taxes."

"That was true when he was on the earth, but now that he is up in the skies, no more he does that way."

"He was no more strong on the earth than in the sky, and mntter says he knows we need

some shoes, else after the Easter we cannot go to the school, till comes the weather warm, and we go with the bare feet; at the night I shall pray the good Lord to let the black hen lay a golden egg," and Hans' great blue eyes glowed with excitement at the thought.

"A true golden egg would buy much of the shoes; it is but one dollar for each pair that wants Mr. Green's store for shoes," said Gretchen.

George had been listening attentively as well as his mother, but just then Mr. Flack, who had been away for a week came in; the children politely made their funny little courtesies, and saying "Goot morgen," went home.

That afternoon George and his mother had a long talk. He had two gold dollars, and he decided to give them to his little friends. His mother made a small hole in each end of some eggs; she blew the contents out, pasted a paper over one end and filled the shells with melted maple sugar, dropping a gold dollar in each of the two eggs.

When the sugar hardened she gilded the shells, and early Easter morning George slipped into the coop and laid them in the old black hen's nest. She was already on the nest to lay, and her cackling brought the children out. From behind a barrel George heard Hans cry, "Ah, but the good Lord has made the black hen lay two golden eggs, and now we can have our shoes!" Did I not tell you so he could if I prayed him?

And the apple-cheeked children pattered round in their stout shoes all the spring, and many a comfort went into the good widow's house, because of Hans' faith in "the good Lord up in the sky."—Sunday School Times.

DOMESTIC ECONOMY

Macaroni and How to Cook It.

EDITORS PRESS:—Macaroni with cheese, and macaroni soup, are familiar to you, but to learn all the variations in cooking it, go among the Spanish. After eating macaroni as they prepare it, you will use adjectives in its praise, as did an old Italian nobleman. The story runs that the dish was invented to please an Italian epouree, and his words of delighted commendation, "ma ca roni," became the name.

Some season macaroni with red pepper, some use tomato, but the Spanish put both in one dish. The red pepper grows stronger as it dries, and care must be taken lest too much be put in.

Many find it economical to buy macaroni by the box, for it is the foundation for many good dishes at a season when the question, what can I cook? is an important one.

The poorer pieces of dried beef may be disposed of as flavoring. Let the beef cook slowly with the macaroni for a long time, then take up the macaroni and throw away the beef; its nutriment is gone. If you wish to serve beef with the macaroni, cut fresh slices and let it cook only a minute.

Used with chicken in the place of rice, macaroni makes a palatable side dish.

If cooked slowly, macaroni may be eaten with cream and sugar.

If tomato vines are hung in a cool place, the tomatoes will keep till Christmas-time.

Quick Potato Soup.

Grate two or three large potatoes and stir them into boiling water salted. Soup stock may be used, but if only creamy milk be added on taking up, the soup will be light and wholesome. Serve with toast.

The Best Way to Cook Rice.

After washing the rice, put it into a granite-ware saucepan, salt it, and pour in boiling water to stand an inch above the rice. Boil hard for ten minutes or more, then set it where it will be hot enough to evaporate all the water, and the rice will be thoroughly done with no hard grains.

The following is a nice lunch dish that may be easily made on the breakfast fire. Put a teacupful of rice in enough new milk to make a quart when done. Sweeten, salt slightly, and cook in a double boiler. Flavoring may be added.

To use up cold hulled rice, stir into it two well-beaten eggs, season, and fry a light brown in hot butter.

Slices of cold bacon, dressed in whipped egg and fried, make a presentable breakfast dish.

Boiled Iceing.

A cupful of sugar to the whites of two eggs. Moisten the sugar with boiling water and holl without stirring until it will thread when poured from the spoon. Beat the whites to a very stiff froth and pour over it the holling syrup, stirring constantly. Let it cool before putting it on the cake. This icing will not need to be set in the oven for hardening after being put on the cake. ADAH F. BATELLE.

WHITE CAKE.—One coffee-cup of pulverized sugar, two coffee-cups flour, one teacup of milk, one-half teacup of butter, whites of two eggs, two tablespoonfuls of baking powder.

BAKED SMELTS.—Cut off the heads. Split and dip the smelts in melted butter, and then in flour. Lay on a pan in the oven. Bake from eight to ten minutes. Serve with eighth of a lemon and cayenne.

GOOD HEALTH.

ETHER DRINKING appears to be a new form of intemperance which is just now creating much excitement in Ireland. The London Times sets it down as the true source of most of Ireland's woes. That journal has given a very elaborate account of the new tipple, the very existence of which was almost unknown until quite recently. The drink is a very impure form of ether and the results are most deplorable in character. The use of this new intoxicant has as yet spread through only four or five counties, but its march is onward and it is thought that it will continue to spread until all Catholic Ireland is involved. Insanity is rapidly increasing where this drink is used, and the death rate among the children of the ether-drinkers is very large. In Drapertown, with a population of only 9500, it is said there are not less than 6200 drinkers. In five of the northeastern counties, including Tyrone and Derry, where there is a population of 350,000, there are said to be 46,000 confirmed drinkers.

THE NEW YORK PASTEUR INSTITUTE appears to be doing good work in the prevention and cure of hydrophobia. The institute commenced work in February, 1890, and according to the annual report recently instituted it had received 828 persons bitten by dogs or cats. Of these, 643 received wounds from animals which were not mad, consequently their stay was of brief duration. In 185 cases anti-hydrophobic treatment was applied, the fact of the animals inflicting the injuries having hydrophobia being either clinically evidenced or proven by inoculation in the laboratory, and in numerous cases by the death of other persons or animals bitten by the same dogs. No death occurred from hydrophobia among the patients inoculated. Indigents were treated free of charge. Only 81 patients were received from the State of New York. The balance were from 25 different States, one going from Arizona and one from Canada. The result of the treatment has been a most perfect success.

CONSUMPTION AND CANCER.—The use of the lymph cure for consumption in this city is now generally conceded to be a failure, and we understand that there is now no especial call for treatment; and since the Koch cure for consumption has got the go-by, Cook's cure for cancer is beginning to attract increased attention among many of the more considerate of our medical fraternity. The success attending the treatment of several very pronounced cases now in hand is proving a most agreeable surprise to many deeply interested persons, among whom are several physicians. We are assured that this cure will soon be taken up and thoroughly investigated by persons whose report, when made, will be most unhesitatingly accepted as beyond dispute. That it will be feasible goes without saying.

THE ANT'S JAW.—The grip of an ant's jaw is retained even after the body has been taken off and nothing but the head remains. This knowledge is possessed by a certain tribe of Indians in Brazil, who put the ants to a very peculiar use. When an Indian gets a gash cut in his hand, instead of having his hand sewed together, as is done in this country, he procures five or six large black ants, and, holding their heads near the gash, they bring their jaws together in biting the flesh, thus bringing the two sides of the gash together. The Indians pinch off the bodies of the ants, and leave their heads clinging to the gash, which is held together until the gash is perfectly healed.—Medical Record.

CARE OF THE BRAIN.—The brain stands the most abuse of any organ in the body. Its best tonic and stimulant is success. The worst and most depressing thing to it is failure. The most injurious effects come by using stimulants in early life. Young people should never use liquors, tea or coffee. The latter two may not exactly do harm, but they are conducive of no good. They act mostly on the brain and injure its growth very materially. Abundance of sleep is necessary. Eight hours is not more than enough. Sleep is the time of relatively lowered expenditure and increased repair.

THE BLACKENED TEETH of the Malays and Siamese are not produced, as has been supposed heretofore, by coating them with a mixture of betel and lime, but by rubbing the teeth with a paste made from charred cocoanut kernels. This is carefully applied to the teeth again and again, until a black varnish hides the natural white.

HYDROPHOBIA LONG DORMANT.—A telegram from the town of Mexico, in Missouri, says that William Garner, who was bitten by a mad dog about 20 years ago, died on the 25th ultimo. He was so violent during his illness that four men had to be kept with him all the time. His sufferings were terrible.

LOSS OF BODILY MOISTURE.—We lose two pounds of water in 24 hours by perspiration, and the more we perspire the cooler we become. There are 27,000,000 pores on the surface of our bodies, which, if placed in line, would extend 28 miles in length.

## TABLE OF CONTENTS.

**EDITORIALS.**—A Notable California Peach; California Fruits—Second Edition; Wheat Advancing; Rail Shipments of Grain; American Pork Abroad; Saddle Horse Breeders, 337. The Week; The World's Fair; Broom Corn; Sergeant Barwick's Weather-Crop Bulletin; Hot Water for Smut; California Cement; Grape Yield Per Acre, 344.

**ILLUSTRATIONS.**—The Early Imperial—A New California Seedling, 337. Peter Roth, 340. Portable Poultry Houses for California; The New Pink Carnation—Nellie Lewis, 345.

**THE STOCK YARD.**—The Cattle Outlook; Eastern Beef and Mutton in Washington; A Large Slaughtering Concern, 338.

**THE FIELD.**—Truck Farming in the United States; Bermuda Grass on Alkali Soils; Grass and Its Mission, 339.

**PUBLIC AFFAIRS.**—Village Improvement in California, 339.

**HORTICULTURE.**—State Hort. Soc'y, 339.

**PATRONS OF HUSBANDRY.**—The Master's De-k; For Oregon; Yuba City Grange; Help Our Nebraska Brethren; Pescadero Grange; Executive Committee Meeting; Grange Pioneer; Woodland and Vacaville; Depravity of California Politics; The State Picnic; Overseer Roache for Tulare Plenic; Miscellaneous, 340.

**FARMERS' ALLIANCE.**—From a San Joaquin Alliance Member; San Diego County Alliance; Stanislaus County Alliance; Orange County Alliance; The Alliance in Santa Clara County; Peter Roth, Vice-President; Niles Alliance; Appointments by Col. Barber, 341.

**FARMERS' INSTITUTES.**—The Institutes at Tulare and Fresno, 341.

**THE HOME CIRCLE.**—Placer; Beto de Wah; Craft, 343.

**YOUNG FOLKS' COLUMN.**—Essay on Prohibition; Hans' Golden Eggs, 343.

**DOMESTIC ECONOMY.**—Sundry Recipes, 343.

**GOOD HEALTH.**—Miscellaneous Items, 343.

**POULTRY YARD.**—Chicken Houses for California, 345.

**MEOROLOGICAL.**—Daily Weather Maps from the Signal Service, 345.

**CEREAL CROPS.**—The Season in the Sacramento Valley, 345.

**AGRICULTURAL NOTES.**—From the Various Counties of California, 346-348.

**AGRICULTURAL SCIENCE.**—Notes on California's Lives—Their Adaptation and Oils, 350.

**THE STABLE.**—The Thoroughbred, 352.

**AGRICULTURAL ENGINEER.**—The New Road Law, 352.

**THE DAIRY.**—Milking Shortborns, 354.

## Business Announcements.

(NEW THIS ISSUE.)

Steam Plowing and Harvesting Outfits—Benicia Agricultural Works, Benicia.

Incubators and Brooders—Pacific Incubator Co., Oakland.

Mowers and Rakes—Frank Brothers.

Ro-in Wash—Woodbury Oil Co.

Notice to Dairymen—P. M. Sharples, West Chester, Pa.

Spray Pumps—Wainwright Spraying Apparatus Co.

Gumtree Cattle—S. M. Wilbur, South Pasadena.

Sale of Trotting and Road Horses—Killip & Co.

Manilla Roofing—J. F. Wyman.

See Advertising Columns.

## The Week.

The rains of Monday and Tuesday covered a wide area of the State and were very acceptable. As usual the amount of precipitation was various from an inch and a quarter at some points of the bay of San Francisco to a small fraction of the great valley. The rainfall at most coast locations and in the northern part of the State is now adequate for crops and no doubt some heavy yields will be reported. There is, however, a larger area over which yields on unirrigated lands will be exceedingly light unless we have a succession of showers. It will not be wise to believe stories of large grain surpluses which are industriously set afloat after every shower at this time of the year. They may be realized, but the chances are

against it. Still, with an advance in values which should come, according to all features of the situation the world over, it is quite likely that the money which the State will gain for the year's work will be gratifyingly large.

Frosts have been doing much injury to the peach and apricot in wide valley situations, and the aggregate is likely to be considerably reduced on these two fruits.

## The World's Fair.

By a law enacted by the recent Legislature, the Governor was authorized to appoint a Board of World's Fair Commissioners as a controlling body concerning all matters wherein this State is interested and to control the expenditure of the \$300,000 appropriated for California representation at the Exposition. Governor Markham has named the following gentlemen to constitute the board: First district, John Daggett of Siskiyou; Second district, Robert Murray of Nevada; Third district, A. T. Hatch of Solano; Fourth district, Irving M. Scott of San Francisco; Fifth district, James D. Phelan of San Francisco; Sixth district, L. J. Rose of Los Angeles; Seventh district, Thomas H. Thompson of Tulare.

These commissioners have been selected to represent the State geographically and her leading industries as well. Live-stock, mining, fruit-growing, manufacturing and general farming and progress in land development are believed to be well covered by the appointments made, and certainly the men chosen are widely known, not only in their own regions, but over the State at large.

The progress of the World's Fair enterprise seems to be fairly active. The National Commissioners from California, who are now in Chicago, do not agree among themselves as to who should be chosen for the headship of the horticultural departments of the fair, the candidate who has been generally appointed here has apparently been thrown out, and it seems to us altogether unlikely that the appointment will go to a Californian in view of this discord among our representatives, but this point is not settled yet.

According to recent reports the different States have appropriated nearly \$1,500,000 for the purposes of State exhibits, and there are other amounts still pending in the Legislatures of the different States. So far the California appropriation of \$300,000 is the largest made by any State. States which have defeated appropriations are as follows: Alabama, Arkansas, Kansas, Oregon, South Dakota, Tennessee and Texas.

Various comments upon the anticipated influences of the great fair of 1893 are being made. The following is a general view of the case which certainly has much force. Greater than even the reciprocal advantage of education between producer and manufacturer, American and foreigner, the Exposition as a unifier of the people of the United States will amply repay whatever money be spent in its preparation. East and west, north and south, the people of this country are gradually becoming provincialized as the process of local development creates new centers of interest apart from the capital or metropolitan cities. In the crowded cities of the East hundreds of thousands of people live and die in the belief that the Great West is still a rowdy wilderness peopled only by uncouth, semi barbarians, and in like manner in many Western cities the idea of Eastern civilization is indelibly associated with that of effeminacy. North and South in like manner are each of them unknown countries to a large percentage of their opposite people. To efface this sectional feeling, the World's Columbian Exposition will be an agent of incalculable potency. Mingled together in one common ground, summoned in honor of an event equally beneficial to all, stimulated by individual interest and local pride, protectionist and free trader, manufacturer and farmer, Easterner and Westerner, Northerner and Southerner, American and foreigner will join hands to make the World's Columbian Exposition an event of which not only the American people, but the world itself and the great nineteenth century may justly feel proud.

Figures of the possible attendance at the World's Fair are also being indulged in. The attendance at the Philadelphia Centennial, as shown by the number of admissions, was 9,910,996, and at the recent Paris Exposition, 28,149,353. Large as was the latter, it is expected that the attendance at the World's Columbian Exposition will equal it.

It is telegraphed from Chicago that Commissioner De Young has selected as a site for the California building  $1\frac{1}{2}$  acres of land nearly opposite the present boathouse in Jackson Park.

## Broom Corn.

It is reported by the handlers of broom corn in this city that the supply has proved unusually short and that prices have advanced to \$120 per ton. Local broom makers are importing western broom corn, which they can procure cheaper than the home grown article. Mr. L. W. Palmer of this city gives a reporter of the Post the following statement:

The brush produced in this State is grown principally along the banks of the Sacramento river, from Sacramento to Red Bluff. The seed is planted on the low, wet ground close to the levees, and is cast when the soil is a liquid mud. The brush grows quickly, and a stalk will reach the height of 10 feet in ninety days.

No white men cultivate the brush. Only Chinamen can manage it. You see, there is a great deal of malaria in that district, and white men refuse to run any risk. Then the heat is intense in the summer time, and 120 in the shade is the usual thing. The ground is so close to the levees that scarcely a breath of air reaches it during the hot period. Only Chinamen can stand that sort of thing. They do not own the ground they till. They only have it leased.

I don't think broom brush can be grown anywhere else in this State. An attempt has been made in Los Angeles county and also in Sonoma county to raise the brush, but nothing came of it. You see, the slightest breath of sea breeze affects the brush, and fogs and trade winds render it useless. Wet soil and dry air are essential to the growth of the brush. In Los Angeles and Sonoma the stalks grew well enough, but the fiber would not grow out. There was too much fog and trade winds.

About 800 tons are raised each year in California. A great portion of the product is shipped to Australia and the remainder is made up here. The Australians prefer California brush on account of securing it at less cost for freight. If they bought brush from the Chicago market they would have to pay freight on it to New York and from there around the Horn.

The average normal price of broom corn in this State is about \$65 a ton; the average price in Chicago is about \$75 a ton. The corn you see in my shop is from Chicago, because I cannot buy any here now for love or money. I will be forced to get my raw material from Chicago until the new crop is harvested next October.

We are not sure that all these statements are accurate—at least those relating to the growth of the plant in this State. It may be worth while to pay more attention to a crop of which the supply runs out midway between harvests, and for which there is export demand. Will readers who have grown broom corn in this State let us have their experience? It may be possible that some way can be devised which will not make it a Chinaman's crop alone. The subject is at least worth looking into.

## Hot Water for Smut.

The discussion on smut and bluestone at the Fresno Farmers' Institute reminds us that although it is not the sowing season in California, much interest pertains to this pest of the grain-grower. In a recent issue we alluded to the experiments at the East, which indicated that the use of heat to kill the spores of the fungus was more effective than the use of bluestone. The use of hot water is thus described in a bulletin from the Ohio Experiment Station:

Have two vessels, in one of which water is kept warmed to about 120 degrees Fahrenheit, and in the other to as nearly exactly 135 degrees as possible. Have a basket of wire netting, or a loose splint basket covered with cloth. The water baths must be large enough to admit this basket. Fill the basket with seed grain and immerse it in the cooler bath, keeping it there and stirring it around until all the grains are warmed, then lift it out and plunge it into the hot bath, where it should remain from 8 to 10 minutes, being stirred or agitated meanwhile. Then remove it and dip it into cold water or spread the grain out and throw cold water over it, after which dry it sufficiently for sowing.

The effectiveness of this method depends upon having the water hot enough to destroy the smut germs, which may be adhering to the outside of the grains, but not so hot as to destroy the germ of the grain. Experiment has demonstrated that this may be accomplished by soaking the grain in water of the temperature indicated. The reason for using two vessels is, that if one vessel were used, the water would be cooled too much by the cold grain to accomplish the purpose in view, or, if it were heated hot enough to do this, it would be so hot as to destroy the vitality of much of the grain.

We trust some of our grain-growers who have habitually used bluestone will prepare to try the hot-water method this fall. The method described above will answer well enough for a small-scale experiment, and if it prove satisfactory, some way for treating greater amounts of seed simultaneously can be contrived. Dip-

ping grain in a basket and giving, say ten minutes, to each basketful would make it necessary for some of our grain-growers to begin dipping now to get grain enough ready for next fall; but if the remedy is approved it will be easy to contrive more capacious receptacles and more speedy methods.

## Sergeant Barwick's Weather-Crop Bulletin.

The Legislature would not approve the plan submitted by Sergeant Barwick, the well-known Sacramento observer, for a system of State weather and crop reports. We believe now, as we stated frankly when the bill was introduced, that there have been few propositions by which the State could realize so much at so little cost. But the law-makers would not have it, and so Sergeant Barwick has decided that the State shall have the service anyway, so far as he can secure it by the aid of hard work and Government printing and the co-operation of Secretary Smith of the State Board of Agriculture.

We have before us the issue of the "Weather-Crop Bulletin of the California State Agricultural Society, in co-operation with the U. S. Signal Service for the week ending March 27, 1891." It is a large sheet bearing condensed reports from observers at 28 points in different parts of the State, and at the bottom of the sheet the deduction from the individual reports which Sergeant Barwick makes up each Saturday morning for telegraphing to the Signal Office at Washington. Although the affair is more limited than might have resulted with a little State aid, it is certainly a better like publication than we have seen from other States. With a little more interest by volunteer observers, it can be considerably extended. The Bulletin is issued weekly and is sent to each local observer and crop correspondent and is exchanged for the weather reports of other States. No doubt all who are willing to co-operate with Sergeant Barwick will be welcomed by him as coadjutors, and thus private interest and effort will go far to supply the service which the State denied. It strikes us the matter is very creditable and worthy of encouragement.

## California Cement.

For a number of years we obtained a small amount of cement from Benicia, but the works there shut down a long time since. Then the cement works at Santa Cruz were started, but trouble of various kinds overtook the company and nothing has been done for some years. Now a new enterprise for making cement has been started in San Diego county by the Jamul Portland Cement Works. Considerable money has been spent in the purchase of a plant, gravity railroad, etc. The Jamul Works are turning out 100 barrels a day, but it is proposed to increase this output to the total consumption of California, which at present reaches over 1000 barrels a day. A large force of men is employed at the works, and the deposit of raw material in sight said to be very great.

The use of cement in this State has always been large. The cable railroads alone use immense quantities in constructing their tubes, and we use it very largely for sidewalk and building purposes, in default of cheap stone. For sidewalks in the coast and interior towns, its use is becoming almost universal. Our irrigation dams, reservoirs and cemented ditches and pipes have also called for large quantities. We have been importing annually about \$3,000,000 worth of Portland cement, so there is a very good market for the home product, provided its quality is satisfactory. Deposits of the volcanic stone from which this cement is made might be sought for diligently, for they are valuable.

## Grape Yield Per Acre.

By an oversight, as mentioned in last week's RURAL, the table prepared by the Census Office of the average yield of grapes in the different States was published in the RURAL of March 28th without the decimal point in the column of figures giving average yields per acre. The table, as corrected, is as follows:

	Area in bearing vines, acres.	Average yield of grapes per acre, tons.	Market value of grapes per ton.
Arizona.....	1,000	3.00	\$16 50
California.....	155,352	1.77	17 66
Georgia.....	1,938	1.33	90 00
Illinois.....	3,750	2.00	54 00
Indiana.....	3,850	1.75	67 00
Kansas.....	4,542	2.00	55 00
Missouri.....	10,000	3.00	50 00
New Mexico.....	1,188	3.00	45 00
New York.....	43,850	1.75	70 00
North Carolina.....	4,000	1.75	60 00
Ohio.....	28,078	1.80	57 00
Tennessee.....	1,500	2.50	80 00
Virginia.....	4,100	2.00	60 00
Other States and Ter's.	45,000	2.00	60 00

As we stated last week, we should consider  $1\frac{1}{2}$  tons too low for an average of bearing vines in this State, and why should our neighbor Arizona have nearly twice as great a yield? Perhaps the Census Office can explain.

## POULTRY YARD.

## Chicken Houses for California.

EDITORS PRESS:—I submit for the consideration of RURAL readers plans for the construction of poultry houses suitable for California. A house, say 6 by 10 feet, is of convenient size for moving and large enough to roost comfortably say 20 ordinary fowls. There should be two roosts, running lengthwise of the house, one on each side of the doorway and a sufficient distance from the side of the house (say one foot). This would leave each roost one foot from the two-foot doorway. The house may be made in shed form or with double roof, as one prefers; perhaps the gable roof would be preferable as presenting a nicer and more finished appearance. Either one, however, nicely made looks sufficiently well.

For a shed house the height should be six feet on the lowest side and seven and one-half or eight on the higher, as one's idea of harmonious proportion happens to be. Select boards of ten inches or one foot in width and nail them on perpendicularly from the sill to the plate. Each side may be nailed to the sill and plate on the ground and then raised and fastened together, after which the roof may be put on. As your door will be in the end, the length of your rafters will be, say seven feet; four 2x4 rafters will be sufficient. After nailing on the boards to which the shingles are to be nailed (or shingles, as you prefer), lay your shingles or shingles up to within two feet or so of the front of the roof and then raise your last courses by putting short 2x4 pieces from and on top of the last course to the front plate, upon which place blocks under each short piece to raise it to a position equal with the end resting on the last course and then cover in, leaving in this manner a space four inches high and the length of your house between it and the plate and main roof of your shed, which will furnish a constant and thorough ventilation for the upper part of the house, as the wind blowing in and under the raised portion of the roof, and passing directly on out, causes a current which exhausts the heated air of the house, drawing it away, in fact, and dispersing it outside. For ventilation at the bottom, which I hold to be equally necessary, raise the house on supports of any kind sufficient to hold it firmly, say one foot or even more, perhaps as high as 18 inches, and if there are no skunks or other burly things it may be left open, but if that cannot be done it may be covered in with lattice or wire netting sufficiently fine to keep out animals. I find that many of my fowls, especially of the larger breeds, are in the habit of budding in the corners on the floor, even though the roosts are only two feet high from the floor, and think that if the space below could be left open they would then take to the roosts. Perhaps the accompanying cut, Fig. 1, will assist in conveying my idea.

Another style of house, similar in material points, would be a structure with a gable roof and ventilator over the peak of the roof. This can be built in all respects as the other except in the matter of the roof and ventilator. The sides and ends are made of foot-wide boards placed upright, nailed in place and neatly battened, and having the appearance, when finished, of a shed on each side of a main building much narrower than the sheds, and with the roof raised and overlapping the shed, raised about four inches and overlapping sufficiently to prevent the rain from entering in the space between the two roofs as shown in the engraving, Fig. 2.

The houses may be made 6x10 or 8x10, as either size can be moved easily by a good, stout horse and a sled. If it should be preferred to have a board floor to the house, a space must still be left at the bottom for ventilation, and this may be managed by having corner posts to the house; or if not, then by leaving the corners uncut and cutting as much as desired off the ends of the middle boards and then nailing a 1x6 piece firmly across just above or even with the cut ends to keep them in place and give strength to the building.

The roosts should be about two feet from the floor, or at least one foot from the top of the opening, and made of 2x3 scantling, rounded on top, or straight willow poles 2 or 2½ inches in diameter may be used.

All hen-houses should be thoroughly cleaned as to droppings at least once a week and kept as dry and thoroughly aired as is possible. In warm summer a wire-cloth or lattice door may be used instead of a close door to afford more air during the night.

The use of disinfectants in the house is recommended by many poultry-keepers, such, for instance, as an open, wide-mouthed bottle containing carbon bisulphide or carbolic acid suspended below the roosts. I think it much better, however, while not condemning this practice, to furnish the fowls with a plentiful supply of fresh air and clean houses, which, together with a necessary supply of good, healthy food and fresh water regularly supplied, not forgetting gravel, shells and even charcoal and the dust bath, will keep the fowls healthy, bright-looking and productive. Prevention is always better than cure.

Nests or egg boxes are of many fashions, and perhaps all equally good. I have known fowls to prefer a box or barrel sawed in half to the

most elaborately designed and finished nests, and that when they had the choice. I prefer a long box, say 1 foot or 14 inches square, and divided into nests 14 inches each way, the box to be as long as one thinks needful, and fastened to the outside of the house, on a level with the sill or bottom of the house, the top or cover to be hinged so that it may be raised and the eggs taken out. Entrance holes or openings are made through the side of the house to enable the hens to enter the nests when desiring to lay.

The nests should be supplied with chaff leaves or dust as one prefers. This plan enables one to gather the eggs easily and without entering the house, but where you do not allow the hens in the house during the day, the box may be placed in the house along the side, say six or eight inches from it and the cover, hinged to the side, if the house be of sufficient width to cover the nests, then when one end is

FIG. 1.

PORTABLE POULTRY HOUSES FOR CALIFORNIA.

stopped you have a covered way by which the hens may enter the nests through an entrance to it through the end of the house.

In this way the fowls have free access to the nests without being able to get into the body of the house, and the nests being thus somewhat darkened and secluded, seem to suit the fowl's idea of a proper place to lay in. It is sometimes found advisable to darken a nest to prevent the fowl from eating the egg, which seems to be accomplished in this way, and is the only way which I have found effective at all in preventing egg eating, unless we except killing the eater, which, after all, is the best and most effective, if you can detect the culprit, which

they, as they will eat them without if not previously spoiled by having them chopped for them.

I saw it recommended in a poultry journal not long since, to suspend them at a sufficient height to force the fowl to jump for them, and thus get needful exercise, which perhaps, where fowls are shut up, is not a bad idea; but I should, I believe, place a few on the ground so that they would be sure to get all they needed, and not more exercise than needful at the same time.

T. B. GEFROY.

Lodi, Cal.

## A New Carnation

The attractive engraving on this page represents the newest thing in carnations, the Nellie Lewis. This variety has been flowered by a number of prominent Eastern florists, and is

FIG. 2.

highly commended by them. Edwin Lonsdale, in an essay read last December before the Philadelphia Florists' Club, said Nellie Lewis was held "to be a sport from J. J. Harrison, which is an established favorite in many parts of the country. Nellie Lewis is a delicate pink, striped with a darker shade. This, of course, makes it a striped variety, but it will be none the less valuable on that account, and en masse it is essentially a delicate pink." Other florists describe it as "better and finer than Gracie Wilder," and James Vick of Rochester, N. Y., who is introducing the variety, represents it as "superior to Gracie Wilder in every respect. Flowers large, handsome, showy and of the

THE NEW PINK CARNATION—NELLE LEWIS.

cannot always be done. Where the nest boxes are placed on the outside of the house and the entrance from within, a board or boards may for the purpose of darkening the nests be placed in such a way as to constitute a covered way open at either end.

The roosts, particularly for large fowls, should not be placed more than two feet or so from the floor, and made as I have before described, leaving a distance of at least two feet between the roosts to afford the fowls breathing space and prevent quarreling, which they are very apt to do if close to and facing each other.

The two principal rules for the guidance of the would-be successful poultry keeper are thorough cleanliness in the houses and yards, and seeing that the fowls are regularly fed and supplied with clean, fresh water in clean vessels. There are other conditions needful to be observed, such as houses of proper construction, and where they cannot get it for themselves, a supply of green stuff, gravel, shells and animal food, for which last, milk, either clotted or not, may be substituted. Fowls are very fond of raw vegetable, and beets, carrots, turnips, or cabbages thrown to them are eaten with great relish. It is not necessary to chop

most brilliant color." We shall await with interest the appearance of Nellie Lewis at our California flower shows, for our growers will not be content to be without a variety which has such a good Eastern reputation.

THE RESPIRATION OF INSECTS has been the subject of study by M. Contejean, who has found that, contrary to what takes place in vertebrates, the movement of inspiration is passive and that of expiration active. The air is driven from the body by a contractile effort. Hence, when the insect is wounded, the flow of blood occurs at each expiration. The respiratory movement is not interrupted by cutting off the head, nor by the absorption of curare, which produces an immediate cessation in man.

SPIDERS differ from insects in five minute particulars: Their eyes are simple instead of compound; they have eight legs instead of six; they do not pass through the metamorphoses which are characteristic of insects; they have no antennae, and their breathing is accomplished by means of organs which combine the functions of lungs and gills instead of by tubes pervading their bodies.

## METEOROLOGICAL.

## Daily Weather Maps from the Signal Service.

EDITORS PRESS:—The inclosed map is a copy of the first issue of the new daily weather map which will be published regularly at this office. For the present the maps will be published from the morning reports, at about 10 A. M. If it is found necessary and advantageous to public interests, a second daily map will be published from the evening reports, about 7 P. M. These maps are intended for free distribution to commercial associations, educational institutions, public libraries and individuals. The edition will be limited in order to avoid unnecessary expense. Requests for the map should be addressed to the undersigned and give particular reasons for receiving the publication. The necessity for such a requirement is evident, as the maps must be furnished to those who need them most and can make the best practical use of them. There are two important uses to which the daily weather map can be applied.

1st. To obtain information as to the daily forecasts of weather and temperature for the Pacific Coast States. In this case it is necessary that the map should reach its destination sufficiently early to make the forecasts available within the period for which they are made. It is evident that the use of the map in this respect will be quite limited, owing to the want of sufficient railway facilities for distribution by mail from San Francisco.

2d. To study the weather conditions of the Pacific Coast States from the standpoint of synchronous observations. The daily weather map is practically a photograph of certain atmospheric conditions prevailing over the region represented by the map. It affords the very important advantage of studying the weather of a place in the light of extensive surrounding conditions that influence it. By such investigation, the reader of the daily weather map becomes able to prognosticate from the local conditions at his station, and to have a better understanding of the general forecasts issued from the central office. In this case the weather map can be kept in permanent file for future reference to great advantage. Any particular storm or change in weather conditions can be studied at leisure. This new publication has been inaugurated to give the people of the Pacific Coast every practical advantage of the Signal Service now provided by the Government, and which is enjoyed by other sections of the country.

Defects appear in the first edition that experience and better facilities will gradually eradicate. The public are kindly invited to make suggestions regarding the character and extent of the data published that will tend to enhance the practical value of the map.

## CEREAL CROPS.

## The Season in the Sacramento Valley.

EDITORS PRESS:—The indications for a bountiful fruit crop is most excellent, and since the acreage in bearing is largely on the increase, the aggregate is sure to be much larger than ever before. The cereal crop bids fair to be an average one though the high expectations heretofore anticipated will need to be revised to a considerable extent.

The largest acreage sown for many years was got in in good season and condition, but the cool weather coming on was unfavorable for germination, hence the grain came up then and the cold weather continuing, it did not grow and stood out as it usually does. Thus it is that grain is backward and thin on the ground. Another drawback is the unusual growth of weeds that may be seen in most fields. These have about attained their size, and the wheat will never advance beyond them, but their presence has doubtless injured to a greater or less extent the outcome of the crop. It is conceded by our most advanced farmers that whatever unfavorable conditions prevail now is largely due to the unprecedented wetting the soil received a year ago.

Being so very wet, the soil melted together and then baked and became sour and lifeless. It is claimed that after such a deluge it generally takes two or three years for the soil to be restored to a normal condition. As a whole, the rainfall this season has been below the average; here, less than 14 inches having fallen, and yet it is held that the five or six inches having descended in less than 48 hours the middle of February was rather an injury than a benefit, flooding the land, which afterward baked under the influence of the prevailing dry north winds, which had the effect of pinching the grain at the roots and starving the plant. Rain will help the situation, but it cannot entirely restore the effect of an unfavorable winter.

EUREKA.

[The rain has come since the above was written, and we trust it may improve the outlook considerably.—EDS. PRESS.]

## AGRICULTURAL NOTES.

## CALIFORNIA.

## Alameda.

**SUGAR IN MUST.**—Livermore Herald, April 3: Charles A. Wetmore, of Livermore valley, has written a letter upon the subject of sugar in musts, which has been forwarded to Mr. O. A. Crampton, the chemist of the Internal Revenue Department of Washington, which we believe will do much to straighten out the sweet wine difficulty, between the Department and the California wine-makers. It has seemed impossible to the officers of the Revenue Department—Eastern men, familiar only with grape growing in that climate—that grapes in California should contain as much sugar as the wine-makers claim for their musts. Through this ignorance of our wines, the wine-makers very nearly lost all the sweet wines that they fortified under the provisions of the new law. Mr. Wetmore makes a clear and concise statement of the case, as far as he has observed, showing repeated instances in his own work, and that of others, where grapes have at crushing contained from 30 to 44 per cent. of sugar. He believes that musts may have contained as high as 50 per cent. and still retained their lumped condition. He advocates the removal of all restrictions as to quantity of sugar, as liable to do injustice and cause loss to wine-makers.

**APRICOTS DROPPING.**—Haywards Journal, April 4: A fruit grower informed us Thursday that the report reaches him from a number of orchardists that through some unexplained cause the apricots are beginning to drop from the trees, and it may cause some thinning out of the crops before it lets up.

## Amador.

**FINE BARLEY.**—Jackson Ledger, April 4: James Gaschetti showed us samples of barley grown on his ranch, about a mile southwest of Jackson. Some of the stalks are 40 inches long and the heads are correspondingly long. This is a remarkable growth for this early period of the season, as the grain is not nearly full grown.

## Butte.

**SUMMER-FALLOWING IN BUTTE COUNTY.**—Chico Enterprise, April 2: Farmers are busy summer-fallowing, and there is a great scarcity of teams. Pleas. Gwyn sent a carload of machinery to Nelson, Monday, followed by a huge herd of mules. James Reavis last week took down to the same vicinity a large lot of animals for the same work. This has been a splendid season for summer-fallowing, and lots of it has been done.

**AN ORANGE GROWER'S VIEWS ON ORANGE SEED.**—Oroville Register, April 2: W. W. Gillett, whose home is at Palermo, and who for years was engaged in raising orange trees in Florida, said lately in a conversation with Major Jones that in each orange there were two seeds that were superior to all the others. Said he, "If you examine an orange carefully you will find two seeds that are larger and plumper than any of the others. Plant those seeds and you will find that the trees from them make a ranker, more vigorous and stronger growth than the other seeds. These two among Florida nurserymen are known as the king and queen seeds." The trees grown from orange seeds are divided into three classes. Those from the two seeds named make a large, fine and very thrifty tree, those from the ordinary seeds make a good tree, while those from the poor, thin flat seeds make a poor, small and scrawny tree.

**BELIEVES IN RED LAND FOR FIGS.**—Register: Daniel Streeter, one of the most enterprising farmers in Butte, has lately foiled setting out 1500 White Adriatic fig trees on land between Oroville and Biggs. He believes that the red land will produce fine figs by thoroughly cultivating it; and if so, it will greatly enhance the value of that land to all parts of the county.

**SEEDING ALFALFA.**—Paradise, April 2: Many of the land-owners are sowing alfalfa this season, as this fine grass will make a rapid growth, and with water it is one of the most profitable crops that could be set out.

**ANNUAL FAIR, THIRD DISTRICT.**—Gridley Herald, April 2: The next annual fair will be held in Chico the last week in August, commencing on the 25th and ending on the 26th. The speed program will be held at the same time contingent upon the citizens of Chico subscribing \$1750, which will enable the directors to offer \$5200 in prizes.

**WHEAT CROP ON OVERFLOWED LAND.**—Biggs Argus, April 2: M. J. King says that the cold weather made a wonderful change in the outlook for wheat on the adobe lands where the overflows occurred during the heavy storms. Grain that was seemingly drowned out is now sprouting and springing forth in fine condition, and many acres that were thought seriously damaged will make a good crop. The grain that was not subject to overflow is making a wonderful growth, and all that country lying on the west for many miles in extent is one grand field of beautiful green. Our wheat farmers can well be satisfied with the past season and prepare to harvest a bountiful crop.

**RAISINS IN BUTTE COUNTY.**—Palermo Progress, April 4: Reports of raisins of a high grade being raised in this vicinity have at various times been heard, and were again verified a few days ago, when Mr. Albert Cleal, a farmer living south of town, exhibited some of this fruit, which he had himself grown and cured. The

raisins were packed in 25-pound boxes, where they presented a neat, rich and tempting appearance. They had a fine flavor, and would compare favorably with the best article of the kind grown in the State. Mr. Cleal stated that he had sent a number of boxes to friends in the East. The remainder of his crop he has found a home market for at eight cents per pound or \$2 per box, which is a very good price. The grape vines are planted on red soil without irrigation and with only a mere pretense at cultivation. How much better a quality of fruit could be grown on the same soil with judicious irrigation and cultivation can only be conjectured.

## El Dorado.

**FRUIT PROSPECTS IN EL DORADO COUNTY.**—Placerville Republican: The prospects for a good fruit crop in this county are so far very favorable. The opening of the blossoms is later than usual, which is favorable to their escaping spring frosts. Around Coloma peach trees are in full bloom, but the blossoms are just opening at Placerville.

## Fresno.

**INDIAN SHEEP-SHEARING AT CENTERTVILLE.**—Cor. Fresno Express, April 3: A band of about 20 Indians are shearing the sheep in this vicinity. Last week they sheared 3000 head for Bob Woods, and Joe Burns had a band of 1712. This week they are shearing the 6000 sheep of a Portuguese on the Hughes ranch.

**FRESNO FRUIT REPORTED INJURED.**—Selma Irrigator, March 29: There is no doubt but the fruit in this section has sustained serious injuries by the late frosts. An Irrigator reporter examined a number of peach and nectarine trees in two orchards to-day and found a very large per cent of the buds examined, black and wilted from the freeze. The trees that are farthest advanced are the worst sufferers, as the full bloom seems to have protected the fruit. The apricot is reported to be the worst injured of any, it being the farthest advanced. A number of orchardists in this vicinity have made careful examinations and all agree that the damage is very great.

## Kern.

**DESTRUCTIVE CUT WORM.**—Bakersfield Californian, April 2: In places the cut worm is just now particularly active. In one place out of 4000 peach sprouts set, out 3000 of them were headed by the voracious animal.

**SUCCESSFUL IRRIGATION BY STEAM PUMPING FROM WELLS.**—Bakersfield Gazette: A number of farms on the north side of the river are being irrigated from wells by means of steam pumps. A. J. McLeod is irrigating 40 acres of fruit in that way and W. H. Frazine is irrigating 80 acres of vines in the same manner. The plan works admirably, and solves, to a great extent, the problem of getting water on the dry lands of the plains.

**KERN COUNTY WOOL CLIP.**—Bakersfield Echo, April 2: The new crop of wool is now coming in rapidly; half a dozen or more buyers are here from San Francisco, and competition appears to be keen. The sheepmen hold their wool at 16 cents, an increase of at least two cents per pound over last year. Most of the wool produced here is sent to Boston.

**EARLY BARLEY.**—Echo, April 2: The finest specimen of barley we have seen this spring was brought in by H. S. Winters of Rosedale a few days ago. The seed was sown on Jan. 8th, the grain now standing about four feet high and out in full head.

## Lassen.

**PLANTING AN APPLE ORCHARD.**—Susanville Advocate, April 2: W. G. Bromby of Jenesville and his brother are planting a large lot of apple seed and are going to raise the trees and then replant them in the same soil. They will plant 108 trees to the acre and are confident that an apple orchard in Lassen will pay better than an orange grove of the same size in Los Angeles.

**GRAIN SEEDING AT HORSE LAKE.**—Cor. Susanville Mail, April 2: Mr. Chas. Cramer has been busy plowing for the last two weeks, and now has his grain nearly all sown. Henry Prime and George Walter have also commenced plowing, and all are in hopes of having a large grain crop this season.

## Los Angeles.

**POTATOES FOR THE EAST.**—Los Angeles, April 5: There are 600 acres in potatoes at Centralia and 620 acres at Berena Park. The yield is estimated at 600 carloads. They will be shipped East.

**A \$40,000 OFFER FOR ORANGES ON 40 ACRES REFUSED.**—Anaheim Gazette, April 2: The owner of an orange orchard in Los Angeles county, consisting of 40 acres, now in full bearing, and mostly of Navel oranges, recently refused \$40,000 for the fruit on the trees. It may be that the offer was quite under the value. Orchards have been known to produce 1000 boxes an acre. One dollar a box for Navel oranges on the trees would be a very small figure. It is not probable that the yield in this instance was up to this mark. The yield of huddled oranges is never so large as on seedling trees. In one instance reported, a retired sea captain in Los Angeles county had 8000 boxes of oranges on ten acres of seedling trees. These he has sold at an average of \$1.50 a box on the trees. His small orchard, therefore, will bring him in a revenue this year of not less than \$12,000. This is not cited as an extraordinary instance. Of course, in all such cases no data are given as to the cost of the land, or

the cost of cultivation for a number of years when the trees produced nothing.

**PROFIT IN SEEDLINGS.**—Ovina Argus, April 1: Geo. D. Whitcomb's 2½ acres of seedlings have this year yielded \$1320. In less than 16 years from planting the seed, the proceeds of the 2½ acres have paid for the entire 200 acres originally bought.

**TREE-PLANTING.**—Ovina Argus, April 1: Quietly but persistently the planting of trees goes on. Deciduous fruit trees are sold out here, but we understand stocks elsewhere are held at somewhat lower figures than earlier in the season. Good citrus trees are firm and in good demand, and the prospects are that desirable buds will be scarce by the close of April.

**LARGE LAND SALE.**—Pasadena Star, April 1: E. J. Baldwin has sold 1500 acres of his land south of Santa Anita to an English syndicate at \$350 per acre. Geo. A. Wallace, the Alhambra nurseryman, has bought 300 acres also.

## Napa.

**STEALING A FRUIT ORCHARD.**—Callotoga Callotogan, April 1: A portion of H. L. Gibb's prune orchard is young trees, and they are located along the road leading to Lake county. The other day, while examining his trees, he noticed that a number of them had very recently been taken up and removed; the person or persons taking them had not stopped to make selections from the row nearest the road, but had gone on farther and taken better trees, which were transplanted into the orchard a year or two ago.

## Orange.

**POTATO PLANTING IN ORANGE COUNTY.**—Anaheim, April 2: There will be over 2000 acres of potatoes planted in this valley this season. An agriculturist said yesterday, "Everything is going into potatoes."

**ORANGE CROP IN ORANGE CO.**—Anaheim, April 2: Theo. Plunier is shipping oranges from this point in large quantities. His packing-house, in the old Conrad brewery, is a scene of activity these days. Mr. Plunier estimates the orange crop of the valley at 150 carloads. This is 50 carloads more than any previous estimate.

**BRINGING WORTHLESS LAND UNDER FIRST CULTIVATION.**—Anaheim Gazette, April 2: Between here and Garden Grove, where a few months ago the land was a waste of mustard, sunflowers and rank weeds, there is evidence at present of a spirit of improvement that cannot be equaled anywhere in Southern California. A syndicate of San Diego and Eastern gentlemen whose attention was some months ago directed to that section, has purchased 900 acres, and already 600 acres have been planted to walnuts; there are 240 acres in potatoes, which promise a good crop. Thomas F. Jones has 200 acres of the tract, all under cultivation, principally in walnuts and cabbages. W. J. W. Culton has 130 acres, also under cultivation and planted to walnuts. Clark Minor has 150 acres and E. P. Fowler 130 acres, and here the same spirit of improvement prevails, a continuous walnut orchard covering the entire place. John Rea has 80 acres, Mr. Brewster 60 acres, E. F. Pierce 60 acres and E. Nutt 120 acres, nearly all planted to walnuts.

## Placer.

**NO SCALES REPORTED IN PLACER COUNTY.**—Anshun Republican, April 1: It is believed by our pest inspectors that there is no cottony cushion scale anywhere in Placer county. A case of the pest was reported from Roseville not long ago, but H. E. Parker made an investigation and found that the insects were on some orange trees owned by a man named Silva just across the line in Sacramento county. The State authorities were notified and they have promised to send a colony of Australian lady-bugs to Mr. Silva's place at once.

## San Bernardino.

**FRUITS AND DESIGNS FOR CHICAGO.**—Santa Ana Blade, April 1: Nine carloads of exhibit material and one of designs pulled out of San Bernardino yesterday for Chicago. There are 1900 boxes of fruit, or double the amount used at the Citrus Fair, in the cars. Between 25 and 30 men accompanied the train to set up the several displays in much finer style than was done at Los Angeles.

## San Joaquin.

**GRAIN CROP PROSPECTS IN SAN JOAQUIN VALLEY.**—Stockton Independent: Captain Smith says he looks confidently for a large crop this season, and consequently heavier shipments than ever. Two inches more of rain in the San Joaquin valley will make the crop one of the finest ever grown throughout most of the valley. San Joaquin valley he considers safe for a good crop anyway, but rain that may be confidently counted on in April will greatly aid it. As there have been but two rainless Aprils since 1849, the chances are 20 to one in favor of the two inches, which will put the crop beyond almost any other year.

**ORCHARD AND VINEYARD PLANTING IN SAN JOAQUIN COUNTY.**—Stockton Mail: The following tracts in the northern part of the county have been planted to vines and miscellaneous fruit trees this year: Hatch & Armstrong, 295 acres; John Cory, 80; Strong & Williamson, 20; Stafford Brothers, 75; William Minner, 40; Mr. Smith, 40; George Eddleman, 30; Mr. Bellows, 30; B. F. Langford, 80; Dr. E. Armstrong, 80. Total acres, 830. All but the tracts of Messrs. Langford and Armstrong are contiguous. With the 295 acres planted this year, Hatch & Armstrong have 1015 acres. Adding to this the adjacent tracts just planted, there are 1685

acres of orchard and vineyard "in a bunch," so to speak, in the Lodi region.

## San Luis Obispo.

**ALMOND PLANTING AT CRESTON.**—Cor. S. L. O. Tribune, April 3: R. E. Bridge is now busy planting out a large variety of almonds, which number some thousands of trees, besides a large quantity of fig trees additional to his present fig orchard.

## Santa Clara.

**A FRUIT CROP SOLD.**—San Jose Mercury, April 4: The first record of the sale of fruit this season was made yesterday, County Recorder Owen filing a document by which Sylvester Graves sold all his fruit raised this year on his place near Guerneville to J. D. Shafter and F. R. Shafter. One place contains 34 acres and the other 44. Mr. Graves agrees to deliver the fruit in a condition suitable for drying at F. R. Shafter's fruit-drier on the Stevens Creek road. No price is mentioned.

**FRUIT CROPS IN SANTA CLARA COUNTY.**—Cor. Los Gatos Mail, April 4: The fact that both peach and apricot orchards are being grafted over into prunes, and that so few are now setting out apricot trees, would seem to warrant the opinion that in a few years the scarcity of apricots would increase their price so as to make their cultivation more profitable than now. The advantage of the prune even now is mostly in the ease of handling the fruit. There never was a better promise for fruit of all kinds in this part of the valley than there is now. The apricot and almond blossoms have dropped and their fruit is well set. The peach, prune, cherry and pear trees are now blossoming very full. Scarcely a tree of bearing age but is or has been blossoming, and an abundant harvest seems assured.

**DAIRY AT OAK GROVE.**—Cor. S. J. Mercury, April 1: J. Jones has started in the dairy business. A cheese press is now being constructed and everybody here is rejoicing to think that home-made cheese can be had from a competent cheese-maker.

## Solano.

**CROP PROSPECTS IN SOLANO COUNTY.**—Dixon Tribune, April 4: The showers of last week have improved crop prospects that were already good. The soil is in excellent condition, and the young grain has a strong, healthy color and is growing rapidly. The area sown to grain is so much larger than usual that unless some unforeseen calamity occurs, the crop will be the largest that has been harvested in this county for years.

**EASTERN HORSES ARRIVED.**—Suisun Cor. Tribune, April 4: A carload of horses, consigned to John Harper, arrived from Chicago last Monday. There were three runners and two trotters in the lot.

## Sonoma.

**ROSEBUSH INSECT EXTERMINATOR.**—Santa Rosa Democrat, April 4: County Gardener Dunn says that those having rose bushes infested with insects will find an effective exterminator in a solution of tobacco, prepared by steeping refined tobacco from cigar manufacturers in water.

**SONOMA RAISINS.**—Healdsburg Enterprise, April 2: The raisin production in the vicinity of Healdsburg is becoming quite important, and several vineyardists are going to dry their grapes the coming season. Judge Crocker of Geyserville says that he produced two tons and a half of the Sultan raisins last year as an experiment and received such a profitable price for them, that he intends converting his whole vineyard into that variety and produce raisins.

**IMPORTANT TO FRUIT GROWERS.**—Sebastopol Times, April 2: Mr. W. T. Hunter, our depot agent, informs us that the Donahue Railroad has formed a junction with the Southern Pacific Railroad at Shell Mound. This connection will enable our fruit-growers to ship their fruit direct to the East.

**RAPID GROWTH.**—Sebastopol, April 2: There is in the Times office a last year's growth, eight feet eight inches long, out from a Coe's Golden Drop plum tree on Mr. D. Litchfield's place.

## Stanislaus.

**PLANTING COTTON SEED.**—Modesto News: J. B. L. Bittick has received 320 pounds of cotton seed from the cotton mills of Oakland. He will plant the seeds on the McKenney ranch, across the Tuolumne river from Horro's ranch, and give the matter of cotton-raising in this section a thorough trial. He estimates that he has sufficient seed to plant between 30 and 40 acres.

## Sutter.

**BOGUS FLOWER SEEDS.**—Yuba City Farmer, April 4: Many of the ladies in Yuba City and vicinity, who delight in having beautiful flower gardens, recently patronized a traveling man who had flower seeds for sale which he claimed were new varieties. He showed his catalogue containing beautiful cuts of the flowers and did a good business. He was very accommodating, and in many cases planted the seeds himself. During the last few days, numerous complaints were heard concerning the flower-seed peddler, for in almost every case where the seeds grew some common variety of weed or plant developed. Seeds for choice pansies grew up field mustard; beautiful verbenas developed into pig weed and so on. The peddler was a fraud, and succeeded well in plying his trade.

**RECLAIMING LAND.**—Yuba City, April 3: The two large pumps of Reclamation Co. No. 108 are kept running day and night pumping seepage water off the farm of Senator Fair.

# WOODBURY'S IMPROVED ROSIN WASH.

Perfect removal of scales guaranteed and invigoration of Trees without possibility of injury. Now is the time to apply.

This is the best wash yet produced for all kinds of fruit trees and shrubs. It removes scale from deciduous, citrus or ornamental trees without injury. One application every year is all that is required. From hundreds of testimonials we print the following:

WALNUT GROVE, February 14th, 1891.—MR. C. J. WOODBURY, 123 California Street, San Francisco, Cal.—Dear Sir: I have been using the Rosin Tree Cleanser, as put up by you, for the past two years, and find my trees almost free from scale. It does its work more thoroughly and is less trouble to work than any wash I have ever used. I have tried most all the washes that have ever been compounded. Yours respectfully, L. D. GREEN.

Directions (most simple, easy of application) sent with each shipment. This wash is guaranteed not to harm the leaf, buds or in any way keep them from forming.

Please observe the price. Put up in cases, 45 pounds in each can, two cans in a case, two cents per pound; in barrels, 1 3-4 cents per pound; by the ton, 1 1-2 cents per pound. Weight, nine pounds to the gallon. To one gallon add seven gallons water, result eight gallons ready for use, at a cost of thirteen and one-half cents. Correspondence solicited.

Harvest Oil for Farm Machines, guaranteed anti-gumming, superior to Castor, 50 cents per gallon. ADDRESS

## Agricultural Notes.

(Continued from page 346.)

He has about 6000 acres of wheat out of water. The farmers are all busy; most all of them are done sowing barley.

## Tulare.

**CITRUS FRUITS AT PORTERVILLE.**—There are now more bearing orange trees around Porterville and Plano than in any other part of the San Joaquin valley, and the quality of the fruit produced is excellent. Porterville lemons on exhibition at the Southern California citrus fair this month have attracted the attention of the Southern citrus-fruit growers. They acknowledge that they have nothing which excels them.

**ADVICE AGAINST PLANTING BERMUDA GRASS.** *Traver Advocate:* The planting of Bermuda grass along the banks of irrigating ditches is something that should be prohibited. This grass, when it once gets a hold in a place, renders the land almost useless for any other purpose, for it will cost more than the land is worth to clear the ground of it. Every little piece of the root or top, no matter how small, will grow and soon develop into a good-sized plant, and the only way it can be got out of a place is to lift the soil, which is no small job. Where it is planted along ditch banks, small pieces of the tops of the grass become detached and are carried by the water into land that is being irrigated where it takes root and grows. And to those who intend planting it on alkali spots, we would say, don't do it, or you will regret it later when this grass has possession of your place.

**FRUIT PLANTING AROUND HANFORD.**—*Cor. Visalia Times, April 2:* Dr. A. P. Peck represents a Chicago syndicate that has purchased 640 acres of land, known as the Dice ranch. It is now known as the "Solano Fruit Farm." J. C. Kimball of Oakland owns a fine body of land north of Hanford, on which he has this year planted out 66,000 prune trees. The orchard will be extended next season. The Ballyhooley ranch of 160 acres, and Harvie ranch of 30 acres, south of Hanford, were planted to vines this season. Those properties are under the supervision of S. H. Bigland, who represents a colonization association with offices in London and San Francisco. B. L. Barney, Fred Foster and G. J. Dockle are new arrivals from the State of New York. They have purchased land, which is spoken of as the New York colony, and have this season planted out 40 acres to vines, and will extend the vineyard next year. S. E. Biddle & Bros. are planting 320 acres to vines; E. E. Bush, 150 acres to trees and 350 to vines; J. J. Harlow, 140 acres to vines; J. T. McJunking, 30 in trees and 35 in vines; L. C. Lillis, 340 acres in vines; S. H. Bigland, 180 acres; D. C. Hayward, 150 acres; Frank Sharples, 40 acres; Ben Mickis, 40 acres; Mr. Wilson, 40 acres; J. O. Hickman, 80 acres; W. S. Porter of San Francisco, 100 acres; A. F. Fraser, 70 acres; S. A. Deardorff, 40 acres; Wm. Viney, 20 in trees and 30 in vines; Mr. P. Troxler, 19 acres to vines; John Benedict, 30 acres; Joseph Rogers, 40 acres; Manuel Silva, 75 acres; M. M. Johnson, 50 acres; Harry Newport, 40 acres; Rainey Bros., 60 acres; Richland Colony, 160 acres; S. W. Lane, 40 acres; Porter Mickie, 20 acres; C. J. Creevy, 40 acres; A. F. Jewett, 40 acres; W. H. Henderson, 40 acres; John Rice, 60 acres; J. H. Melone, 20 acres in trees; A. V. Taylor, 150 acres in vines. This is not claimed as a complete list of those who are engaging in the vineyard business for the first time this year, but only those heard spoken of during a visit of a day or two at Hanford. Enough was learned to warrant the statement, however, that the estimate of 7000 acres for the season's planting is none too high. Two years hence there will be 10,000 acres to be cared for. To handle the crop for this immense acreage, will require a small army of men; and at picking time, hundreds of women and children will find employment.

## Yolo.

**FRUIT IN CAPAY.**—*Woodland Democrat, April 2:* Capay valley gives promise of being one of the loveliest spots in all California in the near future. Within a few years the valley will be one big orchard wherein a man can obtain almost any kind of fruit or nut. The Tancred Colony has just finished planting 40,000 fruit and nut trees and over 20,000 grape vines of the raisin and table varieties. They now have 12 teams plowing the second time. The Guinda Fruit Company has added 80 acres to its 120 acres of orchard. Joe McMahon has planted 25 acres more, mostly prunes. W. E. Cole has planted 35 acres in a variety of fruit trees. F. P. Hamilton has planted seven acres in French wainuts. The trees are one and two years old. The following have planted from 500 to 2000 trees each: Sam Allen, H. H. Smith, L. P. and J. B. Everett, Dave Davis, Lorin Taber, R. O. Armstrong and others.

## Yuba

**WORK ON BROWN'S VALLEY CANAL.**—*Marysville Democrat, April 1:* The Brown's Valley canal is advancing rapidly under the excellent management of L. J. Burns, general superintendent of construction, and in a few days will be completed as far as Dry Creek. When the entire canal is completed it will doubtless be a great benefit to the district, as it will irrigate some of the best land in the county.

**CROP PROSPECTS IN BROWN'S VALLEY.**—*Cor. Democrat, April 1:* The grain crop looks well and prognosticates a prosperous yield. The

fruit-growers of this district are jubilant over the encouraging prospects betokened by the fine condition of the trees, and an ample yield of acorns is anticipated.

## The Duty on Coal.

Alfred Bannister, the vice-president and general manager of the Starr Milling Company of this city, has written a brief "suggestion" for the benefit of California farmers and millers, which will be presented to the Produce Exchange and the Chamber of Commerce. He declares that our farmers now labor under the disadvantage that our population is too small to consume sufficient imports to bring here the tonnage required for the export to Europe of the wheat surplus. Mr. Bannister's suggestion is as follows:

"That the State of California should refund to all importers of coal from Europe and the Australian colonies the import duty of 75 cents per ton at present charged.

"It is not proposed to make this refund on coal from British Columbia, which is brought here in vessels unsuited for the export of wheat hence to Europe.

"Coal being bulky and of great weight compared to its moderate value financially, already brings more tonnage fit for exportation of wheat to our coast than all other imports combined. The adoption of the above suggestion would as surely bring us considerably more tonnage than now to export our wheat, as this increase of tonnage would reduce wheat freights hence to Europe. This reduction of freights would enable shippers to pay more than now by \$1 to \$2 per ton for wheat to farmers, who would also be further benefited by the greater value given to their land through thus increasing its earning power.

"No doubt this proposed action would slightly prejudice our few coal producers, but it would, without doubt, very considerably benefit (1) our most deserving 50,000 farmers; (2) our steamship, railroad and gas companies; (3) our growing home industries, and (4) every household and consumer of coal."

Mr. Bannister declares that neither his company nor himself ever import coal, so that his sole motive in making his suggestion is the welfare of the State and of its farmers.

**THE LARGEST RAILROAD CORPORATION IN THE WORLD.**—The Pennsylvania company's system of railroads is composed of no less than 120 corporations; certainly a colossal aggregation to be under the management of one head. President Roberts in his last annual report says that with few exceptions all these corporations are in good financial condition and are earning fair returns on the capital invested. They represent 7915 miles of railroad and canal, and have a share and bonded capital of over \$700,000,000. They earned in 1890 more than \$133,000,000 gross and moved over 137,000,000 tons of freight and 84,000,000 passengers. In 30 years on the lines east of Pittsburgh & Erie the increase in gross earnings was over 800 per cent and in net was more than 200 per cent. The cost of the securities of other corporations now held by the Pennsylvania was \$113,183,734 and the direct revenue from them last year was \$4,439,404, which is in excess of the total funded debt of the Pennsylvania railroad. In connection with the above figures the report of the London and Northwestern for 1890 is interesting. Its authorized capital is £110,077,934, or, figuring the pound at \$4.85, \$533,877,979. On this the gross receipts from traffic were \$29,651,339 and the net, amounted to \$16,199,117. Dividends at the rate of 4 per cent were paid on the guaranteed and preference stocks and of 7 1/2 per cent on the consolidated stock. The amount of these stocks is £77,107,233. The mileage of the system was 1916.4 miles. It will be seen that although the mileage of the Pennsylvania system is 7915 miles, which is just about 6000 miles more than the London and Northwestern, the capitalization of the two companies is by no means so far apart, that of the English corporation being \$533,877,979 against \$700,000,000 of the Pennsylvania. These facts should not be forgotten when the results achieved in both countries are under discussion.

**NEW USES FOR AN OLD MATERIAL.**—Peat, used for fuel from the earliest times, and long known to be of great value as a fertilizer, now finds so many other applications that its preparation has developed into an industry. Peat powder is serviceable, not only about stables but elsewhere, on account of its absorbent and somewhat antiseptic properties and low cost. A few years ago a French surgeon introduced this powder, treated with antiseptic solutions and contained in a cloth bag, as a dressing for wounds. The idea, said to be a very old one among the working people of some places, was improved upon by another medical man of Paris, Dr. Redon, who made a soft and pliable wadding of peat. Other dressings have since crowded these out of hospitals, though the peat applications are coming into use and gaining in favor among veterinary surgeons. Dr. Redon's wadding has yielded important results by leading to many efforts to produce woven fabrics, so that peat is now made into mattresses, coverings, carpets, etc., which are esteemed on account of their power of absorption.

**THE ORGANS OF SMELL IN THE TURKEY VULTURE** and osprey crow are so delicate that they can scent their food for a distance of 40 miles.

## The Sap of Trees.

A keen observer and ingenious experimenter has been writing a book on "Sap: Does it Rise from the Roots?" a question which he proceeds to answer with a decided negative. To those who merely "run and read" the whole question and answer may appear as a very light matter indeed. In reality, however, the right answer to the question is of great moment to us all. In the first place, a negative reply simply means the ruthless upsetting of all our preconceived ideas, the reversal of what has been taught in our schools for ages. It is true that, if we examine into the theory of plant growth as set down by botanical and biological authorities, we find that they disagree among each other to an astonishing degree. They all, however, join in declaring that trees and plants derive sap from their roots and breathe in gases by their leaves. How the sap rises, whether by capillary attraction, endosmose, root pressure, suction, or evaporation, or a combination of all (described by Professor Huxley as pulling, pushing, and dumping), the greatest biologists, including Herbert Spencer, Sachs, Huxley, Darwin, and others, have by no means been able to prove. They all, nevertheless, endorse the theory of rising sap, and agree, moreover, that it rises in spring and descends in summer. Now, if all this theorizing is proved to be wrong, we shall not only have to alter our school teaching, but largely modify our agricultural practice. Clearly, if the roots suck up, absorb, or otherwise collect moisture and the organic and inorganic constituents of sap from the soil, then the soil will quickly become exhausted and require constant feeding, while the leafy parts of the plants must be cut and pruned down. This is the present practice. And it is certainly worthy of remark that our best cultivated—according to the theories of the day—orchards and gardens are those that suffer most readily from blight and disease generally. Our new botanical revolutionist, Mr. J. A. Reeves, with his book on "Sap" tries to prove that we are altogether on the wrong road; that sap does not ascend, but descends, and that gas does not descend, but ascends in all trees and other plants. To the unprejudiced physicist and mechanician this theory of Mr. Reeves seems by far the most credible and intelligible.—*Exchange.*

## The New University.

Senator Stanford, in speaking to a reporter concerning the new University at Palo Alto, says:

"I have talked over the University matters with Prof. Jordan, and I expect him out here some time during April. In any event, he will be here by June. The University will be opened at least for the freshman class by October. Of course, in time, the University will be complete from the kindergarten to the post-graduate course, but that can only be after a village has grown up around the University.

"When the University opens there will be accommodation for about 700 pupils in the dormitories. My idea is not to build big dormitories, but to have 20 or 25 in each, thus making a sort of club.

"The technical department of the school I propose to have more complete. There is no use filling a lad with learning and then turning him out to earn his living when he does not know how. We will teach him, then, to use his hands. Any profession he chooses he can take up and learn there. By this course, I think we will turn out an improvement on the usual graduate from Eastern colleges.

"Young fellows—nice, bright and well-taught boys—come to me continually with letters from friends, asking for positions for them, and yet there is nothing they can do. They have to begin, then, right at the bottom and learn how to work.

"The girls will be accorded the same privileges as the boys, as far as their sex will permit.

"The University will not be free. It has been decided that better results can be gained otherwise. There will, however, be provision made for all sorts of free scholarships, and everything possible will be done to help poor boys to get an education. The institution is designed mainly to benefit middle-class people, though the sons and daughters of the rich will be as welcome as the others.

"I have not decided on any other professors as yet. In selecting the remainder of the faculty I will be guided to a great extent by Prof. Jordan, who knows them all. He is a Cornell man, and the Cornell course more nearly coincides with my ideas than that of any other of the colleges."

**OUR EXPORTS OF AGRICULTURAL IMPLEMENTS.**—An official report from Montevideo announces that the United States is far ahead of any other country in the supply of agricultural implements and machines in Uruguay. These include plows, plowshares, mowing machines and axes, to which an English journal, the *European Trade Mail* remarks: "Reaping and mowing machines are obtained almost exclusively from North America, while Great Britain holds the market with respect to threshing machines. We are also first as regards spades."

## Southern California Pomologists.

**EDITORS PRESS:**—The annual meeting of the Southern California Pomological Society was held at South Riverside April 2d. Representative horticulturists from different counties took an active part in the meetings. Three sessions were held, at which valuable papers were read, followed by interesting discussions. The society will incorporate in a few days. This society decided to do its share toward making our tree and fruit exhibit at the World's Fair in Chicago in '93 one worthy of our State.

A telegram was sent to the president of the World's Fair Commissioners from this society, representing the sixth district, unanimously recommending the representative, practical horticulturist, N. P. Chipman of Red Bluff, as Horticultural Commissioner for the World's Fair.

The following officers were unanimously elected for the ensuing year: President, Hiram Hamilton, Orange; Secretary, D. Edison Smith, Santa Ana; Corresponding Secretary and Treasurer, H. W. Kruckeberg, Los Angeles; Entomologist, Prof. D. W. Coquillett, Los Angeles; Vice-Presidents, Dr. N. H. Claflin, Riverside; Dr. O. B. Chubb, San Bernardino; O. M. Heintz, Los Angeles; Thos. A. Garey, Santa Barbara; N. W. Blanchard, Ventura; F. A. Kimball, San Diego; Executive Committee, N. H. Mills, B. O. Clark, T. A. Garey, N. W. Blanchard, F. A. Kimball, Joel B. Parker.

The next regular meeting will be held at Pasadena, Thursday, Oct. 1st.

At 9:45 p. m., the meeting adjourned to the parlors of Hotel Temescal for a more perfect social acquaintance with the new members and hospitable citizens of South Riverside.

D. EDSON SMITH, Sec'y.

Hope Ranch, Santa Ana, Cal.

## Dewey &amp; Co.'s Scientific Press Patent Agency.

OUR U. S. AND FOREIGN PATENT AGENCY presents many and important advantages as a Home Agency over all others, by reason of long establishment, great experience, thorough system, intimate acquaintance with the subjects of inventions in our own community, and our most extensive law and reference library, containing official American and foreign reports, files of scientific and mechanical publications, etc. All worthy inventions patented through our Agency will have the benefit of an illustration or a description in the MINING AND SCIENTIFIC PRESS. We transact every branch of Patent business, and obtain Patents in all countries which grant protection to inventors. The large majority of U. S. and Foreign Patents issued to inventors on the Pacific Coast have been obtained through our Agency. We can give the best and most reliable advice as to the patentability of new inventions. Our prices are as low as any first-class agencies in the Eastern States, while our advantages for Pacific Coast inventors are far superior. Advice and Circulars free.

DEWEY & CO., Patent Agents,

SAN FRANCISCO, CAL.

# WALTER A. WOOD WORLD RENOWNED AND TIME HONORED HARVESTING MACHINES.

Always In the Lead and, as usual, again Improved and Perfected for This Season's Work.

IN THE PRINCIPAL HAY-PRODUCING REGIONS, THE NUMBER OF THE WALTER A. WOOD MOWERS IN USE IS NOW LARGER THAN THAT OF ALL OTHER MAKES PUT TOGETHER.

## WALTER A. WOOD MOWERS WITH TILTING BAR.

FOUR WIDTHS.

4 ft. 3 in. Cut, 4 ft. 6 in. Cut, 5 ft. Cut, 6 ft. Cut.

The merit of The Walter A. Wood mower causes it to take first premium on all competitive occasions. At all the great WORLD'S FAIRS it has received highest honors. At the 1889 PARIS EXPOSITION, the grandest World's Fair ever held, Walter A. Wood's mower, his binder and his reaper each received highest award for field work; and Mr. Wood personally received highest honors as inventor and manufacturer. It was indeed the greatest sweep-stake ever carried off. Among the causes of the supremacy of the Walter A. Wood mower notice:

Strength, lightness and simplicity; highest class steels, malleables and brasses. Direct under-draft by the floating droop-frame; only purely floating droop frame and cutters. Steadiness of machine and pole when at work. Both wheels firm to the ground and driving with full power, whether going fast or slow. Wide frames for the wide cuts; light work for the team and no neck weight or side draft. Freedom from "choking" in the grass; firm but free and adjustable pitman connection. Wood's milled malleable guards, bolted on; wrench-tight nuts, tight bolts, driving fit; cutlery steel sections and guard plates. Brass boxing, lock nuts and protected pitman; wide gauge, high wheels, comfortable and safe seat. It has the Largest Sale in the World.

## WALTER A. WOOD SELF-DUMP RAKES.

THREE SIZES: 8-FOOT, 10-FOOT AND 12-FOOT.

The 8-foot Rake can be used with one or two horses.

### COMMON FAULTS IN OTHER RAKES AVOIDED IN THE WALTER A. WOOD:

Fouling of the wheels and tripping device; sagging of the axle; skipping hay next the windrow. Failure to dump when tripped; failure to let the teeth fall promptly; dumping when not tripped; unreliability of trip when turning curves. Jar when discharging; side jerk when tripping; fretting and worrying horse; galling back and shoulders of horse. Seat at one side of center; insufficient adjustability of seat to suit size of driver; weight of driver and rake not properly centered over axle. Dead-lock of teeth, causing breakage; non-adjustability for different grasses and ground; poor wheels; poor teeth. Worthless relief devices to prevent breakage of poor teeth; noise; hard-running; clogging up dirt, and thus dusting the hay.

### ADDRESS

**FRANK BROTHERS, WALTER A. WOOD, President,**  
33 & 35 Main St., SAN FRANCISCO, CAL. 68 Front St., PORTLAND, OR.

Machines and Repairs to be had at all principal points.

B. HAYMAN, Los Angeles; KILGORE & CO., Sacramento; JAS. PORTEOUS, Fresno, Etc., Etc.

### FRESNO CANAL, DITCHING AND LEVELING SCRAPERS.

FIREBAUGH, CAL. (Poso Farm), November 8, 1889.  
MR. JAS. PORTEOUS, Fresno, Cal.—DEAR SIR: In answer to yours of 6th inst., will say that I have found your new style four-horse Scraper the best all-round Scraper I have yet tried. Respectfully yours,  
J. W. SCHMITZ, Supt. Miller & Lux.

SEND FOR CATALOGUE AND PRICE LIST.

### FRESNO AGRICULTURAL WORKS FRESNO, CAL.

### THE ROCHESTER STEEL FRAME ORCHARD and VINEYARD GANG.

LIGHT WEIGHT! EASY DRAFT!  
AMPLE STRENGTH!

STEEL FRAME OUTSIDE OF WHEEL

Prevents Injury During Close Cultivation.

LEVER ADJUSTS DEPTH WHILE PLOWING.

Steel Frame, Steel Molds, Steel or Chilled Shares and Lands, Tongueless, Self-guiding, Simple, Strong. A simple adjustment permits plow nearest vines or trees to make shallow furrow, say two inches, thus avoiding danger to the roots, the others plowing required depth. Weight of Three-Gang 7-inch only 200 pounds, and amply strong for hard soils. Price complete, \$38.00. The only implement with advantages of both Plow and Cultivator, thus satisfying the advocates of either. Send for Catalogue and Testimonials.

### SPRAY YOUR FRUIT TREES AND VINES.

Wormy Fruit and Leaf Blight of Apples, Pears, Cherries, Plum Curculia prevented by spraying with the EXCELSIOR SPRAY PUMP. GRAPE and POTATO ROT prevented by using EXCELSIOR KNAPSACK SPRAYER; also injurious insects which infest Currants Gooseberries, Raspberries and Strawberries. PERFECT FRUIT ALWAYS SELLS AT GOOD PRICES. Catalogue showing all injurious insects to fruits mailed free. Large stock of Fruit Trees, Vines and Berry Plants at Bottom Prices. Address, WM. STAHL, Quincy, Illinois.

# AGRICULTURAL SCIENCE.

## Notes on California Olives: Their Adaptations and Oils.

University Experiment Station Bulletin No. 92.

In view of the constantly increasing importance olive culture is attaining in California, I commenced last October, under instructions from Prof. Hilgard, a study of the different olive varieties cultivated in this State and of the quantity and quality of oil produced by each.

The time that could be given to this subject being limited by my other duties, what I considered most important was the identification of the varieties; from which afterward were obtained small samples of fruit used for a chemical test as to the quantity of oil each contained, and, so far as feasible, its quality.

My observations were thus necessarily confined to the plantations at Berkeley, Niles and Mission San Jose, more especially to those of the latter, where, maturity being earlier than in the other two localities, we were enabled to obtain samples sooner.

My first visit was made at the beginning of November, 1890, to the plantation of the California Nursery Co. at Niles, where Mr. John Rock, the president of the company, kindly showed me all the varieties cultivated and gave me much information regarding the large collection of foreign varieties, very well cared for but with only a light crop; partly, doubtless, on account of their imperfect acclimation. The maturity was very late; the variety Rubra alone was just beginning to change color. This backwardness was probably due principally to their growing on low ground; for other trees but a short distance away, but on high ground, showed a more advanced degree of ripeness. This shows that, especially in cool climates, the plantation on high ground is better suited to olives because they receive there more air, heat and light, so much needed by these trees.

I remarked also some damage to the crop caused by a very strong wind which had blown for several days. This damage was still greater at Mission San Jose and at Berkeley, where I think that not only the wind but the dryness of the soil had contributed much to the falling-off of a large quantity of olives. In fact the rain, coming soon after, benefited somewhat the fruit which remained shrunken on the tree, improving it in appearance and size.

My attention was then given exclusively to the olive trees of Prof. Hilgard at Mission San Jose, and there I began the identification of the varieties, of which I could determine only twelve, others being too young or without fruit.

According to my observations, these varieties may be arranged as follows:

According to Time of Ripening.	According to Productiveness.
1. Nevadillo blanco.	1. Mission.
2. Atro-violacea.	2. Nevadillo blanco.
3. Pendulina.	3. Columbellia.
4. Redding Picholine.	4. Uvaria.
5. Manzanillo.	5. Atro-violacea.
6. Mission.	6. Redding Picholine.
7. Polymorpha.	7. Oblonga.
8. Oblonga.	8. Rega is.
9. Rega is.	9. Pendulina.
10. Columbellia.	10. Manzanillo.
11. Uvaria.	11. Polymorpha.

It must be remembered that, with the exception of the Mission olive, most of the trees are young, and therefore the amount of the crop may not correspond exactly with what would be obtained with older trees; so these data must be taken with due allowance.

In the plantation of the University at Berkeley the succession of ripening was the same as at Mission San Jose, but the fruit matured correspondingly from one to four weeks later. The yield ranged from small to very small on all the trees, with the exception of the Nevadillo blanco and the Mission, which had a good crop. Some trees of the former are already about seven years old, and those of the latter are represented by two large and old specimens. All the other trees are from four to five years old.

The results obtained should, however, be taken only as a preliminary experiment, and not as absolute; because the number of samples of the localities represented, and the special conditions of the fruit, were not such as to give completely decisive results. Next season the tests will be arranged in such a manner as to work on numerous good and large samples from various localities in the State.

We are also indebted to Mr. Geo. C. Roeding, who supplied us with six larger samples, produced at the Fancher Creek Nursery at Fresno. The first samples received from Fresno consisted of five varieties, one of which, (name unknown), had been picked November 4th. The others were the Pendulina, Nevadillo blanco, Manzanillo, Atro-violacea; while the sixth sample, of the Rubra, was picked on February 5, 1891.

Their condition was as follows:

*Pendulina*—In fair condition; some olives dried and beginning to spoil; maturity far advanced.

*Nevadillo blanco*—In fair condition, but over-ripe.

*Manzanillo*—In fair condition; some dried olives; generally over-ripe.

*Atro-violacea*—In good condition and at the right degree of maturity for warm climates.

*No name*—In fair condition and over-ripe; This olive resembles somewhat the Italian Cerasola, but it is a little larger.

*Rubra*—In very bad condition; damaged by frost; maturity, at the right degree for warm climates.

From Mission San Jose was received also a

sample of Nevadillo blanco, gathered January 13, 1891. It was in rather good condition, but the maturity was a little passed.

All the above samples, except the Rubra, were made into oil by the usual and practical method, in order to have a small quantity of oil for testing its character.

### OBSERVATIONS ON THE OILS OBTAINED.

On March 13, 1891, I made the following observations on the oils obtained:

*From Fresno*—

*Atro-violacea*—Condition thickish, not clear; color, yellowish-brown; odor, not pronounced; taste, rather greasy and coarse. It seems to be slow in clearing. General quality, fair.

*Nevadillo blanco*—Condition, fluid, clear, but not yet bright; color, light-golden; odor, rather pronounced; taste, a little greasy, otherwise agreeable and delicate. It clears rapidly. General quality, fine.

*Pendulina*—Condition thickish, not clear; color, yellowish-brown; odor, pronounced; taste, somewhat greasy but agreeable. It will take long to clear. General quality, good.

*Manzanillo*—Condition, very fluid, bright and transparent; color, fine-golden; odor, slightly suggestive of unsoundness; taste, very slightly rancid, otherwise delicate. General quality, a rather good oil, clearing quickly.

This sample was very small, and it was impossible to keep it well.

*No name*—Condition, clear but not yet bright, rather fluid; color, fine light-golden; odor, pronounced, but not altogether pleasant; taste, slightly greasy and rank; general quality, a common oil, but clearing quickly.

*From Mission San Jose*—

*Nevadillo blanco*—(This oil was made two months after those from Fresno). Condition, fluid and almost clear; color, rather deep-golden; odor, of fresh olives; taste, oil too young for a close judgment, but promises to become a very fine sweet oil.

From the above observations it appears that olives from the country about Fresno, like those from warm countries generally, produce a thickish oil, dark-colored, greasy and therefore not easy to keep; moreover when made in larger quantities, this oil will not clear as quickly as did our small samples. The Nevadillo Blanco yields the best oil among the varieties from Fresno, but still inferior in quality to the same from Mission San Jose, which, although made two months later, promises to clear before or almost at the same time as the other one.

In order to remedy the defects that oils made from olives growing in warm climates are apt to have, the fruit ought to be gathered when still yellowish and only just beginning to change their color. Such fruit would always produce an oil which on account of its delicate taste would have the same reputation as that obtained in cooler climates. If the olive-grower cares more for quantity than for quality, the olives should be gathered when black and still firm; but in no case should this degree of maturity be passed, because the oil from such olives would be of inferior quality, and sometimes also the quantity would be diminished.

The following table, shows the analytical results from the different samples received at this laboratory.

Column 1 shows the proportion by weight between pits and flesh in the fresh fruit. Column 2 shows the proportion in which pits and flesh may be made to contribute to the oil product when fully extracted. Column 3 gives the absolute percentage of oil contained in pits and flesh. Column 4 finally gives the results of the "Iodine test" much relied upon for the purity of commercial oils, as hereinafter explained.

PARTIAL ANALYSIS OF SOME SAMPLES OF CALIFORNIA OLIVES AND OILS.

Variety.	Locality.	Date of Picking.	1. Proportion of pits and flesh in fruit.		2. Percentage of oil in whole fruit yielded by.		3. Percentage of oil contained in fresh.		4. Iodine absorption. Oil from Oil extracted pressing. by Carbon Bisulphide.

### PROPORTION OF PIT TO FLESH.

The first column, exhibiting the proportion of pit and flesh contained in the fruit of the different varieties, shows a maximum of 87 per cent of flesh in the Manzanillo from Fresno, and a minimum of 63.5 per cent in No. 2 (seedling) from Berkeley. On the other hand, the percentages of pits were 13 for the former and 36.5 for the latter. Between the Manzanillo from Fresno and that from Berkeley there is a difference of 3 per cent both in pit and flesh; this is doubtless due to the growth of the former in irrigated land.

The same can be said for the differences existing between the Nevadillo from Fresno and that from Berkeley and Mission San Jose. Summarily the varieties represented could be arranged as follows in regard to smallness of pit and largest amount of flesh: 1. Manzanillo. 2. Pendulina. 3. Nevadillo blanco. 4. No name (Cerasola?) 5. Rubra. 6. Mission. 7. Atro-violacea. 8. Redding Picholine. 9. No. 10 (seedling). 10. No. 2 (seedling).

These determinations, which will be continued next season on all obtainable varieties, are very important, because they show especially which kinds are most suitable for pickling purposes, for which the finest and largest olives with the smallest pit are required.

### QUANTITY OF OIL.

The next determinations were made with

the object of ascertaining the quantity of oil contained in the different varieties.

Of all the varieties represented in the above table, only the Atro-violacea from Fresno, and those from Berkeley, showed exactly the right degree of maturity for oil-making; hence the results obtained cannot be taken as representing exactly the respective practical values of the several kinds. However, with the exception of the Redding Picholine from Mission San Jose, the maturity of which was very far advanced, the other varieties give results which may be considered as showing approximately their relative capabilities.

From these determinations, taking into consideration the degree of maturity of the olives, it appears that the Nevadillo blanco from Berkeley and Mission San Jose contains more oil than the same from Fresno, while in the latter locality, the Manzanillo has produced a little more oil than the Nevadillo; but the Manzanillo from Berkeley contains more oil than that from Fresno.

The minimum is shown by the Atro-violacea from Fresno, which was the best-conditioned sample received from that locality.

It is extremely probable therefore, that these consistent differences between the Fresno olives and those from the other localities are mainly due to the growth of the former on flat and heavily irrigated ground, tending to produce watery fruit with relatively little oil, particularly where bottom water lies near the surface. With respect to the quantity of oil contained in them, these varieties can, according to these tests, be arranged as follows:

*For Fresno*.—1, Manzanillo; 2, Nevadillo blanco; 3, Rubra; 4, Pendulina; 5, no name (Cerasola?); 6, Atro-violacea.

*For Mission San Jose*.—1, Nevadillo blanco; 2, Mission. The Redding Picholine cannot be taken into consideration on account of its very advanced maturity.

*For Berkeley*.—1, Nevadillo blanco; 2, Manzanillo; 3, No. 10 Seedling.

If we consider the quantity of oil that the pit may yield, we find the largest percentage in the Pendulina and the smallest in the Manzanillo, both from Fresno; and glancing at the oil yield of the pits of the other varieties, we may conclude that it will be a more or less important consideration, according to the purposes that the oil-maker has in view, or according to the special conditions of his locality.

### QUALITY OF OIL.

According to European experience the oil-maker who intends to produce oil of the highest quality must avoid, in its extraction, the grinding of the pits. The kernel contains an oil of inferior quality, which becomes rancid quickly and will spoil the fine oil from the pulp. An exception may exist in the case of varieties which, like the Mission, have abortive kernels.

The crushing of the pits may of course be avoided by the use of adjustable crushers, which crush the pulp while allowing the pit to pass intact.

In this manner oil of very high quality is obtained. Practically, the small quantity of oil yielded by the pits may be neglected, because this loss will be largely repaid by the higher price at which superfine oil can be sold. This loss, moreover, concerns only the first pressing, for the pomace can then be passed again through the mill in order to grind the pits and to have a homogeneous paste with the residues from the pulp. This paste at the second pressing will give a common oil, of edible quality, which would find a market at a lower price.

I would not now advise making a third quality of oil, or extracting the oil from the oil-

more than 84.5 as a standard and consider as adulterated every oil which passes this limit.

The maximum of iodine absorption by our pressed oils was 86.5, and in those obtained by extraction by carbon bisulphide was 80.6. All the other oils obtained by chemical extraction showed the iodine absorption smaller than that of the same oils when obtained by pressing.

We cannot, therefore, rely implicitly upon this method for discovering slight adulterations in California oils, and must extend the limit usually admitted for this factor (84.5) at least up to 86.6 for pure oils.

Taking 88.0 as the extreme upper limit, it should be mentioned that among a number of samples of oil sent us by producers and others, the extreme minimum of iodine absorption was found to be 81.1, while among the highest figures were 89.2 and 92.9. Accordingly these two samples might be considered as adulterated; but as yet we reserve our judgment in the premises.

In view of this uncertainty it will be well to mention here a simple and sure method by which adulteration with cottonseed oil (most used for adulteration) can quickly be discovered. It was devised by Prof. E. Bechi, director of the Agricultural Station at Florence, Italy. It has been officially adopted in the chemical laboratories of the Italian Customhouses. This method serves to reveal the presence of cottonseed oil in all seed oils, and even in cod-liver oil. It may be briefly thus described:

An alcoholic solution of nitrate of silver is made in the following way:

Nitrate of silver.....	1 gram
Alcohol at 95°.....	200 cubic centimeters
Ethyl ("sulphuric") ether.....	40 cubic centimeters
Nitric acid.....	0.1 gram

Another solution also is made of:

Amylic alcohol (fused oil).....	100 cubic centimeters
Pure colza (rapeseed) oil.....	15 cubic centimeters

The reaction is made in the following way: To 10 cubic centimeters of the oil to be tested add one cubic centimeter of the silver reagent and 10 cubic centimeters of the solution of colza oil in amylic alcohol; stir briskly and divide the mixture so obtained into two equal parts; warm one-half for a quarter of an hour at the boiling point of water, and compare with the other half to see if there has been any change of color. In case of any addition of cottonseed oil a dark brownish-red coloration will be obtained.

According to the author the same result may be obtained without using colza oil, but he employs it in order to obtain always a uniform coloration. As can be seen, this method is very simple and within everyone's reach. By its means we can be sure of the purity of the product we are buying.

### GRAPE CUTTINGS FROM FRANCE.

We are indebted to the kindness of the distinguished French ampelographer, Prof. V. Pulliat, for cuttings of 21 varieties of grapes, 11 of which are new to California, or very little known. These are the following:

1. Madeleine angevine. 2. Chasselas Coulard.
3. Agostenga. 4. Pis de chevre rouge. 5. Madeleine royale. 6. Calabrese. 7. Malvoisie jaune du Piemont. 8. Schiradzouli de la Perse. 9. Persan noir de la Savoie. 10. San Antoni. 11. Raisaine.

L. PAPARELLI.  
Berkeley, March 28, 1891.

### Our Agents.

OUR FRIENDS can do much in aid of our paper and the cause of practical knowledge and science, by assisting Agents in their labors of canvassing, by lending their influence and encouraging favors. We intend to send none but worthy men.

THE GREATEST RAILROAD POTENTATE.—It seems a fabulous statement, but parties who claim to be posted make the statement that Jay Gould controls about 40 per cent of the railway mileage of the world. He does not, of course, actually own that amount, but has his plans so laid that the roads are under his control. This is power with a vengeance.

"Ayer's Hair Vigor is a most excellent preparation for the hair. I speak of it from experience. It use promotes the growth of new hair, and makes it glossy and soft. The Vigor is a sure cure for dandruff."—J. W. Bowen, Editor Enquirer, McArthur, Ohio.

### ORANGE PLANTERS

Should read the advertisement of the Aloha Nurseries. The best varieties are offered at rates so low that no one need hesitate about planting for experiment, or for investment in places where the orange is known to thrive.

### IN DARKEST AFRICA

They did not have a "Horse Book" or a "Pioneer Buggy." If they had, the Bear Column would not have been in disgrace. Send 10 cents, silver or stamps, and learn how to cure the Horse, and where to buy the Buggy. Pioneer Buggy Company, Columbus, Ohio.

\$500,000

## Advertising Souvenirs.

Style 1. "Tour of the World." This is a folder containing thirty-six illustrations in close imitation of photographs of the chief buildings and cities of the world. The cover is in two colors; and the whole is worthy a place on the library table. Will also interest and instruct children.

Free on receipt of 2c. for postage.

Style 3. Box of Wooden Dominoes sent free on receipt of 2c. for postage.

Style 4. Book of Popular Songs, with music, heavy paper, and 48 pp. The book has a stout paper cover so that it can be carried in the pocket. Free on receipt of 2c. for mailing. In ordering give style number.

Style 5. Harmonicas for children free on receipt of 2c. for postage. In ordering give style number.

Style 2. Small Pocket Mirror. Handy for men, for school children and for ladies' purse or work basket. Free on receipt of 2c. for postage.

OURS is the largest and most complete general outfitting establishment on the Coast. The key to its success is that it furnishes what the people—and all the people—want. It ministers to every demand. There are coarse, stout goods for rough usage, plain, serviceable goods for everyday wear, and fashionable and costly goods from Vienna, Paris, London and New York. Prices are always as low, and, in most cases, lower than those of all other dealers.

These facts are cited for the benefit of out-of-town persons who wish to deal through the mails. We believe that we have stated nothing that is not accepted by those who know us.

## Dead Lock Gopher and Mole Trap.

ASK FOR IT. USE NO OTHER.

The "Dead Lock" is the LATEST and BEST single trap on the market. By reversing trigger can adjust TRAP TO HOLE, NOT HOLE TO TRAP. Notched and pointed jaws prevent any squirming out. Any child can set it. No soldered joints to loosen and be repaired. Can regulate distance between jaws and trigger. Price, postpaid, 25c, or \$3 per dozen delivered. Special club rates. Show this cut to your dealer or send direct to sole manufacturers:

IRA F. WHITE & SON,  
Pomona, Cal.

## The Harvest Queen COMBINED HARVESTER.

### The Lightest Draft Harvester in the Market.

ENDORSED BY ALL FARMERS AND RANCHERS. SATISFACTION GUARANTEED. NONE EVER RETURNED.

### POINTS OF MERIT:

FIRST—Having two pivot wheels on the ground enables it to turn square corners like a mowing machine.  
SECOND—All of the frame work about the cylinder is the best of oak lined with sheet steel and put on with screws. Other parts built of the best of material and painted inside and out.  
THIRD—The driver is NOT isolated by a ladder from the machine, but is safely seated on the separator, where he can hear and see the working of the machine and drive to suit.  
FOURTH—The new cleaner put on last season works perfectly.  
FIFTH—The machine is so geared that the cleaner, separator or header can be started independently of each other.  
SIXTH—The header is portable. By the use of our supplemental truck we can pass a 16-foot header through a 12-foot gate.  
SEVENTH—The shaftings are all made of steel.

### SIZES, 10 TO 16 FEET.

Send for Price List.

With all our Machines we furnish Straw Dump and Header Truck separate from Machine. Machines delivered on board cars or b. at.

## THE SAN JOSE ORCHARD AND VINEYARD Truck and Cultivator.

Just the thing for the Orchard and Vineyard, built low, with Goose Neck in front, enabling a very short turn, low wheels, broad tire, with springs or without, built any size or capacity.

Greatly Improved, made entirely of Iron and Steel, easily handled and adjusted; teeth extend outside of wheels, in fact the Most Perfect Cultivating Tool ever put on the market.

Write for Circulars. Address

SAN JOSE AGRICULTURAL WORKS, San Jose, Cal.

## THE STABLE.

### The Thoroughbred.

This term is applied only to the race horse with five crosses, found in the stud-book, which is a record of horses bred for racing purposes since about the year 1700, the complete pedigree commencing about 1759. The English race horse is a cross between the common mares of the country and the horse from the Barbary Coast, known as the Barb. Charles II imported a lot of mares from Tangiers, a town in Morocco. These were called royal mares, and were of the breed called Barbs. At various times studs were imported to improve the stock. Among the number were Darby Arabian and Godolphin Arabian.

Thus the foundation for the thoroughbred family was laid. The great distinguishing traits of the thoroughbred are beauty, strength, action and power to sustain a fast gait for a longer period than other horses. This enables him to go long distances and carry heavy weight at a greater speed than other breeds.

He was probably first bred in England for the turf, but the traits which crowned him there soon made him popular everywhere. He was soon found at the front in the chase, in the stage coach, in the gentleman's carriage, and even in the plow. The first importation of thoroughbreds to America was in 1725 and 1730. At various times importations have been made which formed the basis of the thoroughbreds of America. Recent Arabian importations have been made, but are not considered desirable. To maintain and improve the good qualities of the thoroughbred is a problem which has been before the breeders for over 200 years. The law of like begetting like and the race track have done the work. A horse that ran fast and carried heavy weight, coupled to a mare that could do the same thing, would likely produce a foal with the good qualities of its dam and its sire. After years of such trial and breeding, the type of the thoroughbred has been fixed as no other breed, for no other has had such a long and severe test, or has been bred with such care.

Horse racing has been licensed in England and America because it was thought necessary to develop the horse. It has certainly done this, whatever else it may have done for a certain class of men who follow the turf for gambling purposes. It does seem that this might be done and the horse developed without any of the evil influences which attend it at the ordinary track. It is as much our duty to make the most of this gift of God, the horse, as any other. He gave us the horse, just as he gives us other things, not in the highest condition, but in a state which needed development. It is as much our duty to do this as to build railroads or other national improvements. This is a fast age, and the demands upon us are such we cannot drive a slow horse. A business man's time is too precious to lose an hour each day by driving a slow team. We are paying too much to the man who drives our plow to tolerate a slow team. The sun is too hot in the harvest-field for the heavy horse with his thick skin and poor lungs. The machinery must stop for hours each hot day or you lose such a horse. The stopping of machinery and men in the field means heavy loss. We need a horse for all purposes, with the traits of the thoroughbred, but a little more weight than many of them possess. When four-mile races were in fashion our horses had to carry heavy weights, and nothing but strong horses could succeed. If our horses had to carry heavy weights as they do in Australia, and run long distances, as was once popular in America, it would greatly improve the thoroughbred. It should be remembered that horse racing is licensed only to improve the horse, not for gambling purposes. A four-mile horse with ability to carry weight would have to be large and he would be the best all-purpose horse in the world.

It has been found that weight on the back of a horse, a long track before him, and a spur in the side to urge him to his best, is the most successful way to test a horse in all those essential points which make a good animal. His skin, his lungs, his bones, his muscles and his nervous system all go to make his strength, action, speed and staying qualities. None of these can be seen by the eye with certainty. The horse may be well-shaped but porous, and have but little substance. The muscles may be well developed, but like a loosely-twisted string, have no strength. The skin may be sleek and velvety, but without the power to throw off heat. The lung or chest capacity may be good, and the horse have no wind, because texture of the lungs is not elastic and tough. Last, but not least, his brain and nervous system may be so sluggish that the horse has no power to move quickly, and has no courage.

It will readily be seen that tests of all these things are necessary to the production of a first-class breed of horses, and the tests should be made for years and the breeding done with these things in view. It will readily be seen also, that the thoroughbred is the only horse we now have whose breeding and test have been sufficient to justify any great expectation. The trotting horse is a coming horse, but his

pedigree is too short—there are too many blanks.

The heavy horse for farm-work in this climate does not stand the heat, and is too slow. Near the sea-shore, and for a short time—for his life is short—he may do heavy work. But in my opinion, after a trial of over 40 years in a warm climate, the thoroughbred, crossed with a good-sized common horse, makes the best all-purpose animal.—N. W. Motheral, in *Tulare Register*.

## AGRICULTURAL ENGINEER

### The New Road Law.

The new general road law which was prepared in committee and amended several times, passed the Legislature and has been approved by the Governor. The main provisions are as follows:

The Board of Supervisors shall divide the county into suitable road districts and each Supervisor shall be ex-officio Road Commissioner in his supervisor district and shall see that all contracts and orders pertaining to roads and bridges are properly executed.

After the first Monday following the first day in January, 1893, the office of road overseer shall be abolished.

The Supervisors may cause highways to be surveyed, laid out, recorded and opened, abolished or abandoned such as are not necessary, contract, purchase or otherwise acquire right of way over private property for the use of public highway; advertise for sealed bids for keeping in order and repair all roads, culverts and bridges, provided that, in their discretion, they may exclude from such contracts the repairing of bridges. If no bids are received or accepted the Board may order the work to be performed by the Road Commissioner.

If a contractor neglects or fails to perform his contract, the Road Commissioner shall notify him, and if the contractor does not use reasonable diligence in complying with such notice, the Road Commissioner shall cause the work to be done by others, and the cost shall be deducted from the quarterly allowance of such contractor.

The Board of Supervisors may appoint one road inspector at a compensation not to exceed the sum allowed by law as the total compensation of the Road Commissioners, and he shall act in their stead. The Board must advertise for sealed bids to maintain roads. Such contracts must be awarded separately for each road district and to a qualified elector. The Board shall annually levy a tax not exceeding \$3 on each man between 21 and 55 years of age. These are the main provisions.

The Road Commissioner shall inspect the work done under such contracts and ordered and make a written report four times a year. The Board shall thereupon pay the amount found due the contractor for the preceding quarter from the funds of the road district embraced in his contract.

In their discretion the Supervisors may designate mile stones and guide posts. They may erect water works for the purpose of watering roads.

The Road Commissioner, under the direction of the Board of Supervisors, must take charge of the highways within his district, shall employ men, teams, watering carts and all help necessary. No Commissioner shall be interested, directly or indirectly, in any contract or work to be done in his district. He shall keep the roads free from obstructions and in good repair, destroy weeds, cause banks to be graded and bridges to be made. He must make quarterly reports under oath of the number of days he has been employed, wages, receipts, etc. He shall receive for his services 20 cents per mile one way for all distances actually traveled in the performance of his duties (he shall not in any one year receive more than \$300).

**NEW IMMIGRATION LAWS.**—The amendment made by the last Congress to the immigration law, and relative to the importation of aliens under contract or agreement to perform labor, was put into effect on April 1st. The amendment creates the office of Superintendent of Immigration, who is to be appointed by the President, with a salary of \$4000 per annum. The new law makes it an offense for any steamship or transportation company to invite or encourage the immigration of any alien through agents, either by writing or printing, or by oral solicitation, except by ordinary commercial letters or advertisements, merely giving the sailing date of vessels and terms and facilities of transportation. The amendment makes it an offense to encourage any alien to migrate to this country on the strength of any printed advertisements or circulars holding out offers of employment. All aliens coming on such representations will be treated as contract laborers. This does not apply to State Immigration Bureau's offers.

**BOOTS WITH STONE SOLES.**—A German inventor proposes to make boots with stone soles. He mixes with a water-proof glue a suitable quantity of clean quartz sand, which is spread on the thin leather sole employed as a foundation. These quartz soles are said to be very flexible and almost indestructible, while they enable the wearer to walk safely over slippery roads.

## Improved Ranch

### FOR SALE.

### Artesian, Raisin and Fruit Lands.

Located seven miles southwest of Tulare City and three miles from Tokay Switch on the Southern Pacific Railroad. It is centrally located in the artesian belt of Tulare county, and has one flowing well, capable of irrigating 100 acres, the depth to the main flow being only 308 feet. The water is soft for washing, healthful to drink, and contains no substance injurious to vegetation. A reservoir of one acre surrounded with handsome trees, receives the water from the well. Several ditches carry it in different directions on to the land.

The whole 180 acres (quarter-section) is unusually level, is entirely enclosed with fencing, and cross-fences partition the land into several enclosures for pasturage purposes.

The improvements consist of a modern style, two-story, hard finished house, containing seven rooms, with walled cellar, kitchen and porches additional, surrounded with elegant shade trees, etc.; a large barn, storehouse, blacksmith shop, windmill, sheds, stables, etc.

In front of the place is a row of about 40 well-grown elm and Carolina trees. There are eight acres of orchard and vineyard, mostly in bearing, 30 acres of alfalfa, several miles of ditches and 40 acres of land checked and leveled.

The soil is dark Tulare lake bottom land, very productive, grows all kinds of tropical and semi-tropical fruits, except apples, and is especially adapted to the growth of alfalfa and for stock range. Water of good quality is found at ten feet from the surface. There are three surface wells on the place.

The climate is as healthful as any part of the Sacramento or San Joaquin valleys. Adjoining lands are supplied with water for irrigation from Elk Bayou, a never-dry stream, lying one mile from these lands, and water can be had on the land from the same source.

The simple fact that abundance of artesian water can be had so cheaply on this land will soon make the water alone worth more than the land is now offered for.

The owner (not being a farmer) is determined to sell at the best price offered soon. The land is under cultivation, except necessary pastures. Terms easy.

Three hundred and twenty acres of improved land adjoining will also be sold cheap and on easy terms, in tracts of 40 acres or upward, to suit.

Also 180 acres just outside of Tulare City limits, surveyed out in five-acre lots. The whole will be sold for cash for much less than its real value if applied for soon.

Call on or address E. M. DEWEY, Porterville, or A. T. DEWEY, 220 Market Street, San Francisco.

Write us for prices and full particulars. Address TRUMAN, HOOKER & CO., SAN FRANCISCO.....and.....FRESNO.

## FOR SALE!

## PINOLITO OLIVE RANCH!!!

### FORTY-SIX ACRES OF HILL LAND

In the Town of Auburn, Placer Co.

Red soil, superimposed upon upturned, friable, decomposing slate, yielding iron and alumina, thus furnishing a soil which, as Prof. Hilgard said after his analysis, will retain moisture, will not require irrigation, and will not allow the vegetable mold to leech away; thus suited to the growth of fruit trees, especially the olive, as has been demonstrated both by the remarkable growth of the tree and the yield and the quality of oil.

It is situated only 15 minutes walk from Auburn Station—the C. P. R. R. passes along one side—and is a less distance from the Court House. Thirty acres improved and planted to olives, set at long distances for permanent growth, and other fruits planted between the rows for temporary profits, mostly peaches of three best varieties, ripening in succession; prunes, mostly Petite; plums of several varieties, as Kelsey, Japan, Shropshire Damson, etc.; figs of several best varieties; a few apples, nectarines, blackberries, etc. Two acres of table and raisin grapes, never irrigated, the vines remarkably vigorous and in full bearing. The trees, especially the 1500 olive, have all been planted with regard to permanency. About one-half of them have an orchard growth of seven years; fruited last year 300 pounds, this year nearly one ton. They are mostly Mission and Picholine, with a few trees of other choice varieties. Two crops of the olives have been pressed. The yield has been, for the first press, 14 per cent of very clear delicious table oil, and four per cent from the second press—the Picholine yielding this, of a peculiarly clear, nutty oil.

There is on the ranch a few acres of grain sown for hay; two acres of well-set alfalfa, below the Auburn ditch, which crosses one corner of the property; also a small house of four rooms and a kitchen; a well of good water; a small barn; a strong, permanent spring of soft, cold water, which wells up through the slate; a two-inch iron pipe connects the spring with an iron-bound 20,000-gallon tank, situated on a beautiful pine clad hill 40 feet above the spring, a point which overlooks the town and gives very charming distant views, and is one of the most lovely sites for a residence to be found. The water is pumped to the tank by a duplex pump; the power, a four-horse steam engine, which furnishes power sufficient to pump, saw wood, run an olive crusher and do all needed shop work.

The land is all suited to fruit, excepting along a rocky ridge, which furnishes three very desirable residence sites, and the olive, set promiscuously, thrives finely among the rocks. The property can be conveniently divided along a sag which separates two of the high knobs, and water from the spring can be pumped to each of them.

This desirable property is now offered for sale for less than the improvements cost. The land is fenced, the title good and unencumbered. It is connected by a roadway, which is one of the improvements made, with one of the principal streets of Auburn.

The sale will convey the entire plant, furniture in the house, all utensils, etc. If sold before April 1st the sale will include the coming crop. If later, the crop will be reserved, unless otherwise by special agreement. If desired, one-half the purchase money can remain five years, secured by mortgage at eight per cent. ## THE DAIRY.

## Milking Shorthorns.

EDITORS PRESS:—Mr. H. S. Maltby of Placer county has been paying a visit to Baden, and took home with him the fine Shorthorn bull calf, Fawley Duke 21st. This calf was never allowed to suck a cow, but fed his milk from a bucket from the day he was born, and after the time he was three months old he was fed skim milk, mixed with a little oilcake gruel and no new milk. His weight in San Francisco, when 10 months and 10 days old, was 850 pounds. He and some others had been out of doors night and day since the beginning of January, with the exception of some five or six wet and stormy nights, there being a feed trough in the field, but no shade and not much shelter.

Fawley Duke 21st is descended from import. and Fawley Garland 4th, of Sir C. Knightley's Ruby tribe, that became and long continued famous in his hands for its dairy properties.

Mr. Maltby's intention is to start a dairy on his farm in Placer county, and he could not have made a better selection of a bull, with growing and milking qualities combined; the one he bought being of the same family, and almost exactly of the same blood and breeding as the cow Baden Ruby 5th, exhibited by me at the last California State Fair for the premium offered by the American Shorthorn Breeders' Association for the best milking Shorthorn cow. Baden Ruby 5th gave an average of over 40 pounds of milk a day for seven consecutive days at Sacramento, two months after she had her calf, which certainly is a fairly good record, all things considered—27 hours in railway car, change from a cool to a hot climate as well as strange surroundings, all in the season of dry feed. I had one other cow, White Maid, entered for the same premium; she had calved over three months and gave an average of over 30 pounds a day at Sacramento.

Mr. P. Peterson had also three cows entered for the same premium, which, however, was not awarded to any one of the cows entered, for what reason, if any, the exhibitors are left in entire ignorance. ROBT. ASHBURNER.

Baden Station San Mateo Co.

A WORLD'S RAILWAY.—America, argues ex-Governor William Gilpin of Colorado, is a fallow continent, capable of sustaining half a billion people in happiness and plenty. It is the mission of the United States to be the distributor of food to the hungry of both Europe and Asia, lying as it does, midway between them. The time is at hand when all the ships of the seas will not be sufficient to carry the articles of commerce around the world to the nations fast enough. Then will come necessity for more rapid transportation. The plan of this transportation has been the dream of Gov. Gilpin for 47 years, and he prophesied its construction at an early date from that time. He has made one more prophecy. It is that the next great project in the world's material development will be the building of what he calls the Cosmopolitan railway—a railroad which shall girdle the earth. The first link in the chain is the Transcontinental road of the United States. Starting from the western terminus of that, the Cosmopolitan road will extend northward through Alaska, skirting the base of the Rocky mountains, where are plateaus that will render the building easy. Then will come Behring's strait, 48 miles wide, with a large island at its very center. There are no icebergs in the straits, and it is shallow water all the way across with hard bottom and no engineering difficulties. Once across, the road would connect with the Russian railway through Siberia, connecting again with western and southern roads through Asia, Europe and Africa, and the work would be done.

COMMERCIAL DRUMMERS OF ENGLISH ORIGIN. An American who visited England more than half a century ago, when the commercial drummer hardly had an existence in this country, writes of this class of people in England as follows: "The commercial traveler is generally a young and very shrewd individual, possessing a great enervity of manner and a remarkable ability to suit himself readily to all the varied moods of his varied customers. Furnished by his principals with choice samples of their goods, he steps into his chaise, or the stage, and with a light heart commences his circuit. At each town upon his route he carries at the principal inn, where he is sure to find a hearty welcome. After thus encoining himself in comfortable quarters, he arranges his samples, and if it be forenoon puts them under his arm and issues forth to visit the storekeepers. Wherever he goes he is met with cordiality. Like all travelers, he is full of anecdote, and has at his command the rarest news of the time. None are more glad to see him than the storekeepers' wives and daughters. To these he imparts the most recent scandal and the latest fashions, affording them subjects for gossip until his next visit to the town. To the tradesman he lends his samples with all the eloquence and ingenuity of which he is capable, and seldom leaves without making considerable bargains."

## Unitarian Literature

Sent free by the CHANNING AUXILIARY of the First Unitarian Church, cor. Geary and Franklin Sts., San Francisco. Address Mrs. B. F. Giddings as above.

## Notices of Recent Patents.

Among the patents recently obtained through Dewey & Co.'s SCIENTIFIC PRESS U. S. and Foreign Patent Agency, the following are worthy of special mention:

DEVICE FOR CONTROLLING HORSES.—Edwin J. Fraser, 112 Kearny, S. F. No. 448,330. Dated March 17, 1891. This device is intended for controlling spirited, vicious, or hard-mouthed horses, and it consists of pads adapted to press upon and close the nasal passages, and a means by which said pads are actuated in connection with the bit and reins so that the operation of the device will be automatic, acting to compress the nasal passages when the horse commences to pull too hard and instantly relieving itself when he becomes quiet.

PRUNING IMPLEMENT.—James W. Perry & Robt. H. Dixon, Santa Rosa, Sonoma Co. No. 448,363. Dated March 17, 1891. This invention relates to the general class of pruning shears and especially to that sub-class having a sliding or movable fulcrum between the opposing members, whereby what is known as a "draw cut" may be had. By the peculiar construction the blade has its longitudinal movement independent of the handles, which latter therefore remain in the same position and do not move lengthwise, as is customary with one or both handles in other form of shears wherein a sliding fulcrum is employed to provide for a draw cut. Therefore these shears are less tiresome to use, as the handles do not move lengthwise in the hand but remain stationary in that respect.

SEPARATOR.—Fairfax H. Wheelan, Santa Barbara. No. 448,394. Dated March 17, 1891. This is a machine specially adapted for cleaning wheat and the cereals and leguminous seeds by separating them from the particles of dirt and other foreign material. The principle of separation involved in this device is that of frictional contact. Separation which depends on differences in size and upon differences in weight cannot be had where such differences do not exist. Thus with cereals and pulse it often happens that particles of dirt and rock have equal size and weight with the grains or seed of the material to be saved; but such particles have not the same character of surface, and by this is meant not particularly form or shape, but smoothness and roughness. As a matter of fact, the surface of grains and seeds is much smoother than that of the particles of dirt and rock which are mixed with them. This invention is based on this fact; and its object is to separate thoroughly the foreign particles from the seeds and grains and even to separate out imperfect and mutilated grains and seeds, and branches, twigs, etc.

SWINGING HOSE-REEL.—Wm. F. Bowers, S. F. No. 449,033. Dated March 24, 1891. The invention relates to that class of hose-reels which are secured to the wall and are so mounted as to swing, suitable water-joints being provided to allow the uninterrupted flow of the water, no matter to what position the reel may be turned. The object of the invention is to produce a simple and effective hose-reel of this class.

## Worth Double Its Cost.

The PACIFIC RURAL PRESS as a reliable farming paper in this peculiar agricultural field especially, is worth many times its cost to intelligent reading husbandmen for farm and horticultural matter, aside from the general illustrations, home reading and fraternal Order matter. Considered all in all, it is one of the cheapest papers in the United States.

## Don't Fail to Write.

Should this paper be received by any subscriber who does not want it, or beyond the time he intends to pay for it, let him not fail to write us direct to stop it. A postal card (costing one cent only) will suffice. We will not knowingly send the paper to any one who does not wish it, but if it is continued, through the failure of the subscriber to notify us to discontinue it, or some irresponsible party requested to stop it, we shall positively demand payment for the time it is sent. LOOK CAREFULLY AT THE LABEL ON YOUR PAPER.

A WET silk handkerchief tied, without folding, over the face is a security against suffocation from smoke. It permits free breathing, and at the same time excludes the smoke from the lungs.

S. F. OFFICE, 29 STEUART ST.

ORANGE CULTURE IN CALIFORNIA.

Now that the interest in the culture of the orange is extending so as to embrace nearly all parts of the State, a book giving the results of experience in parts of the State where the growth of the fruit has been longest pursued will be found of wide usefulness.

"Orange Culture in California" was written by Thos. A. Garcey of Los Angeles, after many years of practical experience and observation in the growth of the fruit. It is a well-printed hand-book of 227 pages, and treats of nursery practice, planting of orange orchards, cultivation and irrigation, pruning, estimates of cost of plantations, best varieties, etc.

The book is sent post-paid at the reduced price of 75 cents per copy, in cloth binding. Address Dewey & Co., Publishers "Pacific Rural Press," 220 Market St., S. F.

TOKOLOGY Complete LADIES GUIDE The very best book for AGENTS. Sample pages free. Price \$1.75. A. B. Stockham & Co., 157 La Salle St., Chicago.

These Steam and Horse Power Combined Harvesters were run successfully all last harvest, giving entire satisfaction in all ways in grain in every condition.  
**SEND FOR NEW CIRCULAR.** For further information, prices, etc., address

DANIEL BEST, San Leandro, Cal.

### REGAN VAPOR ENGINE.

NO BOILER. FIRE. EXPLOSION. STEAM, ASHES OR ENGINEER.

Started Instantly Without Even a Match. Will Run on Natural or Manufactured Gas or Gasoline. The Moment Engine Ceases to Run, all Expense Stops.  
Upright and Horizontal, Stationary and Marine Engines from 3-4 Horse Power, Upward.  
Our Engines are especially adapted for Pumping and Irrigating and Spraying Fruit Trees; in fact, for any use where power is required.  
**OVER 400 IN USE.**

POPE & TALBOT, LUMBER, Office, 204 California Street. }  
SAN FRANCISCO, Feb. 25th, 1890. }

REGAN VAPOR ENGINE CO.—Gentlemen: The 4 H. P. Vapor Engine I bought of you last May has been in constant use ever since, and has given me entire satisfaction. I have found the engine to be all that you claimed for it, and more too. You can use my name for reference if you so desire. I am, yours truly,  
H. TALBOT.

We Carry Thos. Kane & Co's Famous Racine Launches, fitted with our New Compound Engines.  
**Send for Circular.**

**REGAN VAPOR ENGINE CO.,**  
221-223 First Street, San Francisco, Cal.

### Cheaper Than Windmills for Farmers!

Our Perfected "Safety" Engines Cost to Run only 1-8 Gallon of Gasoline per Horsepower per Hour.  
No Boiler, Fire, Smoke, Steam, Ashes or Heat. No Engineer, No License, No Danger. Single and Double Acting. 1/2 H.P. to 20 H.P.

GENTLEMEN—The 2-H. P. Engine received and set up yesterday. We attached it to part of the machinery in my shop, and it ran my Drill Press, a small Lathe, a large 24 inch by 14-foot Lathe, and a set of Emery Wheels, all of which it handled easily, to our great surprise.  
SAN BERNARDINO, CAL., January 10, 1891.  
Yours very respectfully,  
J. B. HENDERSON.

GENTLEMEN—I am satisfied, after running for over a month my Bean Cleaner, etc., with the 4-H. P. Engine you sent me, that it is much the best Gas Engine I have seen. The electrodes are certainly superior to all others; also your safety rotary slide-valve, which is the personification of simplicity, positiveness and durability; I am satisfied it will develop much more power than we have need for. I also want a 1/2 or 1-H. P. for my wife and daughters to use about the house; we have a rotary clothes washer, can also do the churning, etc. I do not know of any better recommendation than to order a second engine.  
CARPINTERIA, CAL., January 12, 1891.  
Respectfully yours,  
P. C. HIGGINS.

NOTE.—Both of these Engines were shipped to the parties named, and were set up by them solely by the diagram and printed directions we sent them.

Pumping Plants, Yachts & Launches, Street Cars, Fire Engines, Water Works, Etc. **ELECTRIC VAPOR ENGINE CO.** Complete Plants of all kinds, Stationary or Mounted on Wheels. U. S. AND FOREIGN PATENTS.

## HOLT BROTHERS' Improved Combined Harvester.

For Efficiency, Durability, Light Draft and Fine Work it is Far Superior to any other Harvester of the Present Day.

Those contemplating buying are invited to visit our manufactory and see for themselves. Circulars and testimonials sent on application to

STOCKTON WHEEL CO., or, HOLT BROTHERS,  
Stockton, Cal. 30 & 32 Main St., S. F.

## COOLEY CREAMERS

ARE THE MOST POPULAR AMONG DAIRYMEN.  
BECAUSE THEY MAKE MORE BUTTER.  
BECAUSE THEY MAKE BETTER BUTTER.  
BECAUSE THEY SAVE MOST LABOR.

Because the PROCESS EXPELS the animal heat IMMEDIATELY, and PREVENTS the development of BACTERIA, thus producing the PUREST FLAVOR, and accounting for the great number of Medals awarded viz:

22 GOLD MEDALS

and Silver Medals and First Premiums too numerous to mention. In 4 styles and 12 sizes. VERMONT FARM MACHINE CO., BELLOWS FALLS, VT. Illustrated catalogue free. Manufacturers of and Dealers in Churns, Butter Workers, Butter Printers and Carriers. Cheese Vats, Cream Vats, Engines, Boilers, and all Dairy and Creamery supplies.

## Acme Automatic Safety Engine.

WITH PATENT SECTIONAL BOILER.  
Uses Oil as Fuel.

1, 2, 3, and 4-Horse Power Developed at only Nominal Expense.

SAFE! RELIABLE! ECONOMICAL!

These Driving Powers are in General Use by

BOATMEN, for Marine Purposes.  
BLACKSMITHS, for Blowers, Drills & Machinery.  
BUTCHERS, for Meat Cutters, Grinding, Cooking Sausage, Rendering Lard by Steam.  
DAIRYMEN, for Cream Separators, Churns, Workers, Pumping, Cutting Feed and Grinding Grain.  
FRUIT GROWERS, for Sawing Box Material, Operating Dryers, Pumping Water, Grinding Tools.  
GROCERS, for Coffee and Spice Mills, Roasters and Ventilators.

GRAIN BUYERS, for Cleaning and Elevating Grain.  
FARMERS, for Cutting & Steaming Feed, Cleaning & Grinding Grain, Sawing Wood, Pumping Water, Churning, Grinding Tools, Elevating Grain & Hay.  
MACHINISTS AND CARPENTERS, for Saws, Lathes, Drills, Planers, Grindstones, Emery Wheels, etc.  
PRINTERS, for Presses, Paper Cutters & Elevators.

And Many Other Purposes too Numerous to Mention.

The ACME AUTOMATIC SAFETY ENGINE is the only oil-burning Engine made that will successfully run an Electric Light.

You will never know how cheaply it runs, nor how well it operates, until you give one a trial. Write for further information.

Campbell, Portland, saw guide; James Williams, Portland, rowlock for boats. Washington—Legrand D. Harding, Colfax, grinding mill; William B. Morris, Seattle, stump-puller.

NOTE.—Copies of U. S. and Foreign patents furnished by Dewey & Co., in the shortest time possible (by mail for telegraphic order). American and Foreign patents obtained, and general patent business for Pacific Coast inventors transacted with perfect security, at reasonable rates, and in the shortest possible time.

## THE VINEYARD.

## Organization of Grape-Growers.

An important meeting of the grape-growers of Cupertino, Santa Clara county, was held April 23. Col. E. G. Hall acted as chairman and Col. McGlinchey secretary. The report of the Committee on Organization was then read. It was as follows:

First—That this organization be known as the California Grape-Growers' Protective Association of Santa Clara Valley West Side.

Second—None but grape-growers and wine-makers, who are owners of vineyards, are eligible to become members of this organization.

Third—That this association be empowered to appoint an Advisory Board of ten members, whose duty shall be to devise a method for the disposition of the coming vintage.

Fourth—That a membership fee of \$5 be assessed to each member of the association.

Fifth—That two delegates be appointed for the purpose of visiting other wine-growing districts to secure their co-operation with this association.

Captain Merithew wanted to have the hall canvassed to see who would become members. His suggestion was acted on and 30 men signed the roll.

An Advisory Committee of ten was elected, as follows: Captain J. P. Crossley, C. P. Howes, W. C. Miller, A. Malpas, J. O. Cottle, A. H. Wood, N. Hall, T. Kerwin, Colonel E. G. Hall, D. Gartman and Bozo Radovich.

Bozo Radovich and Col. McGlinchey were appointed a committee on organization to organize the State.

Capt. J. P. Crossley was elected President, Capt. A. H. Wood Vice-President, J. B. Kerwin Secretary and Col. E. G. Hall Treasurer.

Mr. Malpas wanted to know what acreage of vines was represented. On a roll-call it was found that over 1400 acres were represented.

J. B. Kerwin was added to the Advisory Board.

On Motion of A. Malpas a District Canvassing Committee of one from each district was ordered.

Jos. Cottle, A. Malpas, Capt. Howes, W. Cochrane, J. D. Williams were then appointed.

J. C. Murphy wanted the committee to be empowered to solicit names and have printed copies of the plan of organization to be signed similar to the one signed by those present.

It was decided to meet again on April 16th.

THE CANNERY COMBINE.—A week ago it was believed that the cannery combine was effected, but it does not yet appear to be settled.

OREGON'S GREATEST FOREST.—It is said there is a tract of forest trees in Southern Oregon embracing about 16,000 square miles, which, cut and sold at \$10 per 1000 feet, would pay our National debt twice over. It is estimated that the amount of merchantable timber standing will reach 400,000,000,000 feet.

## Syracuse Chilled Plows.

The Syracuse Chilled Plow Co. of Syracuse, N. Y., is pushing their business with unusual vigor this season, and as a result report increased sales over any year in the immediate past. The company is continually increasing its plant, and during the past year has added in buildings and machinery over \$50,000. Among the conspicuous changes made is the location of their foundry, in the upper story of their new building. This innovation has proved a great boon, since the extra light makes it possible to do much better and more work during the same hours, increasing the quality of goods and reducing the cost of manufacture. The forging department, a conspicuous department of this company's business, has been doubled in size, and by the addition of several new tools, has more than doubled its capacity. They have within the last month added a new branch to their business, having bought the stock, patterns, patents and good-will of the Rochester Plow Co. This gives them a full line of first-class gang plows, seven different styles, ranging in size from a 5 to a 14 inch cut, and in numbers from two to four plows to the gang. There are three different styles to each size, viz.: Field, Vineyard and Half-vineyard, the titles of each indicating the class of work they are intended to perform. Space forbids our enlarging on the regular lines made by this company. Suffice it they are keeping abreast of the times in turning out hand plows in wood, iron and steel beams, with chilled and steel bodies, single and double shank plows, steel-frame spring-tooth harrows in three styles, and seven different sizes, steel and wood frame cultivators, single and double shovel plows, road-scrapers and a complete line of horse haying tools, including grapple forks, single and reversible carriers, etc. This company issues a complete illustrated catalogue, which they will mail without charge to any person writing for one. They solicit inquiries.

## Destructive Insects and Diseases.

Mr. Wm. Stahl, of Quincy, Ill., has made a special study of how to prevent the ravages of insects and fungus diseases, and will send to any one interested, free of charge, a full and descriptive treatise on this subject.

## New Books for Horticulturists.

A New Book on Propagation of Plants.—"THE NURSERY BOOK," by Prof. L. H. Bailey, Editor of *The American Gardener*, has been prepared with the utmost pains. The book is absolutely devoid of theory and speculation. It has nothing to do with plant physiology, nor with any abstruse reasons of plant growth. It simply tells plainly and briefly what every one who sows a seed, makes a cutting, sets a graft, or crosses a flower wants to know. It is entirely new and original in method and matter. The cuts number almost 100, and are made especially for it, direct from nature. The book treats of all kinds of cultivated plants, fruits, vegetables, greenhouse plants, hardy herbs, ornamental trees and shrubs, and forest trees. A "nursery list" is the great feature of the book. It is an alphabetical list of over 2000 plants, with a short statement with each, telling which of the operations described in the first five chapters are employed in propagating them. About 300 pages, 16mo. Price, in library style, cloth, wide margins, \$1; pocket style, paper, narrow margins, .50 cts.

The New Potato Culture, by Elbert S. Carman, Editor of the *Rural New Yorker*. For the past 15 years the author has given a part of his time to potato experimentation, in the hopes that he might throw some additional light upon the various questions involved in the central problem, "How to increase the yield without proportionately increasing the cost of production." The object of Mr. Carman's book is to show all who raise potatoes, whether for home use solely or for market as well, that the yield may be increased three-fold without a corresponding increase in the cost; to show that the little garden patch, of a fortieth of an acre perhaps, may just as well yield ten bushels as three bushels; to induce farmers and gardeners to experiment with fertilizers, not only as to kind, but as to say, the constituents and their most effective proportions, but as to the most economical quantity to use. Price, cloth, 75 cts.; paper, .40 cts.

Address DEWEY & CO., 220 Market Street, San Francisco, Cal.

We can save you Fifty Dollars when you Build. See?

## THE PACIFIC RURAL PRESS.

Truly a Farm and Home Journal of the highest class, pure in tone and well informed on all matters of industrial interest.

All branches of Farming, including the keeping and breeding of Horses, Cattle, Sheep, Swine, Bees, Poultry, etc.; Garden, Fruit, Vine, Grain, and Hop Culture; Reliable Market Reports, with other important departments devoted to the Grange, Home Circle, News, etc.

It is the Leading Agricultural Home Newspaper and standard authority on all branches of California Agriculture.

Its illustrations are probably the most practical, original and helpful of any agricultural journal in the world.

It also contains more fresh and useful agricultural information for the readers of this coast, by far, than can be obtained through any other publication issued here or elsewhere.

Established by its present proprietors in 1870, with rare facilities for leading in its position, and securing the combined patronage of the most intelligent and thrifty husbandmen of this coast, where the soil, climate, and many other conditions, imperatively demanded a new agricultural literature.

A steady and leading advocate of the Grange cause from its first introduction on this coast, in 1873, the Grange edition of the RURAL has been endorsed as the OFFICIAL WEEKLY ORGAN OF THE STATE GRANGE OF CALIFORNIA, and as successor to the weekly issues of the *California Patron* it is the leading Grange advocate for OREGON, WASHINGTON, IDAHO AND MONTANA TERRITORIES.

It has the fullest and most accurate REPORTS OF HORTICULTURAL MEETINGS, and is the best record of the EXPERIENCE OF INDIVIDUAL FARMERS AND FRUIT-GROWERS in all parts of the State.

These natural advantages, combined with liberal enterprise, strict and long-continued fidelity to the welfare of the farmers and their households, has given the RURAL an aggregation of patronage which places it far in advance of all competitors and which enables us to give much better issues at decidedly lower living rates, (to the advantage of both subscribers and publishers,) than would otherwise be possible.

THE PACIFIC RURAL PRESS has more circulation and influence in the Pacific States and Territories than all the other agricultural weeklies in the United States combined. Advertisers can reach nearly all the leading reading farmers through its columns.

A well-known horticulturist who was in attendance upon the meetings of fruit-growers, writes: "The greatest praise that could be bestowed on the RURAL PRESS at the late Fruit-Growers' Convention and, which shows, undoubtedly, the well-deserved popularity of that paper, is the fact that almost all the members of that Convention were subscribers to the Press."

Its market reports are prepared with care and the greatest reliability possible for the benefit of the producer.

Yearly subscription \$3. [Fifteen months are allowed new subscribers and old subscribers paying \$3, ten months for \$2, five months for \$1 and three months for 60 cents, paid strictly in advance.]

DEWEY & CO., Publishers, No. 220 Market Street, San Francisco.

Send for Catalogue of

THE ONLY INCUBATOR THAT DOES AWAY WITH ALL LAMPS OR AUTOMATIC GOVERNING APPARATUS.

THE HATCH CO., - - SAN JOSE, CAL.

Dealers in Everything for Poultrymen.

## THE BEST FENCE YET!

Cheap, Durable, Portable and Safe.

THE SPALDING HUMANE WIRE FENCE is composed of eight No. 12 galvanized steel wires, woven into four cables of two wires each; interwoven every five feet is a corrugated iron stay or guard, and held in place by the cables, thereby holding the cables firmly in place, preventing them being spread apart and letting stock through. The stays or guards are corrugated and an inch and three-quarters in width, making the fence as visible as a board fence, which is a very essential point. Write for circulars and prices. Address RICH-TURNBULL MFG. CO., 195 La Salle St., Chicago.

## MECHAM & FRITSCH,

— IMPORTERS AND BREEDERS OF —

## Red Polled Cattle.

We have 19 head of Imported Stock.

YOUNG BULLS and CROSSBREDS ON DEVONS for Sale.

H. MECHAM,

Importer and Breeder of Shropshire Sheep. They were all imported from England in '83, or bred direct from Imported Stock, and all registered.

H. MECHAM,

Breeder of American Merino Sheep Without Horns.

The only flock in the United States. When we bought our sheep East 20 years ago, among them was a ram without horns. He grew to be a fine large sheep, shearing at 2 years old, a 12 months' fleece, 35 lbs. of long white wool.

I have bred from him and his get ever since and have never made an out-cross and never used the same ram but one year on the same flock. My rams at two years old will weigh from 160 to 180 lbs., have a strong constitution, without wrinkles, and will shear on an average about 25 lbs., a 12 months' fleece, of long white wool. Rams and Ewes for sale. P. O. Address, Stony Point, Sonoma Co., Cal.

K. R. Station, Petaluma.

## THOROUGHbred JACKS!

A FEW MAGNIFICENT JACKS BRED FROM THE finest strains of blood from Kentucky. Correspondence solicited. L. U. SHIPPEE, Stockton, Cal.

## RICE'S PATENT

Prevents Calf or Cow from Sucking Themselves or Each Other.  
Thoroughly Tested and Endorsed by All. No Hindrance in Eating and Drinking.  
No Pain. Complete Success.

No. 1, for Calves, 50 cts. ea., by mail postpaid... \$ 55  
No. 2, for Yearlings, 75 cts. ea., by mail postpaid... 80  
No. 3, for full grown animals, \$1, by mail postpaid 1 10

**FUNK'S PATENT CALF FEEDER.**  
Also for Colts and Lambs.

Raises better calves than any other method. Better than the cow, because can feed prepared feed and give all the calf can eat. As soon as the calf feels the nipple it tastes the milk and is glad to suck; as it gets older it weans itself. No air swallowed; no fingers chewed; no ears sucked. Less trouble; greater success; easy to clean.  
Sample Feeder mailed postpaid, \$1.00; per dozen, \$9.00  
There are Great Advantages in REARING YOUNG CALVES BY HAND over rearing them with the cow. It takes less time and trouble, because they are easier handled, depend on themselves and winter better; get to eating sooner by putting milk-stimmed milk and slop to spare; make more butter because the cream is saved; can run in the same pasture with the cow, never have to wean them, and the cow does no fretting for the calf.  
Will send trial Weaner and Feeder, postpaid, \$1.50. Don't fail to give them a trial.

Horse Liniment

Is certainly the best preparation of its kind in the market. Ranchers, Stock Raisers and Horse Owners of every description will tell you that it does good work every time.

MESSRS. H. H. MOORE & SONS, Stockton, Cal.—GENTLEMEN: In answer to your inquiry, would state that I used your H. H. H. Liniment on my Holland prize-winning cow, "Lena Menlo," for a wrenched shoulder, and it relieved her very much. She calved the next day, and while still suffering from the sprain gave the largest authenticated quantity of milk ever given on this coast (10½ gallons per day), showing conclusively the great relief received from your remedy. I consider it a necessity in my stables, and when away from home feel perfectly safe, as inexperienced men can do no harm with it, as they can with the more powerful blisters. Respectfully yours,

## S. F. MARKET REPORT

## Market Review.

## DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, April 8, 1891.

Rains the past week followed by cool moist weather have done little in dispelling fears about crops. With showers later on and an absence of hot winds, we will have larger crops than ever before known. Money is getting easier causing a better feeling in all lines of trade. Wheat after receding slightly is again on the up grade. The following is to-day's cablegram:

LIVERPOOL, April 8.—Wheat—Firm. California spot lots, 85 7/8d; off coast, 42s 9d; just shipped, 41s 6d; nearly due, 42s; cargoes off coast, firmer; on passage, firm; Mark Lane wheat, firm; French country markets, generally dearer; wheat and flour in Paris, firm; weather in England, very cold.

## Foreign Grain Review.

LONDON, April 6.—The *Mark Lane Express* says: English wheats are in active demand at an average rise of 1s. The finest kinds are quoted from 40s 42s, and farmers are not eager to sell. Foreign wheats are up 1s. Californian firm, 43s. Large consignments of Indian, Californian and Australian wheats will hardly meet the prospective demands. Limited arrival of barley raised values 6d. Oats are abundant. Corn at London, Liverpool and Glasgow is quoted at 6d and at Bristol 1d dearer. At to-day's market English wheats were stronger; foreign averaged 2s dearer. There was good inquiry for Californian and Australian. Corn is badly sorted in the new crop. Flour, 1s per sack dearer on fortnight.

## Liverpool Wheat Market.

The following are the closing prices paid for wheat options per cwt. for the past week:

	April.	May.	June.	July.	Aug.	Sept.
Thursday.....	85 1/2d	86 1/2d	85 1/2d	85 1/2d	85 1/2d	85 1/2d
Friday.....	85 1/2d	86 1/2d	85 1/2d	85 1/2d	85 1/2d	85 1/2d
Saturday.....	85 1/2d	86 1/2d	85 1/2d	85 1/2d	85 1/2d	85 1/2d
Sunday.....	85 1/2d	86 1/2d	85 1/2d	85 1/2d	85 1/2d	85 1/2d
Tuesday.....	85 1/2d	86 1/2d	85 1/2d	85 1/2d	85 1/2d	85 1/2d

The following are the prices for California cargoes for off coast, nearly due and prompt shipments for the past week:

	O. C.	P. S.	N. D.	Market.
Thursday.....	42 1/2d	41 1/2d	41 1/2d	Very strong.
Friday.....	42 1/2d	41 1/2d	41 1/2d	Strongly held.
Saturday.....	42 1/2d	41 1/2d	41 1/2d	Firm, inactive.
Sunday.....	42 1/2d	41 1/2d	41 1/2d	Quiet but firm.
Tuesday.....	42 1/2d	41 1/2d	41 1/2d	Very strong.

## Eastern Grain Markets.

The following shows the closing prices of wheat at New York for the past week, per bushel:

	April.	May.	June.	July.	Aug.	Sept.
Thursday.....	111 1/2	111 1/2	109 1/2	105 1/2	105 1/2	105 1/2
Friday.....	111 1/2	111 1/2	109 1/2	105 1/2	105 1/2	105 1/2
Saturday.....	111 1/2	111 1/2	109 1/2	105 1/2	105 1/2	105 1/2
Sunday.....	111 1/2	111 1/2	109 1/2	105 1/2	105 1/2	105 1/2
Tuesday.....	111 1/2	111 1/2	109 1/2	105 1/2	105 1/2	105 1/2

The closing prices for wheat have been as follows at Chicago for the past week, per bushel:

	April.	May.	June.	July.	Aug.
Thursday.....	105 1/2	105 1/2	103 1/2	103 1/2	103 1/2
Friday.....	105 1/2	105 1/2	103 1/2	103 1/2	103 1/2
Saturday.....	105 1/2	105 1/2	103 1/2	103 1/2	103 1/2
Sunday.....	105 1/2	105 1/2	103 1/2	103 1/2	103 1/2
Tuesday.....	105 1/2	105 1/2	103 1/2	103 1/2	103 1/2

NEW YORK, April 8.—Wheat—\$1.15 for May, \$1.12 1/2 for June, \$1.10 1/2 for July, \$1.06 for August, and \$1.07 for December.

CHICAGO, April 8.—Wheat—\$1.05 for May and \$1.03 1/2 for July.

## Eastern Weekly Crop Report.

WASHINGTON, April 4th.—The weekly crop bulletin says: The season continues late, and, owing to excessive rains, muddy roads and cold weather, little farm work is yet accomplished in the Northern States. Cold and rainy weather retarded growth in the Ohio and in the Upper Mississippi valley, but generally, throughout the winter wheat region, wheat, fruit and pasture continue in good condition. The ground is in excellent condition in the spring wheat region of Minnesota and the Dakotas. Excessive rains also retarded work in Kentucky and Tennessee, where the season is reported from two weeks to a month late. Grass and wheat in these two States are doing well, but snow and the freeze of last night will probably injure fruit, as the trees are reported in bloom. It is also probable that damaging frosts will occur to-night as far south as the northern portion of the Gulf States.

## Wheat Situation Abroad.

LONDON, April 6.—The *Standard* to-day publishes a long review of the agricultural outlook, in the course of which it says the steady rise in wheat revives the hopes of the English farmer and adds that wheat will probably reach the highest price in many years, the principal cause of the rise being the failure of foreign crops. The wheat crops of France and Russia, according to the *Standard*, are much below the average, and it says the deficiency will be at least 20,000,000 qrs. The same paper says: It is believed that the cold winds and frosts have almost destroyed the French crop. Germany, Holland and Belgium all furnish pessimistic reports. In Roumania there is a decreased wheat area and in India there has been a bad wheat season. The only exception is Hungary, where there are better prospects, but it is almost certain that the world's wheat consumption will exceed the production as computed. Whatever the magnitude of America's crop may be, it will not be sufficient to cover the European deficit, thus compelling an extensive draft on the reserves for the third year in succession. The *Standard*, in conclusion, says: Increased home consumption and the decreased wheat area, owing to the spread of population, and a recourse to scientific tillage, in order to repair the waste of the first settlers, thus increasing the cost of production, must inevitably remove the American farmer's formidable competition in the European markets and allow the English farmer to look forward to a prosperous future.

## Eastern Wool Markets.

NEW YORK, April 3.—Bradstreet's will say: The demand for wool has been weak. Manufacturers have bought heavily since the first of the year and are now well supplied. Activity in Australian wools is not so marked. Domestic are reported to be very quiet, and sales are small. The arrivals of foreign wools have been heavy, and it will take lower prices to dispose of inferior grades. Reports received from the coming clip all point to a large supply.

There is sufficient wool in the market to supply manufacturers until it arrives. Values of first-class wools have not changed during the week, though an easier feeling is noted in some grades. Ohio fleeces and pulled wools are dull. Dealers are now offering concessions in Ohio X and XX. Territories and Texas wools are quieter. The stocks of these wools are so light that holders feel no necessity to press sales at present. There is a continued fair inquiry for unwashed and unmerchantable wools. The quotations in carpet wools are being held very firm by dealers. The demand is not strong and the distribution is light.

NEW YORK, April 6: There was a good attendance at the seaboard wool markets. Demand not sharp. The position of goods not stimulating for manufacturers. Nearly everything except delaines favors buyers. Blending of suitable foreign, continues a noticeable feature in important large mill operations. Still our broken stocks of domestic are likely to go out well before the new clip and late prices are backed by the strong opening of London. Boston recently took 1200 bales of Texas from here. Boston—light trading; sales, foreign, 1,510,000 lbs. and 500,000 lbs. domestic, including 65,000 lbs. California, 18@20c. Fine-washed wools steadier at 30@32c. Others hold sample rates last noted. Philadelphia—quiet; worsted grades held firm; Australian growing in favor.

## Dried Fruits.

NEW YORK, April 3.—The *Commercial Bulletin* says, concerning "a California fruitgrower's" statement "that holders of Malaga raisins of lower grades here, being desirous of realizing, have substituted bags for boxes and are offering Malaga as California raisins at 5@5 1/2c." Our Pacific Coast friend might except one point. The goods referred to were not offered as California raisins. They have been sold as sack raisins simply and on their merits. The stock was of the 1889 season packing, London layers, originally, and cost about \$2 per box. At 5 cents a pound in bags buyers considered them of good value. California need not be alarmed if some of the 1890 packages of Malagas are dumped into sacks as a means of facilitating sales, and there is a rare chance that Malaga will send some stock this way in sacks the coming season. In short, the Pacific Coast will have to do something else than talk high prices in the future.

NEW YORK, April 6.—The best bag raisins nominal, 5 1/2c; boxed freely offered at \$1.01-1.70; Three Crown, loose, \$1.50@2 for layers, only perfectly cured lots equal to wet weather were making outside figures.

Evaporated Peaches exceed all the present wants; boxes offered at 13 1/2c.

Prunes—Weak; 9c for sacks; 10c for the four sizes; a few large quoted 11c.

Apricots are freely offered. Boxes 15@16c, bags 13@14c, would be shaded for rounded sales.

Apples are quoted at 12 1/2c as extreme.

NEW YORK, April 6.—The *Commercial Bulletin* says: A good many California raisins have moved from first hands in a quiet way the past week. The practical cleaning up of the sacked stock a little time ago has been followed by the diversion of attention to the boxed stock that has been knocking about at low prices, the outcome of which was numerous sales of fair-sized lots and a decided impression upon the supply controlled by commission firms. Business was chiefly at \$1.20@1.30 per box for loose, and \$1.30@1.50 for layers. While the movement doubtless affords a certain degree of satisfaction, indicating that California raisins have lost nothing in point of popularity, it is obvious that low cost is a conspicuous factor in helping along the movement. For that matter Pacific coast fruit, at current prices, seems to outsell Malagas and Valencias in no uncertain manner, but the foreign stock is getting so cheap there is little chance for improvement in prices for California.

## Miscellaneous.

NEW YORK, April 5.—As about only four weeks remain for the wholesale distribution of dried fruits a heavy feeling prevails. The selling season is far advanced and has proved one of disappointment. Many things of coast interest are being unreservedly pressed on the market, and it looks as if any slaughter will be submitted to, for goods that cannot be economically put into cold storage.

The demand for hops is fair. Sellers are not disposed to invite business by softening last rate and will not part with extra Pacific at 32c; for '90s, 25@31c; common to choice, State and Pacific. Exports the past week 265 bales.

A car of California Naval oranges reported at \$1.65@3 per box. They unpacked poor, owing perhaps to inexperienced putting up. Dealers question if this fruit will successfully compete with Florida's attractive stock. The variety as yet goes chiefly to fancy retailers, and the fact that Coast-grown can reach us when Floridas diminish is not valuable unless size and quality approximate.

Mustard seed is quoted as heretofore for both colors.

Lima beans—Unsettled; \$2.60 for extreme choice.

Honey—Slow; 6 1/2c@7c for amber.

CHICAGO, April 3.—A special dispatch from Kansas City, says that a colossal cattle deal has just been completed by wealthy stockmen of the West and Chicago packers. It involves an outlay of \$2,500,000, and 80,000 head of cattle have been purchased in Texas to be shipped to the Chicago market. Half of these were purchased for W. P. Herring of this city, P. D. Armour of Chicago and E. M. Howins, President of the Cherokee Strip Live Stock Association. An equal number was purchased for Nelson Morris of Chicago, by Colonel Suggs, a well-known stockman.

## The Eastern Peach Crop.

Reports from all parts of Maryland indicate a fine fruit crop the present year. The buds are now in fine condition, and have not yet been injured to any extent, and if it should now become warm, it would probably be ten days or two weeks before they would bloom. Experienced growers say we have never yet missed a crop when they were alive at this date. Reports from all other growing sections are favorable for a fine crop the present season.

The farmers and fruit-growers of Hunterdon and Warren counties, New Jersey, are very jubilant over the signs of a big peach crop. The cold weather of last month was very beneficial in retarding the development of the buds, and the flowing of the sap, and the most trustworthy source of information places the crop at a large one. The buds are now in a condition that insures their safety against any

cold snap that may occur.—Denton, Md. *Journal*. Telegrams received since, report heavy damages in several States by heavy frosts.

Tuesday.....	156 1/2	155 1/2	156 1/2	156 1/2	156 1/2	156 1/2

BAGS—The market is steady for standard size hand sewed at 7 1/2c to 7 3/4c for May-June delivery.

BARLEY—The sample market after receding slightly is advancing again. In futures, trading on Call has been fair, with the bulk of sales cross orders. The following are to-day's reported sales on Call:

Morning Session: Buyer 1891, after August 1st—100 tons, \$1.11. Seller 1891—100 tons, \$1.05 1/2 c. Afternoon Session: Buyer season—200 tons, \$1.36 1/2; 100, \$1.36 1/2; 100, \$1.36 1/2 c.

BUTTER—Receipts continue in excess of the demand. Up north the distributive demand is being largely supplied by local dairies. It now looks as if packing will soon be in order in this state.

CHEESE—Under free receipts and only a moderate demand, the market has shaded off slightly closing weak.

EGGS.—The market has held fairly steady prices. Only selected eggs move off quickly. By selected is meant fresh laid (eggs not smooth or oily) and large sized.

FLOUR—The market is very strong at a still higher range of values. With wheat on the up grade, it is not at all unlikely but a still higher range will soon be established.

WHEAT—The market after shading off from Thursday to Monday developed considerable strength on Tuesday, which was followed by another advance to-day (Wednesday.) On Call, trading (legitimate and cross orders) has been good. The following are to-day's reported sales on Call:

Morning Session: Buyer 1891—400 tons, \$1.58 1/2; 100, \$1.58 1/2; 600, \$1.58 1/2; 200, \$1.58 1/2; 500, \$1.58 1/2; 500, \$1.59; 100, \$1.59 1/2; 500, \$1.59 1/2; 100, \$1.59 1/2. Buyer season—200 tons, \$1.57 1/2; 300, \$1.58; 100, \$1.58 1/2; 500, \$1.58 1/2; 100, \$1.59. Seller 1891—100 tons, \$1.49 1/2; 100, \$1.50; 200, \$1.50 1/2; 100, \$1.50. Buyer 1891, after August 1st—1200 tons, \$1.56; 500, \$1.56 1/2; 100, \$1.56 1/2; 100, \$1.56 1/2; 200, \$1.56 1/2; 300, \$1.56 1/2 c. Afternoon Session: Buyer 1891—200 tons, \$1.59 1/2; 900, \$1.60; 400, \$1.60 1/2; 1600, \$1.60 1/2; 400, \$1.60 1/2; 1200, \$1.60 1/2. Buyer season—400 tons, \$1.59 1/2; 1891, after August 1st—100 tons, \$1.57 1/2; 800, \$1.57 1/2; 100, \$1.57 1/2; 300, \$1.57 1/2. Seller 1891—300 tons, \$1.51 1/2; 1100, \$1.52; 100, \$1.51 1/2; 300, \$1.51 1/2; 100, \$1.51 1/2 c.

## Market Information.

## Produce Receipts.

Receipts of produce at this port for the week ending April 7th, were as follows:

## Cereals.

Mark Lane Express.—March 16: Should April prove a genial spring month, with prevalent south-westerly breezes and a fair fall of soft rains, we expect the country soon to put on a highly favourable aspect, showing healthy and well rooted crops. On the Continent things are now conceded to be far less favourable. France, Spain, Belgium, Holland, and Germany, growing a total of 72,000,000 qrs. of wheat in a good average year, are now regarded as unlikely to have within 20 per cent. of a full yield, the reduction being largely inevitable as the result of abandoned wheat cultivation in fields where the lightly-rooted grain had perished during the winter. The finding of an extra 14,000,000 qrs. of wheat next cereal year will throw a heavy task on the harvests of Austria-Hungary, Russia, India, and the United States, even should all these four great producing countries have good crops. At present the promise is good in the first two, and not unsatisfactory in America; but the Indian crop is the only one which is in hand, and the surplus here, as compared with last season, although undoubtedly, is not commonly taken at more than four and a half million qrs. against three and a half. Five millions will be an outside figure.

London *Agricultural Gazette*.—March 16: The wheat crop in France was reported to have received material and extensive damage at the break-up of the frost, and France, according to her wont, immediately set to work to buy equal to what she considered her deficiency would be. This set the ball rolling, and our merchants, who had been working band to mouth in the face of barely moderate stocks at waterside, began to operate more freely than they have done for years past. Consequently the "floating supply," which will be seen to be nearly as large as it was last year at this time,

will rapidly increase, and after, say, two months, the large purchases recently made will begin to drop in; all exporting countries are selling freely at the higher level of values excepting the United States (from Atlantic ports), and even Uncle Sam thinks it is time to part with a little more flour. There can scarcely be any glut in the market just yet, but if crop reports in France should become decidedly more favourable, and the acreage shown to be reduced to a less important extent than was feared, it is possible that the present level of values here might not be maintained. The only certainty in connection with the subject is that there is comparatively little foreign wheat in hand here; and the seeming probability is that for some six or eight weeks the increasing quantity can only be within moderate limits. After that the whole thing is a matter of speculation.

The estimated yields of wheat in the colonies of Victoria and South Australia are estimated to produce jointly 3,791,906 qrs., against 3,259,135 in 1889-90, 1,854,339 qrs. in 1888-9, and 4,042,658 qrs. in 1887-8. In New Zealand the new wheat crop is said to be of good quality, but no definite quantity has yet been indicated.

Mild weather has been reported from South Russian as well as from Southern Baltic ports. Odessa and Danubian ports are expected to be open for the season; at the former port there are 53 steamers waiting for cargoes, with others daily arriving at all the more important ports.

The local wheat market closed strong on last Wednesday, which was followed by higher prices on Thursday under free purchases of futures by a large milling and exporting firm. These purchases were bona fide and made against cargo sales in England for shipments in April and May. If the Call Board is to be run as a kind of grain gambling institution it would seem that the directors would introduce selling and buying by months, the same as is done in New York, and then exporters can and doubtless would operate more freely, for they could sell cargoes ahead for shipment in certain months, well knowing that they would have the wheat coming in. Since Thursday the market shaded off, but so far as foreign crop advices tend to show, with no good reason. European markets shaded off slightly, and that, too, in the face of a reported shortage in the world's supply. The supply of tonnage in port is large for the season, while the tonnage on the way is over 50 per cent more than at this time in 1890. The large wheat crop in Australasia will no doubt keep vessels there well into May, but after that month they will be offering for this port. The crop on this coast promises to be very large, fully 50 per cent more than it was in 1890. It will undoubtedly tax shippers to the utmost to provide tonnage. In this State in many parts of the San Joaquin valley and as far down as Tulare it is said that previous to this week's rains, the plant in many localities was turning yellow, but in the Sacramento valley as far north as Tehama the plant was looking exceedingly healthy. In San Diego and San Bernardino counties the plant is said to be looking well. The increased acreage over last year is about 1,200,000 acres, so that with an average three quarter yield to the acre the total output will be quite large. The rains this week improved the crop prospects in the San Joaquin, but more rains in this month are wanted to insure a large output to the acre.

The local barley market has held strong, although on call the ring tried by cross orders to break prices. The supply in this State and up north is barely enough to meet the requirements to harvest. The consumption is steadily enlarging and consequently there are those in the trade who are firmly convinced that even with good crops in this State and up north, the market will hold up throughout the season. In giving this opinion they concede that the ring on Call will at times through cross orders temporarily break prices to buy in parcels that will be pressed on the market by impecunious holders. Persons in legitimate trade are outspoken against the Call Board system of dealing in futures, and regret that the Legislature did not pass the bill against gambling or dealing in futures as now carried on on Call.

Corn has been moved under a good demand for both home and shipping. The supply in the State is light, while high prices in the Central States are against shipments to this city.

Oats have not changed. The tone appears to be stronger which is due to light receipts allowing holders here to reduce their stocks. Up north the supply is said to be light.

Rye is essentially unchanged.

## Crops in Washington.

Seattle *Press-Times*, April 3, says: It is estimated by competent authority that last year's splendid grain yield of Eastern Washington will be discounted in 1891. The snows have been bountiful and timely. Gradually melting, the water was absorbed in the ground and there remains, to be drawn up through root and stalk to nourish the immense fields of the inland empire. The broad fruitful valleys of Yakima, Walla Walla, Palouse and the wide sweep of the Big Bend country, which last year charged the elevators and defied the motive powers of the railroads, will this year pour 40 per cent more grain into elevators, depot and box car. In many sections double acreage is reported, and in nearly all others the increase has been from 25 to 30 per cent. Twenty millions of bushels of wheat will demand export from the greatest grain-growing region of the world in 1891. While the people east of the mountains have been turning up the rich black earth and scattering grain, the western part of the State has not been idle. The construction of railroads has brought into market many thousand acres of land.

## Feedstuff.

Ground feed has ruled stronger with a slight advance obtainable for all descriptions. The impression prevails that rolled and ground barley will see still higher prices. The demand for all kinds is fair, while the supply is decreasing.

Hay continues to come in freely. Nevada is a large contributor. The grade of Nevada hay is said to be good. Harvesting will commence soon in the more favored localities in this State. The crop will be large and of a good average quality. The consumption in this State is quite large and steadily increasing.

## Vegetables.

Prices for seasonable garden truck have fluctuated, Peas and beans advanced, but toward the close are falling under increasing receipts. Rhubarb is lower. Asparagus is within the range of canners' views, who clear up the market at from 50 to 75 cts. a box,

Cucumbers and tomatoes are lower. Marrowfat squash is higher. Cabbages are weaker. The crop of garden truck is large and lower prices will rule.

Onions continue scarce and high. The new crop is making rapid growth, and consequently new, will be in the market before long.

Heavy receipts of potatoes from Oregon and Humboldt with free receipts expected to continue throughout this month, caused the market to shade off. Our quotations are more or less nominal. New potatoes are coming in more freely. Some of the consignments are of good size and tolerably well matured. The crop this year is very heavy. Shipments to the East are reported quite large.

**Fruits.**

Strawberries make a little better show. Sales are reported at 25c to 50c a basket. The crop will be large.

Cherries are expected in the market next week. Choice good-keeping apples are in light supply. The demand is only fair.

Limes are weak and lower, but lemons are steady. Navel oranges are doing better, with 150's to 170's fetching still higher prices. Seedlings show more strength. Culls of all kinds are, as usual, hard to place. The shipments overland are very heavy. At the present rate the crop will be marketed sooner than heretofore claimed.

According to catalogue of sales at New York on March 26th, by E. L. Goodsell the following prices were realized for California oranges: 224 boxes seedlings, \$1.55@2.40 a box; 4 boxes fetched \$2.40 and none of the remainder sold at over \$1.80 a box; 40 boxes Navel sold at \$2.15@2.55 a box; 10 boxes St. Michaels' paper rind at \$2.50@2.90 a box. By referring to sales reported by H. Harris & Co., Boston, published last week, it will be seen that the above prices are lower.

Dried fruits and also raisins are reported unchanged. Stocks are gradually cleaning up.

**Live-stock.**

Both bullocks and mutton sheep are a shade lower, with an easier closing reported. Offerings are said to be freer, while slaughterers do not appear disposed to buy heavily unless offered concessions. Block hogs are strong. Milch cows and medium work horses are being called for. General utility horses are wanted, as are matched teams.

The market for dressed cattle is quoted as follows [to obtain the price on foot, take off from the price for stall-fed one-third to one-half, according to the nature of the feed and time fed; and for grass-fed take off the price from 40 to 60 per cent].

**HOGS**—On foot, light grain fed, 5½@5¾¢ lb. dressed, —@—¢ lb.; heavy, 5@5½¢ lb.; dressed, —@—¢ lb. Stock hogs, 4@4½¢ lb. **BEEF**—Stall fed, 7@—¢ lb.; grass fed, extra, 6@—¢ lb.; first quality, 5½@—¢ lb.; second quality 5@—¢ lb.; third quality, 4@—¢ lb. lb.; bulls and thin cows, 2@3¢ lb. **VEAL**—Small, 6@8¢ lb.; large, 5@6½¢. **MUTTON**—Wethers, 8½@9¢ lb.; ewes, 7½@8½¢ lb.; spring lamb, 10@12½¢ lb.

**Miscellaneous**

From reliable advices up to April 8th the following summary of tonnage movement is compiled:

On the way to	1891.	1890.
San Francisco.....	253,244	164,631
San Diego.....	10,454	14,983
San Pedro.....	8,707	3,719
Oregon.....	31,449	28,281
Puget Sound.....	29,522	19,947
Totals.....	339,378	231,553

In port at

San Francisco, disengaged.....	10,502	21,812
" engaged for wheat.....	61,216	52,855
San Diego.....	2,194	
San Pedro.....	3,951	
Columbia River.....	12,635	
Puget Sound.....		
Totals.....	90,508	92,367

To get the carrying capacity, add 65 per cent to the registered tons as given above.

From July 1, 1890, to April 3, 1891, the following are the exports from this port:

Wheat, cts.....	10,295,780	828,035
Flour, bbls.....	896,811	846,619
Barley.....	3,310	13,632

Poultry has held to strong prices throughout the week, with an advance for large-sized, well-conditioned young fowls. Scrub stock, as usual, is hard to sell.

Beans are cleaning up. Receipts are moderate. Honey is without essential change. Receipts and demand are light.

There are very few choice hops on the coast, and to buy them full prices will have to be paid. The supply of other grades is light. Crop prospects are good.

Wool is coming in freely, and buyers are taking hold. We revise our list of quotations. Cold and stormy weather in Europe caused heavy loss of sheep in parts of England and on the continent. This will probably have an effect on wool abroad. The London market is reported strong and slightly higher.

Exports by sea the past week aggregate as follows: Wheat, cts, Dunkirk, 141,257; Falmouth, 45,103; Antwerp, 69,606; Havre, 64,891. Flour, bbls, Central America, 6577; Mexico, 765; Honolulu, 100; China, 12,367; Japan, 4206. Barley, cts, rolled, Honolulu, 196. Wine, gals, New York, 44,478; Bremen, 1180; Central America, 2078. Beans, lbs, Central America, 21,279; Panama, 2014; Honolulu, 12,000; Sydney, 11,052; China, 15,608. Corn, cts, Central America, 2903. Raisins, bxs, Central America, 151; Mexico, 150; Brisbane, 100; Japan, 40. Bran, sks, Honolulu, 1200.

KILLIP & CO.

— WILL SELL AT —

PUBLIC AUCTION

— FOR ACCOUNT —

HENRY PIERCE, ESQ.,

— AT 1 P. M. AT —

OAKLAND TROTTER PARK

On SATURDAY, MAY 2, 1891.

— ABOUT —

Forty Head Trotting and Road Horses,

Including Young Stallions by DIRECTOR, ANTEVOLO, GUY WILKES, STEINWAY, MAMBRINO WILKES, WOODNUT, ABBOTSFORD, ALONZO HAYWARD and GRAND MOOR.

ALSO, Mares in foal or with colts by their side, by BAY ROSE, and Fillies by the above-named Stallions.

Catalogues giving full description and pedigrees are being prepared.

KILLIP & CO., Live Stock Auctioneers,

22 MONTGOMERY STREET, SAN FRANCISCO, CAL.

WHAT DO YOU SELL?

We sell nearly or quite every article used in the family to eat, to wear, or to adorn or furnish the house. We sell 31-inch prints, fast colors, in stly dark shades, at 13 yards for \$1 or 7c by the piece. We sell satteens in all colors of the 15 and 20c grades at 12½¢, and remnants, 2 to 13 ya's, at 10 cents, mostly large figures, but beautiful styles. Only 300 pieces to offer. We sell one line of quilling calico good value at 5 cents, would do for school dresses, and others at 6, 7 and 8 cents for extra wear. We sell black and white plaids in wool goods at 25 cents for misses' or children's Sunday dresses. We sell some beautiful lawns and challies at 10 cents, black lawns with a bar or plaids, if wanted, that are handsome. We sell the best white quilt or bed-spread for \$1 ever offered for the money, full size, try one. We sell lace curtains, 3 yards long, white or ecru, a \$1 pair, tariff or no tariff. We sell a good strong plaid for shirting or working aprons in 20 styles at 12 yards for \$1 or even 8 cents by the piece. Nothing equal to it for wear at the price. We sell sheeting, flannels, shirting, collonades, jeans, cassimeres, and stacks and lots of other goods we get right from the mills at small advance on cost. We sell blankets from \$1.25 pair up and comforts from 85 cents each up to \$4.50 for those handsome satteen ones filled with best white wool or cotton. Let us send you one of the \$2.75 grade. We sell wall paper from the lowest to the highest price, and the designs are beautiful this year. It never was any cheaper, 5c or, as we call it, 10c double roll, and from that up. We sell boys' 2-piece suits from \$1.50 up and 3-piece suits \$3.50 up. One lot of boys' coats, 11 to 16 years, at \$2 and another at \$2.50 each that are worth almost double.

Send for our 40-page price list. Samples free. Address

SMITH'S CASH STORE,

416 & 418 FRONT STREET. - - - - - SAN FRANCISCO, CAL.

SOMETHING NEW: P. & B. Patent Odorless and Water-Proof Building Papers.

Unexcelled for use under shingles, tin or corrugated iron. For sheathing and lining purposes and between floors, they render a house water-proof and dust-proof at a slight cost.

SPECIAL: P. & B. Fruit Papers (Patented).

Especially adapted for fruit drying. No need of wooden trays. No need of turning fruit. Guaranteed odorless and water-proof. Circulars and Samples Free on application.

PARAFFINE PAINT COMPANY,

Manufacturers of P. & B. PATENT PILE COVERING; P. & B. PATENT IDEAL ROOFING; P. & B. PATENT PAINTS AND COMPOUNDS; P. & B. PATENT WRAPPING, SHEATHING AND LINING PAPERS, Water, Acid and Alkali-Proof.

116 BATTERY STREET, SAN FRANCISCO.

SPECIAL OFFER!

Wishing to introduce our

CRAYON PORTRAITS

And at the same time to extend our business and make new customers, we have decided to make this SPECIAL OFFER: Bring or send a picture of yourself, a member of your family, or friend, living or dead, and we will make you a LIFE-SIZE PORTRAIT FREE OF CHARGE, provided you will have it suitably framed by us, exhibit it to your friends as a sample of our work, and use your influence in securing us future orders. Place name and address on back of picture and it will be returned in perfect order. We make any change in picture you wish, not interfering with likeness. JAMES HUTCHISON, Oakland, Cal.

**ABSORPTION OF ORGANIC MATTER BY PLANTS.**  
In a communication by Prof. Calderon of the Institute of Las Palmas, Canary Isles, he contests the ordinary view that the nitrogen of the tissues of plants is derived entirely from the nitrates and ammoniacal salts absorbed through the roots. He does not, however, adopt the old theory that the source is the free nitrogen of the atmosphere, but rather the nitrogenous organic matter which is always floating in the air. The nutrition of plants he divides into three classes: *Necrophagous*, the absorption of dead organic matter in various stages of decomposition; *plasmophagous*, the assimilation of living organic matter without elimination, or distinction of any kind between useful and useless substances, such as the nutrition of parasites; and *biophagous*, the absorption of living organisms, such as that known in the case of insectivorous plants. A further illustration of the latter kind of nutrition is, according to Prof. Calderon, furnished by all plants furnished with viscid hairs or a glutinous excretion, the object of which is the detention and destruction of small insects. To prove the importance of the nitrogenous substances floating in the air to the life of plants, he deprived air of all organic matter in the mode described by Prof. Tyndall, and subjected lichens to the access only of this filtered air and distilled water, when he found all their physiological functions to be suddenly suspended.—*Nature*.

**IS REDWOOD INFLAMMABLE?**—Quoth the San Jose Herald: "In protesting against the rate of fire insurance in San Jose, the point that our buildings are almost exclusively built of redwood should not be lost sight of. In cities where pine is used for buildings, the rate of insurance should be far higher than in San Jose for that reason. Redwood is very nearly non-combustible, while pine will burn on the slightest provocation. It is not likely that the committee appointed to present the case to the managers of the insurance compact will forget this point, but it is well to keep it before the public generally, since if we have a local insurance company, we want to make the losses as light as possible, and this can best be done by building exclusively of redwood. The difference between pine and redwood in the matter of combustion has been demonstrated time and again. It is almost impossible to burn a redwood building. If it catches fire, it smoulders and chars and is quickly and easily extinguished, while a pine building, once fairly on fire, is doomed to absolute destruction." The story about the unconsumable redwood is a very old chestnut and would be good if only it were true.

**Complimentary Samples.**

Persons receiving this paper marked are requested to examine its contents, terms of subscription, and give it their own patronage, and as far as practicable aid in circulating the journal, and making its value more widely known to others, and extending its influence in the cause it faithfully serves. Subscription, paid in advance, 5 mos. \$1; 10 mos. \$2; 15 mos., \$3. Extra copies mailed for 10 cents, if ordered soon enough. If already a subscriber, please show the paper to others.

**SHOOTING LOGS.**—The feat of shooting logs over the Snoqualmie falls, 60 miles east of Seattle, has long been talked of among the loggers. It is well known that above that cataract stand many millions of feet of fine timber, some of the best known in the State. This is inaccessible except by the means proposed, and hence the project thought of. The falls are over 400 feet high and at certain times of the year the flow is quite reduced. During freshets, however, there is an immense volume of water there, and then would be the safest time to float the logs down over. Several loggers, the most enthusiastic, claim they have tried the experiment and found it to work well.

What a debt of gratitude the world owes to such men as Drs. Ayer & Jenner—the latter for the great discovery of vaccination, and the former for his extract of Sarsaparilla—the best of blood purifiers! Who can estimate how much these discoveries have benefited the race!

**NEWSPAPER AGENTS WANTED.**

Extra inducements will be offered for a few active canvassers who will give their whole attention (for a while at least) to soliciting subscriptions and advertisements for this journal and other first-class popular newspapers. Apply soon, or address this office, giving address, age, experience and reference. Special inducements to old agents.

DEWEY & CO., Publishers,  
No. 220 Market St., S. F.

**THE DAY OF OPPORTUNITIES.**—This is an age for practical and thoughtful men in every line of trade and profession, or there is encouragement for those who are ambitious and energetic. There was never a time in the world's history when the opportunities were so great and openings more numerous for the attainment of position and influence. For the workingman, there is every opportunity to rise, to become a skilled and competent artisan, to excel in his line of work.—*Ex.*

Use "Dead Lock" Gopher Traps. They are the best. See advertisement in this paper.

**FOR DYSPEPSIA,  
Ayer's Sarsaparilla**

Is an effective remedy, as numerous testimonials conclusively prove. "For two years I was a constant sufferer from dyspepsia and liver complaint. I doctored a long time and the medicines prescribed, in nearly every case, only aggravated the disease. An apothecary advised me to use Ayer's Sarsaparilla. I did so, and was cured at a cost of \$5. Since that time it has been my family medicine, and sickness has become a stranger to our household. I believe it to be the best medicine on earth." —P. F. McNulty, Hackman, 29 Summer st., Lowell, Mass.

**FOR DEBILITY,  
Ayer's Sarsaparilla**

Is a certain cure, when the complaint originates in impoverished blood. "I was a great sufferer from a low condition of the blood and general debility, becoming finally, so reduced that I was unfit for work. Nothing that I did for the complaint helped me so much as Ayer's Sarsaparilla, a few bottles of which restored me to health and strength. I take every opportunity to recommend this medicine in similar cases." —C. Evick, 14 E. Main st., Chillicothe, Ohio.

**FOR ERUPTIONS**

And all disorders originating in impurity of the blood, such as boils, carbuncles, pimples, blotches, salt-rheum, scald-head, scrofulous sores, and the like, take only

OUR DISTINGUISHED VISITOR, BENJAMIN HARRISON, PRESIDENT OF THE UNITED STATES.—See page 372.

## CORRESPONDENCE.

Correspondents are alone responsible for their opinions.

## Fruit Notes in Sacramento Valley and Foothills.

EDITORS PRESS:—In the foothills of Calaveras, the apple crop promises well, the scale, however, has gained entrance and will, no doubt, prove a troublesome pest. The peach orchards are full of blooms and the outlook promising. In the lower sections the orange has proved itself at home. The fig does well up to an elevation of 1800 feet and in suitable locations at over 2300 feet.

Passing over into Yone Valley, Amador Co., the Q. ranch of Mr. Geo. Woolsey, is looking excellent. Some of the other fruit ranches suffered very severely from the rains of the winter of '89 and '90, when the water stood a foot deep all over the ground for a month's time. That the Q. ranch escaped with so light a loss, is due to the fact that the trees are given every possible attention, kept in a most thrifty healthy condition, and in consequence are the better able to withstand and come out unaffected from a season that proved very destructive to the surrounding orchards.

I meet a great many fruit-growers, who assert that it pays to spray fruit trees even if they are not affected with scale, as it acts as a tonic to the trees. One thing is certain, there is more money in five acres of fruit given every attention than in 40 that is only half cared for.

In Placer Co., the peach crop never looked so promising, the trees are very thrifty and one mass of bloom. In spraying, the growers have used lime, sulphur and salt and the I. X. L. compound.

Many were late in spraying and claim that the lime kills the open bloom, so have sprayed the trees with the blooms unopened with the lime, sulphur and salt, and the trees in full bloom, with the I. X. L. This season will demonstrate what value there is in the I. X. L.

There is one feature of the fruit business that is to be deplored and that is the fact that the whole business is going into the hands of the Chinese. Go where you will and you will find the largest, finest and most profitable fruit ranches, with very few exceptions, are rented to Chinamen. The fruit-grower takes the land in its wild condition, clears away the wild growth, plants and grows his orchard until he has it in full bearing and then hands it over to Chinamen. The door of the once cheerful home bears the red label of the Chinese renter. Everything about the house shows into whose hands it has fallen. For the first year the property does well, owing to its previous care. In the second year it begins to decline and in less than five years the Chinaman has squeezed the pulp out of it, and returns the seed and skin to its former owner, while he seeks a better property. It does not require a prophet to foretell the result of this practice. The Chinaman does not go into any section to benefit it, and no section can grow and prosper that hands its business over to the Chinese while the owners move into other parts of the State.

Placer County is receiving a large number of English families of the better class who come here with capital and fully intend to make this their permanent home. They seem to prefer the orange for their operations, and are on the search for suitable lands for orange-growing. One reason why the orange has proved a sure crop in Placer Co. is the fact that the trees are grown there not in hot-houses, but right out on the hillside, and thus thoroughly acclimated. The Aloha Nurseries at Penryn, with Mr. F. C. Miles of the State Board of Horticultural Commissioners as manager, have over 30,000 orange trees growing that not only show a thrifty growth, but a most excellent root system.

While the orange and the fig do very well throughout the fruit belt of Placer, the principal fruit is the peach. As the peaches are all shipped East to be eaten out of hand, every effort is put forth to have the fruit large, high-colored, juicy and well flavored. To obtain these results, the proper varieties, high cultivation, judicious thinning, irrigation and careful selection are requisite. Placer county fruit stands A. No. 1 in the Eastern markets, but if the writer does not miss his guess, the present swarm of Chinese will require close watching by the fruit-shippers if this high standard is to be kept up.

In Yuba and Sutter counties, the fruit prospects could not be better. One thing is noticeable everywhere, and that is that the fruit of these counties is several weeks ahead of Placer this season. In Yuba and Sutter, the fruits are grown principally for the local canneries. The fruits are all grown without irrigation, with the result that the fruit is very meaty, and while not as large as that of irrigated sections, yet fully as valuable for drying and much more so for canning purposes. I doubt if there is another section where the business of fruit-growing is as uniformly profitable and satisfactory as in this vicinity. The fruit of the best orchards is all engaged, at a fixed price, before it is grown, and in this way all doubt and uncertainty is removed.

The fact that the few orange trees growing all over the country in the front-yards of the ranchers do well has at last forced the fact upon the people that considerable areas of Sut-

ter and Yuba are adapted to the orange, and in consequence large plantations are being set out and the trees are looking fine.

Sutter is the home of the Thompson Seedless Sultanias. This grape, while producing a greater yield per acre, has the desirable characteristic of ripening before the Muscats. In consequence it escapes the early rains that play havoc with the ordinary Sultanias; and then, too, the same trays can be used later for the Muscats.

Mr. B. G. Stabler of Yuba City called my attention to a small bug, resembling the Vedalia, that he finds working on the San Jose scale. The insect is very small, of a dirty white color, with black spots, plump, and looks almost like a seed. I trust it may grow and multiply.

At Smartsville the orange is attracting attention, and in time will be the leading fruit of the section. By careful selection of the land and protecting the trees for the first two years, it is possible to raise the orange wherever the fig will grow, and by planting the Japanese orange in the lower, colder situations the field for orange-growing is considerably increased.

In the sections I have referred to, the outlook for this season is exceedingly good and every one is confident that this will be the greatest year that California has ever had in her fruit industry. E. H. SCHAEFFLE.

Murphys, Cal.

## HORTICULTURE.

## Strawberries for the Farmer's Table.

[Written by request and read before Turner Grange, Oregon, by F. S. MATTHEWS, and, on motion, ordered sent to the PACIFIC RURAL PRESS.]

\* \* \* That our respected progenitors (Adam and Eve) should have smuggled some strawberry plants out with them when they left the Garden of Eden was no more than a natural sequence, and since that time they have run wild in many lands of the earth. Cultivation has developed many varieties, and vastly improved them in size and productiveness, while the berry has maintained its popularity as a delicious delicacy, until raising strawberries has grown to be a large industry, occupying thousands of acres of land and furnishing lucrative business for hundreds of people; and whole trains of cars are sent into New York, Chicago, and other large cities, during the season. Although the strawberry is 90 per cent water, people prefer to take water in this pleasant form. The farmer is no exception to this rule, and likes a good thing as well as anybody, and so does his wife, and his children (if he has any).

It then becomes a question of the best variety to plant, and conditions and management to produce them successfully.

First, as to varieties. The old Wilson is the standard variety here for market, and for those who love a sour berry, it is the best for family use. For canning, it has no superior. For hardiness and vigor of plant, for adaptability to all soils, for size and appearance, it has few equals. It is productive, but it is sour, and for those who love a sweet, high-flavored, luscious strawberry, it is not fit to eat, unless one is hungry for strawberries. This is from the standpoint of a producer who knows by practical experience what good berries are, and what is fit for a farmer's table. The Wilson is good enough for the urban citizen, and little else is raised here for market.

In the line of sweet berries (so-called; they are all sub-acid) there is none better, perhaps, than the Sharpless—hardy, productive, large size, fine color, sub acid, high flavor, delicious. The tendency of its fruit to sun scald in very hot weather and its long fruit stems allowing the fruit to lie on the ground too much, are its chief failings.

We have tested many varieties, but none have given as good satisfaction as those named. The Juncunda or the Parry will yield a few berries a little later, but they have nothing else to recommend them above the Wilson or the Sharpless.

We have one variety of which we are hopeful that we have found something better than others. It is an accidental seedling, probably a hybrid, and for size of berry, appearance and sweet, delicious flavor, it has no superior. It is the earliest berry we know of, giving us ripe fruit four to six days sooner than any other. It is productive as any, very easy to pick, and easy to hull, is firm, and is the most "meaty" strawberry I ever saw. The plant is reasonably hardy here in the red hill soil, and we are hopeful of it. At the same time, we have tried so many of the highly praised varieties which have all proved unsatisfactory, that we have grown cautious. I expect to put some of our new berry on this Grange table the coming season, and let the members try their palates on it.

Remarks upon the wholesome properties of strawberries being now in order, and as I am not now in the practice of medicine, I can speak freely with a clear conscience, and I tell you that if every farmer would put more berries and cream on his table and less "old hog," it would be a great improvement. If all the money now spent by farmers for pills, plasters and "patent medicines," bitters and other slops of one kind or another, and which manufacture more drunkards from the cradle up, than all the saloons in the land do, of "our boys," over which so much bus and cry is

made, was expended in berries (and other fruits) and sugar and cream and eaten off the farmer's table, better health, clearer minds, greater intelligence, more "gleams of horse sense," better looks and a higher state of civilization would result. The pocket-flask would not be so common in the inside pocket of the young man's overcoat nor the glass of beer and the cigar so much craved by the farmer when he goes to town, and even "McKinley prices" would pinch a little less.

## As to Cultivation.

The poorest land on your farm will usually produce the best strawberries, especially if it is sandy or gravelly. Moist, rich bottoms or made land is not good. They grow too much top and too little fruit. Plow land deep; make the surface smooth and in good tilth and set plants in rows three feet apart and about 14 to 16 inches apart in the row. Cultivate cleanly, but don't hill up; keep off runners and you will have berries. It is best to plant in spring and let no fruit grow the first season. Do not cultivate later than February; then leave until fruit is gone and then cut runners and cultivate. If you cultivate in spring, you leave the ground loose and your berries are liable to be dirty; and washing them is not only a bothersome labor but injures the appearance and flavor. [This advice is given for Oregon.—EDS. PRESS.]

Raise three or four crops, and then, when the last crop is gone, clean your land of plants, summer fallow it cleanly until the fall rains have brought up all weed seed, and when it is in condition plow it deep and leave it until you are ready to plant in spring, when you only need to smooth the surface and plant again.

How many plants will supply a family? That depends. The size of the family. Their love for strawberries. How many friends you have. The productiveness of your land—are all factors in the problem. In fairly good land and a fairly good season you may count on a pound of berries to the plant. You will often hear stories of crops far larger than this, but, Queen Saba, blessed are they who do not expect too much. They shall not suffer disappointment.

Let the Granger plant strawberries. They are "good for food," they are "pleasant to the eyes," they are "to be desired to make one wise," let the woman "take of the fruit thereof," and eat and give to her husband with her, and he will eat; and her children also; and future generations shall rise up and call her memory blessed.

Aumsville, Ogn.

## TEXTILE INDUSTRIES.

## Ramie Again.

EDITORS PRESS:—Looking over the different periodicals, I see a great interest is taken in booming the ramie plant, and a great many very misleading statements are made. For instance, I see it stated that it takes 3000 plants to plant an acre in ramie. Now the writer who asserts anything like that has never seen a ramie field. To plant an acre in ramie takes no less than 12,500 plants. It has to be planted in rows, the rows 2½ feet apart, and in the rows no farther than 12 inches. The object is to get a thick stand as soon as possible. If the plants are farther apart they branch out too much in making side shoots, and all such stems do not produce valuable long fibers. Even at the above-mentioned distance the stand will hardly be close enough to get much fiber the first season. It is the long, slender stems that produce the fine, silk-like fiber. They ought not to be larger than one-quarter inch diameter.

Another misleading point is, I see it advocated, that ramie does not require much moisture, now let me tell you no greater blunder could be made than to nurse such impressions. Ramie is a nettle, and wants much water, but no standing water, and to make a growth of 5½ to 6 feet in six weeks, requires lots of moisture, and this cannot and is not furnished by the dew, so in our State it has to be brought to the plant during the summer by irrigation. By such quick forced growth the stems grow of an almost even size, and in decorticating by a good machine the fiber comes off in nice even ribbons.

Another grand blunder I see published is that ramie does not want rob land—that almost any land is good enough for it. This is a mistake; on the contrary, to be successful, it will require the very best of land and land that does not bake. Of course it will grow anywhere where the ground does not freeze four inches deep, but growing and raising profitable crops are two very distinct factors.

Opinion among ramie culturists is divided regarding the decorticating. Some advocate doing the work when the stems are in a green condition and others when the stems are dry. To work the stems green and de-gum the fiber, at once produces a more silky-like fiber, with a more lustrous gloss, and no bleaching is required, but the machine for this process has to be brought to the field and worked there. Others advocate drying the stems and hauling them to a stationary place to decorticate them. The fibers worked in this way require bleaching and never look as fine as those worked green. Of course there are circumstances where either has advantages. I, for my part, like the green process for many reasons.

We have been in the United States very slow

in the culture of ramie, simply because we had no good machines to make a marketable fiber and were too much prejudiced to get or import the only perfected machinery in existence at the present time. This is the machine used in France the last 12 years. I do not think that the machine worked at the last Mechanics' Fair will produce a marketable fiber that will bring a high price in Bradford, England, or in France, as it breaks too much off the fiber and the product is no better than that produced by the machine invented 21 years ago by Emile Lefranc in New Orleans. The whole construction of the machine looks very much like it; it is clumsy and too heavy. The No. 1 Favier machine requires one-horse power and one hand to feed the stems to the machine and one hand to receive the fiber. The No. 2 Favier machine requires the same power but can be worked by two feeders and two receivers, and produces double the amount of fiber. No. 3 Favier machine produces a fiber ready for the spinners, but costs more. In those machines there is absolutely no loss and no danger; children over 13 years can work them.

Now, my object in writing this is to assist in bringing the thought of those who contemplate to go into ramie culture into right and successful channels. The State giving bounty I do not approve at all, as ramie by itself is too good an article to require State aid. Ramie produces in France about \$175 worth of raw fiber per acre, at the rate of four cents per pound, of non-de-gummed fiber, and I would not be afraid to guarantee a production of \$200 worth of fiber by having my choice of land and plenty of water.

I have a process of increasing the plants very rapidly, which I found out during the first excitement of ramie culture soon after Sr. Don Benito Rotze brought the first plants from Santa Camopan in the State of Vera Cruz, Mexico, 1867, to New Orleans. I planted the first plants in the United States and had the first three-quarters acre in ramie in this country, and the first plants that came to California were raised on my place in Summit, Mississippi, and sent by an agent I had in New Orleans, so I know some little about ramie.

I mentioned above that I preferred to decorticate the fiber in the green state, and one main reason is: There is on each stem a bushy head composed of leaves and a stem tender and succulent, about six to eight inches long. This head falls off or breaks off in the machine and is afterward shaken out and separated from the lower wooden part of the stems and dried; it makes the finest kind of hay for milk cows, or can be fed green right from the machine.

Ramie properly introduced and prepared, will undoubtedly form in the future a great industry. To make bags of it would be all wrong, as jute can be raised and imported for one-half the value of ramie.

In the RURAL PRESS of the 4th instant, in talking about ramie, a writer says: "When the fiber is produced, it should never be allowed to find its way to France." Now, suppose we succeed in producing a good, fine, ribbon-like fiber and a French agent should happen to be in San Francisco and offer one cent or even one-half cent more than anybody here, would not the producer sell to the Frenchman? It will be time enough to boast whenever we have a fiber that the French ramie manufacturers will want to buy, but as long as we have no better machinery than what I have seen until now, we need not fear that a Frenchman will come and offer a very high price for our fiber.

Cloverdale, April 9, '91. G. HUNZIKER.

[In this matter of ramie as in all other mooted industries, the RURAL has only a wide interest, and that is to present the subject fully and fairly before our readers. Mr. Hunziker is an old subscriber, and a man of good repute, and the results of his long experience and observation form an acceptable contribution to the general consideration of the subject.—EDS. PRESS.]

## THE STOCK YARD.

## Stock Feeding in the Great West.

In the sections of the Great West that are well developed, certain factors should be observed in the production of meat, for both economy and quality. I shall summarize the results of some 15 years of continuous research in animal nutrition, and some 25 years of observation as a feeder, without marshaling the corroborating data, which are often voluminous, in support of the direct assertion made.

1. Only good animals that inherit good forms, or that have the largest ratio of choice parts to the whole carcass should be bred, because such steers always sell at 25 per cent or more higher than those steers that are of ordinary structure. The latter class of steers return less revenue for the food eaten without a single compensating advantage. It is a sluggish mind that follows the practice of feeding ill-made steers.

2. It is well known that meat varies in individual animals in flavor and in tenderness. The development of the art of breeding and of the intelligence of the tastes of men has arrived at that stage of growth that demands the selection of breeding stock with reference to the points above suggested. The qualities mentioned, like every other animal characteristic,

are hereditary, and may be forced in a family.

3. I adhere to the heretofore expressed belief that our cattle sires should be tested to ascertain their capacity for consumption, digestion and assimilation of food. Animals vary in their powers in these directions, and only those that possess these powers to a high degree should propagate their kind. Breeding has fixed form, by following a standard, but I assert that it has not fixed the qualities in question. It is possible for a wealthy breeder to do as great a work for stock improvement as that of Bakewell.

4. "Breed goes in at the month," except form; yes, largely so. Without organizing any corroborating facts, I assert a conviction that will excite the indignation or contempt of many able men, that native stock of this country will make nearly as much, possibly quite as much, gain from a pound of food as will our pure-bred stock. If my position is true, and I am sure it is far nearer the truth than breeders have thought, it means that breeders must now look beyond form and that poor feeders must exalt food more than they have. The poor feeder is pampering himself.

5. Shelter in the north reduces the amount of food consumed, increases the value of manure produced, and increases the value of hay housed. These gains pay for shelter, and the assertion rests upon practical trials. I found over 13 per cent of hay was lost in the ordinary stack and only about one per cent in the mow, while less hay was eaten by sheltered steers and sheltered pigs than by unsanctified ones.

6. Steers must grow steadily from birth to death. About two-thirds of the food eaten by a half-grown animal is used for maintenance, hence every day that an animal merely holds his own, it is burning the taper without giving light, and is therefore using food at a total loss. Almost all of the philosophy of early maturity in its relation to economy of growth rests in this fact. A four-year-old steer that weighs no more than a two-year-old steer has consumed twice the food of maintenance, and therefore has consumed a very high ratio of unnecessary food.

7. Steers should be sold at the highest weight that will bring the highest market rate. This is due to the fact that the food of maintenance is nearly in proportion to weight, hence the food that would merely maintain a nearly matured steer, or say one weighing 1400 pounds, would be more than enough to make two pounds of growth if fed to calves weighing 300 pounds; in fact, it would feed two such calves and make a pound of growth on each.

8. Our cheapest beef is made on pasture feed, and only for pasture-feed use it is possible to sell beef except at a ruinous loss. Formation of good pastures is the most direct road to the cheapest beef, and the pastures should, therefore, receive the first and most thoughtful attention of the feeders.

9. Perfectly well cured food fed in its natural form is the most economical system of feeding. It has been shown that cooking, steaming, souring, cutting, etc., do not add to the nutritive effect of food, while grinding 30-cent corn does not pay. It is also practically demonstrated that ensilage is no more effective than the same food would have been had it been air-dried. This does not bear upon the relative economy of air-drying versus storing in the silo.

10. Steers should be fed at morning, noon and night. Frequent feeding increases the ratio digested, so it is held. This is not demonstrated. It is shown, or well known by good feeders, that small and not great rations of coarse food should be given. When several small rations are fed, the animal has fresh food that has not been selected from or breathed over, and hence it will be more readily eaten. That is, if I desired to feed ten pounds of hay in the morning, I would not give it all in one ration, but in two or three rations, following each other in quick succession. More will be eaten by this practice, and the ratio of excess food to maintenance food will be thus increased, and therefore, the ratio that grows to growth is thus increased.

11. The German theory of nutritive ratio is of very little consequence compared to that of feeding plenty of palatable foods. We need worry but little over the German views, but much over securing large rations consumed, for the amount eaten will depend upon the palatableness of food given and the ratio of the total food given that goes to growth will depend on the amount eaten. When 30 pounds are eaten, 18 pounds being maintenance ration, 40 per cent of the total food given goes to growth, but if only 24 pounds are given then only 25 per cent of the food-given goes to growth. No palatable ration is likely to be made up that will not contain protein enough. Care in cutting hay at the right moment, and of curing it in the best order, and preserving it in the best manner determines much its palatableness. I mention this as it is still our cheapest food and most abused in practice.

12. The ratio of muscle to fat, the color of the fat, etc., in animals can be determined by the ration fed. A protein ration, like bran, cottonseed meal, clover, etc., makes animal's growth containing much lean meat, while carbonaceous foods, like corn, produce more fat and distribute it differently.

13. The west will have to consider feeding animals more with reference to their influence on the fertility of the farm and less with reference to direct profit than has been heretofore the case.—Prof. Sanborn in *Live Stock Indicator*.

## THE DAIRY.

### Silos and Silage in Oregon.

[Bulletin No. 9 of Oregon Agricultural Experiment Station by Prof. H. T. French, Agriculturist.]

In response to numerous inquiries, regarding the use of the silo in storing food for stock, the following report of work done in this line at the Experiment Station, has been prepared:

A small silo was built in the barn on the station farm, in 1889. It consisted of a portion of the lower floor, 10x12 feet, partitioned off with 2x6 studding, placed 12 inches apart, and extending to the upper floor, 10 feet above. On the side next the side of the barn the studs were 16 inches apart. The floor of the silo was made on the ground, 18 inches below the barn floor, making the silo 1½ feet deep. The studding was boarded inside with common rough lumber running across the studs. Tarrd building paper was placed on this, lapping enough to break joints. Then a covering of matched flooring running up and down was put over the paper, making a smooth and air tight wall. A coat of hot gas tar and resin was put on the last covering, to protect the lumber from the hot juices of the silage. The tar and resin was used, in the proportion of one pound of resin to one gallon of tar. This portion of the silo, has been filled the third time, and there is no sign of decay in the lumber. There was no floor in the silo when filled the first time, simply the ground covered with two or three inches of pounded gravel. This worked all right, until the rats found out the merits of silage, and began explorations. A cement bottom has since been put in, to protect the silo from these rodents.

Many use plank floors and are much pleased with them; observing the same precautions that are taken in the construction of the walls—namely, to keep out the air and vermin, and to make it strong enough to support the great weight of the green silage.

In the fall of 1889 the silo was partially filled with corn of several varieties, grown on the experimental plots and on the farm. About 15 tons were available for silage, hence the silo was only partially filled. The filling was delayed by the outer not arriving on time. On account of this delay the corn was very badly frothtitten, so much so that when cut the leaves were dry and brittle. Notwithstanding this condition of the fodder, it made excellent feed, none being refused by the stock. The silo was filled the first week in October.

After filling the silo tarrd paper was spread over the top, and loose boards laid over this, with about half of a cord of fir wood placed on the boards to hold them in position, and press them down in a measure. There was comparatively little weight, and even this may be dispensed with, as many have determined in practice.

When the silo was opened January 1st, 1890, there was a few inches of poor silage on the top. This was removed to the manure pile and feeding begun. All of the covering was removed from the top, which is thought to be the best method, as there is no loss when a layer is taken off every day or two for feeding.

There were no animals on the farm that had ever been fed on silage, yet some of them ate it at once, and all soon became very fond of it. It is best to feed only a little of the silage at first, as in the case of any new kind of food, animals have to learn to eat it. The animals were given one feed each day for a few days; but later two feeds were given, constituting the main ration. A small ration of bran was given to cows giving milk. Better results are realized, if there is one feed of dry material given each day, or the animals are given the privilege of the straw stack. I believe straw can be utilized very satisfactorily when fed in this way.

Some digestive experiments in feeding silage were carried on by the chemist of the station, the results of which were published in Bulletin No. 6.

All of the cattle, consisting of ten head, were fed on the silage, until the middle of March, when the supply gave out. In May, 1890, five or six tons of mixed clover and grass, cut from the college lawn, were placed in the silo. This was covered with a layer, three inches thick, of green rye which had been run through the feed cutter. The clover and grass was not cut with the feed cutter. The silo was covered as before, except there was no paper placed over the material. The feeding of the clover silage was begun July 1st. The animals were very fond of it, and the cows gave more milk than when running in the pasture. This is one of the strong points in favor of the silo in this State; i. e., by its use the supply of succulent food can be kept up during the dry season. Dairy products bring a better price at this time than earlier in the season, and the pastures invariably fail during these dry months. The practice of feeding silage at this season has been successfully followed by many who are engaged in the dairy business. At a Farmers' Institute, held at McMinnville, Col. T. Cornelius said that "he had fed his dairy stock on silage the year round, and found it more profitable than to pasture stock."

The clover silage was fed as long as it lasted with very satisfactory results.

Last fall we enlarged the silo on the station farm by building it ten feet higher in just the same manner that the lower portion was built. This addition has not proven an entire success,

from the fact that the wall next the side of the barn was not strong enough to hold the pressure. No injury was done to the building, yet the silage was slightly damaged, owing to the entrance of air at the corners, where the walls sprung apart. In building a silo of this height, 2x10 should be used for studding, placed not more than 16 inches apart; then there is little danger and no loss.

Forty tons of corn, by actual weight, were put up the first week in October. There was no paper used in covering the top. The boards were used as before, and a few sticks of wood thrown on to hold them in place.

The silo was opened December 1st, showing very little loss, indeed not more than two or three inches. This supply of silage will last our stock until May 15th, giving them all they will eat, in addition to what they get at the straw stack. Eleven head of grown cattle are being fed during this time, besides four calves from four to eight months old.

The silage is of excellent quality and very nutritious, as shown by the condition of the animals. The cows giving milk have had a small ration of bran and shorts. A Jersey hull has been fed on silage almost exclusively, and has maintained his condition, which is not poor by any means. There was a large proportion of grain grown with the fodder, making the silage of high feeding value. Three varieties of dent corn constituted the larger portion of silage. A number of varieties were grown in small plots. The Pride of the North was the principal variety grown. Another variety called Hibbard corn was grown, giving good results. This is probably a cross between flint corn and some variety of dent. It is medium in size and in date of ripening. A variety of dent corn was obtained from the southern part of Michigan, which promises to mature successfully, and it produces a larger growth than the other varieties mentioned.

During the coming season a trial will be made of putting green rye, peas and vetches for feed during the dry weather of July and August. If this proves successful, then the same silo can be used to serve a double purpose, that of summer feeding, and again filled with corn for winter feeding.

There is no doubt that corn is the most satisfactory crop to grow for the principal supply of silage. Wheat, oats, peas, rye and numerous other crops have been grown for silage with more or less satisfaction.

As regards the construction of the silo, there is little to be said; for it has been fully explained, in agricultural journals and in station reports, both by illustrations and printed details. In case such details are not understood, any information in our power will be cheerfully granted upon application. It is sufficient to say that there is nothing about the construction of the silo which cannot be mastered by the average farmer, or at most with the assistance of a carpenter.

There is one point in favor of the construction of silos in this valley, over that in sections where a much lower temperature prevails in winter. No double wall is necessary to keep the frost from entering. The outside covering of the silo may be cheap, and when built in the barn, only the inner coverings are needed.

We would recommend that the floor of the silo extend to the ground when possible, and that cement be used instead of wood. The cost is not great and the durability is much in its favor.

The cost of the silo can be safely placed at one dollar per ton of storage capacity, and in many cases this can be very materially reduced. The silo should be well built, at all events, for it is among the permanent improvements of the farm, and its success will be largely gauged by the thoroughness of the work.

In portions of this State, the silo becomes of double importance in providing a comparatively cheap storage capacity for food that otherwise could not be cured for stock. Corn fodder and the grain as well, when stored in the ordinary way, will not keep during the damp weather which prevails in winter; but when placed in the silo they keep perfectly, and are in the very best condition for handling and for economical feeding.

For cutting the corn fodder there are many good improved machines. We used the Ross cutter, No. 11 A. The size is too small for a large silo; but for a small farm it does the work very satisfactorily. The power used has been a small portable engine hired for the purpose. The station is about to purchase a tread-power for this work. This power can be placed in the barn and used during stormy weather, in cutting straw and hay, or for grinding food. The cutter is gauged so that it will cut the corn fodder and ears into pieces about an inch long. On the whole, the work at the station in storing food in this manner has been a success, and we believe will prove successful throughout the valley, and in other parts of the State where corn, or some suitable forage plant can be grown with a reasonable degree of certainty.

While corn does not mature here quite as readily as it does in the Eastern States, yet it will reach the stage for making good silage with little difficulty. Corn for ensilage should be planted in rich ground, in drills three and one-half or four feet apart. If the stalks are about one foot apart in the drills, on strong soil, they will produce an average of one good-sized ear to the stalk. Corn planted in this way will yield from eight to fifteen tons per acre.

We have failed to meet with a single man

who has tried the use of the silo, and is not highly gratified with his success. The following extract, from a paper written on this subject, by Col. T. Cornelius one of the most successful farmers in the Willamette valley, speaks in the strongest terms of the merits of the silo:

"My experience with the silo is some thing like this: In the summer of 1888 I built a silo, which holds almost 225 tons, filled it with green corn and I was so well pleased with the result that the following year I built three other silos and filled them with green corn, clover, oats, and wheat, all of which made good feed. This year I put up 1000 tons of corn, clover and oats, mostly corn. I am well pleased with the result—would not undertake to keep any considerable number of stock on a farm without a silo, and believe farming lands in this State, especially for stock or dairy farming, is worth at least 25 per cent more with the aid of the silo than without it, as any of our valley lands may be made to support one cow per acre with the silo, while without the silo it requires above four acres to support one cow, and any land reasonably near to transportation in the Willamette valley that will support one cow per acre is well worth \$50 per acre for stock farming, while land that will only support one cow to four acres, is only worth \$10 per acre."

This statement coming from a man that has worked out the merits of the method from a practical stand point, is worthy of careful consideration.

That the State of Oregon should meet her demands for dairy products is putting it mildly. She ought to export such products rather than import them, and the silo will assist in a large measure in bringing this about.

## FORESTRY.

### Forestry at the World's Fair.

Not the least important of the great divisions of the World's Columbian Exposition is that devoted to Forestry. Mr. W. I. Buchanan, Chief of the Department of Agriculture, who is at present in charge of the Forestry Department, has entered actively upon the work of enlisting the various timber and lumber interests, and State Forestry Bureaus in this important feature of the Exposition. Speaking of the matter Mr. Buchanan says:

"I am very much gratified by responses received to letters sent out to State Forestry Bureaus; to the journals devoted to forestry and lumber and others interested in this subject. From the general tone of these replies I am encouraged to believe that the Forestry Exhibit will be very full and complete, and will be one of the most attractive ever shown at any Exposition.

"The importance of this department of the Exposition can scarcely be overestimated. The question of erecting a building for the forestry exhibit, through the co-operation of the various forestry interests in its construction, so as to illustrate in a unique and attractive manner all the woods of commerce in their natural and finished states, is in contemplation and is a question for future determination. The statistics of wood and timber consumption in the United States are full of meaning, and forcibly suggest that the efforts on the part of the General Government and the several States to conserve the forest supply and promote timber culture were inaugurated none too soon and cannot be prosecuted too vigorously. It is intended that the forestry display shall fully illustrate what has been accomplished in this direction, and that State Boards of Forestry will show the most desirable methods of observing Arbor Day, the benefits derived therefrom, and the progress made by them in tree culture. A comparison of notes and a general survey of the situation cannot fail to be interesting, instructive and profitable.

"In a general way, it may be said that the forestry exhibit will embrace wood in its natural state from every section of this and other countries, thus affording a most excellent opportunity for comparing the same varieties growing in different latitudes, and the climatic effect on forest growth. Worked timber in all of its many commercial forms will be shown by beautiful specimens selected from the wood-working establishments of the world, including the various ornamental woods used in furniture, veneers and interior decorations.

"The advance in the science of preparing timber in various ways to resist decay and the encroachments of animal life will be appropriately illustrated. There will be an exhibit of dye woods and barks; of lichens, mosses and ferns; of commercial gums, vegetable ivory, wood pulp, and a curious collection of seeds, and peculiarities of forest growth, such as cypress knees, burls, etc.

"A good deal of attention will be devoted to forest botany, the distribution of forests, of genera and of species, as well as the anatomy and structure of woods, and the diseases of forest trees and timber.

"Forest management, maps, illustrations and instruments for measuring standing timber; growth of different ages and soils; graphic and other illustrations showing rate of growth; influence of various managements on tree growth; statistics of the lumber trade and of forestry; the harvesting of forest products; the turpentine and charcoal industries, will all receive proper attention.

## PATRONS OF HUSBANDRY.

In our Rural Press Official Grange Edition, issued every week, will be found additional matter from this and other jurisdictions, of interest and importance to Patrons. Any subscriber who wishes can change free to that edition.

## The Master's Desk.

E. W. DAVIS, W. M. S. G. OF CALIFORNIA.

## Ho for Oregon!

The following, from the Pacific Coast Steamship Co., is self-explanatory. It is the best that can be done. Now is your chance to have a cheap trip by sea. You can attend the Oregon State Grange for a small sum of money. Do you want to go? If so, send your name and secure berth at once of D. W. Hitchcock at No. 1 Montgomery St., S. F., Cal.

SAN FRANCISCO, April 10, 1891.

E. W. Davis, Esq., Santa Rosa, Cal.—DEAR SIR: We hereby agree to carry ten or more passengers from San Francisco, Cal., to Portland, Or., and return (first-class accommodations in every particular guaranteed) for the sum of \$25 for each passenger. Tickets to be good for 60 days and to be issued at any time between the 10th and 23d of May, 1891. We will do our best to obtain special railroad rates from Portland to Hillsboro, Or., and return, these special rates being made on account of the excursion to the Oregon State Grange session.

D. W. HITCHCOCK,  
For the company.

The season of picnics seems to be near at hand. Well-filled baskets and depleted benches will tell you all about the good times coming. But it will be very gratifying to hundreds of readers if somebody would take the time to write these events for publication in our PRESS. We know of many successful Harvest Feasts and Reunions which have not been "written up." Whose is the fault?

Who plows the straightest furrow in the neighborhood of your Grange? Get that man to join your Subordinate. He will make a faithful member. Any man who makes a straight line in life is a man worthy of consideration.

Bennet Valley Grange reports a brighter prospect for an increase of membership.

The successful General is the man who, in the hottest of the fight, is perfectly composed. The faithful and competent fireman is the man who is always "cool," that is, composed. The best housewife is the one who does not become flurried if there is a rush of company; she is the woman who keeps composed. The successful business man is the composed, cool-headed, steady man. The Order that is to hold and win influence must be composed of composed members. Composedness is a natural estate. Let us seek such a naturalness as will make us steady, true and always composed. Never be in such a hurry to say or to do something that you lose your self-composedness. Stand by the self-poised, cool-headed, honest-minded person, whomever he be, that is composed at all times and in all places.

The Worthy Overseer, Bro. A. P. Roache of Watsonville, Cal., has promised to do some "field work" for the Grange. Call on him, and don't take "No" for an answer except there is sickness in his family.

Send out your harvesters and gleaners! Let them gather in grain for the Grange. Every extra kernel means an extra plant after the coming seed-time.

There is a key to the situation. Do you know the Grange holds the key?

The man who thinks nowadays that he holds any intelligent body of people in his political grasp is quite apt to make a "discovery" when it is too late.

Intelligence, sobriety, honesty and political purity are much needed in public stations. The Grange may have to furnish men with such qualifications. It has many such men.

Now is the season of flowers. Which of your lady friends has and tends with her own hands the prettiest flower garden? Such a lady ought to belong to your Grange. You want somebody to scatter sweet thoughts as well as laden the air with the aroma of flowers. The flower of good works outlives any human being. Get the author of good words and good works to join the Order of Patrons of Husbandry, an Order that is ever ready to help the needy, raise the fallen, and scatter the flowers of forgiveness and love by everybody's roadside.

Ask every member of your Grange who is present at the next meeting to take home an application for membership. Have all return these applications at next meeting. See how many blanks there will be. I think there will be a score of applications signed to one blank returned.

The National Farm and Fireside brings the sad news of the death of Bro. Rufus Prince, Master of Main State Grange. Bro. Prince succeeded the worthy and efficient Bro. Robie as Master. The Patrons of the "Pine Tree

State," as well as the Order everywhere, have lost an honorable, conscientious, efficient Patron. Those who met him for the first time at Atlanta soon saw in Rufus Prince a clear-minded, careful and progressive man. The Order of Patrons of Husbandry cannot well afford to lose such men. His place will not be easily filled. To the family, we extend profoundest sympathy and condolence.

Past Master Wm. Johnson has kindly agreed to do some active work for the Grange cause right away. We shall hope to hear from him and of his work.

## Essay on Agriculture.

[Written by a young Member and published by request of Waterloo Grange.]

Agriculture is the art of cultivating the ground for the production of food for the support of man. The earliest successful farming on record was in the great valleys of the Nile, Euphrates and Tigris. At a much later period, in Greece, agriculture flourished as early as 1000 B. C. The latter used forked sticks with handles for tilling the soil. The first important steps in modern scientific farming began in the 18th century, when new modes of culture, new practices, new methods of fertilizing, new forms and improvements in machinery became general. Through the golden light of chemistry, that indispensable handmaid of agriculture, the farmer has been compelled to abandon his old prejudices, until to-day husbandry, based upon established facts, is making great strides in the train of progress.

## The Present March of Improvements in America

Surpasses all other periods in history, and foreshadows the development of agricultural resources beyond the power of human conception. An impartial survey of the facts before us proves conclusively that the United States has largely increased the life-supporting means of the world. We may truly say that America is furnishing the world with food to a much greater extent than all other nations combined. The farmer feeds the world. Astonishing as are our resources, they are likely to be tested to the uttermost, for about all European nations increase in population without a corresponding increase in agricultural products; hence they will furnish profitable markets for the products of the American farmer for years to come.

## The Duty of American Farmers

Is plainly indicated by the march of onrrent events. He must do his individual part, meeting the world's demands on his country. In no way can this be done to better advantage than by co-operation, for we believe this is the most successful way of storing the mind with knowledge bearing on his calling.

At present, American agriculture is only, comparatively, in its infancy, with magnificent possibilities before it. But, though young, it is sturdy and stentorian; indeed, few of us comprehend the magnitude and diversity of our agricultural productions. Perhaps the idea cannot be made more impressive than by presenting a few estimates based upon Government reports. The number of bushels of grain produced in one year amount to 2,500,000,000, worth say \$1,200,000,000. The aggregate value of live-stock raised in the United States is estimated at \$500,000,000. Of these, four-fifths is sent to foreign countries; to say nothing about the other great staples of the country. Therefore give us a learned agricultural people and we may defy the world. As it is only intended in this paper to give a mere outline of agriculture, we will close by saying, give us an educated farming class, with a well defined ambition in it, and we need not fear for the future destiny of our great country.

## State Grange Open Meeting.

## Relief for Nebraska Sufferers.

On Tuesday the Executive Committee of the State Grange met in San Francisco.

Bro. Amos Adams recommended that an open meeting be held at the next meeting of the State Grange, and in accordance the following was adopted:

Resolved, that we recommend an open meeting, to be held on Wednesday, at 1:30 P. M., during the coming State Grange Session at Haywards, and that all our Senators and Representatives in Congress be invited by the Secretary of the State Grange to attend, and exchange opinions on subjects relating to agricultural interests.

The secretary offered the following relating to the Nebraska sufferers, which was adopted: Resolved, that we endorse Sister E. Z. Roache's appeal to the committees on Women's Work in our subordinate Granges, that such Grange contribute seeds, etc., to the suffering farmers of Nebraska, who lost their last crop and are without means for procuring seeds.

This is in accordance with the recommendation of Worthy Master Brigham of the National Grange. Contributions to be forwarded to J. R. Cantlin, Secretary Nebraska State Grange, at Webster, Neb.

On motion of the Worthy Master, \$25 was appropriated from the general fund of the State Grange to be forwarded to Bro. Cantlin, with instructions that the same be used for buying seeds for the purpose mentioned.

[Further proceedings will be found in our Grange edition.—EDS.]

## Sacramento Grange Hears Solid Words.

EDITORS PRESS:—Again I make my bow to the Granger world and blow my trumpet. I shall keep on blowing it for the Grange I have a warmth for as long as I have strength enough to do so. Our last meeting was not a success in point of attendance. There were not over 45 or 50 members present. Some had gone out to American River Grange to enjoy the great day there; others were engaged in their spring work, so the attendance was small, but the enthusiasm was not. It is strange how men can have the love for the Order the members of Sacramento Grange have if there is "nothing in it." There is something in it. We who are within the gates know what it is. Those who are shivering in the moisture outside do not, but they are the ones who condemn the Order.

## Believes in Progress.

Among the many good speeches of the day, the remarks of our esteemed brother J. B. Welty stand boldly out in prominence. Bro. Welty is progressive. There is no man on earth, to my knowledge, who is so ready at all times to listen to reason and accept innovation so readily as Bro. J. B. Welty. He is in no wise antagonistic to the ideas of others, even if they do not exactly dovetail with his own. He has a plan for reviving the present dictionaries that is the very essence of common sense and practicality. His plan is highly endorsed by Bro. Flint and others. Bro. Welty always has something to say when he comes to Grange and he knows how to say it right well. To-day his address ran in about this high moral groove. He said some people called him a crank and eccentric, and why? Simply because he believes in improvement. He is not contented to remain in the same spot his grandfather did, but has a desire to move upward to a better and higher and nobler sphere, believing that that which was appropriate 50 years ago is 50 years behind the time now. He believes in progress. He believes progress and improvement will make us better Grangers, therefore better citizens in our respective communities, better factors in the universe. He believes every man has a realm—an intellectual realm—intended for him, and he should try and reach it. No man has reached the circumference of his realm in this day and age for various causes. That this is deplorable is undisputed, but such is the case.

## Every Man Has His Mission

On earth, which is more than raising wheat or apples or potatoes alone. That man cannot avoid this menial labor, for his bread comes from the action of defective social machinery. He would like to acquire Hebrew and Latin and Greek in the original, and ascend, but it is denied him. He is a student and covets time for study, but he has it not. He would like to rise intellectually, shake off the old shell and be something more satisfactory to himself and elevate those around him as well; but no. Fate's decree, or better, man's decree wills it shall not be. He pointed to his hands and the evidence there of honest toil in his life's battle. His hands would not be so hard, and his brain brighter and more flexible, were man as a mass constituted with different traits of character. Society forces men into one sort of slavery; drudgery, the greatest evil of country life, into another. The man rash for wealth pushes one into ignorance. And just as long as it continues to go on, man will not reach the circumference of his capabilities; he will continue to be less than was intended he should be. "Give man 13 hours each day for study and recreation, and how much brighter and happier this world would be!" exclaimed our worthy brother. There would be less dissension, less jealousy, less narrow-mindedness. On the other hand, there would be more progress and improvement and intellectuality. It is a hard thing, he says, to convert the world. It is slow to act. One man seldom does it. Concentrated action in time might free man from the fetters that now bind him to drudgery and open brighter prospects. Man who does not work does not consume; but he who works too much does not repay the world the debt he owes it, except in manual labor, and the world wants something more. Barbarism is one cause of it. There are others.

## The Liquor Curse

Lowens man in degradation. It lights his soul and body and his country. It is a direct cause for the standing condition of affairs. The results of intemperance cause temperate men to work in a measure for their unfortunate brethren, at the expense of their own progress and enlightenment. Tobacco is another curse to mankind, says Brother Welty. It tends to weaken one's intellect, and the undeveloped suffer their portion for it. Tobacco is an unbidden demon. Tobacco and liquor are the greatest curses of all civilized countries. He has brought up one boy who never used either, and has two more under his care now, and not one ever touched tobacco in any form. "If all the gold in California was melted together and put at my feet, I would reject it rather than see my boys use tobacco or liquor." No gold can ever induce them to use either. The reason so many common panpers are abroad, so many whiskey and tobacco drunkards, is because no endeavors were used to bring up the children properly by their parents. If you are addicted to either the tobacco or liquor habit, break off.

"Do it; by the help of God do it. Man can make up his mind and do it if he will. We can all, if we will but exert a little spiritual manhood," says the brother. I would like to continue his points, but space forbids.

## A Pioneer Granger Speaks.

Bro. R. Davenport, the most beloved member of our Order, and the oldest member of the Grange in California, addressed the Grange. He loves the Order as no other man does; he loves it because it has been good to him. It is his solace and balm. He likes the Grange because it takes care of its own; he likes it because it makes us all better. The Grange obeys the injunctions of our Savior. He likes its social liberties. The greatest wonder to him is everybody does not belong. "May it go on and prosper."

Sacramento Grange will no doubt attend the festivities at Enterprise shortly, for its members always go there—some to hear the eloquent speeches, others to sample the delicious pies, but I go there to see the babies. Every young man and pa bring their little tots to me for inspection, and they are all about the same out that way—simply perfection. The owners got their money's worth. Faithfully,

MACK JR.  
S. C. Saco to Grange.

Union House, April 11th.

## A Visit to American River Grange.

EDITORS PRESS:—Everything was conducive for a good time at American River Grange last Saturday. The hall was prettily decorated with flowers, and each officer in his and her position, ready for work. After some little delay, (which only served to sharpen our appetites for chicken pie) those wishing to take the final pledge were escorted into the hall. There were 17 in the class—10 sisters and 7 brothers—who were instructed in the mysteries of the fourth degree in a very creditable manner. I was much pleased to find that the new class was composed principally of young people, but sorry to see the brothers in the minority. What we need in the Grange is more young people, and especially young men. You see I am an old maid and am particularly interested. While the old heads were talking so earnestly about the "tariff, taxes and transportation," and sighing over the wrongs and longing for the rights, the thought flashed through my mind, that there is another subject for them to think and ponder upon, and that is

## "Our Old Maids and Our Old Bachelors."

The country is full of them and what is to be done? Seems to me that instead of giving all the time to the "government," some of it, at least, should be given to the entertainment of our young people, who are still in the age of wild dreams and fancies, and who cannot, somehow, digest tax, tariff and transportation.

The Grange is a grand institution for the farmer, his wife, sons and daughters, and especially the feast days, where true, genuine farmer hospitality is extended. Here the wise ones have an opportunity to discuss their "pet hobbies," the mothers to talk of the most approved remedy for la grippe, and the young ladies and young gentlemen to meet each other and discuss the weather and "crops." If our young people cannot be enticed into the Grange under the present rules and regulations, why not

## Introduce New Attractions?

Once get them there, and you are all right; for they will amuse themselves if you have enough of them. Perhaps the reason I am going on at such a rate is because I lost my escort at the dinner table. He was a tall, handsome, old gentleman, and everything was all right until a pretty, young girl sat down near him. I very soon found his attentions diverted, and learned to my sorrow that these old heads have a fondness for pretty faces, and that the girls will coquette, and if not with the young, it must be the old. So do you wonder that I am anxious for a reinforcement of brothers in the Grange? But I am drifting from my subject. The meeting was a grand success, from start to finish. Earnest speeches were made by Bros. Caples, Simons, McConnell, Hack and others, also Sister Hattie Jones from Yuba City Grange. The feast was a decided credit to any Grange, and I wish to say, "Thank you for my pleasant time," to the sisters who did so much to make the day so enjoyable. Fraternally,

OLD MAID.

"LIFE IS REAL, LIFE IS EARNEST."—Do you know that to live a year in the present time, with a mind in condition to grasp our situation and improve by surrounding conditions, is worth a decade of ordinary life? The onward march of a spirit of justice and the rapid growth of fraternal feeling between man and man notes this the most sublime age which has ever yet dawned upon the earth. The high moral awakening has never before so thoroughly taken hold of the masses. The acute sensibilities of human misery are powerful emotions for agitating earnest souls to cry out and impel men to think and act in order that we may try to elevate the children of men above the enslaved condition caused by prejudice and selfish influence.—M. Whitehead.

OVERSEER ROACHE will, no doubt, give the Grange and Alliance picnickers, May 9th, a sensible and patriotic address of the best order. Let no farmers or their wives, boys and girls fall to turn out on that rare occasion.

## FARMERS' ALLIANCE.

SUBSCRIBERS wishing fuller information of the Alliance can have their names changed to the Grange Edition of the RURAL PRESS free, much to their advantage, this department being continued in the same.

### Stirring Words for All.

[By PRESIDENT CANNON.]

We will soon be in condition to open the battle. We have now 362 Alliances organized in this State, with a membership of about 22,000, and I may say to these members, buckle resolution around your heart and with renewed energy go forth to battle for the rights of humanity. Yours is no common cause—your light no flashing, fading luminary. It sends forth its steady rays from the blue dome of heaven to enlighten and beautify the darkest corners of the earth. Prove your devotion to a cause that would lift you above the condition of a tramp, a pauper, a slave. For your families and loved ones you dig, delve and sweat, you endure the winter's cold, the summer's heat, the oppressor's wrong, "the proud man's contumely and the rich man's scorn." This appears to be your heritage; what sacrifice are you making to mitigate this condition? Shall the arms of this great brotherhood fall paralyzed by your apathy? Shall the glorious sun go down in night upon a nation of serfs while you stand idly by? Look into the faces of the poor and the oppressed and answer. Friends, you must help this great reform with your sympathy, your strong arm and your purse. Are you not willing to make this small sacrifice to enjoy this great boon of your birthright? Stand fast, and in 1892 the old moss-back politicians can write over the entrance to their wigwags the inscription that Dante saw written over the gates of hell: "All hope abandon, ye who enter in."

MARION CANNON.

Pres. Cal. S. F. A. & I. U.

### What Is the Matter?

[Contributed by JAMES MORGAN.]

Whatever may be the primary cause of the unrest that is everywhere manifest in the minds of the American people, there is no mistaking the fact that popular opinion locates the trouble in the steadily growing power and influence that capital, in vast aggregations, is exerting to degrade labor, and make the laborer but a tool in working out the selfish schemes of the wealthy—a mere slave to do the bidding, and receive with thankfulness the pittance grudgingly doled out to him by the millionaire, the corporation, the syndicate or the trust. As a means of grinding down the masses, and making them the helpless captives of the money power, systematic plans have worked for years, by the financial kings to so reduce the volume of the currency as to make it possible for them to manipulate and control it. This was accomplished by the demonetization of silver, leaving only gold and National bank notes in circulation, with these latter liable to be largely withdrawn whenever the interests of the money kings could be served thereby. This scheme has been carried out so completely that it is now possible for this syndicate of bankers and capitalists to control the volume of the currency, and thereby to control the price of labor and of the products of labor of all kinds. By means of combinations, and unions and trusts, manufacturers have in a measure protected themselves from the evil effects of this manipulation of the money of the country by the soulless money power; but only in a measure, as the continually occurring failures of old and well-established houses give proof. But the

#### Farmers Over Our Vast Country.

Isolated, unorganized, working single-handed and alone, have fallen an easy prey, as have also the laborers in all departments, who have been purchasing consumers of farm products.

The article of bread may be made to illustrate the whole list. The wheat crop, of which the bread for the coming year is to be made, is harvested and ready for storage by Oct. 1st. It is a vast crop, representing a vast amount of labor, consequently a vast amount of money, and must be carried by some one along through the year, or for an average of six months. There comes a stringency in the money market just then—from natural causes the papers say, but the producer must have money to pay his bills, for everybody feels the pressure and demands are urgent. He cannot hold his crop. The consumer needs it, or will need it, but he too feels "the stringency in the money market" and cannot secure his year's supply, although it is coming on to the market dirt cheap. But luckily for all parties, just now appears some syndicate, some especial friend of the "Money King," and kindly consents to buy the wheat and give the producer the money he must have. But how small the pittance! How the bright dreams that have cheered and buoyed him in his hours of toil all fade away! He has labored hard; he has produced a fine crop, which, if sold at a fair price, would have lifted him out of debt and given him and his loved ones some of the comforts, if not the lux-

J. M. MOORE, STATE BUSINESS MANAGER, F. A. & I. U.

uries, of life; but the stringency in the money market that happens to come just then

#### Has Left Him Nothing

To show for his year of toil but a worn body and a crushed spirit. A few months pass. The last producer has been forced to yield his precious product for a pittance of currency, and money becomes easier. The wheat market brightens up; the curbstone speculators smell the battle from afar, and fly to the bankers and money-lenders for money. They are accommodated at two, three, four or five per cent per month, and they rush into the fray. Some make, many break; but it matters little. It is a mad gambling carnival that is a disgrace to our civilization in the nineteenth century.

But wheat goes up, up, up, and the laboring consumer pays enormous prices for that which brought the laboring producer so small a pittance. And what of all this? Merely a sample case of how a handful of moneyed men, banks, corporations, etc., can sit behind their counters in their fine offices and wring the life-blood from the laboring masses. And why? Because as our financial system is at present, they can entirely control the money of the country. Is it strange that the conviction is so rapidly gaining ground that the power of controlling the volume of the currency should be taken from individuals or banks or corporations that can have any private interest in the matter, and be held only by the general government—a power which is of the people, by the people, and should be for the people.

#### Tulare County Alliance.

The Alliance meeting was presided over by I. N. Wright who stated that the speaker who was expected to address them had failed to arrive and they would have to depend on other gentlemen present. N. W. Motheral was called upon and made a ringing speech on behalf of the farmers. He believed that the time was at hand when the farmers were determined to free themselves from their shackles. He fought once on the wrong side of a great cause and was licked but he was on the winning side this time. L. C. Hawley of Hanford, Mr. Hewitt and J. W. Mackie made short and pointed speeches, the latter gentleman taking a hopeful view of the farmer's future. The meeting was characterized by a spirit of enthusiasm and the speakers were frequently applauded.—*Tulare Register*, April 3.

#### The Alliance in Contra Costa County.

M. M. Tousey in *Antioch Ledger*: The first regular quarterly meeting of the county Alliance was full of interest, and the feeling manifested was one of genuine enthusiasm. People may differ with them in regard to the measures they advocate, but no thoughtful man or woman can question their earnestness or the urgent need of some reform in the relations of the industrial classes to each other and to the law-making branch of the government. Farmers, and work-people generally, are learning the lesson of self-reliance, and are quietly doing whatever they have in hand, rather than publishing their intentions to the world, or counseling with those who are opposed to their views, and would discourage them in every way possible. Antioch may be a much neglected town, and the farming community of which it is the center may not have received the atten-

tion it deserves at the hands of the caterers for popular favor, but the Alliance is not guilty of any fault in this respect, however it may have been made to appear by those who did not wish them success. The first Organizer who came this way had to go home suddenly, on account of sickness. The next representative who came among us, Burdette Cornell, was here to fill every appointment, and failed once to meet his engagements in every part of the county, and that on account of a heavy and prolonged rain-storm. In spite of every discouragement he has succeeded in organizing seven subordinate Alliances, besides the County Alliance, and is now at work in Alameda county.

#### J. M. Moore, State Business Agent.

Bro. Moore, State business agent of the F. A. and I. U., was born in Nova Scotia in 1848. When only 13 years of age, he entered a store as a clerk, in which capacity he continued up to the time he was 24 years of age, when in company with a friend he came to California. On arriving in this State, the avenues to his chosen occupation appeared to be filled, consequently he was forced into other pursuits. Dairying appearing to be the better adapted to his liking, he went into Solano county and engaged in that business up to 1875, when he sold out his interests and moved into Tulare county, settling near Hanford. At that time irrigation was in its infancy, and as it became better understood, under discussion and from actual tests, immigration set toward irrigation districts and lands appreciated in value. Since living in Tulare county, Bro. Moore has engaged in wheat raising, general farming and running harvest machinery. He has always taken a lively interest in irrigation and takes great pleasure in the knowledge that his many predictions of great benefits that would flow from its successful introduction have been more than fulfilled.

Bro. Moore enjoys an enviable reputation as a conscientious and thorough business man. It is confidently expected that as he becomes more fully posted in the business transactions in this city, he will give even better satisfaction than now. So far as we are able to learn, he gives entire satisfaction by his close buying of all merchandise, machinery, etc., required and also in the good prices realized for farm products sent him to be sold.

He was the successful Master of Tulare Grange for the past two years. He is well known and held in high esteem as a solid and reliable man by the farming and industrial community of Tulare county. As we have said before, we believe him to be a man every way worthy of the confidence of the Order and the tradesmen with whom he has to deal.

#### A New Alliance in Orange County.

I organized Laguna Alliance, No. 14, at Arch Beach, last night, with H. E. Olds President and Fred E. Stocking Secretary. There are several good Alliance workers in that district, notably Bro. H. S. Goff, who is ready to take hold and push all reforms for humanity. Southern California is now becoming pretty well organized. The great work now begins—that of education. Let every member of the Alliance take and carefully read one or more representative Alliance papers.

D. EDSON SMITH, Lecturer.

Hope Ranch, Santa Ana, April 2.

### Spirit of the Press.

The Legislature has adjourned and gone home, unshriven and unblessed. It is a genuine relief to the people that the session is at last over. It was not only wasteful and extravagant, but scandals sprang up at every turn like Jonah's gourd. No reforms were instituted or economies introduced. Instead of doing away with unnecessary commissions and abolishing sinecures, new State Boards were created and new berths made for political parasites. All the old pap-smoking institutions have been retained and a new crop brought into being to eat up taxes.—*Tulare County Times*.

Bledsoe's course in relation to the Bruner scandal has been highly creditable. Far from injuring his party by his condemnation of Bruner, Bledsoe is entitled to the thanks and praise of good Republicans throughout the State. The days of the party will have become numbered when willingness to conceal corruption becomes its test of allegiance.—*Marysville Appeal*.

So Claus Spreckels and the Havemeyers have united their forces and divided the kingdom. In other words, Spreckels and the Havemeyers have formed a combination in the sugar-refining business, and hereafter there will be a single sugar monopoly, whose operations will be co-extensive with the nation. The details of the terms of the combine have not been made public, but it is known that the territory—that is, the nation—is to be divided, and each party to the combine is to keep within his own field. The Pacific Coast will fall within the Spreckels empire, and all of us will continue to pay tribute to the same old feudal lord.—*Fresno Examiner*.

"Hayseed legislators" and "rural legislators" are pet names applied to representatives from among the people now occupying seats lately "owned" by demagogues and slysters, until dispossessed at the late elections. And it hurts the latter fearfully, and that portion of the press which "stands in" with the boodle and spoils-takers stands back and manufactures frightful names against the legislators, as "hayseeds," etc., like the kid who has been knocked out threatens his big brother or pugilistic parent. Some people may be highly educated, but they can be proportionately criminal; the brilliancy and talent are all right if they are directed by virtue and honor.—*Coquille (Oregon) Herald*.

SUPPOSE that two dozen legislators have voted for a certain man for United States Senator. Does it not seem a little strange, if he concludes to withdraw from the race that he can swing them almost to a man to such person as he may designate as his choice for the position? Does it not appear more than probable that some of these intelligent beings would have an opinion of their own concerning who would be the best men left after their first choice was taken from them? Does not swinging at the impulse and dictation of one man seem rather the part of a machine than that of men of intellect and ideas?—*Stockton Mail*.

It is no wonder that a Farmers' Alliance has sprung up to check the mercenary greed of our present law-makers. Something must be done to check the plunderers of our present treasuries, or both the State and the nation will be bankrupt in less than ten years. If the National Government goes on spending a thousand million dollars a year, how long will the public money last? The last two sessions of Congress made the most open and daring of all the raids upon the public treasury. They devised all and every scheme possible to deplete the treasury of the nation, and our last Legislature copied the example as far as the funds in the State treasury would admit. With a debt of fifteen hundred million dollars it would be necessary to exercise the strictest economy until that debt is paid. We know not what may happen nor how soon another war may be forced upon us. Let the aim be to pay our debts while in the enjoyment of peace.—*Oakdale Leader*.

We had the pleasure of a half-hour talk with a Deputy Organizer of the State Alliance, last evening, and in the conversation learned much about the progress of the Order in this State. Since April 11, 1890, the membership has grown to a little over 22,000, and now, since the had showing made by the Legislature, he says the membership is rapidly growing in all parts of the State. It is believed that by the date of the next general election in 1893, the membership will reach a number sufficient to defeat the election of men to the next Legislature who have made such a bad record, and be able to accomplish some good for the farmers.—*Marysville Democrat*.

THE FARMERS ALLIANCE.—We hear that the Farmers' Alliance meeting at Carpenteria was a decided success, both in point of numbers and interest manifested. The Alliance movement appears to be full of life and vim throughout the country, and it promises to become a movement of vast and far-reaching importance. The *Star* feels a strong sympathy for any and all elements in our country that earn their bread by the sweat of the brow, never having ourselves ate any bread otherwise obtained; and, therefore, believing this organization has for its object the good and welfare of the laboring people of America, we shall, at all times, aim to give it our moral support, ever wishing it God speed, so long as it shall keep itself from falling into the hands of demagogues and political office-hunters.—*Santa Barbara Star*.

### The Blind Spinner.

Like a blind spinner in the sun,  
I tread my days;  
I know that all the threads will run  
Appointed ways;  
I know each day will bring its task,  
And, being blind, no more I ask.  
I do not know the use or name  
Of that I spin;  
I only know that some one came,  
And laid within  
My hand the thread, and said: "Since you  
Are blind but one thing you can do."  
Sometimes the threads so rough and fast  
And tangled fly,  
I know wild storms are sweeping past  
And fear that I  
Shall fall; but dare not try to find  
A safer place, since I am blind.  
I know not why, but I am sure  
That tint and place,  
In some great fabric to endure  
Past time and race,  
My threads will have; so from the first,  
Though blind, I never felt accursed.  
I think, perhaps, this trust has sprung  
From one short word  
Said over me when I was young—  
So young and heard  
It, knowing not that God's name signed  
My brow and sealed me his, though blind.  
But whether this be seal or sign  
Within, without,  
It matters not. The bond divine  
I never doubt.  
I know he set me here, and still,  
And glad, and blind, I wait his will.  
But listen, listen, day by day,  
To hear their tread  
Who bear the finished web away,  
And cut the thread,  
And bring God's message in the sun,  
"Thou poor blind spinner, work is done."  
—Helen Hunt Jackson.

### Women in California Horticulture.

Mrs. Mary L. Givens recently read an essay at the San Diego County Horticultural Convention entitled "Women in Horticulture." It was an account of her personal experience and that of her sister, Mrs. Maude. These two ladies, who were raised in luxury, started a five-acre fruit ranch at Chula Vista two or three years ago and are making a marked success of the same. What these ladies are doing, says the National City Record, should put to shame every fellow who is "waiting for something to turn up."

Woman's work, from the standpoint of a Californian and frontiers-woman, possesses a different meaning from that we learned in infancy, as we sat beside the wide, generous fire-side, "listening at the mother's knee," watching the patient, tireless fingers as they swiftly and unerringly guided the shining needles through the maze of stitches, round after round, while the stockings for our chubby feet grew into form and beauty; or, as she stitched the patches over yawning rents in our clothing, increased by careless contact with every point set by the "enemy of souls" to betray unwary children into difficulty. Those were days when we believed a "woman's work" consisted in the graceful accomplishments of knowing the needs of husband, home and babies; foreseeing and providing for their needs and happiness. Much time was consumed in "learning to brooder the neat little coats—to dream and to doat." Even then the well-nigh threadbare adage was oft repeated:

"A man's work is from sun to sun,  
While a woman's work is never done."

The wildest dreamer, in those days, could scarcely have conceived the possibilities of the daughters of these homes—children trained to lives of luxury and ease—going earnestly and cheerfully into "woman's work" in its broadest sense, as we understand it here in our own flower-bedecked and fruit-laden California. There is no avenue closed to us here. Indeed, from the work of a Samaritan to the most homely drudgery of household and ranch, women are permitted to bear their part; and I may truthfully add, they are helmsmen for man. God's generous gifts to us, of blue skies, balmy air and the most fertile soil, have induced some of us to make an attempt to wrest from man his claim, so long and jealously guarded, of alone being able to cause the earth to open up her great treasure-house.

"Experience being the school where we all learn wisdom" in these matters, I must confess in the outset to a very limited share of knowledge, having only the meager supply gained in a year of blind groping—learning more through my failures than my success. However, I will say women are quite as capable and successful, and even more so, than men in some branches of floriculture and horticulture, the chief activ-

ities of this section of the State, i. e., so long as she possesses the physical power and moral courage to wield a hoe or spade or trundle a wheelbarrow. To successfully carry on a ranch, a woman must lay aside the conventionalities of life and take to the field in earnest. "Eternal vigilance" is the price of all that grows. Many ladies have succeeded beyond all expectation in floriculture. Some will exclaim, "This is a land of flowers. Why cannot all succeed?"

True it is our soil is fertile, our climate never too severe for any semi-tropical plants, and the "sunny skies that bend above us" will win over a sickly vegetation into newness of life if only half a chance is accorded it.

One necessary thing has been withheld by our hountiful Giver of All Good, and that is the fresh flowing water. If we could turn the New England brooks and rills across our meads and foothills, we might easily find Eden's beauty repeated here in this land of our adoption. However, where Nature has provided a meager portion man's ingenuity and thrift have met the need and the difficulty has been overcome, at least for us, who are blessed by the Sweetwater system.

A proper and judicious application of water, however, must be made or our condition is scarcely beautiful. Those who first came here from the well-watered Eastern and Middle States hail water as king, and open every hydrant and pipe to pour out a sparkling draught for the thirsty soil. Everything must be soaked, and they fondly dream of success which shall never be.

The sun will soon bake a crust over the surface, and so effectually imprison the seeds and tender shoots that life or growth will be absolutely impossible. I find in our mesa soil, for almost all small plants, it is quite necessary to prepare the soil so as to prevent this baking or crusting, and then in irrigating allow the water to trickle so slowly that it will be absorbed.

We can take a lesson here from Mother Nature, and see how her most tender, delicate flowers are strewn beside streams or in shady nooks where the earth is always moist.

In the scientific world, when great results are accomplished, all effort is thrown into one channel and a "specialist" is the successful man. Having this lesson before me, and taking an exceedingly practical view of life as I do, I passed by the attractions and fascinations of floriculture and have given all my efforts to the useful, preferring the glory of the breadwinner to that of the dilettante.

It would require "the pen of a ready writer" to do the smallest justice to my subject, and at such time and place as this, only occasional points can be touched upon.

Of course, it goes without saying, that soil, altitude and exposure are all to be considered, and no rule can be given by which all may be guided.

My experience has been on the mesa of Chula Vista alone, where there is a heavy alluvial soil, with an underlying stratum of adobe. At their own sweet will, the four winds of heaven play at hide and seek over every foot of the premises, as no hedge or wind-brake has yet developed sufficiently for protection.

I warn all beginners that the cardinal virtue of patience, with ceaseless care, must be kept constantly in view, or success will not crown one effort. First of all, my interest went out to seedbeds and nursery stock. From a few sacks of oranges, seeds enough were procured to make an experiment.

The bed was constructed by simply inclosing the necessary space with narrow boards, to prevent washing. The natural soil was soaked to a good depth, and then pulverized. The seeds were planted in drilled lines, which were about two inches apart, the seeds almost touching. A light covering of earth was spread over them, and then an additional covering of sand, about one inch in depth; this holds the moisture and prevents the soil from baking. The beds should never be allowed to dry, as this is injurious, if not fatal, to the germs. For two months, I consider it necessary to keep them in this condition.

My experience taught me this was not the wisest plan.

I should now advise first plowing or spading the soil from 15 to 18 inches in depth. When thoroughly pulverized, plant the seeds in drills six inches apart and the seeds not nearer than one inch; cover as before. Instead of sprinkling, allow the water to seep through the spaces between the lines of seeds. Never make the bed too slope enough to wash. By all means avoid the use of manure in the construction of seedbeds, as it breeds worms which are destructive to young plants.

However, when the seeds are well up, a dressing of well-rotted manure, applied in the spaces between the drills will be found advantageous. I have abandoned the idea of boards to inclose the bed, as I find the reflection of the sun from them burns the plants.

A light covering of cheese-cloth, fastened to standards about two feet or less above the ground, is a very great protection against the burning rays of the noon-sun; and can be removed when the plants are strong enough to resist the heat; and can be again utilized when there is danger of frost, and will afford ample protection.

I have seen some beds which gave promise of splendid growth suddenly show signs of disease; the leaves curling, turning yellow and after a time the plant would wither and die. This came of an injudicious selection of

soil, where the adobe laid too near the surface, or was permeated with alkali. Large trees will thrive under these conditions, but the struggle for life which the young plant makes is short, and it is seldom the victor. I have also seen a similar condition induced by a too generous supply of leaf mould and manure in the seed beds, which forced the tops, but gave no root. Orange seeds planted in May can stand without removal till the next spring.

The surest and best method for transplanting, is to soak the bed, and in this way the plants can be pulled up, without much injury to the rootlets. After cutting off the tap root, and all that are injured, pack the whole into a box of damp sand, of course, leaving the tops exposed—set the box into a cool, shaded place, where the sun's rays cannot reach them, and let them stand for three weeks, till the broken roots callus, and then transplant in nursery rows one by three feet apart. They will at once begin a vigorous growth, as they cannot do if transplanted immediately, and exposed to the heat of the sun.

I use fertilizers generously on my nursery stock, placing it in furrows on each side of the trees, but not nearer than six inches to them. In this furrow I irrigate, at least once a week, during the rainless season, but, of course, one should be guided, always, by the quality of soil, and its facilities for drainage. In my experience, this rule has applied admirably to oranges, guavas, grape fruit and loquats.

I have never found that too much cultivation could be given. I use for a cultivator the Garden Queen, and then, with the hoe, break and turn the soil around each separate tree, never allowing it to bake or harden after an irrigation.

In strawberries, I was richly rewarded for my efforts. In November of '90, I planted in rows eighteen inches by one foot apart 1,500 plants of a new seedling variety, which I christened Pride of Chula Vista. Twice a week the fruit was gathered, and immediately after each gathering, I soaked the ground thoroughly, never allowing the bed to dry entirely. The ground was never cultivated. When weeds were to be removed they were pulled up. This fruit was large, bright red, delicious in flavor and the aroma indescribable. We measured berries seven and one-fourth inches in circumference. From February 1st to September 1st there was an abundance of fruit, but I then allowed runners to start, and from this small beginning there are now about 30,000 plants.

Budding comes legitimately under the head of "woman's work." So much might he said here, that I scarcely feel able to touch upon the subject. I cannot refrain from a few practical hints, however. Buds should be taken from the new growth, after it has hardened and before the tip of the branch shows signs of new growth. After the leaves are trimmed away, the twigs should be rolled in a wet cloth and hurried for a week or ten days. Any not wisely selected will then wither and show signs of immaturity in time to prevent a loss of labor in planting them; also, the leaf-stem will drop readily. Such buds knit more readily than fresh ones. If one desires to store them, they can then be sealed in a glass, can or bottle and kept in a dark place for months before using them. Much is said in favor of dormant buds, but, unless the tree is growing the bud will die. To secure an even growth, I prefer spring budding. After the bud is well started, if the parent stem is bent down, and held to the ground by a forked stick, bent at a sharp right angle, just above the bud, but not broken, all the strength will be taken by the bud, and double results will be observed.

I have felt great interest of late in root graft, but am totally without experience.

If only our days could be lengthened into 36 hours, and strength given us to "do with our might what our hands find to do," by sowing our seeds, transplanting, grafting, budding, pruning and gathering, what homes of beauty and abundance would be ours—where the year is a ceaseless cycle of fruit and flowers. For, especially in these lines, a woman's quick eye, deft fingers and love of the beautiful, leads her to work. But alas for the short days, from the peep to the sleep of sun!

"For when one task is finished, something's found,  
Awaiting a beginning, the year around."

Whether it be  
To draw the tea,  
Or bake the bread,  
Or make the bed,  
Or ply the broom,  
Or dust the room.

And it will be so till we are ushered into the haven of rest, where the things of time and sense are not.

Chula Vista, Cal.

DANGER EVERYWHERE.—Scientific and medical investigation seems to prove that the human family is literally surrounded with danger from every direction. Not only the air we breathe, the water we drink, the food we consume, but even our very pets, as well, are all fruitful sources of disease and death. The latest reports from eminent French authority estimate that cats are responsible for 30 per cent of the cases of common contagious diseases.

"HYPNOTISM is a great thing. I can hypnotize any one, and what I desire the subject to do he does." "See here Professor," said the little tailor, "I'll give you 10 per cent on all the collections you can hypnotize out of my customers."

### A Taste for Reading.

[Written for the RURAL PRESS by MAUDE S. PRASLER.]

Variety of work requires variety of recreation. Many occupations engage the mind while the body is inactive. Those who have such occupation should seek recreation in muscular exercises. Other employments require the use of the muscles more than the brain. Persons engaged in such employments should, during their hours of recreation, exercise their minds. One source always available is good reading matter.

The taste for good reading is usually acquired. It is the result of education, of patient training. We have no right to demand that a child love good books unless he has been effectually aided to this liking by teachers or parents. We sometimes hear people attribute "the lack of love for good reading to a natural weakness or depravity of the child, when it is really the weakness or neglect of those whose business it was to establish the habit and create the taste for good reading.

A child must learn to love good reading by practice in good reading. There are many ways in which he can be made or tempted to read good books until he does enjoy them.

The best way to create a love for books is to begin early to know them; there is so much in force of habit. There should be in every home as many good books as it is possible to procure, and each one should be to the little children as an old family friend, whom they might love first for their parents' sake, and later, when they have grown to know them, for their own sake.

Reading should never be made a task. The best in books, as in people, is found only when we cultivate them with loving sympathy. The books of Dickens, with their pleadings for civil reform; of Thackeray, with their revelations of high, noble life; of Charlotte Bronte, with their plea for the equality of man and woman; and those of George Eliot, our greatest realist, will live because they have each a great purpose and a pure style, for a great purpose alone is not sufficient.

To cultivate in a child a love for the best books is to strengthen character, to develop intellect and to nourish and beautify the soul. Young children may be gradually led up to an appreciation of higher literature, by the means of such steps as are afforded by the few really good children's magazines and periodicals. Most of these are illustrated, obtaining a child's eye at once, and rousing his interest by the curiosity he is sure to feel about the meaning of the pictures.

It would be impossible to lay down any fixed course for one to pursue in training a child's taste for good reading; equally impracticable to estimate the great importance of so directing the inclination.

### The World's Fair.

The women's building at the World's Fair, will be built from designs prepared by Miss Sophia G. Hayden, of Boston. A prize competition for designs was invited, and Miss Hayden carried off the first prize of \$1,000, over 12 others who entered the contest. Miss Lois L. Howe, of Boston, was awarded the second prize of \$500, and Miss Laura Hay, of Chicago, the third of \$250. Mrs. Potter Palmer, President of the Board of Lady Managers made the awards, after the different designs had been carefully examined and dissonned by Chief of Construction Burnham, and other members of the Board of Architects.

Miss Hayden's designs provide for a building 200 by 400 feet in dimensions, of Italian renaissance style, with colonades broken by center and end pavilions. It will be constructed chiefly of iron and steel, and show but little ornamentation except at the main entrance. It will stand on one of the most conspicuous sites in Jackson park, being opposite the eastern end of Midway Plaisance, and close to the main lagoon. The building will cost \$200,000. By reason of the use to which it will be put, the woman's building will certainly be one of the most notable structures at the Exposition. As soon as Miss Hayden's design was selected, Chief of Construction Burnham, telegraphed to her to come to Chicago at once, and elaborate it so that specifications can be prepared for the erection of the building: She will receive her expenses and be paid for her work while in Chicago. Miss Hayden graduated with honors from a four years course at the Massachusetts Institute of Technology, and has since done some excellent work in the employ of Boston architects.

A BARRISTER, who is shortly going to enter the holy estate of matrimony was seen scribbling on his brief the other day in Court. Later in the day his clerk, happening to glance at the writing read these old lines—"Fee simple or a simple fee, And all the fees entail, Are nothing when compared to thee, Thou best of fees—female."

HE. (ardently.)—I love you truly, Miss Priggly, more than words can tell. May I hope that my love is returned?

SHE.—I can't—

HE.—Oh, well, perhaps you don't like me as well as I like you. You see I am more easily suited than you are.

Preparing for Baby.

Among the mysteries for a little new-comer, nothing is daintier than the baby basket, with its contents ready for the first toilette.

Get a common wicker basket with a cover. Give it two or three coats of enamel paint, cream color would be a pretty shade, using blue silk for the lining. Thinly pad the inside of the basket, then line it nicely with blue silk (or sateen). Cover with plain muslin gathered prettily in puffs, letting a ruffle of rich lace fall over the inside of the basket. The basket being covered and furnished with two inside pockets should then be filled with all the articles necessary for the first dressing. A piece of narrow tape, a small bottle of vaselline, a number of small squares of soft linen, for the mouth cleansing, a piece of soft silk sponge, square of pure castile soap. These articles will all be required before the clothes, and should have a prominent place in the basket; for the dressing, on top is found a strip of soft flannel, torn from a piece, and turned over only on the edges, for the band; the little shirt of hand-knit wool, two diapers of old soft linen, the pinning blanket, flannel petticoat and the slip, and a square of flannel or a knit blanket to wrap around the little one when it is carried about. A nice home made baby powder is of cornstarch, to which a small quantity of pulverized orris root is added; this is the purest and best. A case to hold safety pins is made as follows: A strip of china silk nine inches long and five wide, must have an inner lining of crinoline to give it the required stiffness, and another lining of some pretty contrasting shade of silk. Leaves cut out of white flannel, and buttonholed with silk, should be fastened by their backs to the inside of this strip about three inches from the end. This should be the back of the case which should be bent over here, and have a bow of baby ribbon on the outside. The crinoline will keep it in the desired shape. Three inches farther, the strip should be turned over again, and the remainder left to form a part similar to the flap of a pocket hook. An apron made of cotton flannel with the furry side out is nice for the nurse or mother to put on, as the little one when taken from the bath can be rolled up in it, and answers at the same time the purpose of a soft towel. For wiping of head and face an old soft white silk handkerchief is a good thing. Little wrappers for baby to wear after the bath in the morning can be easily made at home, costing but a trifle. Cut them out of cheese cloth, princess shape. A layer of wadding should be tacked between two of cheese cloth, and fastened at intervals of a few inches by knots of worsted, as in a comfortable. The princess pattern is then laid on and the wrapper cut out, the seams felled on the inside and the edges finished by a buttonhole stitch of the worsted. A pretty robe for the baby carriage can be made from dotted white silk. The dots should be worked with a solid over and over stitch to resemble the centre of a daisy, using yellow fillo-floss for the working. Now make petals of white silk, and lo! the dots are transformed into beautiful daisies. The petals are made of one long double stitch, caught down at the end with a thick strand of white fillo-floss. If wished, the basket can be mounted on three wooden standards, after the fashion of the gipsy tables which are made from broom handles. Of course the standards are enamelled to match the color of basket. Add lastly, and for a finish, a large bow of wide blue ribbon, to the top of the cover. Ladies who work for Exchanges can take old furniture and after sand-papering thoroughly add two or three coats of enamel paint; then upholster with plush or brocades. Or use the new furniture before it is painted at all.—*Eva M. Niles in Transcript Monthly.*

Chaff.

POMONA Times: Gall is gall, but when a set of men try to patent the moonlight in which to fight scalebugs, they develop an immensity of oheck which is rather ahead of the usual style of things.

THE only time the average woman never talks back is when she accepts your seat in a street car.

"WHEN you were stealing the cake, my young friend, what thought did you have?" enquired a friend. "I thought nobody was looking," replied little Johnnie.

ROBINSON bates his mother-in-law cordially, and mamma-in-law returns the compliment. "Confess that you wish me 100 fathoms under ground!" she said to him the other day. "Oh no six feet would be quite enough," gloomily returned Robinson.

MISTRESS—"Mary, what are you doing with that clock?" Mary, (with the servants' bedroom clock under her arm)—Please, mum, O'm takin' it to the watchmaker's. It's all out av order, mum. I very morning at foive o'clock it goes all to paces, and makes such a racket Ol can't elape.

BLACK.—So you've been abroad. How did you like Ireland.

WHITE.—Oh you wouldn't know it from some parts of America.

JUDGE—"Prisoner, are you married?" Prisoner—"No, yer Honor; those scratches on my face came from stumbling over a barbed wire fence in the dark."

YOUNG FOLKS' COLUMN.

Myra's Revenge.

(Written by MARTHA T. TYLER.)

Myra Miller did not like to visit her Aunt Wedderkin, but sometimes she was obliged to do so. Her objections to her aunt were innumerable, but the principal difficulty lay in the fact that Mrs. Wedderkin expected children always to behave exactly as grown people behaved and to like only what was exactly good for them.

Myra was a warm-hearted, impulsive child with a great fund of mischief at command, and a quick little temper of her own, so that Aunt Wedderkin's peculiarities were a source of much annoyance to her.

It is true that the widow was really fond of Myra and desired to make the little girl happy, but perhaps her nature was such that she had never been a child herself, or she had forgotten all about that period of her own life, for whenever she and her niece were together, they invariably succeeded in making each other wretched. Myra was always at her naughtiest with Aunt Wedderkin, and Aunt Wedderkin, in her anxiety to have the child become the pink of propriety, exaggerated everything she did that was not precisely in accordance with the lady's ideas of decorum.

The Millers lived in the city. They had a sweet cottage home surrounded by a gay little garden, and as a rule there were no happier children than Myra and her baby sister.

Mr. Miller's circumstances were only moderate, and it was natural that his rich widowed aunt should take an interest in his family.

Mrs. Wedderkin had a large, comfortable place on the outskirts of a country town, and once a year in the summer time, the reluctant Myra was sent to spend several weeks with her.

Myra loved the country. She liked to run about under the broad shade of the oak trees, or to roll on the grass, and it would have delighted her to assist Hannah, the neat dairy-maid, in churning the cream, or to have ridden in the wagon with the butter and eggs, when honest John drove these supplies to the village market, but none of these amusements were permitted at Aunt Wedderkin's.

It was not proper for little girls to move around too violently, and even if it had been otherwise allowable, it would have spoiled the smooth lawns to roll over them. As to the dairy, it made Mrs. Wedderkin nervous to see the child about. She would be sure to step into a bowl of milk or overturn the churn, and as to her niece's riding in the market wagon with the dairy produce—absocking!

So it was that Myra generally arrived at Aunt Wedderkin's oppressed by a sense of coming misery, and was returned home by her indignant relative in a state of dire disgrace.

Aunt Wedderkin's house was two stories high, and over the living rooms stretched a broad, dim garret, lighted only by one small, front window. It was a dusty, cobwebby place, this last, filled with odd pieces of time-worn furniture, old chests and a few empty picture frames.

The rest of the house was pleasant enough. Large, airy rooms, quaintly but handsomely furnished, where Myra thought she might have been very much contented but for Aunt Wedderkin.

Myra was a pretty child and it was not without satisfaction that her aunt noted her rosy cheeks and sparkling blue eyes on the morning of her arrival at the farmhouse, one day in June, but unfortunately for Aunt Wedderkin's peace of mind, and greatly to the delight of Myra, she had the prospect of a playmate during her visit this year, and it was that that made her color uncommonly brilliant and her eyes brighter than usual as she lifted her head to receive her aunt's kiss of welcome. She had seen as she came up the road in the buggy, a girl of her own age swinging on the gate of the place just below Aunt Wedderkin's. An old couple had lived there heretofore, but as Myra discovered afterward the property had been sold to the father of the little lady on the gate. There were also two small boys among the new comers, and as the Wilsons were really nice people, Aunt Wedderkin could not object to an association between the children, except upon general principles. She seemed to think it not at all natural that young people should desire other than grown up company.

An intimacy soon existed between Myra and her little neighbors, and as she did not venture without special permission to bring a pair of mischievous boys within the sacred precincts of her aunt's garden, she was absent herself most of the time, and in this way gave the old lady much less trouble than usual. No wonder that she found the Wilsons' home pleasanter than Aunt Wedderkin's, for Mrs. Wilson was an amiable, indulgent parent, and Sallie and the boys did very much as they pleased.

"Myra," said Sallie, one morning when the quartet had assembled under the large elm tree in the Wilson's front yard: "Let's get up a picnic."

"I have never been to a picnic," answered Myra.

"I have," said Sallie, "and its lot's of fun. You have a big basket, you know, packed with goodies, and you find a place way off in the

woods somewhere, and then you eat everything up that's in the basket."

"Aunt Wedderkin wouldn't let me," mused Myra. "She would say it was all nonsense to take your meals in the woods when you might have them more comfortably at home."

"But it's not a regular meal," explained Sallie, "it's pies and cake and candy and all that—"

"And pickles and—chewing gum?" queried Myra. "Well, I have some money, and the boys can buy them all at the store, and we won't ask Aunt Wedderkin anything about it—but it will be naughty," she added, with a sudden qualm of conscience.

However, the boys were despatched to the village store, where they invested in half a pound of peppermint drops, a dozen hard ginger bread horses, a jar of pickles, and an apple pie. Sallie found an old basket into which she packed the sweetmeats, and by ten o'clock the picnickers were off for the woods.

When Myra failed to return for dinner at three in the afternoon, Mrs. Wedderkin began to be uneasy and sent Hannah over to the Wilsons' to make inquiry. The girl returned looking a little bit frightened. Miss Myra and the other children were not to be found. Mr. Wilson had gone out in the wagon to look for them. They had been seen by one of the neighbors walking in the direction of the woods a few hours before. Mrs. Wilson had not informed Mrs. Wedderkin, because she thought it would alarm her needlessly. Mr. Wilson would be sure to find the children.

But Aunt Wedderkin was not to be so easily quieted.

"Was there ever such a naughty child!" she exclaimed, "and what will my nephew say should anything happen to her? I will punish her severely when she is found; but suppose she should not be found," and so on, until the poor old lady had worked herself up into a fever of excitement.

Meantime the children wandered a long distance from home. The morning was so clear and lovely and the woods so cool and monotonous that they did not realize how far they had come and how tired they were until they began to be hungry.

"Don't you think it's time for the picnic?" asked Myra at last.

The others thought they had now arrived at a good stopping place, so they all sat down on the grass and Sallie opened the basket.

Myra was surprised to find that the sweeties were not half so nice as she expected them to be, in spite of her appetite, and would have given all of her share for an equal supply of Aunt Wedderkin's beautiful bread and butter and a glass of milk. Oh how thirsty she was! and there was not a drop of water to be had. If all picnics were like this, she thought she had enough of them. Sallie probably reasoned the same way, for when they had rested awhile she proposed in rather a faint voice that, as the lunch was disposed of, perhaps they had better go home.

This, however, was easier said than done. The trees all looked so much alike, it was impossible to decide which direction to take, and after moving about aimlessly for an hour, Myra declared she was too tired to go a step farther, and all four sat down again in despair.

It was about sunset when Mr. Wilson at last discovered the half-famished and wholly frightened group. He crowded them into the wagon without a word, and in a short while Myra was delivered into the hands of her exasperated relative. Mrs. Wedderkin, however, saw that it was no time to scold the child. She merely said, "Myra, I shall punish you to-morrow," and hurried her charge off to supper and to bed.

Next morning Myra and the old lady breakfasted together in profound silence. As soon as admissible, the little girl put on her sunbonnet and shawl as usual, and was hastening out of the house, hoping to escape the execution of Aunt Wedderkin's quondam threat, when that lady sternly ordered her to stop.

Grasping the small culprit by the arm, Mrs. Wedderkin pulled her along the hall up two flights of stairs into the dismal garret.

"Here," she said, "you are to remain all day. You will have time to reflect upon your conduct of yesterday, and I hope you will make up your mind to be less willful in future. Hannah will bring you some bread and water at dinner time," and she closed the door after her, turning the key in the lock.

Myra was angry. Never before had she suffered such indignity. She knew she had been naughty, and she was sorry for it, and would have said so, if Aunt Wedderkin had looked less stiff and unrelenting; but to be fed upon bread and water! It was disgraceful. She would do something worse than she had ever done yet.

As her eyes became accustomed to the twilight pervading the garret, Myra began to distinguish the different objects around her. On a pile of boxes at one end she spied the corner of a small pillow, and a brilliant idea seized her. She would frighten Aunt Wedderkin.

Climbing upon an old chair, she reached for the pillow, and having descended with it in her arms, proceeded to divest herself of her white bonnet, her red shawl and her brown dress.

"There!" she exclaimed triumphantly, "I will put my clothes on the pillow and push it out of the window. Aunt Wedderkin always sits on the front porch this time of day and when she sees it fall she will think I have thrown myself out of the window."

"John," called Mrs. Wedderkin from her

corner of the porch, "doesn't that lawn need cutting again?"

"Well, ma'am," answered John—"O Lord, ma'am, what's that?"

Mrs. Wedderkin caught a glimpse of white and a flutter of red and brown, and in another instant the sham Myra lay on the lawn limp and motionless.

Mrs. Wedderkin nearly fainted. John ran up to the fallen object, looked at it narrowly for a moment and then turned it over with his foot.

"Some of that child's trickeries!" he ejaculated, with a gasp of relief. "It's nothing at all, ma'am," he explained to the terrified Mrs. Wedderkin, "there's nobody in the clothes."

When Myra's aunt was brought to an understanding of the situation, she declared that the girl should be sent home before the close of another day.

"For I am actually afraid to punish her further," she said to herself, "no telling what she might not do next."

So Myra's little trunk was packed forthwith and she was forwarded to her parents on the afternoon train. "I can no longer be responsible for her," wrote Mrs. Wedderkin to her nephew.

DOMESTIC ECONOMY

BAKED PUDDING FOR INVALIDS.—One pint of milk, three eggs, sugar to the taste, two tablespoonfuls of flour. Beat the eggs, add the sugar, then the flour, and stir in the milk gradually. Butter a pan, pour in the pudding and bake it.

FISH CROQUETTES.—Any cold cooked fish, chopped fine and mixed with one-third as much hot mashed potato; moisten with a little cream or melted butter, make into balls, roll in beaten eggs, then in crumbs, and fry in hot fat, using a wire basket if you have it.

PUDDING SAUCE.—Mix two tablespoonfuls of corn flour with a dessert-spoonful of cold milk, and stir this into half a pint of boiling milk previously sweetened to taste, and stir it all over the fire till it thickens then flavor to taste with either cinnamon, nutmeg, vanilla or a glass of wine.

EGG DRESSING FOR SALAD.—Three eggs, two tablespoonfuls of mustard, two tablespoonfuls of oil or melted butter, one tablespoonful of sugar, one teaspoonful of salt, one teaspoonful of white pepper, one-half cupful of cream, one-half cupful of vinegar. Cook all to scald, add the oil slowly afterward, and pour over any chopped salad.

RICE CUP PUDDING.—Pick and wash a tea-cupful of rice and boil it in a quart of milk till it is very thick and dry; add to this while it is hot, a pint of rich milk or cream and two ounces of butter. When it is sufficiently cool, add three eggs, well beaten, and sugar to taste. Butter your cups, pour in the mixture, and bake in a moderate oven. Grate nutmeg over the top and serve them with cream.

SPONGE CAKE.—Five eggs, half a pound of loaf sugar, the grated rind and juice of one lemon, a quarter of a pound of flour. Separate the yolks from the whites. Beat the yolks and sugar together until they are very light, then add the whites, after they have been whisked to a dry froth, alternately with the flour. Stir in the lemon, put the mixture in small pans, sift sugar over them and bake them.

LEMON ROLLS.—Take three pounds of flour, one pound of butter, one pound of fine sugar, six eggs, half a pint of milk, quarter ounce of ammonia, and sufficient oil of lemon to flavor; make these ingredients into a dough; roll it out into long, round strips, and cut crosswise, slantingly into diamond shapes; scallop the tops with the back of a knife; bake on greased tins in a hot oven.

APPLE JACK.—Make the same as apple pie, leaving out the sugar and spice; when done take the upper crust from the under one, spreading half the apple on the inside of each crust; sprinkle a handful of sugar and put small pieces of butter on the apple, and lay the upper crust, apple side up, on the under one. Eat while warm, as it is not good when cold.

OMELETTE SOUFFLE.—Break six eggs separately; beat the yolks of four, one teaspoonful of flour, three tablespoonfuls of powdered sugar, a pinch of salt, and flavoring together; beat the whites till stiff; mix all lightly; pour into buttered dish and place in a hot oven. It is done when risen and lightly brown. Roll out on a hot dish, sprinkle with powdered sugar and serve.

LEMON PUDDING.—Pour a quart of boiling milk over 1½ pints of bread crumbs. Put the mixture into a buttered pudding dish, stir in a teaspoonful of salt, cover closely with a plate and let it stand half an hour. At the end of that time, heat into it three eggs and a teaspoonful of lemon extract. Beat it until it is perfectly smooth, and bake it in a hot oven about three-quarters of an hour.

CREAMED ONIONS.—Put a dozen onions in a pan of cool water and take off their skins. Put them in a saucepan of boiling water with a teaspoonful of salt, and boil them until tender. In the meantime melt in a small saucepan a tablespoonful of butter, add a tablespoonful of flour, and when it froths stir in half a pint of milk, stirring until it boils; now drain the onions, pour this sauce over them, and set them where they will only simmer gently until dinner is ready.

## The Week.

It is the late rains that make the crop, and they are doing their work well this year. They do not reach far enough up the San Joaquin valley to insure all sections, but they have done better than usual, even in this regard. The Lower San Joaquin, the Sacramento valley and the coast regions generally have been fully moistened, and the warmer weather is bringing forward a splendid growth. It is, of course, too early to describe results, but it is safe to say that so far things are going well, and the outlook is promising.

President Harrison and his group of relatives and friends will find California in its most regal garb. They will return with new ideas of floral wealth if not of coarser pelf. From

their car-windows they will behold the valleys carpeted with the most gorgeous bloom, and at their stopping-places they will be well-nigh suffocated with garden beauties. They will find California beautiful and Californians prosperous and happy.

## The President's Visit.

Only once before has a President of the United States, while still clothed with the insignia of that high position, reached our distance from the National Capital. We have had visits from ex-Presidents and have shown them honors worthy of their public services. President Hayes alone found his way to California while still in office. President Harrison will be the first of all the Presidents to visit the States of Oregon and Washington.

It is but natural that the coming of the chief officer of the republic to our shore should awaken the keenest interest and arouse enthusiasm. Hero worship has prevailed since the beginnings of the race, but in these later days we have come to characterize our deference to those in authority with a wider significance than pertains merely to devotion to the person of the sovereign. We rally to welcome the President as a worthy and honorable citizen, but beyond that our wealth of loyalty and devotion is poured out not upon the man but upon the office which he graces—the headship of our beloved nation. Let not, then, there be any disposition to glorify the coming of President Harrison for fear of sharing the abject devotion which pleased the vanity of the despot. We shall honor Harrison as the embodiment of the American idea and the representative of American greatness. As we believe in that idea and as our patriotism rises into fervor as we contemplate the grandeur of our nation, we cannot refrain from honor to our visiting President. It is but fitting, then, that we show him welcome, hospitality and the fullest goodwill. It is proper that all thought of partisanship should be banished from the popular mind. We honor our institutions and ourselves and we show to the world our faith in them when, as dwellers upon the far-away Pacific, we bestow the highest civic honors upon the visiting chief executive of the nation and demonstrate the fact that though 3000 miles from the nation's heart, the patriotic current is warm and strong and powerful for national unity and harmony.

Various ways will be adopted for signaling California's welcome to President and Mrs. Harrison. At all stopping places, there will be greetings of the most enthusiastic character. In the larger towns there will be parades and receptions. No doubt many unique features will be developed by the local committees. The project proposed in Los Angeles of marshalling the school children in two lines a mile in length, flower-laden, and ready to greet the President, as he passes by, is a most happy one. The City Superintendent of Schools commends the plan.

The sight of the President would surely inspire the children with loyalty. The welcome they could and would give him could but be highly pleasing to him. Let the 7500 children of the public schools be drawn up in two lines, the boys on one side and the girls on the other side of some prominent street, and the President's carriage driven between the lines. From our wealth of flowers each pupil could be supplied with a handful, which might be strewn in front of his carriage on his approach.

This will indeed be a notable welcome, and the sight of such a rising generation will be as forcible a prophecy as could be made of the future of the Pacific Coast. Everywhere let the children see the President, and let their young hearts glow with patriotic ardor. They can learn no better lesson.

The President's party is made up as follows: President and Mrs. Harrison, Mrs. McKee, Mrs. Dimmick, Postmaster-General Wanamaker, Mr. and Mrs. Russell Harrison, Private Secretary Halford, Mr. and Mrs. George W. Boyd, Mr. Tibbett, the President's stenographer, and several representatives of Eastern newspapers who will accompany the party. Hon. J. M. Rusk, Secretary of Agriculture, was at first announced as among the visitors, but he will not come west of Texas, which will be regretted by our agriculturists.

The special train bringing the party is expected to touch California soil at Fort Yuma in the morning of Wednesday, April 22d. It is probable that Governor Markham, Senator Felton and other officials will meet the Presi-

dent at the State line. The following is the itinerary of the California visit:

Arrive at Los Angeles Wednesday, April 22d, at 3 P. M.; arrive at San Diego Thursday, April 23d, at 7:30 A. M.; arrive at Pasadena Thursday, April 23d, at 4:30 P. M.

Leave Los Angeles Friday, April 24th, at 10 A. M.; arrive at Santa Barbara Friday, April 24th, at 2 P. M.

Leave Santa Barbara Friday, April 24th, at 12 o'clock midnight; arrive at San Francisco Saturday, April 25th, at 7:45 P. M.

Sunday, Monday and Tuesday in San Francisco. Leave San Francisco Wednesday, April 29th, at 9 A. M. for Palo Alto.

Leave Palo Alto on evening of Wednesday, April 29th, stop at San Jose and then run through to Santa Cruz.

Leave Santa Cruz Thursday, April 30th, at noon for Monterey; Thursday afternoon and Friday forenoon at Monterey; arrive in Oakland (via San Jose and Niles) Friday afternoon.

Saturday and Sunday in San Francisco.

Leave San Francisco Monday, May 4th, at 2 A. M.; arrive at Sacramento Monday, May 4th, at 6:30 A. M.

Leave Sacramento Monday, May 4th, at 10 A. M., for Portland.

Great preparations are being made for the reception and entertainment of the presidential party in San Francisco. As stated above they will arrive on Saturday and will pass a quiet Sunday.

On Monday there will be a reception to the Governor and staff officers, municipal officers, army and navy officers, consuls, members of the Chamber of Commerce, etc. In the afternoon, from 2 to 5 o'clock, the President will drive through the Park to the Cliff House.

On Tuesday he will participate in an excursion on the bay and visit harbor fortifications. He will be tendered a banquet on Saturday evening, May 2d, after his return from Monterey.

The President's visit to Palo Alto will be for the purpose of inspecting the Stanford University. There will be no ceremonies, as has been stated. The cornerstone of the institution was laid long ago, and the dedication will not take place until October.

Benjamin Harrison, of whom a good portrait appears upon the first page of this issue, was born at North Bend, Hamilton county, Ohio, August 20, 1833. His father was John Scott Harrison, who served his district two terms in Congress. His grandfather was that famous leader and general, who, after a life of brilliant and distinguished service in the forum and the field, was elected President of the United States, after the most exciting campaign of 1840. His great-grandfather was one of the heroes of the Revolution, Governor of Virginia, and a signer of the Declaration of Independence. One of his ancestors was a general of the Commonwealth of England, before Cromwell's usurpation, and whose unflinching Republicanism cost him his life in the early days of the Restoration. His immediate descendants came to America and founded the family in this country.

Benjamin Harrison received a classical education, and is a graduate of Miami University, Oxford. Immediately after graduation, he commenced the study of law at Cincinnati, Ohio. In 1853 he was married, and in 1854 he established himself at Indianapolis, his present home. On the breaking out of the Rebellion, he left home, a successful practice, and all that makes life pleasant, in response to his country's call for her defense. The same diligent application that contributed to his success in peace enabled him to succeed in war, and the proclamation of peace found him wearing the stars of a general. In 1881 he was elected to the United States Senate, serving out his full term. In 1884 he was prominently canvassed as a Presidential candidate, and in 1888 was nominated and elected President, taking the oath of office March 4, 1889.

**ENFORCING THE PEST LAW.**—The horticultural authorities in Los Angeles are going ahead under the new law, already published in the BURAL. The Los Angeles Times says: Inspector Richardson has started in to rid all the trees hereabouts of the scale pest. He is at present engaged at the Hewitt tract on the east side of Galena avenue, and will continue operations until the whole town has been covered. After taking the necessary steps to discover the owner of neglected orchards, if unsuccessful, the work will be done at the expense of the county, which, in turn, will become a lien on the property. The county horticultural commissioners will be in town on Thursday to see what progress is being made. There is much of this work to do in Los Angeles because so much orchard property was cut up into lots and sold to absentee owners.

## Revival of the Cattle Interest.

We have had several articles looking toward the revival of the cattle interest, which we believe to be forthcoming. No doubt many readers who have in mind the wretchedly low prices they have recently secured for beef cattle and for fine young thoroughbred breeding animals think it is high time that there should be a change if they are to keep soul and body together and their enterprises afloat. So, indeed, it is, and we believe they will not be disappointed in the forecast for better days. We have given full statistical authority looking in this direction. The *Breeders' Gazette* of Chicago now sees unmistakable evidence of anticipated shortage in the operation of the great slaughterers of that city who are making enormous purchases for fear of being squeezed in a shortage which they foresee. They have, it is said, bought all the cattle at the Canadian distilleries, and have bought over 80,000 head of cattle in the pan-handle for upward of \$2,500,000. Upon these statements, the *Gazette* thus remarks:

If there are any competent witnesses on the subject of the present cattle supply of the country, they are certainly the slaughterers of Chicago, who for so long a time have had the market in their remorseless grasp. The ramifications of their systems extend the country over, and they are in possession of greater facilities for gathering information on this subject than any one else, the Government not excepted, for it is their business to keep posted. When they thus hoist the signal of distress it surely is time for the most skeptical and the most conservative to bring themselves to a realization of the situation. We have reached the turn in the road.

The experience of the past few years unmistakably teaches the advantage of producing better beef animals, and with present low prices for thoroughbreds, such blood is available to all. We have emphasized this point before, but the following from the *Gazette* will serve as another lesson from the same text:

With the lessons of the past few years as to the wide range in values in a single day's market before our cattle-breeders, it would scarcely seem necessary to argue the folly of a return to the propagation of inferior herds. Surely the appeal to the pocket-book has been convincing enough to deter any intelligent man from again taking up with an inferior class of cattle, with the expectation of deriving any satisfaction or profit from their handling. Much of the scrub stock has gone through the packlog-house during the past three years; let us sincerely hope that what remains will be given the best advantage to redeem itself—and that can only be afforded by the services of herds of the improved breeds. It is not within the possibilities that the prices of pure-bred cattle should remain at their present point while the prices for beef cattle continue to mount skyward. The one will of necessity bear the other with it in its upward flight.

There is no time to be lost in getting possession of good blood. When values are at rock bottom, their course is invariably upward. Do not lose the chance to get good blood now and use it for all it is worth on common cows. Do not allow auctions to be held without attendance and permit fine young bulls to be sold, as they have recently been in this city, at little more than beef value. The man who stocks a good range now and handles good blood in a practical and sensible way is morally certain to be largely profited by the enterprise.

**REPORTS OF THE BOARD OF FORESTRY.**—The last two reports of the California State Board of Forestry have contained much remarkable information, not only about forestry work, but especially with reference to classification and description of our native California trees. These publications have not in all cases at least reached those who are likely to be most interested and benefited by them, and we are glad to announce that copies can now be had by applicants, as will be specified below. The Second Biennial Report describes especially the "Prices of the Pacific Slope," with 24 illustrations, and of this a few copies are still to be had. The Third Biennial Report, recently published, contains a monograph with 30 illustrations of the cone-bearing trees of the Northwest, especially of California. This work in both reports is by Prof. J. G. Lemmon, the well-known botanist, and copies of the documents can be had by application to him at 1015 Clay street, Oakland, sending ten cents for each report to cover expenses. These reports will soon become rare and difficult to obtain.

**A SAD AFFLICTION.**—The many friends of J. De Barth Shorb of San Gabriel will sincerely sympathize with him in a most distressing bereavement. His youngest son was killed by a vicious dog last week. It is a case in which words cannot express the feelings which the event inspires.

## The Orange Carnival in Chicago.

Our enterprising citizens of Southern California have made a grand strike by their transfer of the chief features of the recent Los Angeles Citrus Fair to Chicago. The telegraph wires are laden with accounts of the success of the opening which occurred on Monday evening of this week. Estimates of numbers in attendance vary from 15,000 to 25,000. There were in any event so many thronging the great pavilion building, that the formal opening exercises had to be in part abandoned.

That the affair is really a marvelous success is evidenced by the reports made by the local papers. The *Daily News* in its account says:

"Twenty-two thousand people feasted their eyes upon the Southern California orange display. It was something new—a fresh amusement for Chicago, and it scored a hit. The 500,000 oranges which have been deftly grouped, arranged and constructed into forms and structures never before seen in this city, heaped on the delightful throng, and incidentally, while the Second Regiment band played its sweetest, called attention to the glorious climate of California."

The telegrams contain interesting accounts of the opening exercises, which had to be held in an ante-room to get out of the way of the crowd. President Jackson made an address recounting the days of the Argonauts, and contrasting the California of '49 with California of to-day, with its great resources and bewildering beauties.

He was appropriately answered by J. W. Cook of Glendora, who ascribed the State's greatness to the courage, patience, fortitude and foresight of the pioneer. Immediately after this Peter Studebaker, the head of the great Studebaker Manufacturing Company, who came up from South Bend, Ind., expressly to be present at the opening of the carnival, made an address in reception to as many as could crowd into the room, telling in a droll way his experience as a pioneer.

He told how the first wagon he ever made was sent to California across the plains, he giving the wagon to the captain of the train for the privilege of joining the party in the capacity of a hull-whacker; how he landed in the mining regions with \$65, of which he was promptly relieved by hunko sharpers, and how the lesson then learned served to lay the foundation of his prosperity. Finally, he congratulated the Californians upon the magnificent display they had made. State Senator Ballou and others also made speeches, and the carnival commenced under remarkably favorable circumstances.

Another feature of the evening was the presentation to the managers of the show of a beautiful floral piece by the Chicago California Fruit Buyers' Association. The piece is six feet in diameter and four feet high, and contains over 3000 roses. The convex center forms a stem end of an orange, orange-colored calendulas being set around the stem. The rim of the orange is of Marechal Niel roses. The center is completely girdled by a belt of roses ending in a huckle and projecting strap of red and white carnations. In the center of the belt are the words, "The Orange Belt of California." Above and below the inscription are bridal roses of a light cream tint, and the trimming of the entire piece is American beauties, ferns, lilies and smilax. It cost \$500. During the continuation of the carnival it will be kept in order at the expense of the donors.

The general display is the most elaborate and perfect of its kind ever seen. Starting at the

PALERMO'S EXHIBIT AT THE MARYSVILLE CITRUS FAIR.

door the visitor sees a glorious orange 37 feet in circumference made up of thousands of smaller fruit. Behind it is the rest of the orange county products in the form of hanks and pyramids of limes, lemons and oranges with a car-wheel, indicating that all are sold in car-load lots. To the left is the additional display made by Cucamonga of oil, wine and other things.

Then comes the beautiful arch, 46 feet in span, of Redlands, San Bernardino county, representing in its background the Bear Valley dam. Next is an exhibit from Ontario of a car composed of oranges. The upper San Gabriel valley with separate exhibits from its three towns—Glendora, Covina and Azusa—shows a model of Cleopatra's Needle and fruit enough to give 73 small boys colic every half hour for ten days. An interesting feature of the exhibit is the courthouse of Los Angeles standing upon an eminence and built, except the clock, of mandarin oranges and limes.

The bay and harbor of San Diego, with Point Loma, are represented, gulches and all, in the gold-yellow fruit, with orange and lemon laden

ships, wharves and piers. The exhibit of various products of that glorious climate follow.

A beautiful model of the old mission of the Franciscan monks at San Gabriel stands at one side of the entrance, with steps, ruined walls and the old Spanish belfry carefully portrayed. In the center are architectural designs not less pretentious and impressive.

Duarte has a great mosque, crescent-topped, admitting a score of persons beneath its bulging minaret, while to the north is the great obelisk of Pasadena. This alone required 24,000 oranges of assorted kinds, Navels, St. Michaels, Malta Bloods and Mediterranean Sweets, the choicest of all the Golden coast products. Nearly 200 boxes made up 38 feet of solid oranges, with palms and pampas plumes atop, bringing the total height of the column to 50 feet.

The Santa Barbara exhibit was in hard luck. The first night out, before it had crossed the mountains, the train tumbled down an embankment and left nothing but fragments. A new lot of fruit was forwarded and the original idea of a beautiful tropical garden carried out.

At the entrance to this garden, stand two great fan palms.

Behind them are strawberry gnava of Japan in full fruit, from which comes the famous jelly, and the banana, both in fruit and flower. Custard apples, Cherymoya, Egyptian papyrus, giant bamboo, etc.

Then there are two date palms containing six bunches of fruit, weighing from 60 to 80 pounds apiece, a branch from a lemon tree, 11 feet long, all grown in four months. All this with raisins and olive, citron, lemon and orange trees in both blossom and fruit, will hardly give a complete idea of the finest exhibit ever made.

Among the Californians interested in the exhibit are Dr. Wilder, president of the Woman's Annex of Los Angeles Chamber of Commerce; C. M. Wells, president of the Fruit Growers' Association and of the Los Angeles Chamber of Commerce; H. Jay Hanchette, secretary of the Chamber; J. W. Cook, supervisor of Los Angeles county; Frank Wiggins, his assistant; M. H. Wright, Barney Williams, J. W. Banberry, Pasadena; L. S. Bridge, J. D. West, Glendora; G. D. Bunch, L. L. Bequette, Rivera; C. L. Loud, Pomona; W. Friend, Ontario; H. H. Sinclair, Redlands; H. O. Fosdick, Tustin; C. L. Lloyd, Santa Barbara; A. C. Weeks, Alhambra; L. E. Allen, San Diego; R. H. Young, editor San Diego *Great Southwest*.

## Restoration of San Gabriel Citrus Orchards.

We have had many statements of the grand work done in the Southern California citrus orchards by the Anstrallan ladybng (*Vedalia cardinalis*) in clearing out the ruinous cottony cushion scale (*Icerya purchasi*). The following explicit statement we take from a letter dated April 6, 1891, from A. Scott Chapman to Prof. Hilgard:

The San Gabriel citrus orchards have pulled out of the mire and everything looks hopeful. I have 150 lemon trees, which, in the summer of 1889, yielded no fruit at all and the trees were dying. During the summer of 1890 the scale was cleared out and I have sold fruit as follows: July, \$9; August, \$52.43; September, \$141; February, 1891, \$108; to-day (April 6th) I make a shipment of 152 boxes and have as many more just gathered in the packing-house, and the trees are in splendid shape.

My father, A. B. Chapman, comes out even better on five acres of fruit huddled on Tahiti lime stock. He calls the fruit the "Central American orange." Last year he did not harvest a single box and this year he has gathered about 4000 boxes and has no bugs. He has used superphosphate and nitrate of soda as fertilizers.

This is a signal triumph for economic entomology. The fate of the cottony cushion scale has been sealed. Now we want parasitic or predaceous insects which will handle all the other scales which infest our fruit trees. As we have already stated, the State has set apart \$5000 to carry on the search for them. May it prove successful.

## Echoes from the Marysville Fair.

The account of the grand triumph of the Southern citrus fruit-growers at Chicago calls to mind again the grand display made by the Northern citrus fruit-growers at Marysville, of which full descriptions were given at the time, but were not accompanied by pictorial illustration. Upon this page may be seen two of the most unique designs at the Marysville fair. The pretty little church with its steeple 20 feet high was made by the representatives of Palermo, modeling their exhibit after the place of worship in that colony and using 8500 oranges in its construction.

The other picture represents the Sutter County Fruit Co.'s train, which stretched for nearly 50 feet along the southern wall of the pavilion and consisted of locomotive, tender, and three cars. The locomotive was elaborately plated with dried fruits, the boiler appearing in pitted plums, the dome and sand-box of peaches and white figs, the smoke-stack of black figs, the pilot of raisins, etc. At night it carries a *bona fide* electric headlight. The oah and tender were finished in similar fashion and the latter were heaped with French prunes instead of coal. The three cars typified the canning, the drying and the citrus seasons, the first being freighted with oans, the second with dried fruits in great variety and the third with oranges.

SEIZURE OF FRAUDULENT MILK.—The Health Officer is seizing and condemning "Elephant brand of condensed milk." The alleged condensed milk, upon examination by the Health Officer, was found to be a preparation of terra alba (white clay) and other deleterious substances, in appearance very much resembling axle grease. The seized "milk" has been selling in the market at 10 cents a can, which fact alone Health Officer Keeney considers sufficient to prove it a fraud. Good condensed milk, he says, cannot be made for less than 15 cents a can, while the best quality sells for about 20 cents.

THE SUTTER COUNTY FRUIT COMPANY'S FRUIT TRAIN.

## AGRICULTURAL NOTES.

## CALIFORNIA.

## Butte.

**SALES OF NEW CROP WHEAT.**—Chico *Enterprise*, April 8: The outlook for the wheat crop is good, and if the weather continues favorable, there will be an immense yield. The old crop has not been so completely cleaned out of first hands for many years, and old milling wheat is becoming very scarce and commands a high figure. Already our local grain dealers are in the market for the new crop, and some sales have been made for July, August and September delivery at \$1.30 per cental.

**BELIEVES IN THOROUGH DRAINAGE.**—Biggs *Argus*, April 9: James Baynon, one of the best-fixed farmers on the adobe west of town, is about to purchase a 14-horse ditcher and excavator with which to excavate drainage ditches on his 1400-acre farm. The machine is to have an elevator which carries the dirt from the ditch and deposits it on the side, thereby making a levee on either side. Mr. Baynon sees the necessity of thorough drainage to make his land productive.

**REDLANDS FOR FRUIT AND ALFALFA.**—*Argus*, April 9: Daniel Streeter, who owns a section of land about eight miles northeast of town, which consists of red sandy loam, has just finished setting out 22 acres to White Adriatic figs. He planted a few trees on this land some years ago, and they grew so well and produced such fine fruit that he concluded to plant extensively. He is now preparing 75 acres of similar land adjoining the fig orchard, which he will plant next year to prunes, almonds and grapes. On this same place Mr. Streeter has six acres in alfalfa, which is doing fine, some of the roots of the clover having penetrated to a depth of 15 feet. The fine stand and beautiful growth made by this patch, which has never been irrigated, has convinced the owner of the excellency of the soil for alfalfa growing, and he is cultivating a 100-acre field which he will plant next February.

**RIVER PLANTING NEAR PALERMO.**—*Progress*, April 11: West from Palermo, at the river, W. R. Strong Company has planted 200 acres in various kinds of deciduous fruits, and T. B. Hutchins and Philip Hefner have likewise planted several hundred acres of deciduous trees. Several hundred acres of potatoes have also been put in on the river-bottom land.

**LARGE ORANGE GROVES.**—Palermo, April 11: The largest grove of oranges yet planted in the world and owned by any one man is, we understand, one owned by Seth Richards of Pomona, Southern California, according to the *Pomona Register*, and is wholly planted to Navel oranges and contains a little over 400 acres. According to the *Ontario Observer*, a still larger one is being planted this year at that place and will contain 700 acres. The *Progress* says: Major McLaughlin of Oroville is now preparing to set 147 acres in oranges at Thermalito. We already have at Palermo the Hearst & Taylor orchard of 245 acres, and the Daly & Sargeant orchard of 126 acres. Droscher & Hickmott have, adjoining Palermo, 100 acres in one tract, and are preparing to add more to it this year.

**PALERMO OLIVE OIL CO. INCORPORATES.**—Palermo *Progress*, April 11: A project for an olive-oil factory has been worked up and was consummated this week by the incorporation of the Palermo Olive Oil Company. Palermo has become the center of a large orange and olive growing country, and in the case of the olives, it is certain that no better and more favorable part of California can be found for the production of a first-grade article of commerce, grown from flourishing healthy trees, in no way liable to scab, and other pests on the coast. The acreage is already large, and preparations are on foot for increasing it very extensively in the next few years.

## Contra Costa.

**TREE-PLANTING IN CONTRA COSTA.**—Danville *Cor. Gazette*, April 11: Orchardists had very nearly a perfect winter for setting out trees, and the result is that nearly every tree planted this winter is now starting out a very thrifty growth of young leaves. As one of our neighbors remarked a few days ago, "last winter was the worst we ever experienced in California, and this one has been the best out of about 35."

## Fresno.

**TREE AND VINE PLANTING AT REEDLEY.**—*Exponent*, April 8: A. B. Clark has set out 100 acres of Muscatel raisin grapes, and will set out 120 acres more. The California Fruit and Wine Land Company's vineyard has set out 50 acres to olives this season. It took 5000 young trees at a cost of \$1.00 each to go over the 50 acres. At the Carmelita vineyard, 160 acres have been set out to vines and trees, as follows: raisin grapes, 80 acres; Bartlett pears, 20 acres; peaches, 10 acres; apricots, 10 acres; oranges, 20 acres. In addition to this the vineyard is rooting 60,000 seedless Sultana cuttings. A. T. Simpson has set out 25 acres to Muscatel raisin grapes. The new vineyard, which has over 12,500 vines, is in colony lot 42.

## Kern.

**FOXTAIL DISAPPEARING.**—Bakersfield *Californian*: It is reported that the foxtail which has been so annoying in the first crop of alfalfa is turning into cheat. One farmer who last year burned over 200 acres of alfalfa in order to destroy the foxtail, says that this season there is hardly a spear of foxtail, and he in-

tends to save the first cutting, as cheat does no harm.

**TREE PLANTING NEAR BAKERSFIELD.**—T. M. Sweet in Fresno *Expositor*, April 10: At Poso the Delta Fruit Company is planting 160 acres with raisin grapevines, and has another 160 upon which a good crop of barley is growing. An orchard will be planted on its grain land next winter. The Golden State Fruit Company, which has 160 acres near Poso, has finished planting it in fruit, while many smaller tracts have been improved by settlers. A decidedly notable addition to the long list of permanent investors in Kern county lands is the Earl of Gosford, a member of the British House of Lords and the head of one of the oldest and best-known families in England. This gentleman has purchased an entire section (640 acres) of land a short distance from Bakersfield, and he is having a part of it planted with grapevines, peaches and pears. It is his intention to plant the entire section, and no pains will be spared in bringing it to the highest stage of development.

## Merced.

**AN EASTERN COLONY.**—*Star*: A syndicate of farmers from Illinois has purchased the entire Dean colony, consisting of 300 twenty-acre tracts. The colony is located about three miles west of Merced, and is adapted to the culture of figs, prunes and raisins. Every 20-acre tract will be occupied by a family. The people are all Americans and Presbyterian. A number of them have already arrived, and the work of improvement will begin at once. The colonists who buy pay \$50 per acre for land, inclusive of water-rights.

## Monterey.

**RAINS IN SALINAS VALLEY.**—*Salinas Index*, April 9: To set at rest all apprehensions regarding crops, in the middle of the afternoon of Monday, the gentle rain began to come down. The storm was timely and will help the grain to stool and cover the ground and hold the moisture already in the soil, and also what may reasonably be expected to fall later on.

## Napa.

**GRAIN CROP IN NAPA.**—*Register*, April 10: The members of the Board of Supervisors, which is this week in session, all give encouraging reports of the crop, both fruit and grain, in their respective districts.

**FRUIT CROPS IN NAPA.**—*Register*, April 10: Horticultural Officer M. F. Inman of St. Helena was in town Tuesday. He says fruit prospects throughout Napa valley were never better. Timely showers have supplemented the work of the orchardists, and there is little fear entertained of damaging frosts. Peach trees were never in freer or firmer condition than now. They are entirely free from the "sap blight," which sometimes affects them, and are loaded with the promise of a big yield. Almonds are out of harm's way. In many cases they are already as large as robins' eggs and the foliage of the trees completely covers them. Nature has performed a good service for the prune-grower in sending storms to thin out somewhat the fruit upon his trees. Never were branches more heavily loaded, and, unless the unexpected intervenes, the prune crop throughout Napa county will this season be immense. Grapes are somewhat later than usual, but those vineyards that have been cared for and are free from phylloxera are in splendid condition, and the vintner has every reason to be happy.

## Orange.

**LARGEST CULTIVATED WALNUT GROVE IN THE WORLD.**—*Anaheim Gazette*: The 700-acre walnut grove south of town belonging to Messrs. Jones, Culton, Minor and Fowler is the largest in the world.

## Placer.

**LARGE CROP OF FRUIT AT NEWCASTLE.**—April 13: The indications are that the fruit crop at Newcastle this year will be the largest ever known there. Advices from every quarter indicate that all varieties of fruit will mature in abundance, and that a large percentage of the fruit now upon the trees will have to be thinned out to prevent the trees from breaking down. The Southern Pacific Co. is already preparing to handle the heavy shipments of fruit which will be made from this point.

## San Benito.

**CROPS IN SAN BENITO.**—*Hollister Advance*, April 10: The heavy rains of Monday and Tuesday have assured a heavy crop in this county. Farmers, merchants, stockraisers and business men are jubilant over the prospects. From all points of the county come the same glorious tidings, and the harvest of 1891 will be the heaviest for years past. Even the late-sown grain is assured. The acreage sown this year is computed to be about three times as large as last year, and the yield per acre will be about double.

## Sacramento.

**NEXT SEASON'S HOP SALE.**—*Record Union*, April 9: "Here is a pointer on hops. Henry and W. E. Gerber have contracted with a hop firm to grow and deliver 30,000 pounds of hops this summer, and the hop firm agrees to pay 17 cents a pound therefor."

**FLORIN FRUIT-GROWERS IN CONVENTION.**—*Record Union*, April 7: There was a very large assemblage of fruit-growers at Florin. The Manager of the Fruit-Growers' Association, David Reese, made his report which showed that during the year \$8000 came back to the strawberry-growers, they having shipped their berries by carloads eastward, and received very satisfactory prices for the same. Seventy cars of grapes were shipped to every important city

of national note east of the Rocky mountains, going as far as Boston and New York. One grower by way of experiment, shipped several crates of Tokay grapes to London, England, thus proving that Florin grapes are, as has been claimed for them, perfection for shipping. The grape receipts were reported to be about \$50,000 for last year.

## San Diego.

**TREE PLANTING AT ESCONDIDO.**—*Times*, April 9: S. P. Abell informs us that there were no less than 150,000 fruit trees set out in and around Escondido this season. He is one of the county inspectors, and consequently speaks by the book.

## San Joaquin.

**CONVERTING ALKALI SPOTS INTO FERTILE SOIL.**—*Stockton Mail*, April 7: There is an effective expedient on the farms of C. W. Bidwell to redeem alkali spots. Galvanized iron pipes, well perforated, are sunk through the hardpan in the lowest depressions of the alkali land. The pipes run down into the quicksand or gravel, as the case may be, underlying the hardpan. As is well known, water is a good absorbent of alkali, and consequently the rains of winter take up the alkali, and when the water drains off down the pipe into the gravel, it takes, of course, the alkali with it. In this way, spots that once would support no growth whatever—not even salt-grass—have been converted into the most fertile soil. It is, of course, impracticable to work the scheme in land where the stratum of gravel is very deep. In some tracts, the blue clay is 40 feet thick. The work of boring holes and sinking pipe in such places would cost more than the spots redeemed would be worth.

## San Luis Obispo.

**SAN LUIS OBISPO CROP NOTES.**—R. T. Fanset, six miles east of Paso Robles, brought in a sample of wheat and barley that measured nearly five feet in height, grown this season. He says he has about 200 acres of the same kind with as big a growth. The wheat and barley both are well headed for this time of the season. Our Stimmier *Cor.* says crops look fine and the farmers are busy summer-fallowing and other planting gardens. Some fruit trees have been planted, but our country is new and we are slow in starting orchards.—*Paso Robles Moon*.

## Santa Barbara.

**CROP PROSPECTS AT SANTA MARIA.**—*Times*, April 11: The recent rains have put broad smiles upon our farmers and citizens in general. Our valley never looked more attractive than at the present time. Its apricot and peach orchards are out in full bloom, while the earlier varieties are already laden with fruit. Its grain-fields display every sign of a bountiful harvest.

## Shasta.

**CROPS AT MILLVILLE.**—*Cor. Redding Democrat*, April 8: The farmers are all jubilant over the prospect for harvesting one of the biggest crops ever raised on the east side. This crop ought to make times better next summer. Mr. Hereford & Sons have every acre of their fine farm sown to grain. Benj. Atkins has about 200 acres in on the D. T. Shearlin place; the Webb boys have about 100 acres in. Hoff man of South Cow creek will plant his place in corn and artichokes. Wagoner and all the rest on the creek have fine-looking crops.

**WHEAT CROPS IN PARADISE VALLEY.**—*Anerson Enterprise*, April 9: Wesley Harris and Mr. Hampton, Ohann Creek, Paradise valley, agree that growing grain never looked healthier or more prosperous in that valley than at present, and there is fully two times the area of any single season before.

## Solano.

**PROFITS FROM AUXILIARY FARMING.**—*Dixon Tribune*: Of late years there has been a marked increase in the amount of eggs, butter and poultry marketed by farmers in this community. This increase seems to be principally among the farmers who till from 160 to 320 acres, and the result is that many of them are beginning to realize that a close attention to these small matters is the surest road to success. One of them recently remarked that his farm about paid his running expenses, and that nearly the only profit about the business was derived from the sale of poultry, butter and eggs.

**TO BOOM SOLANO COUNTY.**—*Vacaville Enterprise*, April 11: For the purpose of presenting the value of Solano county as a fruit producing section, Assessor Schirmer has prepared a blank for fruit-growers to sign, giving the number of trees and vines of all varieties, bearing and non-bearing, and also the acreage devoted to each.

## Sonoma.

**APPLE ORCHARD AT STEWART'S POINT.**—*Petaluma Argus*, April 11: An apple orchard of 10,000 trees is to be planted near Stewart's Point by Wetmore Bros. of San Francisco. The *Argus* has predicted that the best shipping apples would eventually be grown near the coast.

**EARLY CHERRIES.**—*Argus*, April 11: A friend left at the *Argus* office several oliviers of Tartarian cherries finely developed. The crop has the appearance of being one of the largest for several years past.

## Stanislaus.

**SAN JOAQUIN VALLEY CROP PROSPECTS.**—*Cor. Santa Rosa Republican*: There is every reason to believe that the crops in the San Joaquin valley are in a most promising condition. As far south as Tulare, the grain is magnificent. Sum-

mer-fallow is waist high and is beginning to head. Winter sown grain is not far advanced, but it, too, looks healthy and has the ground well covered. Trees and vines are in blossom and in leaf, and everything in the agricultural line betokens plenty and prosperity. At Merced, the business men feel confident and say the outlook was never more cheerful. The large sheep-ranges are giving way to the small fruit-farm and the country school house. Stanislaus is the great wheat county of the State. In San Joaquin county from Tracy, Byron, Lathrop, Rippon and Stockton one can see great fields of waving grain all of which is looking well. Contra Costa county, too, is well sown. There is an immense acreage, all of which is full of promise. Take it all in all the grain crop of the San Joaquin valley is looking well.

## Sutter.

**GRAIN CROPS IN SUTTER.**—*Independent*, April 10: Sunday we rode out among the grain-fields and found a majority of them needing rain. The earlier sown summer-fallow had made a fair growth and maintained a healthy color, but later fields showed a tardy growth and lack of surface moisture. In many places the ground was badly crusted on top, which would have soon begun to pinch the plants. The rain since Sunday is very timely, and if followed by warm weather, wheat and barley will make a rapid growth. We believe that the acreage sown to grain in this county this year is fully 25 per cent above the average, and we now see no reason why the yield per acre should not be up to the average.

## Tulare.

**MORE ABOUT FROST DAMAGE.**—*Times*, April 9: There has been several heavy frosts within the last two weeks and orchardists appear divided in opinion as to its effect on fruit. No doubt apricots have been damaged, though a gentleman of Traver, on Saturday last, informed the *Times* that just enough of his apricots were killed to save him the trouble of thinning the fruit on the trees at a later date.

**LARGE HAY CROP—BEST ALL GONE.**—*Times*, April 9: The hay crop harvested last season was so abundant, and far beyond the needs of home consumption, that it was predicted prices would rule low for that article. While prices have not been exceedingly high to date, good profits have been realized and the crop has been disposed of. Fresno has purchased largely in this county, and in fact has taken the surplus, until now there is little to be had in car-load lots. To-day Fresno is shipping hay from Livermore, and had our crop been one-third larger than it was last season, no doubt Fresno would have taken what was to be spared.

**PRESENT STATUS OF A LARGE BODY OF LAND IN KERN.**—*Visalia Times*, April 9: A number of people who filed on Kern county lands, claiming them as desert, do not appear to understand the present condition of those lands. Those filed on in 1877 were soon after expended and remained in that condition until the beginning of the present year, when they were restored, and are now subject to reclamation and proof—that is, those who originally filed desert entries on these lands now have something over two years in which to put water on their claims, after which they can make proof and in time receive patents for their land. There are few pieces of this land on which contests have not been filed, but this will not hinder the original claimant from obtaining the land in case he has complied with all the provisions of the Desert Land law. Of course these contests will have to be heard before the Register and Receiver of the Land Office in this city, and this will add to the cost.

**SPRAYING BUGS AT GRANGEVILLE.**—*Cor. Visalia Register*, April 10: A few of our vineyards are bothered with a little black bug eating the leaves. The remedy being used is Paris green dissolved in water, one pound of Paris green to 180 gallons of water. It is applied with a spray pump or a sprinkling can. The bug has a gray stripe down its back.

## Ventura.

**TREE PLANTING AT SATACOOY.**—*Cor. Los Angeles Express*, April 9: Thousands upon thousands of fruit trees have been planted in and around here during the past winter, largely walnuts of the soft shell variety. The country, from one end of the valley to the other, will soon be one solid fruit orchard. From Camulos to the sea the prolific lands are being planted to apples, oranges, lemons, apricots, walnuts, and such other fruits as each section is best adapted to.

**VENTURA COUNTY BEAN CROP.**—The prospect was never better in this vicinity and throughout the whole valley for a fine bean crop. The rains coming late prevented weeds from starting, the land has been easily worked and farmers are happy, as well they may be.

## Yuba.

**GRAIN CROP PROSPECTS IN YUBA.**—*Wheatland Four Corners*, April 11: That so many grain ranchers are purchasing improved harvesters is an indication that the 1891 crop has fair prospects. In fact, the grain is looking extra fine, and a farmer remarked to us the other day that it would be nothing less than a miracle if the crop turned out poorly.

## NEVADA.

**CATTLE IN GOOD CONDITION.**—*Central Nevada*: Cattle throughout this section are in better condition this spring than for the past six years, and trainloads are being shipped from Iron Point to market.

It takes two car-loads of paper every year made in the East and shipped across the Continent to print the Illustrated Catalogue of WEINSTOCK, LUBIN & Co., Retailers, Sacramento. Four or five fast steam presses are used in printing; and thousands of dollars are expended for engravings, editing, printing, mailing, etc.

And what does it all mean? Back of it all there is a great truth. *It pays to send to them for whatever you need to wear.*

This Catalogue (free to any address) places their great stock at your very doors. It lets you select at leisure and select what you wish. It does not over-persuade you to buy what your judgment the next day will tell you is an unwise purchase. You can make out your order, lay it aside for a day or two, then review it and see if it still seems a wise one. Do salesmen give you this privilege?

If goods are not as ordered, you are at liberty to return them at their expense and get your money back.

Illustrated Catalogue free to any address. Also, samples of Dress Goods. In ordering samples, state colors desired and about the price desired.

**WEINSTOCK, LUBIN & CO.**  
400, 402, 404, 406, 408, 410 and 412 K St.  
Sacramento, Cal.

Ladies' or Misses' Bracelets of rolled gold twisted wire, with padlock. These bracelets are very finely finished; and the fastening is so arranged that it also can be used as a glove buttoner. The whole is very neat and useful, as well as ornamental. Price 20c., by mail, 2c. extra. State whether your wrist is large or small. WEINSTOCK, LUBIN & Co.

# STANDARD MOWER

ONE MAN AND TEAM instead of two.  
TWENTY ACRES A DAY instead of ten.

## CUTTER BAR

has no nuts or obstructions on top, the obliquely

## RECESSED GUARDS

bolt to finger bar with nuts on under side, leaving upper side of cutter bar perfectly smooth surface.

MAIN WHEELS made interchangeable — one wheel fits either side of mower.

## NO SIDE DRAFT

as CUTTER BAR is carried entirely on Main Wheels.

7-FOOT mower will do as much with one team as two 4-foot machines, SAVING half the corners.

THE FOOT LIFT raises cutter bar with perfect ease without the aid of hand lever, the first ever made. EASILY TILTED.

THE STANDARD MOWER can be entirely taken apart and put together again by the farmer with a common wrench. SEND FOR SPECIAL CIRCULAR.

ERECTING AND OPERATING COMPLETE PLANTS A SPECIALTY.

Having arranged with a leading American firm for the manufacture of our machinery, we are prepared to build complete plants and furnish skilled labor to operate them when desired. We are the builders of the Alvarado, Cal., Sugar Works, and the Utah Sugar Co.'s Works, now in course of construction. We guarantee our work. Correspondence solicited.

## The Celebrated Chapman-Climax Spray Pump

is still ahead of all competitors, and is the most popular spraying machine in the market. THE CLIMAX NO. 1, represented by this cut, is the cheapest reliable sprayer made, and its economy in the amount of wash required for a given amount of work will save its cost in a few days' operation. IMPROVED CLIMAX NO. 2 is a large double pump, made entirely of brass, and equipped complete with two lines of hose, four improved Pacific Cyclone Spray Tips, extensions, shut-off valves, etc. Guaranteed the safest, most satisfactory, and, in the end, the cheapest large spraying outfit in existence. Correspondence solicited. Address all communications to

R. S. CHAPMAN 18 California St., San Francisco, Cal.

# WOODBURY'S IMPROVED ROSIN WASH.

Perfect removal of scales guaranteed and invigoration of Trees without possibility of injury. Now is the time to apply. This is the best wash yet produced for all kinds of fruit trees and shrubs. It removes scale from deciduous, citrus or ornamental trees without injury. One application every year is all that is required. From hundreds of testimonials we print the following:

WALNUT GROVE, February 14th, 1891.—MR. C. J. WOODBURY, 123 California Street, San Francisco, Cal.—Dear Sir: I have been using the Rosin Tree Cleanser, as put up by you, for the past two years, and find my trees almost free from scale. It does its work more thoroughly and is less trouble to work than any wash I have ever used. I have tried most all the washes that have ever been compounded. Yours respectfully, L. D. GREEN.

Directions (most simple, easy of application) sent with each shipment. This wash is guaranteed not to harm the leaf, buds or in any way keep them from forming.

Please observe the price. Put up in cases, 45 pounds in each can, two cans in a case, two cents per pound; in barrels, 1 3-4 cents per pound; by the ton, 1 1-2 cents per pound. Weight, nine pounds to the gallon. To one gallon add seven gallons water, result eight gallons ready for use, at a cost of thirteen and one-half cents. Correspondence solicited.

Harvest Oil for Farm Machines, guaranteed anti-gumming, superior to Castor, 50 cents per gallon. ADDRESS

## Whitewashing Machines & Tree Cleansers.

Complete Outfits at prices from \$3 to \$50.

The Pumps are all BRASS, with BRASS AND RUBBER VALVES.

For Orchardists, Florists, Stockmen, Poultry Raisers  
THERE IS NOTHING LIKE THEM

Pump sent complete as in cut for \$14. Send for Illustrated Catalogue.

**WAINWRIGHT SPRAYING APPARATUS CO.,** 1409 Jackson St., S. F.  
Contracts taken for Large Jobs of Whitewashing.

## ENTOMOLOGICAL.

## A Notable Address by Prof. Riley

We intended sooner to have alluded to the address made by Prof. C. V. Riley, U. S. Entomologist at the last meeting of the Association of Economic Entomologists in Washington, but the pressure of entomological information has deferred reference to the broader field in which Prof. Riley labors. We shall now select from the address alluded to, certain portions which seem of greatest interest on this coast.

## Scale Insects.

The hydrocyanic acid gas treatment against scale insects is becoming more and more common in California, and has, to a certain extent, superseded the use of washes, especially against the Red Scale (*Aspidiotus aurantii*). This is largely due to the fact that recent experiments, carried on through Mr. Ocquille, have resulted in a great cheapening of the process. The expense has been reduced one-third, and the bulky machinery mentioned in my report for 1887 has been, for the most part, dispensed with. It has also been found that the use of the process at night is safer and more beneficial, in that it lessens the effect of the gas upon the foliage.

The repeated importation of scale insects from Florida into California has attracted much attention. The species concerned are principally the Purple Scale (*Mytilaspis citricola*), the Long Scale (*M. gloverii*), and the Chaff Scale (*Parlatoria pergandei*). The fact that these insects must have been repeatedly imported into the State in past years without obtaining a foothold has been used as an argument against a quarantine, and a great deal of discussion on the subject has been had in the California papers. From my own observations in the State I am convinced that where the proper conditions of shade and moisture obtain there is no reason why these scale insects should not get a foothold, but that they will probably die out in the hotter, drier, and less shaded localities. An agent who was sent to Pomona to investigate certain newly planted orange groves of Florida trees, found that while the trees were planted a year previously, and had been dipped according to custom there in a caustic solution, every tree examined by him bore a few specimens of the purple scale. The excitement on this subject in California has been fostered by the claims of rival nurserymen engaged either in the importation of Florida stock or dealing in varieties grown at home, and from such contrary claims from persons prejudiced by their business interests it is difficult to extract the truth. A rigid quarantine not absolutely prohibitive were wisest, for great injustice might be worked by absolutely prohibitive restrictions. Careful inspection and thorough treatment, if they could be guaranteed, would prove an effective safeguard, but it were unsafe to trust to them without a rigid quarantine.

I have commenced a series of experiments upon the black scale (*Lecanium oleae*), a species which, ordinarily occurring upon the olive, has long damaged citrus fruits in California. The horticulturist of the Wisconsin Station, Mr. E. S. Goff, has modified the Nixon pump by adding a tube so that kerosene may be drawn from one receptacle and a mixture of soap and water from another, thus forming a mechanical mixture in the act of spraying. This modification, at the request of Prof. Henry, I have had tried in this series of experiments, and although it is too early to state the results, it may be said that so little time and labor are required in preparing a stable emulsion that this mechanical substitute will probably not come into general use. In this connection, it may be observed that the formulae recommended by some of our most voluminous writers are very misleading and are calculated to produce only a mechanical mixture more or less unstable. The use of kerosene temporarily combined with water or soapsuds by mechanical means dates from many years back. It was a favorite remedy of my friend Thomas Meehan, who urged it in 1871 in the *Gardener's Monthly*. It was experimented with by others, and I used it successfully in 1872 against an undescribed Lecanium on Australian pine, as also against aphides on the place of Mr. Julius Pittman of St. Louis, and in 1874 and 1875 against the congregated young of the Rocky Mountain locust. But the true and stable kerosene emulsion, which now forms one of the most satisfactory and widely used insecticides, and which requires two parts of the oil to one of the emulsifying agent, violently churned until a stable, butter-like emulsion results, was the outgrowth of my efforts in the investigation of the cotton worm, the milk having been first suggested in 1878 by the late Dr. W. S. Barnard while working at Selma, Ala., and the most satisfactory formula in 1880, from experiments which I had continued over two years by Mr. H. G. Hubbard on orange trees.

## The Hop Fly or Louse.

One of the most interesting facts of the year has been the occurrence of the hop fly (*Phorodon humuli*) in the extreme Northwest, especially in Oregon and Washington, so soon after my note of warning as to the danger of its introduction to the hop-fields of that section, and the need of precautionary measures that might prevent such a calamity. The soil and climate

of Southern Oregon seem particularly adapted to the growth of the hop, as it is already the leading crop in Lane, Marion, Polk and other counties.

There can be no doubt about the species, because Mr. F. L. Washburn, the entomologist of the experiment station, has given it some attention, and I have also received specimens from him and from Mr. A. Todd of Eugene, Or., as also from Mr. Giles Farmln and Mr. G. M. Stratton of Puyallup, Wash.

Mr. Washburn, from the fact that it has been noticed that hops were sometimes not so much affected in the immediate vicinity of plum trees as some distance away, and from the further fact that some of the growers reported that they never saw the insect on the plum, indicates that there must be a different state of affairs in Oregon, so far as the life-cycle of the insect is concerned, from that which prevails in the Eastern States and in Europe. Absolute and experimental proof of facts obtained after long and persistent investigation should never be lightly questioned. It is by no means an uncommon experience that hop plants in the immediate vicinity of plum trees are not more affected than, or as much as, others at a distance, and this may depend on the direction of the wind or on local circumstances, or on the variety of plum, whether wild or cultivated. I have examined in vain certain cultivated plum trees for evidence of *Phorodon*, whereas I have invariably found it upon other varieties in the same vicinity. *Phorodon humuli*, in common with all other aphides, preferably chooses, when migrating, certain genial days, and often fills the air, flying great distances. In perfectly calm weather the migrants settle almost everywhere, but they are easily affected by the least breeze and are wafted in different directions. The invasion of a hop-yard may be from plum trees miles away to windward, and we may depend upon it that the species will migrate to and from *Prunus* in the Northwest as it does in the East.

## Phylloxera Experiments in California.

On the subject of direct remedies the value of the kerosene emulsion for this purpose has not been properly realized in France, because of the relatively high price of petroleum in her grape-growing Departments. A series of experiments which I made in 1883 showed conclusively its great value for this purpose, as it not only destroys the insect in all stages, but also stimulates root growth.

In this connection I have recently had a series of experiments made through Mr. A. H. Koebele's agency, in the Sonoma valley, California, to ascertain the effect upon the phylloxera of certain of the resin washes which proved so valuable when used against the fluted and other scale insects. The results have been quite encouraging and the experiments have already shown that in the use of those washes we have a valuable addition to the underground remedies. Soaps were made by the use of bicarbonate of soda, sal soda, and caustic soda, each mixed with resin. In the earlier experiments the earth was removed about the base of the vine to a depth of 6 inches and for a diameter of 4 feet. Ten gallons of the mixture were poured into each hole and found to penetrate from 12 to 16 inches or from 18 to 22 inches from the original surface of the ground. Most of the insects, as also the eggs, were destroyed to a depth of 16 inches. In the later experiments the holes were made only about 2 feet in diameter, and nearly, if not quite, the same results were obtained with half the amount, or 5 gallons of the mixture. The plan, which I have previously adopted for the application of insecticides to underground insects, of washing the mixture in with pure water was tried with good success. Soon after the first application 5 gallons of water were added, and 5 gallons more the following day. This would indicate that in the spring, when rains are frequent (occurring almost every day) in the Sonoma valley, only a small amount of the mixture need be applied, and the rains will do the rest, as examination has shown that up to a certain point each application of water intensifies and extends the action of the original insecticide. The best soap was made with bicarbonate of soda, but the results of that made with caustic soda are so little inferior, while the price is so much less, that the caustic soda and resin soap mixture is the one which I would recommend. The formula which was found preferable is as follows:

	Pounds.
Caustic soda (77 per cent) .....	5
Resin .....	40
Water to make 50 gallons.	

The soda should be dissolved over a fire in 4 gallons of water, then the resin should be added and dissolved. After this the required water can be added slowly, while boiling, to make the 50 gallons of the compound. To this water may be added at the rate of 9 gallons for 1, making 500 gallons of the dilute compound, sufficient for 100 large vines, at a cost of only 84 cents, or less than a cent a vine.

## Introduction of Parasites and Predaceous Species.

The success which has attended the introduction from Australia of *Vedalia cardinalis* has been phenomenal. Indeed, few who have not kept in knowledge of the reports and the actual condition of things can appreciate the remarkable character of the results, not only because of the brief period required therefor, but because of the thoroughness of the work of the little ladybird, and the moral and financial

benefit to orange-growers which have followed in its wake.

The striking success of the experiment has served to fix attention, not only of entomologists, but of fruit-growers and farmers, to this mode of dealing with injurious insects, and there is no question but that the cases in which the experiment may be more or less successfully repeated are numerous. Let us hope, therefore, that the moral effect will be as great as its practical effect in opening up means and ways in the future, as it should serve to remove the disposition to deride any expenditure having such results for its object.

During the year, I have endeavored to return the favors received from Australia and New Zealand, by sending there some of the natural enemies of the codlin moth, and from last accounts, though jeopardized by the action of the custom-house authorities, the experiment promised success, so far as a species of *Raphidia* from California is concerned. I have also endeavored to introduce some of the parasites which attack the Hessian fly in Europe, and which do not yet occur in this country. These efforts have been made by correspondence, for you will be surprised to learn that the restrictive clause in the appropriations to the Department of Agriculture for entomological work, which limits traveling expenses to the United States, is still maintained in the face of the Vedalia experience, where by the expenditure of \$1500, many millions were saved. The maintenance of this restrictive clause in the last appropriation bill, under these circumstances, is a travesty on legislation, and all the more remarkable because done by the Senate in opposition to the House, and the recommendations of both the Secretary and Assistant Secretary of Agriculture.

## The Field of Economic Entomology.

We have been able to but take a paragraph from an address which is one of the most notable papers of its kind ever produced. A full copy can be found in *Insect Life*, Vol. III, No. 5, which can no doubt be had by application to the Department of Agriculture at Washington. We give, however, the following general paragraph concerning economic entomology:

It is a field that some of us have cultivated for many years, and yet have only scratched the surface; and if I have ventured to suggest or admonish, it is with the feeling that my own labors in this field are ere long about to end and that I may not have another occasion. At no time in the history of the world has there, I trust, been gathered together such a body of devoted and capable workers in applied entomology. It marks an era in our calling, and looking back at the progress of the past 15 years, we may well ponder the possibilities of the next fifteen. They will be fruitful of grand results in proportion as we persistently and combatively pursue the yet unsolved problems and are not tempted to the immediate presentation of separate facts which are so innumerable and so easily observed that their very wealth becomes an element of weakness. Epoch-making discoveries result only from this power of following up unwaveringly any given problem or any fixed ideal. The kerosene emulsion, the cyclone nozzle, the history of *Phylloxera vastatrix*, of *Phorodon humuli*, of *Vedalia cardinalis*, are illustrations in point; and while we may not expect frequent results as striking or of as wide application as these, there is no end of important problems yet to be solved, and from the solution of which we may look for similar beneficial results. Applied entomology is often considered a sordid pursuit, but it only becomes so when the object is sordid. When pursued with unselfish enthusiasm born of the love of investigation and the light of benefiting our fellow-men it is inspiring, and there are few pursuits more deservedly so, considering the vast losses to our farmers from insect injury and the pressing need that the distressed husbandman has for every aid that can be given him. Our work is elevating in its sympathies for the struggles and suffering of others. Our standard should be high—the pursuit of knowledge for the advancement of agriculture.

**BLOCKS OF COMPRESSED WOOD AS A SUBSTITUTE FOR BRICKS.**—If we may believe German journals, brick and terra-cotta are no longer to stand alone as the best fire-resisting building materials. A new hotel, which has just been put up at Hamburg, is described as being built entirely of blocks of compressed wood as hard as iron, and by subjection to certain chemical processes rendered absolutely proof against both fire and the attacks of insects. If the claims of the inventor are well founded, he is clearly wasting time in the Fatherland, and should come over to us with his invention without delay and reap the reward of his labors. A process for making wood fire proof is just one of those things which American builders have been hankering after for some decades past.

## About Obtaining Patents.

## Patents are Virtually Contracts.

The Patent Law provides that in case a patent, which is the evidence of the contract, is not executed in compliance with the requirements of the law, it may be annulled and rendered void. Hence it is of the greatest importance to every inventor that his patent or contract be skillfully and accurately drafted, in order that it may afford him complete protection for his invention during the life of his patent.

## How to Procure a Patent.

To avoid all needless delay, however, and secure patents at the earliest moment practicable, inventors will do well to forward a model, drawing or sketch, with a plain, full and comprehensive description of their invention (stating distinctly what the particular points of improvement are), with \$15 as a first installment of fees. If the improvement appears to us to be novel and patentable, the necessary papers for an application for a patent will be prepared immediately and forwarded to the inventor for his signature. When he receives the application and finds it duly prepared, he will carefully sign and return the same plainly addressed to us, with postal money order or express receipt for our own fee. The case will then be promptly filed by us in the Patent Office, and vigorously prosecuted to secure the best patent possible. (This course is the most expeditious and satisfactory, as no time is lost in transmitting correspondence relative to the preliminary steps.) When the patent is allowed, the inventor will be duly notified, and on sending the final Government fee of \$20 to us, we will order the issue of the patent, and forward the same as soon as it is secured from the Patent Office.

The payments are thus divided and made easy. We make no pretense of doing cheap work, in order to entice custom, nor do we afterward make additional charges to bring the bill up to a fair compensation. We do our work honestly and thoroughly, and we never give up a case so long as there is a chance of obtaining a patent. The Agency charge, including drawings, rarely exceeds \$40, and for this we do all we can without appealing the case.

## Models and Drawings.

Models are now seldom required by the Commissioner of Patents, and generally only in intricate cases. Perfect drawings of practical working machines are more satisfactory to the Patent Office than the old cumbersome system of storing up an immense bulk of countless models.

Drawings or sketches, sufficient to illustrate the invention clearly, with a description that will enable us to make a full set of perfect drawings for the Patent Office, is all that we require. A model will answer our purpose as well, however, in cases where the inventor can more easily furnish it.

## Secure a Good Patent.

The value and even the validity of a patent often depends on the character, clearness and sufficiency of its drawings. There are thousands of existing patents in which the improvements are but partially or poorly illustrated in the drawings. When an attempt is made to dispose of such patents, the vagueness and defects of the drawings often prejudice capitalists and manufacturers against the invention, while in reality it may be of great value, and would meet with ready sale had it been skillfully, completely and artistically portrayed. In all cases prepared by us, the drawings are made under our personal supervision, by skilled draftsmen in our constant employ, and every precaution is taken to have the invention fully and clearly shown by different views, so that the improvement will be readily understood by the Examiners in the Patent Office, and comprehended by the public when the patent is granted.

## Advantages to Inventors on the Pacific Coast.

The firm of DEWEY & Co. has edited and published the MINING AND SCIENTIFIC PRESS continuously since 1860—a period of 30 years. Few agents, who are still engaged in the business, have had so long-extended practice in patent soliciting. The members of the firm give personal attention to the applications entrusted to their care; and their familiarity with inventions and with local affairs in the Pacific States and Territories enables them to understand the wants of inventors on this coast more readily and thoroughly as we believe, than any other agents in America. Thus there is saved a great deal of the time which ordinarily, when distant agents are employed, is wasted in preliminary writing back and forth.

This happy continuation of long business experience together and wide connections has placed our firm in a position unquestionably most fortunate for affording inventors prompt and reliable advice, and the best facilities for securing their full patent rights with safety and dispatch at uniformly reasonable rates.

Every patentee of a worthy invention is guaranteed the gratuitous publication of a clearly stated and correct description of his invention, in one or more of our influential and reliable newspapers, affording just the circulation best calculated to widely inform the class of readers especially interested in the subject of his invention.

## Caveats.

A Caveat is a confidential communication made to the Patent Office, and is therefore filed within its secret archives. The privilege secured under a caveat is that it entitles the inventor to receive notice, for a period of one year, of any application for a patent subsequently filed, which is adjudged to be novel and is likely to interfere with the invention described in the caveat, and the inventor is then required to complete his application for a patent within three months from the date of said notice. Caveat papers should be very carefully prepared. Our fee for the service varies from \$10 to \$20. The Government fee is \$10 additional.

To enable us to prepare caveat papers, we require only a sketch and description of the invention.

## Rejected Applications.

Inventors who have rejected cases (prepared either by themselves or for them by other agents) and desire to ascertain their prospects of success by further efforts, are invited to avail themselves of our unrivaled facilities for securing favorable results. We have been successful in securing Letters Patent in many previously abandoned cases. Our terms are always reasonable.

Inventors doing business with us will be notified of the state of their application in the Patent Office whenever it is possible for us to furnish such information.

Near Railroad Depot.

Stockton, Cal.

## FLORIST AND GARDENER.

### The New Lawn.

[By EMORY E. SMITH before the California State Floral Society.]

The word "lawn" was derived from the old English "laund" or "lawnd," which was especially applied to untilled tracts of land lying between woods. Modernly, the word is applied to grass lands, large or small, which are kept especially for ornamental purposes. England may be termed the home of the lawn, because in her mild, moist climate, the sod formed is thick, and presents the year around verdure and luxuriance, which has been the despair of the gardener in other parts of the world. Some of the lawns in England are said to be 2000 years old and are yet in fair condition; but I am not able to vouch for the truth of the statement. In most parts of the United States, a good lawn is only retainable by the most continuous watchfulness and care. In the dry climate of California this is particularly true, the most thorough preparation and most constant watering and care being necessary to keep a smooth, green sod.

There is nothing in nature upon which the eye rests with more gratifying satisfaction than upon a well-kept plot of green grass. But few improvements have been made in lawn-making of late years; but, following the adornment of all things horticultural, lawn-making has recently taken a big stride, which bids fair to revolutionize existing methods, giving us finer and more enduring lawns, and placing them upon a par with those of England. The use of seeds and sods is done away with entirely, and "pedigree" grass roots from sterilized beds are planted. In a few months a strong sod is formed, which is entirely of one variety of grass, and is absolutely free from weeds of all kinds.

The method of procedure is as follows: A piece of thrifty sod which has proven adapted to the locality is taken up and closely scrutinized, every foreign root and plant being carefully removed. The grass roots are then divided into small pieces and are planted several inches distant from one another in beds three or four feet square, the surface soil of which has been sterilized by heating it in an oven or otherwise. In a few weeks the grass plants have grown together, forming a magnificent sod, the like of which cannot be imagined by one who has never seen it. The ground designed for the lawn is now prepared by deep plowing, or, if the place is small, spading, and is then carefully leveled and an application of chemical fertilizer is made.

In a few days the first crop of weeds will have made their appearance. These are raked or harrowed out, and likewise the second crop, which will soon follow.

Most of the weed seeds in the ground, having germinated, are done for. The lawn is now again stirred on the surface, smoothed and marked off. The sods from the sterilized beds are taken up and divided into small pieces, which are planted a few inches apart in regular order; if even eight or ten inches distant, they will quickly cover the intermediate spaces and will crowd out any weed or foreign growth that may start. Grass so treated seems to have imparted to it a vigor and luxuriance never seen in ordinary lawns, and it is very difficult for foreign growths of any kind to secure a foothold in a lawn so made.

Several of the Eastern Government Experimental Stations, as well as private parties, have successfully inaugurated what they choose to term "pedigree grass planting," and the superintendent of Central Park, New York, talks of replacing the immense lawns of that park with pedigree grass. He even proposes to devote a large greenhouse to the purpose of propagation, so that the work of preparation can go on without any intermission during the winter months.

### The Camellia.

[By MISS E. S. RYDER before the California State Floral Society.]

The Camellia, the appearance of which is familiar to us all, with its brilliant blossoms and shiny foliage, belongs to the natural order Ternstroemiaceae, and is a native of China and Japan, where it has been cultivated from time immemorial. It is also indigenous to the north of India. It was first imported into Europe from China by a Moravian Jesuit named Geo. Joseph Camellus, or Kamel, about the year 1739. He traveled in Asia and wrote of plants. In honor of him his name was given by Linnaeus to the shrub camellia.

The camellia is closely allied to the tea plant, and some horticulturists have been in favor of uniting them. One variety, the Camellia Sasanqua, known as Sasanqua Tea, is cultivated in China for its flowers, used in flavoring certain sorts of tea.

In its natural state the wild camellia has single red blossoms and that description of the plant is much used by gardeners as stock on which to graft the many fine varieties produced by florists in Europe and America through hybridizing. The single sorts are produced by seed. The plant is also propagated by cuttings and layers.

The best known and most general favorite is Camellia Japonica. The most hardy and one

of the most beautiful Camellias is the Reticulata, from which many others in cultivation are partly derived. One variety, the Camellia Oleifera, is extensively cultivated in the southern part of China for its seeds, from which an oil is extracted after boiling, similar to olive oil, used in food and domestic economy generally by the Chinese. The seeds of nearly all the species yield this oil.

The plant does not need heat, thriving best in a temperature a little above freezing point, but it cannot bear frost. Free access of air is of great importance, and a liberal supply of water, but not so much as to keep the soil soaked after the needs of the plant are supplied.

They are grown best in well-drained borders, under glass. An attempt to cultivate Camellias as window plants in pots generally results in disappointment, the roots not liking such close confinement, and there is apt to be too much heat or an excess of water, causing the buds to fall before opening. The best soil for Camellias is a loose mold composed of black loam, peat and sand.

### Malvaceae or Mallow Family.

[Read by EMIL KELLNER before the State Floral Society.]

Hibiscus, Rosemallow (ancient name of obscure origin)—Flowers showy, usually large, blooming in summer and autumn, and under glass oftener. An extensive genus comprising about 150 varieties, species of store and greenhouse plants, or hardy herbs, shrubs or trees, natives of the most part of tropical regions, but occurring also in temperate ones. Flowers variable in color, and usually showy leaves, variable, often partite.

#### Cultivation of Hibiscus.

Store or warm greenhouse species of Hibiscus succeed best either in large pots or when planted out under glass. A compost of peat and fibry loam not broken too finely, in about equal proportions, with the addition of a little charcoal and sand, will suit them admirably. Those grown for their flowers should be restricted and kept tolerably dry through the winter. In the spring, they require a little cutting in and starting in a brisk, moist heat; afterward applying plenty of heat and water throughout the summer.

Some of the species, which succeed in greenhouses all the summer, will require warmer quarters in winter. They are propagated from seed and by cuttings inserted in a close frame in spring. Some of the varieties of Hibiscus:

*H. Africanus*, from Africa; *H. Cameroni*, from Madagascar; *H. Elatus*, from West India; *H. Coccineus*, from Scarlet marshes of Florida and Georgia; *H. Huegelii quinquerolnerus*, Baron Huegel's fine spotted, from Swan river; *H. Marmoratus*, marbled; *H. Miliaris*, rose-colored, United States; *H. Ferox*, fierce, yellow, New Grenada; *H. moschentos*, white, with a purplish center, hardy; *H. pendiculatus*, deep rose-red greenhouse; *H. radiatus*, rayed, yellow petals; inner part deep crimson, store shrub India and China; *H. rosa sinensis*, Chinese rose, large, single; height, 10 to 15 feet; China and Japan store plant; *H. brilliantissimus*, very brilliant, 5 1/2 inches across, deep crimson; *H. Culleri*, Culleri, buff yellow with a crimson-scarlet base; *H. Cooperi*, Coopers, scarlet-plashed and blotched, with olive green, creamy white and crimson, and margined with a broad and irregular border of reddish carmine; *H. fulgidus*, shining flowers five inches broad, carmine scarlet; *H. miniatus semiplenus*, half double vermillion; *H. vivacious*, lively, brilliant crimson scarlet, five-inch flowers; *H. roseus*, rose, naturalized in marshy spots in France, hardy, which originated probably in the new world; *H. shizopetalus*, cut petaled, from Syria, brilliant orange-red, two-inch flowers; *H. zebrinus*, zebra-striped, 3 1/2 inches diameter, scarlet, edged with yellow; *H. speciosus*, showy, a synonym of coccineus; *H. splendens*, splendid, rose-colored, sometimes 6 to 7 inches long, 12 to 20 feet high, Australia; *H. syriacus*, Syrian, hardy deciduous shrub, of which there are a great many varieties; Rose of Sharon or Althea, *H. Aurantiaca*, large, double, orange-colored flowers; *H. Collieri*, buff yellow, with a crimson scarlet; *H. Denisonii*, nearly a pure white, slightly tinged with rose; a large single flower and very beautiful; *H. Lambertii*, single flowers of the richest crimson-scarlet; dark-crimson at the petals; very large and showy; *H. Miniatus semiplenus*, semi-double flowers of a brilliant vermillion scarlet; petals waved and recurved, the flowers noticeable for the absence of formality, but are very handsome; *H. Rubra* magnificent double variety; large, red flower; *H. Subviolaceus*, flowers enormous; semi-double; flowers clear carmine, tinted with violet. Probably the largest in the Hibiscus family, and a free bloomer.

In California, according to Prof. Green's "Flora Franciscana," there are native; *Hibiscus Dioscorides*, stout herbs, with large and showy axillary and solitary flowers; *Hibiscus Californicus*, flower yellowish-cream color, with dark-purple center; found from the lower San Joaquin river as far north as Butte county.

*Hibiscus Trionum* Bladder Ketmia or Flower of an hour; *Hibiscus esculentus*, Okra or Gumbo with yellow flowers resembling cotton flowers, a very healthy mucilaginous vegetable used in the South very much, and also grown in California.

The Abutilon also belongs to the malvaceae family; so does Gossypium herbaceum, common cotton of commerce, Gossypium barbadense,

Sea Island cotton and Gossypium arboreum, tree cotton.

In the Southern States a cotton field in bloom presents a beautiful appearance. The flower is like a yellow Hibiscus flower and changes from yellow to red and falls off, and forms the ball in which the cotton fiber is produced.

The cotton is the most valuable fiber plant of the United States. The State of Texas alone produces 1,000,000 of bales averaging from 500 to 600 lbs. valued at \$50,000,000. The seed of cotton is manufactured into oil which is used for cooking, painting, and also adulterating olive oils. The cottonseed meal after extracting the oil is used as a fertilizer and food for cattle in England and the United States. The value of a ton in Liverpool is about \$35.00. Cottonseed meal is also a fine fertilizer for flowers, or any thing else, as it contains a large amount of nitrogen. The Sea Island Cotton is mostly raised in the Islands of the Gulf of Mexico. The staple of the fiber is longer, about four times as long, as of common cotton.

Only a small amount of this is raised in the United States. Tree cotton is only raised for ornament.

### Fruit Outlook at the East.

A recent cold snap in northern Indiana, says the Cobden Ills., *Fruit Growers' Journal*, did great injury to peach buds in that section with slight injury to other fruits. Fruit outlook in Marissa, Ill., is good, though snow fell heavily there on March 12th. The fruit trees have commenced to bloom in Fruitland, Tenn., and but little injury has been done. In Austin, Ark., the prospects are excellent, but if it keeps cold, strawberries will be late. It is feared much damage has been done the crop in the vicinity of Dallas, Tex., the rain freezing as it fell on March 13th. From Walnut Hills, Ill., comes this: Fruit prospects at this place are very good at this writing. Strawberries went into winter in fine shape. Apples, peaches and cherries good, blackberries and raspberries not a full crop. In the locality of Villa Ridge, Ill., the black raspberry has suffered somewhat from the past winter, and the tops of many canes are winter killed. A correspondent from Decatur, Mo., says that reports from all parts of the peach belt in that State deny that the recent cold weather has materially injured the crop prospects. The buds did not mature sufficiently to be seriously damaged by the sudden change in temperature, and are so plentiful that, with a loss of one-half, there would yet be a larger yield than for many years. There was a heavy hail storm in Jackson, Miss., on March 7th, some of the stones being as large as marbles. Considerable injury was done the fruit crop and gardens. The continued wet weather discourages farmers very much, and under the most favorable conditions from now on, planting will be from two to four weeks late. A writer from New Orleans gives the following: The freeze on February 26 did considerable damage to the prospective fruit crops in this section. On Saturday afternoon large hail fell for a few minutes and Saturday night the rain fell in torrents for several hours, causing greater damage than had been done in many years. Last night there was another freeze, this time preceded by rain, which finished up the peach blossoms and very few peaches, if any, will be produced this season. Last year the peach crop was lost by a freeze on March 1. The above-noted facts will apply with equal force to a large number of market gardens along the line of the Illinois Central Railway within a hundred miles of New Orleans.

**WEALTH IN SEWAGE.**—The city of Worcester, Mass., has probably the best arrangement for an economical disposition of city sewage of any other city in the world. After considerable experiment the system is now considered as demonstrated to be an unequalled success. The sewage is collected in large tanks, and when the work of chemical precipitation has been accomplished, the effluent, which is discharged into the Blackstone river, is so pure that chemists say it might be drunk with safety. The system is in use in European cities and the general verdict there is that its efficiency is unquestioned and its administration economical.

"After a varied experience with many so-called cathartic remedies, I am convinced that Ayer's Pills give the most satisfactory results. I rely exclusively on these Pills for the cure of liver and stomach complaints."

—John B. Bell, Sr., Abilene, Texas.

### Our Agents.

OUR FRIENDS can do much in aid of our paper and the cause of practical knowledge and science, by assisting Agents in their labors of canvassing, by lending their influence and encouraging favors. We intend to send none but worthy men.

GEO. WILSON—Sacramento Co.  
J. C. HOAG—San Francisco.  
F. W. KRAFF—Amador Co.  
M. S. PRIME—Alameda and Contra Costa Cos.  
F. B. LOOAN—Solano and Yolo Cos.  
D. G. CLARY—Sonoma Co.  
E. H. SCHAEFFLE—Central California.  
A. S. COOLY—Tehama Co.  
DAVID B. WORTHINGTON—Shasta Co.

WM. OLSON—Washington.

### HOW MUCH IS THE FREIGHT?

Send 10 cents for the horse book. It tells you all about our celebrated buggies, and gives the freight charge to your place.  
Pioneer Buggy Company, Columbus, Ohio.

## MILK TESTERS

Test Your Cows. Poor Cows are Bad Investments and Should be Replaced at Once. Quality, not Quantity, Pays Best.

### EDSON'S CREAM TESTER

A dairyman's practical invention. Consists of frame holding six test tubes graduated into hundredths to ascertain the per cent of cream in freshly drawn milk. The glasses are well protected and can be easily removed for cleaning. The frames are substantial, carefully graduated and varnished, large size holding about twice as much as other.

Reg'r Size, \$1; Postpaid, \$1 1/2  
Large Size, \$2; " \$2 1/2

**DIRECTIONS.**—Fill the glasses with fresh drawn milk up to the line indicated by 0. Set in cool place for 24 hours, when the separation of cream from the milk will be perfect and the figures will tell the per cent of cream in the milk.

Actual tests prove that common or grade cows give as good results in cream and butter, when pains have been taken in selection, as Jerseys, Holsteins, or other imported stock, but in order to do this, they must be bred from deep and rich milkers, the bulls as well as the heifers, and the best authorities place more dependence on the bull than on the heifer, thus showing that we should take great care in the selection of cows to raise bulls from. Begin at once to test your milk, and note amount by weight, given by each cow. Then multiply the pounds of milk by the per cent shown by the tester and you know just what each cow is worth to the dairy. There is a great deal of money made by dairying, but it is all made from good cows. If you want to make money out of your dairy, rear your own cows and use only your best ones as mothers and breed them to a good bull.

WE ALSO CARRY A FULL LINE OF LATEST IMPROVED SCIENTIFIC

### CREAM AND BUTTER TESTS.

Both Chemical and Mechanical, for Dairy and Creamery Use.

Curtis Test Churns, Short's New Method, Farmer's Test Churn, Lactometer, Lacto-Butyrometer, Lactoscope, Peepscope, etc., etc.

FOUR WIDTHS: 4 ft. 3 in. Cut, 4 ft. 6 in. Cut, 5 ft. Cut, 6 ft. Cut.

WOOD TWINE BINDER.

LIVERMORE, CAL., April 22, 1889.

N. D. DUTCHER.

Strength, lightness and simplicity; highest class steels, malleables and brasses.  
Direct under-draft by the floating droop-frame; only purely floating droop-frame and cutters.  
Steadiness of machine and pole when at work.  
Both wheels firm to the ground and driving with full power, whether going fast or slow.  
Wide frames for the wide cutts; light work for the team and no neck weight or side draft.  
Escapes from "choking" in the ground, firm but free and adjustable pitman connection.  
Wood's milled malleable guards, bolted on; heavy steel sections for the guard plates.  
Brass boxing, lock-nuts and protected pitman; wide gauge, high wheels, comfortable and safe seat.  
It has the Largest Sale in the World.

WOOD LIGHT REAPER.

THREE SIZES: 8-FOOT, 10-FOOT AND 12-FOOT.

**The 8-foot Rake can be used with one or two horses.**

### COMMON FAULTS IN OTHER RAKES AVOIDED IN THE WALTER A. WOOD:

Fouling of the wheels and tripping device; sagging of the axle; skipping hay next the windrow.  
Failure to dump when tripped; failure to let the teeth fall promptly; dumping when not tripped; unreliability of trip when turning curves.  
Jar when discharging; side jerk when tripping; fretting and worrying horse; galling back and shoulders of horse.  
Seat at one side of center; insufficient adjustability of seat to suit size of driver; weight of driver and rake not properly centered over axle.  
Dead-lock of teeth, causing breakage; non-adjustability for different grades and ground; poor wheels; poor teeth.  
Worthless relief devices to prevent breakage of poor teeth; noise; hard-running; digging up dirt, and thus dusting the hay.

## GOOD HEALTH.

## Cure for Catarrh.

EDITORS PRESS:—Thinking the enclosed recipe, which proved so valuable to a friend of mine, may be of use to some of your readers, I have copied it as she gave it to me:

"Take one part pulverized saltpeter and two parts pulverized sugar. Dissolve one-third teaspoonful in one-third small cup of water and syringe the nose three to five times a day, according to the severity of the case. Continue for weeks or months if necessary."

Said a lady to me: "I had catarrh in the head so I could scarcely breathe through my nose, and I tried this treatment for several months and it effected a complete cure." It is beneficial some-times in cases of *la grippe*.

National City. ROCK MAPLE.

**TO RELIEVE AN OVERWORKED BRAIN.**—A Swiss doctor says that many persons who extend their mental work well into the night, who during the evening follow attentively the program of a theater or concert, or who engage even-ings in the proceedings of societies or clubs, are awakened in the morning or in the night with headache (the *Sanitary Inspector*). He is particular to say that he does not refer to that headache which our Teutonic brethren designate *Katzenjammer*, that follows certain convivial indulgences. This headache affects many persons who are quite well otherwise, and is due in part to the previous excessive work of the brain, whereby an abnormal flow of blood to that organ is caused; in part to other causes, for example, too great heat of room, contamination of the air with carbonic acid, exhalations from human bodies, and tobacco smoke. For a long while the doctor was himself a sufferer from headache of this kind, but of late years has wholly protected himself from it by simple means. When he is obliged to continue his brain work into the evening, or to be out late nights in rooms not well ventilated, instead of going directly to bed, he takes a brisk walk for half an hour or an hour. While taking this tramp, he stops now and then and practices lung gymnastics by breathing in and out deeply a few times. When he then goes to bed, he sleeps soundly. Notwithstanding the shortening of the hours of sleep, he awakes with no trace of headache. There exists a clear and well-known physiological reason why this treatment should be effective.

**THE REAL CAUSE OF DEATH.**—The most common cause of death is fat and lime. Microbes are mere accessories in causing death. Take myself as a case in point. Once, when younger, I could lift my leg on a level with my head, writes a doctor in the *St. Louis Globe-Democrat*. It is an effort for me now to get it half that distance. Lime deposits are the cause of it. It is only a few days since that I performed a post-mortem on the remains of a distinguished journalist who died in this city at an advanced age. When I reached his heart I took my knife and on rubbing it over that organ it sounded as if it were being rubbed over a rough stone. The heart was fairly encased in lime. I have now under my care a distinguished literary man—a nonagenarian. He is going to die. (The patient has since died.) His death will be caused by abnormal deposits of lime. There is no mystery in death. It is as natural for man to die as to be born. We are born, we develop, we grow ("grow" is right) and we die. Is there anything strange about that? Man is like a tree. He lives his time, then withers, decays, dies. When we shall have learned everything we shall be wise enough to prolong the life of man, but by reason of the materials of which the body is composed he must die.

**CANCER AND SMOKING.**—Since the death of President Grant, a constant smoker, cancer of the tongue and cigar smoking have been closely associated in the public mind. Surgeons of experience find that the disease is far more frequent in persons who have been in the habit of smoking. The disease appears to be about six times more common in males than in females. The affection known as "smoker's patch" is common. It is a slightly raised oval area on the forepart of the tongue, a little to one side of the middle line, just where the end of the pipe rests, or where the stream of smoke from the pipe or cigar impinges on the surface of the tongue. The patch is usually red, but it may be bluish or pearly white. It lasts for years, but tends to spread over the surface of the tongue if the irritation be continued. When diffused in this fashion, it constitutes leucoma of the tongue. Leucoma is certainly a predisposing cause of cancer. The smoker should never leave a "patch" untreated, and should avoid rough mouthpieces and brands of tobacco which cause irritation of the tongue.—*S. L.*

**NATURE'S TRUE TONIC.**—One of the advantages of light gymnastics is that the sick and convalescent can make what appear to be trifling efforts, and by them, in time, be restored to active health. If too feeble to be practically able to make but little exertion, try what are known as deep-breathing movements. Lie flat upon the back, take as long and as deep breaths as possible, and while the mouth is closed, slowly throw the arms up in front and then at the sides. Rest for ten minutes. Try again the same inhalation and exhalation of

air, the latter being pure and fresh. After a while attempt the same, sitting up. These exercises can safely be taken by the sick one, every day, several times, and the whole muscular system will be improved, just as if some revivifying tonic had been given, a far better one than any charged with alcohol or some like stimulant.—*Ladies' Home Journal*.

**CARBOLIC ACID FOR BOILS.**—A German medical journal asserts that incipient boils may be readily cured by the injection of a three-per cent solution of carbolic acid. In order to effect a radical cure and prevent suppuration, the injection must be made early. If a boil has already begun to discharge, the only effect of the injection will be to hasten the cure and prevent the formation of deep scars.

## Wayside Notes in Contra Costa.

EDITORS PRESS:—Having recently returned from a trip into Contra Costa county, I send a few notes thereof. Left Oakland Thursday P. M., 19th ult., experienced some ups and downs after leaving Claremont avenue to Lafayette. Out in a pleasant valley among the hills found hospitable entertainment with an old subscriber to the *RURAL*, Mr. Nathaniel Jones, a pioneer indeed, who, with his family, came to California in 1846, narrowly escaping the fate of the "Donner" party, being in their company on the day previous to that on which they encamped during a violent snowstorm where so many of the former party perished. Mr. J. is President of the Walnut Creek Alliance, a flourishing body of over 30 members.

Near the road leading to Walnut Creek, I called on J. W. Jones, a subscriber, his residence being on a slightly elevation about one-fourth of a mile from the road. At Alamo still another Jones was found, about a mile off the road at the foot of the hills, also a subscriber, who kindly accommodated me over night.

During Sunday, a very windy day, I was comfortably housed with Mr. Reel, near Walnut Creek.

Next day, took a trip out to Ygnacio valley, where nearly seven years ago I met an accident in crossing a steep gulch, dislocating my ankle, but found that the road across it was now fenced up. Came into Concord in the evening and put up at Mt. Diablo hotel.

On toward Martinez next day, stopping at ranches of Wm. Caven and Chas. Lobos, near town. The latter offers his place of over 200 acres for sale, well improved with different kinds of fruit and vines, the railroad soon to be running less than a mile distant.

Proceeded over a good road to Pacheco, once the scene of considerable business activity, but now in decadence, evinced by vacant and ruinous stores and warehouses. The writer in '52 navigated a square rigged brig of over 100 tons nearly to this point, and loaded hay, where now for many years no craft of any size could find depth of water to float in.

From here to Martinez, passed almost continuous vineyards on both sides the road, many small holdings being cultivated by Portuguese in vines and vegetables.

At night "came to" in a snug harbor, the well-improved place of Capt. Ingraham, who with wife and daughter has resided here about 15 years, has a fine vineyard and keeps 300 hens, whose appearance, as well as the place generally, indicate that the Captain now, as of yore, when he sailed on ocean's highway, believes in keeping things "ship-shape and Bristol fashion." Next morning I drove into Martinez, a mile distant, and out to the place of Prof C. F. Diehl, who has a hillside ranch, which he has been on and improved but two years; has 2000 young fruit trees and as many vines of table varieties now growing. He taught school in Philadelphia 42 years, but the health of his family requiring a change of climate, improvement in that respect has been found in this locality.

The gale of last Sunday night upset a small building on his place, turning it upside down, but his hired man, who slept in it, came out but little harmed, being of the sailor variety, probably clung to the keel until rescued. Passed another night at the Captain's, taking his subscription for *RURAL*, with which he can shape his course for the next 15 months.

Next day, after a rainy morning, visited "Hillgirt," the appropriate name of the picturesque place of John Swett, S. F. superintendent of public schools, about two miles out of town. His family reside here, his son, a N. S. G. W. and graduate of California University, managing the place; growing wine grapes and manufacturing the principal industry. Drove on to "Edgehill," the home of Judge Hogan, manager for J. L. Flavin of S. F.; also visited the fine places of Wm. Cluff and Mr. Upham, whose orchards promise to yield abundantly. Stopping over night at Commercial hotel, next morning went back to Walnut Creek, by a different road after leaving Pacheco, and on into the beautiful San Ramon valley, finding good quarters for the night at Alamo with Mr. Henry, who, though, he protested that he did not keep a hotel, obligingly accommodated me.

During the night, plenty of rain here which was snow on Mt. Diablo, clothing the summit with a mantle of white but little in keeping with his infernal character. A pleasant morning succeeded, and I continued my course southward, the face of Nature arrayed in her most beautiful adornment, through the fertile valley of some nine miles wide, bordered on

each side by hills and mountains covered with verdure, and the sunshine and shadows making pleasing contrasts on their rugged sides. Diablo, by 3 P. M., had resumed his more nasal and appropriate garb of somber hue, the snow having melted away.

This section of Contra Costa county is destined, ere long, to become better known than it is now. The S. P. R. R. Co. is building a road through it from Avon, four miles east of Martinez, to connect with the S. P. line at Pleasanton. The contract requires its completion to San Ramon by July 1st ensuing, and, with the exception of some bridge work, is already finished to Walnut Creek, to which point it is expected the cars will soon run.

Near Alamo, passed the young and extensive almond orchard of A. J. Hatch—the place called Almona—also next to that is Wm. Hemme's fine residence and apricot orchard, soon to yield an abundance of that delicious and profitable fruit.

Next comes Danville, four miles farther on, a pleasant town. Calling at the house of the village pedagogue, Mr. A. J. Young, a *RURAL* subscriber, found an old acquaintance in his wife, now suffering from *la grippe*. They have a beautiful home situated in a ten acre orchard of many varieties of fruit. Also called at W. Z. Stone's place of several hundred acres, largely improved in trees and vines. He is desirous of selling a portion thereof.

This section embraces the most advantages of climate, pure water, fertile soil and picturesque scenery that has come under my observation in much experience of travel in various parts of the State, which, combined with its proximity to the metropolis, and facility for shipment of produce on completion of railroad, ensures its utilization for residence in the near future to a much greater extent than it is now.

Remained about here a couple of days, visiting the Cook ranch, belonging to the estate of Seth Cook, a group of magnificent buildings situated on a sheltered plateau surrounded by hills.

A stock farm is maintained upon it, many fine specimens of the equine race being kept here, having a race track to exercise on.

Soon after leaving D. the extensive tracks of Dougherty & Llewellyn are passed. On the latter ranch is cultivated 3000 acres of wheat and barley, one field being seven miles across.

At Mr. Harlaus, two miles from Dublin, found hospitable entertainment over night. His ranch of about 300 acres being a little over the line into C. C. Co. and house surrounded by tasty grounds with two tame deer, as contented as though roaming their native hills. He also enrolled his name among *RURAL* subscribers.

Next day through Dublin to Livermore, thence home via Pleasanton, Sunol and the romantic Alameda canyon, crossing the fords of which, the water came up to the bottom of the buggy box, and completed a very pleasant and enjoyable trip. M. S. P.

## How to Make Large Soap Bubbles.

Children, and others, as well, may learn how to prepare a mixture for making the largest kind of soap bubbles, from the following receipt furnished by St. Nicholas:—Next to white castile, the mottled castile gives the best results. The soap being obtained, a friendly druggist must carefully weigh out 60 grains (for exactness in proportions is needful) for each ounce of water. That is, one drachm (according to the apothecary's weight of the old arithmetics), and when the weighing is done, and the obliging druggist thanked for kindness, the rest is plain sailing. A bottle with a sound cork is the next requirement. It must be large enough to hold three or four times the quantity of solution you wish to make. Do not prepare too much at one time; two ounces of soap solution will be a good quantity, and for this a six or eight ounce bottle will be the right thing. The bottle must be well cleansed and then well rinsed out with soft water—which, by the way, should be used for all the operations. All being ready, the soap is cut into fragments small enough to enter the bottle. Measure an ounce of water for each drachm of soap; this can be done with a teaspoon, eight spoonful making an ounce. Having poured the water and put the soap into the bottle, we have now to await perfect solution, which will happen in the course of two or three hours, if the bottle be put in a moderately warm place. Then add glycerine to the soap solution, the quantity varying with your ambition. I have found that one-half the volume of the solution gives excellent results; that is to say, to each ounce of water add one-half ounce of glycerine, measuring the quantities instead of weighing them in both cases. The bottle is now to be tightly corked and well shaken; then set aside for two or three hours more, and well shaken again. These alternate periods of rest and agitation should continue for a whole day. Finally, let the bottle stand undisturbed and tightly corked for twenty-four hours. Bubbles of great size and beauty may be blown with this solution.

Many people who pride themselves on their blue blood would be far happier with pure blood; but, while we cannot choose our ancestors, fortunately, by the use of Ayer's Sarsaparilla, we can transmit pure blood to our posterity.

## ORANGE PLANTERS

Should read the advertisement of the Aloha Nurseries. The best varieties are offered at rates so low that no one need hesitate about planting for experiment, or for investment in places where the orange is known to thrive.

## THE NEW MUSIC PALACE,

453, 455, 457, 459, 461, 463

Washington Street, in the exact trade center of Boston, is the present central establishment of

## OLIVER DITSON COMPANY.

And includes an elegant large retail store of 70 feet front, Piano Parlor of great beauty, many halls, war-rooms and offices devoted to the storing and sale of the largest stock of Music on the continent, and of every known Band, Orchestral or other Instrument.

The Store, from its situation, is accessible to all music lovers in eastern Massachusetts, and, by its universal system of advertising, mailing of lists and catalogues, extensive correspondence, and prompt mailing and expressing of goods ordered, practically stands at the door of every village-home, and is a neighbor to all the scattered farm-houses of the whole country.

CORRESPOND FREELY FOR LISTS, INFORMATION OR MUSICAL ADVICE.

## THE FIELD.

## Those "Abandoned" Farms.

We have received from time to time letters from our subscribers asking why so many farms in the Eastern States had been abandoned. The prevalent opinion among Western people seems to be that those farms have been abandoned because they were so exhausted that they were no longer of any value. This, we are convinced, is in the main erroneous. Other factors have been working to bring about this change. Immigration has passed by those States, being attracted by the more alluring prospect of a home on the free prairies of the great West, while the farmer boys of New England, in launching out for themselves, have found a 160-acre farm on Government land in some new State more to their taste than the cultivation of the harder soil of the paternal acres. In fact, this movement has but been in accord with a universal law of nature. As the atmosphere moves always toward the point of lightest pressure, so population, free as water, moves always toward the point of least resistance. The word "abandoned" is not properly applied to these farms as a whole, for many of them are still being used for various purposes, and their owners hold them at a fair market value. As was stated by the Commissioners of Maine, who were sent to make an investigation of these forsaken farms, the term "abandoned" is applied to those farms of which the owners are non-resident.

MAINE.—There are about 3000 abandoned farms in Maine, according to the returns made to the Labor Commissioner of the State. A great many of these farms are hilly and rocky, and have not proved profitable enough to their owners to induce them to remain upon them. Some have sold them for what they could get to their neighbors, to be farmed or pastured in connection with their own farms. Some have rented them or leased them on shares. Certainly such farms cannot be said to be abandoned. All lexicographers agree in defining "abandon" to mean "to forsake entirely; to give up all claim to." Abandoned farms would thus revert to the Government, and would become legally open to the homesteader. Such a condition of affairs does not, however, exist in New England. These farms are still held by their original owners, but many of them can be purchased at a moderate price. A Mr. Reynolds of Androscoggin county, Maine, writing in the *American Agriculturist*, in speaking of the exodus from these farms, says:

"Have these people bettered themselves by leaving the farm? A few perhaps have, the many probably have not. It would have been better for them to have remained on their farms. Most of these abandoned farms are well adapted to fruit raising, especially apples. Most of them have more or less orcharding on them, with many scattering trees which have come up spontaneously, and which, if grafted and cared for, would in a few years prove a source of income. With what trees there are already on these farms, and what might be planted each year without a great expense, nearly every one of them could be rendered profitable in a few years, so that fruit raising, dairying and sheep raising would afford a sufficient income to support the family.

In the State of Vermont a very exhaustive inquiry has been made into the causes and present condition of the unoccupied farms. There are a few exceptional places where the land is not and never was worth cultivating. In his report to the General Assembly the Commissioner says that of the lands once cultivated, but now unoccupied for farming purposes, the official reports show that a large portion are of good soil, not worn out, and can be made as fruitful as lands near by, which are successfully cultivated. In answer to circulars sent out to the different towns of Vermont, a gentleman in Jamaica, Windham county, that State, has compiled a list and description of farms in that town, from which are taken the following examples:

"1. A farm of 200 acres, fair buildings, good sugar orchard, plenty of wood and timber, has been one of the best in town, listed at \$810. 2. A farm of 135 acres, good buildings, sugar orchard, fruit orchards, in good state of cultivation, listed at \$700. 3. Another of 90 acres with good buildings, vacant only one year. Timber enough on this farm to pay for it. 4. Twenty-two acres, listed at \$225, with good buildings, vacant one year. 5. Ninety-seven acres, good buildings, sugar and fruit orchards, listed at \$700—a good farm. 6. Ninety acres, listed at \$765. This is a good farm in a high state of cultivation—must be sold. 7. One hundred and fifty-five acres—the finest location in town—has got to be sold." A gentleman in Essex county writes: "In the town of Norton are 20,000 acres of good farming land, and once, standing on a considerable portion, was spruce and hard wood timber, now taken off. This land is selling for \$5 per acre. The soil is blue clay—not sandy—some parts are stony, but the stones are small and easily removed. I have heard different men say that there is no better land for farming in the State."

The Commissioner, speaking of the causes that led to the desertion of many of these farms, says:

As early as the year 1837, a perceptible diminution of cultivated acres was observed. The year 1840 found the tide from the State fairly in motion. This was coincident with and

following the great panic of 1837. Our manufacturing of iron and textile fabrics, then in their infancy, were closed, business came to a standstill, and the home market for farm produce was greatly curtailed. The General Government offered public land to settlers at a nominal price, and new States held out extraordinary inducements. Many of our best citizens and most successful farmers thought it for their interest to avail themselves of the offers made. The movement west increased in volume, through the two decades immediately preceding 1860, and afterward, until it seemed as though portions of our State would become depopulated. The stage routes determined to a great extent the location of the early settlers, and the introduction of railroads tended to attract the people from the hill to the valley and to the railroad centers. Another factor pertaining to this subject made itself felt and was important in its results. The war of the rebellion called from the State to the Union army over 34,000 men—young, vigorous men. Thousands died on the field of battle; thousands were grievously wounded; while other thousands, with a little money saved, did not return to the homes of their fathers, but drifted to the village and city, or to the far west, to take advantage of the Act of Congress, making the period served in the army count upon the time required to secure a quarter-section for a homestead. Their fathers, with no children at home to lean upon in old age, followed their sons to the west or passed to their final rest, leaving none to fill their places. Not one-half of those who entered the army from Vermont ever returned as permanent residents. Assuming that but for the war of the rebellion a large portion of these young men would have lived and reared families in the State, the natural result would have been that Vermont would have at least a population of 40,000 more than it now contains, and many less unoccupied farms. The fact that our lands have been left uncultivated and our population during some decades has decreased is not entirely without its bright side; and we do not alone suffer from the causes mentioned, as our sister States have experienced the same decline in population and farming interests. Even in the Central Western States the movement has been still westward. Nebraska was settled largely by people from Iowa and contiguous States. In the West, others were ready to purchase the lands of those desiring to move, but with us no tide of immigration filled our vacant places.

MASSACHUSETTS.—Mr. Horace Wadlin, chief of the Bureau of Statistics of Labor of Massachusetts, has collected a very complete data on the "abandoned" farms of his State. Commenting upon these figures, the *Inter-Ocean* of a recent date says:

There are in the State of Massachusetts 1461 abandoned farms; 772 of these have buildings upon them; 689 are without buildings; the area of those abandoned farms is equal to 126,459½ acres; 66,530½ acres are farm lands with buildings; 59,958½ acres are farm lands without buildings. The assessed valuation of the abandoned farms with buildings is \$690,019; the valuation of those without buildings is \$386,369; so that the valuation of all abandoned farms in the State is somewhat more than \$1,000,000. By themselves, these figures are minatory of ruined agriculture connected with other figures, and with certain facts their alarming features are obliterated. The number of acres of abandoned land would, at first sight, indicate a diminution of the area of land under cultivation; but the truth is, that the area of land under cultivation has increased by nearly 3.50 per cent during the ten years reviewed by the Massachusetts statistician. The value of agricultural property has increased by more than 23 per cent in the same period, and the value of agricultural products has increased by nearly 29 per cent. The products of agriculture have increased more rapidly than those of manufacture, despite the abandonment of many farms. This holds true not only of the State at large but also of the counties in which abandonment has been most noticeable. For example, the county of Barnstable has 15 abandoned farms, comprising 416 acres, but the increase of the value of farm property is 102.82 per cent, and its increase of agricultural products 71.93 per cent; the decrease of acreage under cultivation for this county is 2.88 per cent. These figures indicate the abandonment of poor land, or of land remote from markets, and intensified culture of better land. Even in New Hampshire, where the abandoned farms number 216, with an area of 21,672 acres, making a decrease of more than 12 per cent of the area under cultivation, the increase in the value of farm property has been nearly nine per cent, and the increased value of farm products nearly 12 per cent.

That many of the farms are of good soil, capable of being brought under a high state of cultivation, is proved by the fact that some of them have been bought up by city men as an investment and have returned a very large annual interest on the money invested. As an instance of this a young man in Boston purchased one of the above mentioned class of farms, and, having the money to carry on the work in a thoroughly scientific manner, received a larger return on his money than he was receiving from his business in the city, where he was engaged as a clothier, presumably on a small scale. He abandoned the less productive business for the greater, and is now located on his farm and supplying butter to the city market the year round at 40 cents per pound.

## Minnesota Chief Threshing Machine.

Threshing machines have, for many years, invited the best efforts of inventors and mechanics, and almost every prominent machine has been improved more or less with each season. The difficulty with most machines is that they have specialties—succeeding in good results in one direction, at the expense of defects in some other, where perfect work is equally necessary. One machine is a rapid thrasher, but a poor separator; another is a rapid thrasher, but defective in cleaning; and another cleans the grain thoroughly, but is very slow. Men of experience will readily call to mind machines that have failed in the ways mentioned. In the effort to combine all these good features, the progress of manufacturers and the consequent improvement of threshing machines have been manifested.

The manufacturers of the Minnesota Chief, at an early day, learned a valuable lesson from the mistakes of their competitors; and no man need be much of a mechanic to understand why the Minnesota Chief is doing annually more and better work than any other machine. The primitive way of separating grain from the chaff was for the operator to toss up, again and again, the mingled mass, the wind catching and

## Planet Jr. Implements for 1891.

S. L. Allen & Co., manufacturers of the well-known Planet Jr. line of horse and hand tools, are out again with improvements which keep their implements abreast of the progress in advanced ideas and practice in land tillage. A pleasing and entirely new feature which is now incorporated in all of their horse tools consists in a hand wheel-lever which, raised or lowered a little at a time, instantly adjusts the depth of cultivation, no wrench or even stopping of the horse being necessary. In addition to their popular horsehoe and cultivator combination, they are now putting on the market two entirely new and evidently very desirable tools which we illustrate herewith.

Fig. 1 represents a special "market gardeners' horsehoe," constructed with particular regard to very fine, close, level culture and admirably adapted for growth of sugar beets, has teeth so formed that while the soil is worked most thoroughly, it still remains level. This tool at a single passage works all rows from 18 to 32 inches, and the beet horsehoe all from 12 to 24 inches. The hoes in either may be exchanged from one side to the other, and the pulverizer may be reduced in size for narrow rows; or by taking off the sweep and the center

Fig. 1—PLANET JR. SUGAR BEET HORSE HOE AND CULTIVATOR.

Fig. 2—PLANET JR. ELEVEN-TOOTH HARROW, CULTIVATOR &amp; PULVERIZER.

blowing away the chaff and straw, while the grain, being heavier, fell to the ground. This is precisely the manner by which the Chief handles the mingled grain, chaff and straw, upon the separating table, after it passes the cylinder, taking each handful sharply up and letting it fall again, 30 or 40 times, before it finally passes out of the machine; the grain, being heavier, falls down through the table, thus making the separation perfect and certain. Instead of a small fan running at a rapid motion, producing a spiteful blast and blowing over the grain, we use a large fan, moving at a low speed, throwing a strong, steady and uniform current of air through large openings across broad sieves, sufficient to carry all the chaff and dirt off the riddle. This feature in the operation of the Chief is readily appreciated by the farmers, and makes a material and welcome addition to their profits. In the construction of the Minnesota Chief separator, it has been our aim to attain the three most important requisites to a successful machine; and that our efforts in this direction have been successful is attested by the reputation it has acquired, and which we also confidently leave to the judgment of all who will examine it. These qualities are durability, simplicity and ability to do first class work. Our advertisement, with illustration, will be seen on another page. For catalogue, send to Robert Brand, General Agent, 654 Washington street, Oakland, Cal.

HABIT OF CHEWING GUM.—A prominent New York physician has announced that the constant chewing of gum has produced weak minds in 14 cases of young girls now under his treatment; the constant movement of the mouth causing too great a strain on the head. Here is a solemn warning which our girls should heed.

tooth of the pulverizer, securing the handles to one side and replacing the wheel with a pair of steel runners, either tool may be used to straddle the row and cultivate both sides at once, as in cotton, etc. They run with extreme steadiness, and therefore can be safely used in the very closest and most delicate operations.

Fig. 2 represents the "eleven-tooth harrow," an entirely new and valuable tool now put upon the market after thorough and long extended trials. The frame is much higher than usual in this class of tools, and the blades, an inch wide, are of such shape as to offer very unusual amount of wearing surface; the recurved throat and high frame prevent clogging and the reverse position is given to the teeth in a short time by the changing of a single bolt in each. The frame is heavy and strong, and the teeth set straight with the line of motion, and are interchangeable. It is claimed that they may be worn off three inches before requiring renewal, and yet retain the original cutting width, and then can be cheaply replaced.

Both of these new tools are provided with the new lever wheel already alluded to, and with a pulverizer attachment which leaves the ground in the finest condition. The pulverizer is controlled by a lever which can be operated by the foot while in motion.

These new tools in connection with the full line of Planet Jr. implements, are represented here by G. G. Wickson, 3 and 5 Front St., who makes a large and interesting display of them in his great variety. A full descriptive catalogue illustrating in detail the various methods of cultivation of different crops, which would be particularly interesting to those engaged in market or private gardening; also, in orchard and vineyard work will be mailed to all who apply for it.

A REVOLUTION  
IN PLOWING.

# Best's Traction Engine.

## THE MONARCH OF THE FIELD!

IT WILL DO THE WORK OF 100 HORSES.

Plowing Reduced to a  
Minimum Cost,

And from 35 to 45 acres plowed each  
day at an expense of 50 cts. to 60 cts.  
an acre.

Three Sizes Built,  
30, 40 & 50-Horse Power.

—AND—

22 Best Traction Engines  
AT WORK NOW.

A Fifty-Foot Harrow  
is Used,

With which from 100 to 125 acres  
are harrowed each day, doing  
the work much better than  
horses.

Messrs. Reed & Frisbie of  
Kings City are pulling a gang of  
25 ten-inch plows, moving at the  
rate of three miles an hour and  
plowing eight acres an hour  
with a Best's Traction Engine.

Plowing by Sunlight by  
Day and Headlight  
by Night.

51 BEALE ST., SAN FRANCISCO.

## FARMERS' INSTITUTES.

## Another Account of The Fresno Institute.

EDITORS PRESS:—As no other local participant has done so I believe I will be giving you an item of interest in reporting the Farmer's Institute held here the first week in April. Knowing that a large number of farmers would be in attendance upon the County Alliance held here April 2d, it was wisely planned to have the Institute convene the following day, thereby holding their attendance. I was one of those who listened with a large degree of curiosity to Prof. Wickson of the State University, as he explained the objects and methods of the Farmer's Institute, and before he had finished, I was converted to the belief of its immense power for good to the people of California, and that I was not alone in that, but that it was a regular camp meeting revival was shown by the events that followed.

Prof. Wickson was accompanied by Prof. Hilgard and the large and attentive audience that listened to him in the afternoon sessions upon the subject of "Alkali in soils and its treatment," showed the interest felt in that matter by our people, and if no other benefit had been received by us except that one lecture, we should have great cause to be grateful to the State for holding that Institute here.

W. W. H. Murray presented the subject of Ramie Culture, pointing his clear and forcible remarks, with samples of the plants and fabrics made from its fiber, awakening a new and deep interest in the matter. While the committee appointed did not feel that they had sufficient knowledge of the plant to warrant them in advising their neighbors to engage now in the culture of ramie, they recommended the subject as one worthy of the fullest personal investigation; and the impression among the people seems to prevail that it is likely to become an important article of production.

I shall occupy too much space if I tell you of all the feast of good things we enjoyed, and also tell you of how we did our part in the good work that had been so well begun for us, which was to form a permanent organization, known as the Fresno Co. Farmers' Institute, and such live energy was displayed in the matter, that officers were elected for the coming year, a Constitution and By-Laws formed and adopted, and we are now in full working order. We shall hold quarterly meetings in the different towns of the county, and fully expect to help ourselves, and be in condition when talent from the State University or from any other place in the State can be with us, to derive the greatest possible benefit from their presence.

We are fortunate in having with us for our Presiding Officer, Mr. O. P. Laird, a new comer fresh from the Institute work in Ohio. Miss L. H. Hatch, the successful raisin grower and Mr. R. B. Harlowe, a live young farmer, are our vice-presidents. Capt. Dawes, an equally live old farmer, is the Treasurer. It will be the duty of these officers to instruct their Secretary to arrange and publish a program one month in advance of a quarterly meeting, and this is where I want the hearty co-operation of the readers of the RURAL, not only of Fresno county, but all over the State. If any of you have any subject of interest you want to bring before an audience of bright, progressive, earnest men and women, farmers and workers in all branches of industry included, prepare a short, pithy article for our next meeting, which will be given in the month of July—exact date will be published duly.

If you are not able to attend in person, name a proxy to give it for you. We shall have at least one evening session, which will allow time for music and appropriate literary exercises. We hope no one will hesitate after this public invitation has been given to respond to it. We have the promised help of Mr. J. S. Dore, whose large acquaintance in the county and State will enable him to suggest means for the program.

One of the first acts of the Organization was to petition the Board of Supervisors to give us a Board of Horticulture consisting of J. S. Dore, Miss L. H. Hatch and Mr. Lucius Baker. We hope, through enthusiastic efforts of our own and the assistance of those favorable to such enterprises, to make such a success of this, that others seeing our good works will go and do likewise. To this end I would earnestly request any one willing to assist us to correspond with me.

MRS. M. B. STUART,  
Fresno, Cal. Sec. Farmers' Institute.

CITY POOL ROOMS CLOSED.—The people of San Francisco have reason to rejoice that one form of local gambling is to be suppressed. It is bad enough to have the pool iniquity at the race track and not spread out everywhere for the debasing of youth and ruin of mature manhood. The San Francisco Supervisors therefore passed an ordinance restricting pool-selling and book-making to the race track on which the races are run, and this ordinance has now been declared to be valid by decision of the Superior Court. In their decision, the judges say: "We are unanimous in the opinion that under Section 11 of the State Constitution, and the Legislative Act of 1862, the ordinance passed by the Board of Supervisors in reference to pool-selling is valid." The gamblers propose to die hard, and have carried the question to the Supreme Court.

## THE BOTANIST.

## Blossom Time.

EDITORS PRESS:—On April 5th from Cholone came a lot of red poppies (*Meconopsis heterophylla*), *Allini serratum* (purple-flowered wild onion), two species of yellow primroses and several species of lupins.

A very odd feature of the red poppy was that it grew only in clumps in large beds of the white flowered *Ellisia membranacea*.

From the north end of Monterey county come the odd little *Tellima affinis* with its dainty white blossoms, *Nemophila aurita*, a purple-flowered, climbing species of "Baby Eyes," *Calochortus lilacinus*, *Allium unifolium* (a pretty rosy-flowered onion), *Linum Canadense* (wild flax), a beautiful rosy purple form of *Lupinus polyphyllus*, a yellow-flowered *L. arboreus*, *Brodiaea laxa*, two species of *Iris* and three species of *Caenothus*.

An odd feature in regard to *Fritillaria liliacea* was noted as follows: Well up on a ridge-side its seed were ripe, the pods opening; lower down, the plant was seen in all its gradations from the full-grown pod to the little green pod just formed, and finally at the bottom of the valley blossoms just opened.

From western Sonoma county comes *Iris longipetella*, *Hosackia bicolor*, with a pretty white and yellow pea-like blossom, *Dodecatheon media*, *Tellima affinis*, *Amsinckia spectabilis*, wild flax, man root, cream cups, forget-me-nots, butter cups, a European cotton, snake root, a number of ferns and other specimens to be examined later.

Speaking of a thermal belt on the east side of Salinas valley, the writer finds it in one location to be coincident with the habitat of *Salvia Carduacea*.  
A. L. LIANCE.

Gonzales.

Duval, assignor to the Benicia Agricultural Works, Benicia, traction wheel; Charles W. Harvey, Los Angeles, and C. J. Root, Bristol, Conn., said Root assignor to said Harvey, door spring; Charles S. Jones, Redding, ore mill; John C. Scradner, Dover, N. J., assignor to Repanno Chemical Company, Wilmington, Del., and Atlantic Dynamite Company, San Francisco, apparatus for making dope for explosives; Henry E. Thomas, assignor of one-half to F. H. Hansman, San Francisco, suit-power pump; Hilbert Tompkins, San Leandro, foot-strap for horses. Oregon—Langley Hale Jr., Glendale, assignor of one-fourth to G. A. Taylor, Roseburg, car axle. Washington—Joseph H. Bradshaw, assignor of one-fourth to J. Wiley, North Yakima, harness.

NOTE.—Copies of U. S. and Foreign patents furnished by Dewey & Co., in the shortest time possible (by mail or telegraphic order). American and Foreign patents obtained, and general patent business for Pacific Coast Inventors transacted with perfect security, at reasonable rates, and in the shortest possible time.

## Prison Grain Bags Again.

In his report of the State Prison Directors Warden Hale says that the output of grain bags at San Quentin penitentiary has been sold up to May 1st. He also recommends that the price of bags be made to conform to the market value of the imported, and that instead of selling prison bags, which he claims are better, at 6½ cents, to increase the price to 7½ cents. This recommendation is contrary to farmers' views and interests, which will receive attention in our next issue from a representative farmer who has given much attention to the bag problem.

The report states the number of grain bags manufactured from January 1st to date, at 759,050; number of grain bags carried over from last year, 968,300; number of bags to be

manufactured to fill accepted orders, 110,850; total, 1,838,200. Number of grain bags sold and delivered to date, 1,139,200; number of grain bags sold and held for shipment, 699,000; number of bags jute on hand April 11, 1891, 1713. Mr. Hale further states that the output is increasing and waste decreasing. To increase the output still further, an extra guard was placed on duty at the mills.

## State Board of Horticulture.

President Ellwood Cooper of Santa Barbara presided at the annual meeting of the State Board of Horticulture in this city April 15. There were present Commissioners Sol Ranyon of Courtland, J. L. Mosher, San Jose; Frank A. Kimball, National City; Dr. A. F. White, Santa Rosa; Fred C. Miles, Penryn; R. H. Thomas, Visalia.

Secretary Lelong read his report and that of Quarantine Officer, Alex. Crow to which we shall refer at another time. The laws relating to horticulture passed by the last Legislature were considered. The regular appropriation of \$10,000 a year—or \$20,000—was obtained here \$5,000 to be used especially to send Albert Koehle to Australia to search for predaceous insects.

The election of officers being in order, Mr. Cooper was re-elected President without a dissenting voice.

## Death of Ex-Governor Waterman.

Many readers of the RURAL will hear, with deep regret, of the death of Ex-Governor R. W. Waterman, at his residence in San Diego on Sunday last. The disease was pneumonia, and it did its fatal work with frightful speed. He was buried with marked honors on the afternoon of April 14th. Governor Waterman was a native of Herikmer county, N. Y., and a California pioneer. His chief field was mining, and in it he achieved great success and amassed a large fortune. He was elected Lieutenant-Governor in 1886, and became Governor upon the death of Governor Bartlett in 1887. Probably no man ever labored harder to administer an office in accordance with his idea of right than did Gov. Waterman. He suffered from inexperience in public affairs and made mistakes, but of his sincerity and uprightness there is no question. It is sad that after such an experience as he had in a high office he was not given more time to enjoy the quiet of private life, of his fortune and of the family ties which had such grateful influence upon him. He was but 65 years of age, and apparently rugged and good for many more years of earthly effort and attainment, but the summons came and was not to be deferred. His memory will be long cherished.

# HILL'S IMPROVED LIGHTNING BALER.

Capacity, 32 Tons per Day.

AWARDED FIRST PREMIUM BY THE CALIFORNIA STATE AGRICULTURAL SOCIETY FOR 1890.

MULES  
VERSUS  
MEN.

CALIFORNIA'S  
TRIUMPH.

No tramping. No forking from the stack. No cutting of stacks necessary. You can sit at a hundred-foot stack and bale it without a move. It makes the best bale in the market. You can put ten tons in a car. The forking from the stack is all done by the horses. The Baler can turn out more hay in less time and better style than any other Press. Here is one of the recent endorsements of this wonderful machine:

J. F. HILL—Dear Sir: We baled on James Ryan's Ranch on the Cosumnes, one mile from the Slough House, 277 bales of alfalfa hay, that weighed 32 tons and 35 pounds, with one of your Lightning hay presses on the 21st day of July, 1890. Yours respectfully,  
CONNOR & ANDERSON.

—MANUFACTURED BY—

## Pacific Wheel and Carriage Works

BUY  
THE BEST!

— THE —  
**H. H. H.**  
Horse Liniment

Is certainly the best preparation of its kind in the market. Ranchers, Stock Raisers and Horse Owners of every description will tell you that it does good work every time.

MRS. H. H. MOORE & SONS, Stockton, Cal.—GENTLEMEN: In answer to your inquiry, would state that I used your H. H. H. Liniment on my Holland prize-winning cow, "Lena Menlo," for a wrenched shoulder, and it relieved her very much. She calved the next day, and while still suffering from the sprain gave the largest authenticated quantity of milk ever given on this coast (10½ gallons per day), showing conclusively the great relief received from your remedy. I consider it a necessity in my stables, and when away from home feel perfectly safe, as inexperienced men can do no harm with it, as they can with the more powerful blisterers. Respectfully yours,  
**FRANK H. BURKE,**  
Breeder of Registered Holsteins and Berkshires.  
Menlo Park, Cal., January 22d, 1889.

**MANHATTAN**  
STOCK FOOD

Saves One-Quarter of Grain Feed.

FRAUDULENT PARTIES have been selling an article, claiming theirs to be the same, and, in order to mislead, have added a prefix to "Manhattan." Our genuine food is called simple "Manhattan Food," with the Red Ball Brand.

623 Howard St., San Francisco, Cal.

## THE BEST FENCE YET!

Cheap, Durable, Portable and Safe.

THE SPALDING HUMANE WIRE FENCE is composed of eight No. 12½ galvanized steel wires, woven into four cables of two wires each; interwoven every five feet is a corrugated iron stay or guard, and held in place by the cables, thereby holding the cables firmly in place, preventing them being spread apart and letting stock through. The stays or guards are corrugated and an inch and three-quarters in width, making the fence as visible as a board fence, which is a very essential point. Write for circulars and prices. Address **BIRD-TURNBULL MFG. CO.,** 195 La Salle St., Chicago.

## S. H. MARKET REPORT

## Market Review.

## DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, April 15, 1891.

Rains with showery weather the past week, have contributed no little in raising the drooping spirits of many and inspiring a more confident feeling regarding the future. It now looks as if the grain crops are well on the road which promise to give the largest output on record, with the grade being a good average. Money is easy and speculation is cropping out. Eastern and European wheat advices report better markets. The following is to-day's cablegram:

LIVERPOOL, April 15.—Wheat—Moderate demand. California Spot lots, 8s 7½d, off coast, 43s; just shipped, 42s 9d; nearly due, 43s; cargoes off coast, very firm; on passage, quiet but firm; Mark Lane wheat, firm but not active; French country markets, very firm.

## Foreign Grain Review.

LONDON, April 13.—The Mark Lane Express, in its review of the British grain trade for the past week, says: English wheats are firm, ranging from 35s to 45s; foreign are active and is dearer; California is quoted at 43s 6d. Flour is firm at the top price, corn is 6d higher. Barley and oats are higher. At to-day's markets English and foreign wheats sold at 6d advance. English flour was 1s higher; American 6d higher.

## Liverpool Wheat Market.

The following are the closing prices paid for wheat options per cwt. for the past week:

	April.	May.	June.	July.	Aug.	Sept.
Thursday.....	8s7½d	8s8d	8s7½d	8s7½d	8s6½d	8s6½d
Friday.....	8s7½d	8s7½d	8s7½d	8s6½d	8s6½d	8s6½d
Saturday.....	8s6½d	8s7d	8s6d	8s6½d	8s6½d	8s6½d
Sunday.....	8s6½d	8s7½d	8s6½d	8s6½d	8s6½d	8s6½d
Tuesday.....	8s6½d	8s7½d	8s6½d	8s6½d	8s6½d	8s6½d

The following are the prices for California cargoes for off coast, nearly due and prompt shipments for the past week:

	O. C.	P. S.	N. D.	Market.
Thursday.....	42s9d	42s3d	42s8d	Strong
Friday.....	42s9d	42s6d	42s9d	Quiet but firm.
Saturday.....	42s9d	42s6d	42s9d	Steady.
Sunday.....	42s9d	42s6d	42s9d	Firm.
Tuesday.....	43s0d	42s9d	43s0d	Tending up.

## Eastern Grain Markets.

The following shows the closing prices of wheat at New York for the past week, per bushel:

	Day.	April.	May.	June.	July.	Aug.	Sept.
Thursday.....	113½	111½	109½	105½	105½	105½	105½
Friday.....	113½	111½	109½	105½	105½	105½	105½
Saturday.....	113½	111½	109½	105½	105½	105½	105½
Sunday.....	113½	111½	109½	105½	105½	105½	105½
Tuesday.....	113½	111½	109½	105½	105½	105½	105½

The closing prices for wheat have been as follows at Chicago for the past week, per bushel:

	Day.	May.	June.	July.	Aug.
Thursday.....	104½	104½	102½	102½	102½
Friday.....	104½	104½	102½	102½	102½
Saturday.....	104½	104½	102½	102½	102½
Sunday.....	104½	104½	102½	102½	102½
Tuesday.....	105	105	103½	103½	103½

NEW YORK, April 15.—Wheat—\$1.15½ for May, \$1.13 for June, \$1.10 for July, \$1.06½ for August, \$1.05 for September and \$1.07½ for December.

CHICAGO, April 15.—Wheat—\$1.05½ for May, \$1.04 for July.

## The Wheat Crop.

WASHINGTON, April 10.—April returns at the Department of Agriculture make the conditions of winter wheat 96.9 and rye 95.4. The season for seeding was favorable over the whole winter wheat area, and the soil was generally easily worked. The seed-bed was prepared with unusual care and the sowing was followed by gentle rains, sufficient to properly pack the earth and insure prompt and perfect germination. The entire season is favorable to California, while in Oregon the dry seed-bed received moisture in time to secure good, though late growth. The advances of the condition in the principal States are: New York, 92; Pennsylvania, 97; Tennessee, 98; Kentucky, 97; Ohio, 98; Michigan, 93; Indiana, 90; Illinois, 97; Missouri, 96; Kansas, 99; California, 99, and Oregon, 97. The returns make the percentages of the losses among farm animals the past year: Horses, 1.7; cattle, 3; sheep, 4, and swine, 8.4.

The weather generally has been mild over the whole area, and while the snowfall was comparatively light, it came when most needed, protecting the plant during the coldest weather. The Hessian fly, which was feared in December in the Central West, is yet in abeyance, but the presence of the pest is noted in many localities, and serious injury might follow should the early season prove favorable for its development.

The general average for condition is the highest reported for April since 1882, and the individual State averages are remarkable for their uniformity. It is 16 points higher than last year and three above the returns for 1889.

A high April condition does not insure a large yield, but it indicates strength and vitality, which would enable the plant to withstand more than the ordinary vicissitudes of a season.

## Visible Supply of Grain.

NEW YORK, April 13.—The visible supply of grain in store and afloat, as compiled by the New York Produce Exchange, is as follows: Wheat, 22,539,000 bushels, an increase of 5,000 bushels; corn, 2,338,000 bushels, a decrease of 323,000; oats, 2,594,000 bushels, an increase of 43,000; barley, 1,040,000 bushels, a decrease of 236,000.

## Eastern Wool Markets.

NEW YORK, April 10.—Bradstreet's will say: The demand for wool has fallen off during the week in all the domestic markets. Australian wools are quiet and values are holding firm on the strength of the cable reporting an advance at London sales. There has been little doing in either Texas or California wools. The demand for pulled wools is confined entirely to fine and fine medium grades. One-quarter and three-eighths blood wools are quiet and the sales which have been made were for small lots. Carpet wools are in light demand, but values are unchanged and quite firm.

## Dried Fruits East.

NEW YORK, April 13.—A lively movement in California evaporated apricots and peaches the past few days inspires the belief that the market is getting into better shape. Philadelphia figured as

buyers and sellers. There is a strong belief that all the old stock on hand in the East will be needed before the new season comes around, and prices are more likely to advance than move in the other direction. Prunes and raisins are also reported as more active.

The commercial journals note the sale of California Tangerines here last week as a novelty. They jobbed at \$3.50 per box, and attracted much interest among the fruit men.

## Local Markets.

	Buyer Season.	Seller Season.	Buyer 1891.	Seller 1891.
Thursday.....	136	136½	104	103½
Friday.....	136	135	104	103½
Saturday.....	137	136½	104½	104½
Monday.....	136½	136½	105	105
Tuesday.....	136½	136½	104½	104½

\*After August.

	Buyer Season.	Seller Season.	Buyer 1891.	Seller 1891.
Thursday.....	161	161½	160½	160½
Friday.....	161	161½	160½	160½
Saturday.....	161	161½	160½	160½
Monday.....	161	161½	160½	160½
Tuesday.....	161	161½	160½	160½

BAGS—The market is fairly steady, 7¢ 7½¢ for May and June delivery. Prison bags are sold up to May 1st.

BARLEY—The sample market has held fairly strong. On Call trading in futures has been more or less neglected owing to the interest centering in wheat. The following are to-day's Call Board sales: Morning Session: Buyer season—100 tons, \$1.36½. Seller 1891—200 tons, \$1.04½ per cwt. Afternoon Session: Buyer season, 800 tons, \$1.37½. Seller 1891—100 tons, \$1.04½ per cwt.

BUTTER—The market has a slightly steadier tone owing to packing. Receipts are large. In last month 18½ tons were shipped to the East. Oregon is increasing her butter output.

CHEESE—Notwithstanding receipts are large, there is a firmer tone, particularly for young American which command an advance. Flats are stiffening.

EGGS—Reported shipments coming from shipping points in the Central States cause dealers to force sales. Only the more choice selected Californian are readily taken.

FLOUR—The market is strong with still higher prices looked for.

WHEAT—The market for sample parcels acts very much as if quite a number of short sellers have been caught. The supply in this State is very light and what there is here is concentrated. If there is a short interest, still higher prices will rule. The market abroad is higher and advancing. On Call trading continues active. The following are to-day's Call Board sales: Morning Session: Buyer 1891—1800 tons, \$1.65; 600; \$1.65½; 200, \$1.64½. Buyer season—200 tons, \$1.63½; 100, \$1.63½; 100, \$1.63½; 100, \$1.64½; 100, \$1.65; 600, \$1.64½; 900, \$1.64½. Buyer 1891, after August 1st—900 tons, \$1.60; 1000, \$1.60½; 1300, \$1.60½. Seller 1891—300 tons, \$1.53 per cwt. Afternoon Session: Buyer 1891—800 tons, \$1.65; 100, \$1.65½; 300, \$1.64½. Buyer season—500 tons, \$1.64½; 200, \$1.64½. Buyer 1891, after August 1st—300 tons, \$1.60; 200, \$1.60½; 100, \$1.60½ per cwt.

## Cereals.

Mark Lane Express, March 30.—The aspect of our cornfields is not discouraging; but the autumn-sown wheat, although good in color and of a healthy growth, is so far behindhand that even thus early in the season the anticipations of a September harvest, instead of an August crop, have a strong balance of probabilities in their favor. This will throw the burden of finding an extra one or two million qrs. of wheat and flour on the present cereal year—a burden, of course, quite irrespective of the eventual yield per acre of the new crop. The February wheat is little more than up, and will be now later than the sowings of the old year. Spring corn is wanting rain, and if the drought of the first quarter of 1891 be repeated in the second quarter, we shall have a failure of all but the hardest and deepest rooted of the crops. Abroad, the good promise of the wheat in America, Russia, and Austria-Hungary gives the trade hope of a larger total export surplus from these countries than in 1890. The difference in the United States may amount to from 7,000,000 to 10,000,000 qrs., and in Russia and Austria-Hungary combined, to from 2,000,000 to 4,000,000 qrs. Thus, at the best, the wheat surplus in aggregate may be raised from 9,000,000 to 14,000,000 qrs. Against this surplus has to be set the practical certainty of heavy import wants in France and Italy, and the strong probability of increased imports into Spain, Belgium, Holland, and Germany. The current opinion in the trade to-day is that the total of these deficiencies, with the chronic wants of England, will be larger than the total of the surpluses in America, Russia, and Austria-Hungary, and that 1891-92 will

be a cereal year marked with a decidedly higher mean of value than that which has recently prevailed. At present, Mark Lane and the Baltic are restricted in their ability to back this opinion by the fact that the capital in the corn trade is no longer what it used to be. Should, however, the harvest prospects fall off in either Russia or the United States, or should the promise of our own crop be threatened by untoward weather, then outside capital would doubtless be procurable to strengthen the hands of holders, and we might well have decidedly higher prices even within the next few months of the present cereal year.

The local wheat market has continued to hold to strong prices, with further advances established. Although the writer has stated consistently throughout this season, that much better prices would rule over the opening prices in last July, yet it is safe to say that very few farmers in this State are benefited by the higher prices now current, owing to their having sold. The exports to date are fully up to the likelihood in the season of 1889-90, but the surplus now in hand is very much less. The fact must not be lost sight of, that the consumption in this State has increased rapidly under extended fruit-raising, and also that wheat-flour is a leading article of food, and as such, it is quite safe to place the consumption at from 4½¢ to 5¢ bushels per capita. Reckoning it at the former, then, its consumption for food is in round numbers 3,600,000 centals equal to 180,000 short tons.

Dealers claim that it is very hard to buy wheat. Many of the better informed say that there is not over 160,000 tons in the State.

Rains and cloudy, moist weather in this State the past week have improved the crop prospects. All present advices warrant the expectation of a larger output than ever before known. Oregon and Washington advices report good prospects.

Barley has held firm. The supply is very light, but buyers are offish in view of forward crops in several of the counties. New barley will begin to come in early next week. The crop, it is said, will be large and of good quality. It has been many years since supplies were so reduced as they are this, and the season of 1890-92 will come in on a market with stocks exhausted, not only in California, but in Oregon and Washington. Crop prospects in this State and up north are of the best. Although the receipts of oats are light and stocks are being depleted, yet buyers are conservative and any advance in the views of buyers causes them to be offish. Buyers generally claim that there will be a large output on this coast.

Corn has held steady, with a firm tone. It is claimed that there is a steady export buying, and as the supply is not over large buying of any moment causes sellers to ask higher prices.

Rye is virtually unchanged.

In last week's issue mention was made of exporters buying wheat on Call or at least buying buyer option. These purchases were made so as to secure the firm against several cargoes of wheat for shipment in May and June. An exchange in Yuba county (particulars in "Agricultural Notes") states that sales of new crop wheat have been made for July-August delivery. And now comes the Chicago *Drovers' Journal*, April 9th, with particulars of the following sales for forward delivery: Messages from New York note foreigners as large buyers of cash wheat and deferred futures. One dispatch said of the cash demand that foreigners had taken 100,000 bu. wheat for June shipment, 100,000 for July, and 200,000 for August shipment. Another said that six loads of spot wheat at New York and five at Baltimore had been worked and 25 loads additional for summer shipment, and that the foreigners had bought 1,000,000 bu. of September and December futures.

## Oregon Crop and Stock Report.

Portland Crop-weather bulletin, April 11: Farm work is slowly progressing. Seeding on uplands is being pushed rapidly, on low lands the soil is too wet for it to be worked. The acreage of spring grain is being increased. The early sown grain is above the ground and looks to be unusually healthy, though of slow growth. Fall wheat is also of slow growth, but its roots and stools are large, and it is generally reported to be looking unusually well. Wheat prospects were never better at this time of the year than at present; the same can be said of other grains, fruits and crops of all kinds. Fruit is slow in developing which precludes the possibility of damage or injury by probable late frosts. Spring seeding is almost done in Umatilla Co. Strong winds during the week did some slight damage to the newly sown grain.

The stock wintered well, the loss has been practically nothing, the range is becoming better. Some cattle are yet fed, but sheep generally get sufficient food on the range. Pelts and hides are scarce.

Warmer weather and more sunshine are needed to cause crops to have more rapid growth.

## Feedstuff.

The demand appears to be enlarging for ground feed, and as the supply of bran and middlings is only fair, prices for the former are higher. Feed-meal and cracked corn are held at an advance on our quotations.

Under light receipts and a good demand the better grades of hay fetch more money. The supply of old will about be exhausted when new begins to arrive. The prevailing opinion is that fewer grain fields will be put for hay this year than there were in 1890. This opinion is based upon reports that the plant is generally not so high as in last year, while the high price of cereals will cause many to cut for grain.

## Fruit and Canned Goods.

The shipments of fruit and canned goods to the East by rail in March were as follows:

	Canned Goods.	Dried Fruit.	Citrus Fruit.
From—			
San Francisco, lbs.....	689,000	249,100	.....
Los Angeles.....	33,440	50,650	3,813,230
Sacramento.....	108,440	56,680	.....
San Jose.....	207,980	209,820	.....
Marysville.....	70,500	19,000	116,700
Colton.....	.....	65,860	3,491,860
Stockton.....	.....	13,540	.....
Totals.....	1,689,450	683,650	7,421,790
January.....	1,554,360	2,007,410	965,610
February.....	833,360	953,510	1,773,510

Three months, 3,467,170 3,624,570 10,165,910  
The shipments of raisins from the State in the past month were as follows: San Francisco, 108,-

680 lbs; Sacramento, 450,520; Stockton, 364,860, Marysville, 13,780; Los Angeles, 22,300; San Jose, 23,390. Total, 983,530 lbs, as against 1,329,740 in January and 481,330 in February.

## Fruits.

All advices are confirmatory of good crop prospects. Apricots are reported to be dropping, but then this will save thinning. Cherries will be in market next week. Some shipments are reported to have been made East. The crop will be large and of good quality. Information regarding crops is given under Agricultural Notes.

Apples are about gone. Quotations are withdrawn. Strawberries are coming in more freely. It is reported that canners are contracting for apricots at 1½¢ to 1¾¢ according to location of orchard. Sicily lemons are higher, other kinds are strong. Lemons are unchanged.

Oranges continue to go East in large quantities. While the East gets choice, we, as a rule, get the culls. Choice oranges in our market are light stock and fetch good prices. There is an oversupply of scaly and also of thick-skinned and corky.

## Vegetables.

Favorable weather is reported for garden truck. Cool, moist weather is against rapid maturing, but it is favorable for young growing vegetables.

The receipts of new potatoes are light; the bulk of the receipts are better adapted for playing marbles than for eating. Large-sized new, fetch outside quotations. Old have a stronger tone. Under free buying for shipment East, Burbanks were advanced. Onions are in light supply, causing a strong market to obtain.

Canners are reassuring in asparagus, and expect to start on peas the first part of May. The crop of peas will be heavy, as will that of string beans. The receipts of peas, asparagus and rhubarb are free, while that of string beans are light.

The southern counties report overland shipments of vegetables.

## Live-stock.

Bullocks and mutton sheep are cheaper under freer selling. The conditions are uniformly good. Hogs are firm. Milch cows and horses are unchanged.

The market for dressed cattle is quoted as follows [to obtain the price on foot, take off from the price for stall-fed one-third to one-half, according to the nature of the feed and time fed; and for grass-fed take off the price from 40 to 60 per cent]:

HOGS—On foot, light grain fed, 5½¢ to 5¾¢ lb; dressed, —@—¢ lb.; heavy, 5¢ to 5½¢ lb.; dressed, —@—¢ lb. Stock hogs, 4¢ to 4½¢ lb. BEEF—Stall fed, 6½¢ to —¢ lb.; grass fed, extra, 6¢ to —¢ lb.; first quality, 5½¢ to —¢ lb.; second quality 5¢ to —¢ lb.; third quality, 4¢ to —¢ lb.; bulls and thin cows, 2¢ to 3¢ lb. VEAL—Small, 6¢ to 8¢ lb.; large, 5¢ to 6¢ lb. MUTTON—Wethers, 8¢ to 8½¢ lb.; ewes, 7½¢ to —¢ lb.; spring lamb, 10¢ to 12¢ lb. lb.

## Miscellaneous.

Young, well-conditioned and large-sized poultry are wanted. Older kinds are weak, owing to receipts overland.

White beans are higher and in good request, which causes the entire line to fetch better prices. The shipments to the East and also by sea are large, which cause dealers to look for slightly better prices. Crop prospects are uniformly good.

The supply of hops on this coast is very light, and buyers to have their wants met have to pay full prices.

Wool commands full prices, that is, if it is healthy and lively. Dead wools and all other defective wools are hard to place, except at concessions. Buyers are sampling more freely. Honey is coming in more freely, but quotations are essentially unchanged.

The overland shipments in last month aggregated as follows, in pounds: Beans, 1,404,320; brandy, gals, 343,100; butter, 37,510; hops, 118,000; potatoes, 8,945,280; wine, gals, 6,338,360; vegetables, 1,136,410; wool, grease, 289,690, pulled, 156,840, scoured, 254,200.

Exports by sea the past week aggregate as follows: Flour, bbls, Honolulu, 1843; China, 11,975; Japan, 6252; Westport, 21,250; Tamaco, 130; Guayaquil, 3500; Manila, 500; Central America, 2368. Wheat, cts, Antwerp, 72,836; Havre, 313,759; Dunkirk, 49,703; Barley, cts, rolled, Kahului, 140; Honolulu, 1201; Hilo, 138; in grain, Hilo, 146; Honolulu, 1874. Wine, gals, Honolulu, 8407; New York, 6009; Newark, 1287; Hoboken, 1284; Central America, 3763; Panama, 2047. Dried fruits, lbs, Victoria, 1950; Honolulu, 1850. Bran, sks, Hilo, 2099; Honolulu, 415. Hops, lbs, Central America, 1061. Hay, bbls, 3476. Beans, lbs, Honolulu, 28,154; New York, 70,954; Central America, 6094; China, 31,958.

From reliable advices up to April 15th the following summary of tonnage movement is compiled: On the way to 1891. 1890.

San Francisco.....	247,506	177,766
San Diego.....	17,456	14,570
San Pedro.....	2,773	11,055

Totals.....	96,346	87,033

To get the carrying capacity, add 65 per cent to the registered tons as given above.  
From July 1, 1890, to April

Domestic Produce.

Table with multiple columns listing various domestic produce items such as Beans and Peas, Broom Corn, Chickens, Eggs, Feeds, Fruits and Vegetables, and various oils and flours. Includes prices and quantities.

PACIFIC COAST WEATHER FOR THE WEEK. Table with columns for various locations (Olympia, Portland, Eureka, Red Bluff, Sacramento, S. Francisco, Fresno, Keeler, Los Angeles, San Diego) and rows for weather conditions (Rain, Temp., Wind, etc.) over a period of time.

EXPLANATION. Cl. for clear; Cy., cloudy; Fr., fair; Cm., calm; indicates too small to measure. Temperature wind and weather at 5 P. M. (Pacific Standard time) with amount of rainfall in the preceding 24 hours. T indicates trace of rainfall. P C, partly cloudy. Ra., rain.

POSTAL TELEGRAPH.—As Postmaster-General Wanamaker is to visit us with President Harrison, and will probably give some time to the selection of a site for the new San Francisco postoffice, it has been fitly suggested that his visit could be given much wider significance by securing an address from him on the postal telegraph. An invitation could be extended by some trade organization like the Chamber of Commerce, perhaps, and as Gen. Wanamaker has clear views on the subject, no doubt he would be willing to voice them for the information of our people, who are so deeply interested in cheap and satisfactory telegraphic communication. We hope this will be done. Another important innovation, which should be urged upon Mr. Wanamaker, is making ten cents in ordinary stamps affixed to a letter, secure immediate delivery. It is often inconvenient and sometimes impossible to secure an "immediate delivery" stamp. Uncle Sam should do the business whenever he is paid ten cents in any of his stamps.

Easy Binder. Dewey's patent elastic binder, for periodicals, music and other printed sheets, is the handiest, best and cheapest of all economical and practical file binders. Newspapers are quickly placed in it and held neatly, as in a cloth-bound book. It is durable and so simple a child can use it. Price, size of Mining and Scientific Press, Rural Press, Watchman, Fraternal Record, Masonic Record, Harper's Weekly, and Scientific American, 75 cents; post age, 10 cents. Postpaid to subscribers of this paper, 50 cents. Send for illustrated circular. Agents wanted.

ONE day last week the people of San Jacinto, San Diego county, devoted to tree-planting in their public streets. The Register says 1000 cypress and blue gums were set out.

A COMPANY of local capitalists of Los Angeles have been given permission to erect a \$40,000 fruit-drier inside the city limits.

WAKELEE'S THE BEST IS THE CHEAPEST. SQUIRREL AND GOPHER EXTERMINATOR! IN 1-LB. AND 5-LB. CANS.

LAND WORTH LOOKING AFTER —AND— Likely to Double in Price Soon. FINE VINEYARD CHOICE FRUIT RARE RAISIN AND ALFALFA LAND EXAMINE THIS RARE CHANCE.

A well-cultivated farm of 160 acres, with miles of fencing and cross fencing, good improvements, 7-room, two-story, hard-finished house, nearly new, plenty shade trees, large barn, blacksmith shop, milk house, grain house and other outbuildings; 7 acres of bearing orchard; 20 acres of alfalfa; large flowing artesian well of splendid water, and first-class surface wells of water; pleasantly located 7 miles from Tulare City; is offered for sale at about cost of improvements, on easy terms, by the owner, who is engaged in other business. Land sold, in lots, without improvements, at \$25 per acre. The readers of this journal are assured that this chance is worth looking after. Parties in San Francisco who know the property can be referred to. Some adjoining land can be secured at favorable rates if desired.

Address E. M. DEWEY, Porterville, Tulare Co., or A. T. DEWEY, 220 Market St., S. F.

Ramie Meeting at Merced. EDITORS PRESS:—On Saturday, April 11th, a farmers' meeting was held at El Capitan hotel, Merced, and 200 farmers were present. A paper was read on "Ramie Culture" by W. H. Murry, Superintendent of Ramie Culture. Mr. R. L. Lichtenberg, who has had years of experience with ramie fiber and the plant also, addressed the meeting, and some 15 acres were promised to Mr. Lichtenberg, who explained he had only a limited number of the ramie roots, and that his California Ramie Company would purchase the fiber at three cents net, and guarantee to take all the stalks for 5 to 10 years, and work them in a new decorticating machine. At 2 P. M. the meeting reassembled, and Mr. C. Landrum was elected chairman and Mr. R. Gracy secretary. A committee was named to take charge of the ramie station at Merced, and to have full charge of the business arrangements of the station as follows: J. A. McKiricus, J. B. Galand, H. K. Huls. Merced, April 12.

DRIFTED SNOW FLOUR. Write us for prices and full particulars. Address TRUMAN, HOOKER & CO., SAN FRANCISCO and FRESNO.

### Tomato Raising in Alameda.

In Haywards the writer met and conversed with A. L. Graham, who has won the reputation of being the greatest raiser of tomatoes in California, or in other words is the "Tomato King" of the State. Last year he had 200 acres in tomatoes, 20 in cucumbers and 40 in peas. This year he will have 250 acres in tomatoes, 75 of cucumbers and 30 of peas. He shipped last year 3000 tons of tomatoes to the San Francisco market, in 72,234 boxes of about 80 pounds to the box, all of it going by rail, and sometimes requiring 8 cars a day to transport it. During the season he had about 150 men working for him and will this year have more. Mr. Graham is still but a young man. He began operations five years ago when in his later 'teens, without a dollar of capital. He planted 34 acres and had a return of 800 boxes to the acre, a tremendous yield, that netted him a profit of \$5000 and put him on his feet, enabling him gradually to increase operations as he is doing. Mr. Graham was born near Haywards, and is the son of Judge Joseph Graham who began farming and vegetable raising in Alameda county in 1852, and continued it with success until he retired a few years since. Mr. A. T. Graham has as partner in this enterprise, F. M. Worthington. He is also engaged in grain and hay raising as well as vegetable raising, in another tract in partnership with his father-in-law Daniel Culp, and his brother Charles S. He has a beautiful cottage home on Castro street in a good part of town. As exhibiting the wonderful fertility of the ground on the Meek ranch, on a portion of which these tomatoes are grown, it may be stated that the tomato vines are planted 7x8 feet apart, but they spread out and cover the ground completely. They are the "Trophy" variety.

### Forty Years Ago To-Day.

The Pioneer Newspaper Advertising Agency of S. H. Parvins' Sons was established in Cincinnati on the 27th of March, 1851, forty years ago. It has kept pace with the advancement of civilization and the demands of the times. From a small beginning the business has gradually grown into one of immense proportions, having unlimited credit with the entire newspaper press of the United States, Canada and foreign countries.

One noticeable feature is the fact that during all these years having maintained a high standard of integrity, the Parvin Agency have through fair dealing, gained the confidence and good will alike of both advertisers and publishers, thus enabling them to secure for their many patrons the most favorable consideration at the hands of publishers.

The success of such a reliable firm is chronicled with pleasure. The Parvin Agency, infused with the spirit of progressive men of experience, and a thorough knowledge of the advertising field, has gained for them a world-wide reputation and produced fortunes for many of their customers.

After forty years of creditable business experience in the field of advertising, the firm of S. H. Parvin's Sons deserve the hearty and cordial recognition, as well as congratulations, of the entire press of the country.—Cincinnati Enquirer, March 27, 1891.

### Complimentary Samples.

Persons receiving this paper marked are requested to examine its contents, terms of subscription, and give it their own patronage, and as far as practicable aid in circulating the journal, and making its value more widely known to others, and extending its influence in the cause it faithfully serves. Subscription, paid in advance, 5 mos., \$1; 10 mos., \$2; 15 mos., \$3. Extra copies mailed for 10 cents, if ordered soon enough. If already a subscriber, please show the paper to others.

### NEWSPAPER AGENTS WANTED.

Extra inducements will be offered for a few active canvassers who will give their whole attention (for a while at least) to soliciting subscriptions and advertisements for this journal and other first-class popular newspapers. Apply soon, or address this office, giving address, age, experience and reference. Special inducements to old agents.

DEWEY & CO., Publishers,  
No. 220 Market St., S. F.

### Don't Fail to Write.

Should this paper be received by any subscriber who does not want it, or beyond the time he intends to pay for it, let him not fail to write us direct to stop it. A postal card (costing one cent only) will suffice. We will not knowingly send the paper to any one who does not wish it, but if it is continued, through the failure of the subscriber to notify us to discontinue it, or some irresponsible party requested to stop it, we shall positively demand payment for the time it is sent. LOOK CAREFULLY AT THE LABEL ON YOUR PAPER.

# PACIFIC RURAL PRESS

Vol. XLI.—No. 17.

SAN FRANCISCO, SATURDAY, APRIL 25, 1891.

DEWEY & CO., Publishers,  
Office, 220 Market St.

## The Wheat Situation.

The wheat markets of the world witnessed higher prices the past week than for several years, and yet it would appear from best statistical information obtainable that still higher ranges are altogether likely to rule. For several months past the commercial columns of the RURAL PRESS have furnished food for the more thoughtful readers of the paper, and we feel confident that many of our patrons have profited by the statistics therein presented, from time to time, regarding the world's wheat supply and requirements. At any rate, events of the past few weeks have substantiated our statements made sometime previous to the inauguration of the present hull campaign in the wheat market of the world.

The local spot market for wheat to-day is higher than since the memorable deal in 1887, which, when it collapsed, wrecked many fortunes. Then the prices were speculative and fictitious, but now they are based on substantial grounds; and in this connection it is of interest to note the highest prices in this city for 14 years past, as contained in the following table compiled from a table of monthly prices recently published by us, and furnished by Albert Montpellier, manager of the Grangers' Bank of California, San Francisco:

Year.	Month.	Price.
1877.....	December.....	\$2 42½
1878.....	January.....	2 35
1879.....	November.....	2 15
1880.....	January.....	2 05
1881.....	November.....	1 75
1882.....	December.....	1 76½
1883.....	March.....	2 05
1884.....	January.....	1 80
1885.....	April.....	1 50
1886.....	December.....	1 52½
1887.....	August.....	2 12½
1888.....	November.....	1 66¾
1889.....	February.....	1 45
1890.....	May.....	1 35

According to Mr. Montpellier's table the highest prices during the month of April were 1878, \$2.05, 1879, \$1.65; 1880, \$1.87½; 1881, \$1.42½; 1882, \$1.65; 1883, \$1.85; 1884, \$1.60; 1885, \$1.50; 1886, \$1.36½; 1887, \$1.75; 1888, \$1.34½; 1889, \$1.42½; 1890, \$1.31½.

In last week's issue of the PRESS there was given an extract from the *Mark Lane Express*, which claimed that the increase in the surplus of wheat this year over that of 1890 by Russia, the United States and Austria-Hungary is estimated at from 72,000,000 to 112,000,000 bushels, but this increase would probably be more than offset by a deficiency compared with 1890 in the crops of France, Italy, United Kingdom, Belgium, Holland and Germany. Accepting this as correct, then, with the world's reserve reduced to lower figures than ever before known, we can reasonably look forward to a season of high prices. What gives color to short crops in Europe is the heavy purchases by France and the Continent of wheat cargoes on passage and for shipment, and this, too, at steadily advancing prices. Bearing on the French crops we give the following from a well-known and responsible wheat house in France, published in a late issue of the *North-western Miller*:

In the first place, the area sown is at least 2,500,000 acres less than last year, which, taken at the average yield of 18 bushels per acre, means 45,000,000 bushels loss. With regard to the area damaged by frost and replowed, it is still estimated to be at least one-fourth, or say 4,500,000 acres. It remains to be seen what amount of this will be resown with spring wheat; but in any case, the condi-

HON. J. M. RUSK, SECRETARY OF AGRICULTURE.

tion of the plant where it has not had to be replowed is so unfavorable that even the most optimistic authorities look for a further loss on this account of 50,000,000 bushels compared with last year; so that, altogether, we must look for a crop 90,000,000 to 95,000,000 bushels short of last year's, which was officially estimated at 336,000,000 bushels, but is commercially recognized not to have exceeded 320,000,000 bushels. Thus present indications point to a crop of 225,000,000 to 230,000,000 bushels, while France consumes annually 340,000,000 to 350,000,000 bushels.

AGRICULTURAL STATION EXHIBITS AT THE WORLD'S FAIR.—The Association of Agricultural Experiment Stations had a meeting in Chicago last week, and it was decided to make an exhibit of station work at the World's Fair. There will be many departments of the work made, each under the direction of the station-worker most eminent in that line. The department of "soils" has been given to Prof. Hilgard, Director of the California Station, and he is now beginning correspondence with the different stations in the U. S. with reference to soil exhibits. It is proposed to show soil samples from perhaps 12 representative regions in each of the larger States, taking the soil from the surface to a depth of three to four feet, and showing them as their layers stand related in nature. There will also be notes of native growths and maps of the prevalence of the sample soils. The work for each State will be done by the local station, according to the plan devised by Prof. Hil-

gard. The display will be of great interest, and when it is remembered that this is only one of a dozen or more departments of station work, it will be seen that the Government building at Chicago will devote much space to this department of national activity.

THE MILITARY AT THE YOSEMITE RESERVATION.—Captain A. E. Wood, who has been detailed by the War Department to protect the Yosemite Reservation from the depredations of sheep and cattle raisers, has decided, after a thorough investigation of the valley, to locate a permanent camp for his command on the south fork of the Merced River, near Wawona—subject, of course, to the approval of the authorities. The Captain anticipates no trouble with the owners or herders, but believes his men will have their hands full in keeping out those herds which have for years been accustomed to follow up the receding snow without any restriction or attention on the part of those who claim them.

STATE BOARD OF TRADE.—At the meeting of the directors, on Tuesday of this week, E. W. Maslin was chosen secretary and manager. Mr. Maslin has much experience in such work, knows the State from end to end, and can be of great value to the State in his new field. It is reported that the board may secure new and more spacious quarters in the basement of the new Crocker building on Market St., opposite the Palace hotel.

## The Secretary of Agriculture.

Pacific Coast people will be glad to see "Uncle Jerry" Rusk, a member of the Presidential party, during its progress upon the western rim of the continent. It seems that the cattle interests in Texas were found in such condition that the business did not arrest Mr. Rusk, as was anticipated, and he was able to continue his journey westward. This will allow the Secretary of Agriculture to make many eager acquaintances on this coast, and will give him an opportunity to catch visions of the general characteristics of our country and a knowledge of its production, which will be of direct value to him in his work. Mr. Rusk has impressed California people very favorably. Those who have called upon him in Washington have found his interest keen in affairs they desired to present to his attention and his greeting cordial. Such, as we infer from the tone of our Eastern exchanges, has been the general experience with Mr. Rusk as Secretary of Agriculture. He has given close attention to the agricultural need and requirements of the country and has secured legislation which has proved promotive of agricultural interests. To the great cattle industry of the central West he has given unremitting attention and has received emphatic approval from cattle-growers' meetings. He has shown himself thoroughly in earnest in advancing agencies and organizations devoted to agricultural progress. The Agricultural Stations, the Farmers' Institutes, and other farmers' institutions, have felt his strong and sympathetic impulse. He will receive a cordial greeting.

Jeremiah M. Rusk of Wisconsin not only sprang from the farm, but chose agriculture for his means of livelihood after attaining his majority, and was one of the pioneers in laying the foundations for the present vast agricultural interests of the Northwest. He was born in Morgan county, Ohio, in 1830, and worked on his father's farm until he reached his majority. He was 23 years of age when he removed from the State of Ohio into Wisconsin, taking a farm near Viroqua, Vernon county. In 1862 he entered the Union army and began a military career which was distinguished and honored. He was Major and afterward Lieutenant-Colonel of the Twenty-fifth Wisconsin regiment, and Brevet Brigadier-General. Shortly after the close of the war, he was elected State Bank Controller, an office which he filled from 1866 to 1870. His next public position was that of member of the Forty-second Congress in the House of Representatives. He served three consecutive terms in Washington. In 1881, Mr. Rusk was elected Governor of Wisconsin. In May, 1886, Gov. Rusk gained a national reputation by his firmness in suppressing the anarchist riots in Milwaukee. In March, 1889, he became a member of President Harrison's Cabinet, taking the portfolio of agriculture. His department of governmental work has grown under his hands. He has labored for the reformation of abuses in it, and for the increase of its effectiveness. He has been happy in the choice of his subordinates, and has used their abilities with excellent effect. We would have preferred to show him the Pacific Coast at harvest-time, but he can learn from the rich promise of the fields, and the wealth of the blossoms, something of what the Pacific Coast can do.

## CORRESPONDENCE.

Correspondents are alone responsible for their opinions.

## In San Gabriel Valley.

EDITORS PRESS:—We of the north have been led to believe that in Pasadena we would find a city of unfinished and unoccupied houses, huge foundations of projected brick and stone blocks on which work ceased when the "boom" collapsed. We have also been told that the outlying country grew more surveyors' stakes than farm produce, and that the harvest was more profuse of town lots than oranges.

Pleasant, indeed, was the disappointment that awaited me when, a few days ago, I paid my first visit to Pasadena and the San Gabriel valley. The city itself differs but little from many of our thrifty northern towns—Raywards, for instance. Its buildings are perhaps more pretensions and more graceful in architecture, the extreme cleanliness of its bituminous paved streets forming a very attractive feature. I saw but one unfinished house on which no work was being done, and the house agents' signs were not more numerous than in other cities of like population. A stranger soon forgets amid the life and motion of Pasadena's streets and the hospitality of her inhabitants that there was once a "boom" and that it has fled.

Through the kindness of Mr. W. G. Arnold, one of Pasadena's prominent business men, and a member of the Arnold & Mills Co., I found myself seated in a comfortable huggy soon after luncheon, rolling over the main highway toward the Sierra Madre Villa (now no longer a public health resort). On either side of our road waved fields of thickly sown barley, interspersed with occasional orange and lemon groves, from whose blossoms floated that richest of rich perfumes through the sunny spring air. To the left towered the lofty site of the projected Southern California Observatory, Wilson's Peak, the zigzag road to the summit being plainly visible from the highway. Farther off in the distance could be distinguished the snow-crowned summit of Old Baldy, bringing a cool inspiration into the warm air about us.

Just where the city limits of Pasadena join those of Lamanda Park, grow the fine peach and apricot orchards of Mr. Bonine, the owner of 50 choice acres, 40 of which are planted to different varieties of fruit trees. Mr. Bonine is one of those men who makes the fruit business pay, and the shape of his trees shows that he is a believer in the system of "close" pruning.

Next we skirt the northern boundary of E. J. Baldwin's famous horse-breeding farm, the Santa Anita ranch, which presents a striking contrast, with its dense growth of live and white oaks, and rank underbrush, to the thrifty orange groves that line the opposite side of the road.

Many and varied were the orchards we passed. Ol apricots, the Moorpark and Royal varieties were the most numerous, while of peaches, almost every known member of the family has found representation in some one or other of these foothill plantations. The soil is light, warm and black, and is slightly gravelly; in cultivating, it works up like a nursery plat, retaining moisture well, and so releasing the farmer from the necessity of irrigating. It requires considerable time to drive through Mr. Baldwin's property. There are many hayfields, peach, apricot, orange and lemon orchards to be passed, the cozy ranch-house, with its miniature lake in front, the race-track and stables, where we saw the hay filly, Albartine, resting after an exercise.

At last we emerged from a long avenue, in sight of the Sunny Slope vineyard, the property of L. J. Rose & Co. (Limited), with an acreage of 500 acres devoted almost entirely to wine grapes. Some of the oldest orange trees in the valley are growing at the Sunny Slope vineyard, their age being almost, if not quite 30 years. A heavy crop still hung on their branches, and it was my pleasant privilege to eat of the fruit of one of these patriarchs. Here also is a fine lemon and orange grove of about 50 acres belonging to Mr. A. B. Chapman.

Then we come to the tract of the East San Gabriel Land and Water Co., planted to oranges, the young trees looking bright and clean from the effects of a shower the evening previous. A little way farther, and my guide drove through a long avenue, lined with citrus trees, to a pretty, vine-covered cottage, where I had the pleasure of meeting Mr. J. R. Dohbins, well known in this section, and in fact in all California, as a pioneer in the orange-growing industry. Mr. Dohbins is held as an authority on all matters relating to citrus-fruit culture and pests, and a half-hour conversation with him is a treat any patron of horticulture would appreciate. The village of Alhambra lay next on our route, where we saw many loquat trees laden with their peculiar fruit, as yet little known to California palates.

The five-hour drive was beginning to tell on our horses as we ascended the graded incline to the Hotel Raymond, the objective point of the popular Raymond excursions from the East. From the crest of the eminence on which the hotel is built, a magnificent view of the entire San Gabriel valley is obtained, dotted here and there with the settlements of Pasadena, South Pasadena, Garvanza, Alhambra, Old Mission,

Whittier, Puen'te, Monrovia, Glendora, Snsa, Covine and the Sierra Madre Villa. I was glad to observe, in my conversations with the fruit-growers about the valley, a strong opposition to the "State division" scheme, and sorely no resident of Northern California, after once visiting the spot, would ever wish to part with so bright a jewel as Pasadena and the thrifty San Gabriel valley. E. R. S.

## HORTICULTURE.

## Pineapple Growing in Florida.

EDITORS PRESS:—The pineapple, *Ananassa Sativa*, ranks with the orange, banana and mango, the four tropical fruits which are generally palatable on first acquaintance to inhabitants of the temperate zone, and which may be favorably compared in general quality to the peach, apple, pear and grape. Of course the South yields very delicious fruits, but none which so readily appeal to the palate of the Northern home as these four. The pineapple—a "pine" as it is familiarly nicknamed—like the banana, is an indigenous plant, destroying itself by the act of fruiting. The plant grows like a century plant or a screw pine, at the end of the second year sending up a cluster of purple blossoms on a stem a foot or two tall from the center of growth or bud, the fleshy receptacles growing, swelling and filling with nectar and honey and good things to form the insoluble apple. As the plant grows from the center, a new center is now necessary to its life, and a sucker shoots up from the axil of one of the lower leaves of the old stalk and in a year produces another apple, and so on *ad infinitum*. Upon the stem, close under the apple, appear numerous miniature plants, called slips, which are removed and planted to produce other apples in two more years.

The pine is practically an air plant delighting in plenty of heat and moisture but capable of enduring months of heat and drought, plants pulled up and thrown on exposed brush-piles in the burning sun often producing and ripening apples in that position. It prefers a loose, sandy, soil free from excess of lime or other alkali, and will grow on white silicious sand so sterile as to support no natural growth but stunted lichens and mosses, and will bear superior fruit if supplied with abundance of chemical manures.

Along the southeast coast of Florida from latitude 20° south, the production of the pineapple is becoming a very important industry, and owing to the handsome and quick returns for small outlays, is rapidly crowding out all other forms of agriculture. A field of ten acres can be cleared, planted and brought into bearing in two years at a total outlay of \$300 per acre, and \$200 per annum can be safely set as the minimum net returns; \$1350 were netted from the fruit produced on two acres at Eden last season, aside from the yield of slips, these selling for some \$350 more, and this from the common, coarse Red Spanish variety. Of course, this is an exceptional instance, but it is quite safe to say that the hundreds of acres in bearing pine all over this coast averaged over \$300 per acre last summer.

With the choice varieties more than double per acre can be counted upon, but the plants are at such a premium that the poor farmer cannot find the capital to invest in these more remunerative sorts, and as a general thing they are monopolized by the large planters who can afford to hold and multiply them.

Of 30 or more varieties under cultivation here, the Egyptian Queen has, by a course of natural selection, assumed and holds the first place. All varieties known to the world have been introduced by enterprising private individuals and by the Government from the pineries of England and the plantations of Ceylon, but five plants of the Egyptian Queen sent Capt. Burnham in 1885 have superseded and crowded out all competitors by reason of their hardiness, productiveness and commercial value, so that they now outnumber all the other choice varieties on the coast combined. The fruit is a clear, golden yellow throughout, with small, pointed nipples, tender, melting pulp, and a flavor and aroma only equaled by some of the choicest mangoes.

There are other pines equal in quality and some superior in size, but none which combine so many good qualities with its productiveness, health and vigor. The Porto Rico often attains a weight of 10 pounds, and on rich land sometimes 15 pounds, and in spite of its large size it is very tender and of delicate flavor but is a comparatively shy bearer. The Sugar Leaf resembles the E. Queen much in flavor and appearance, but owing to its poor shipping qualities, though excellent for a home market, the slips do not command half the price the Queens do though comparatively scarce.

Slips when removed from the plant can be stored for months if kept warm and dry without losing their vitality, just as Sago and tree fern stumps are shipped from Japan and Australia, apparently dead, to be reawakened to life by the warmth and moisture of the greenhouse. In localities where winter frosts are to be expected, a light covering of grass or palm leaves is laid over the plants, sometimes sup-

ported by rails laid on posts and removed when the dangerous season is past. Fruit is matured from May to August, though scattering apples are to be found at all seasons, and the Queen bears quite a winter crop about Christmas time.

The pine is a most beautiful foliage plant, assuming in the fall brilliant hues of purple, crimson, bronze and yellow, each variety having its peculiar shade or combination of color, so that a ten-acre field of selected varieties, carefully arranged, may produce the effect of a grand ribbon-bed, shading the miniature efforts of the florist with colors and croton. Thus the tasteful pine-grower may indulge his love of the esthetic while gratifying his natural desire for the practical and lucrative and make his artistic flower garden yield him his shoe leather, his expenses to Europe and his hotted beer.

This reminds me of an anecdote of one of our pioneer pine-growers, who may be almost termed father of the industry here. He had a hard struggle for years before the railroad facilities enabled him to ship his fruit with reasonable safety, lived on the proverbial hog and hominy of the "cracker," but as he gained ground instead of indulging in luxuries, the surplus income went directly into an increase of acreage; so he finally determined to set apart certain tracts whose income should be expended for certain luxuries. He planted a patch for clothing and patches for various things, and among others a patch for beer, and when the harvest came the beer patch embraced the above mentioned acres, which netted \$350. What a spree he might have had! His son followed the paternal example, with a slight modification, however; not willing to trust so grave a matter to fortune, he selected his beer patch after the field matured its crop.

Melbourne, Fla. JOHN B. BEACH.

Co-operation Among Fruit-Growers.

EDITORS PRESS:—The spirit of organization and co-operation among the fruit-growers of Santa Clara county seems to be ripe. A strong co-operative drying association has been formed by the growers on the West side of the valley, and the products of the orchards of the members will be prepared for market, and the profits, if any, will be divided among the stockholders. The officers of the association are Col. Philo Herrey, president; S. P. Saunders, vice-president; E. T. Pettit, secretary; A. R. Woodhams, treasurer. A New York fruit-dealer, has already made a proposition to the association to handle all the fruit it can dry.

On Saturday evening, April 25th, the orchardists of Campbell will hold a meeting for the purpose of considering the advisability of forming a co-operative drying association, or of uniting with the west side association and having a branch drier at this point. The advantages of co-operation are too well known and understood to require explanation here, and it is believed that when the matter is fairly and fully set forth, there will be many such organizations in the State, which will result in better prices to those who spend so many weary hours in toil, in caring for their orchards and their fruit. It is worth while, at least, to make the effort, and no doubt other sections will do so. The combine of canners, packers and driers formed in this county last winter will not have things all their own way, as they fondly supposed, for the growers have concluded to have a word to say in the matter.

R. P. MCGILVER.

Campbell Cal., April 18.

## THE APIARY.

## Bee Notes.

EDITORS PRESS:—Yesterday, April 7th, we had a foot of snow here at Grizzly Flats; to-day the storm has passed, the blue skies show signs of continued pleasant weather again, and in two days, if the weather is warm, the snow will all be gone.

The manzanitas have been in bloom quite awhile, and on all warm days the bees gathered considerable honey from this source. At the "Oak Leaf Apiary," in Placerville, the colonies have all built up rapidly and three-fourths of them are at work in the sections. The latter part of last month (March) the first swarm of the season came out. They were Carniolan bees and a pretty large swarm for so early in the season.

Peach trees are in bloom here at an elevation of 4000 feet; pear trees are also starting to burst forth into bloom. A great number of wild flowers are in bloom, but very few of them are honey-producing plants.

To remove propolis and stains from the fingers after handling bees, kerosene oil is about the cheapest and most effective material for that purpose.

To find a queen quickly, blow a few puffs of smoke in at the entrance, give the hack of the hive a few raps, remove the section case and then the honey-board, and in most cases you will find the queen on the honey-board.

Clear, soft, yellow wax is best for manufacturing foundation.

For the early crop of honey, starters are best in section boxes, but for the fall crop or when honey is coming in slowly, full sheets should be used.

If you want to bleach beeswax, run it through a solar wax-extractor a few times.

In a location where bees have a tendency to swarm a great deal, give them plenty of room and ventilation at the proper time.

To make bees enter the sulphur boxes, go to some colony where the bees are working well in the sections, and take out a partly filled one, covered with adhering bees, and give to the non-section workers; and I think in a few hours, if the honey flow and weather are all right, they will commence working in the section.

At this time of the year, after a continued storm, quite a number of dead bees will be found in front of the entrance. This is the season of the year when most of the old bees are dying off, so do not be alarmed to find some colonies pack out two or three hundred dead bees. Colonies that pack out so many bees after a storm are generally the largest in the apiary.

Alfalfa and white sage stand at the head of all honey-producing plants; both yielding in favorable season large quantities of honey of a clear, pale color, and of an exquisite flavor and great density. In all the markets it has ever reached it takes the lead.

The Tanager is about the simplest and handiest of all section cases.

Bees are attracted by the odor of a flower and not by its bright color.

Many bee keepers speak of losing their bees by the bee moth; if there is a healthy colony of bees in the hive, there is no danger of the moth injuring them in the least.

A good time to transfer bees is 21 days after the prime swarm has issued; at about that time all the young bees will be hatched, and you can easily transfer without many bees.

When you find the drones being killed off in the breeding season, you may be sure that there is not much honey coming in.

If you want to plow around your hives, close the entrances up early in the morning with a wet rag. Strange to say, this will not irritate them in the least, but tends to quiet them, and they will not make any attempt whatever to get out; that is, if they are not confined over two or three hours.

A Nebraska strawberry grower, after a succession of failures of crops, bought a swarm of bees for the sole purpose of fertilizing his strawberries. With the advent of the bees the strawberry vines afterward produced in abundance.

Candied or crystallized honey that you cannot sell, you should keep to feed with in times of a scarcity of honey.

Honey is now used to a great extent in the manufacture of honey jumbles, honey chocolate creams, honey chocolate tablets, and many other kinds of cakes and candies.

## Questions Answered.

A few days ago I received a letter from a Monterey county bee keeper from which I extract the following:

"I have read your article on queen rearing in the PACIFIC RURAL PRESS and would like to ask you a few questions further in regard to the same matter.

When is the proper time to commence substituting good queens for poor ones, or rather raising queen-cells?

Can you give an infallible rule to ascertain when a queen should be removed?

I had some colonies last summer that did almost nothing, while others gave 75 pounds or more.

Anything you might write, either through the RURAL PRESS or to me personally, would be appreciated."

Answer: The proper time for superseding queens is when you find the colony declining in prosperity; and that is easily observed by opening the hive and noting the condition of their domestic affairs inside. There will be a scarcity of honey as compared with other colonies and the brood area will be considerably limited; there will be no rush of bees at the entrance like in all vigorous, powerful colonies.

Some queens are good for three or four years, while again others are not much good after the second year.

It will pay you in dollars and cents to remove all poor and inferior queens as early as possible in the spring. Unless you practice this weeding out process, you will find that in 100 colonies there will be 10 or 15 that will be far below the others in profit, and sometimes they will not yield anything, whereas if you had killed the poor and inferior queens early in the season and introduced good ones in their places you could have obtained considerable more honey.

Some apiarists prefer to let the bees do their own superseding, but in my opinion it is a practice that will not pay. The way to prove it would be to supersede 50 colonies in your apiary, and leave about the same number to take care of themselves; at the end of the season I think you will find the 50 colonies that you looked over and superseded queens where needed will have given one-tenth more honey.

Some of the most extensive eastern apiarists practice removing the queen after the second year. Whenever I find a colony that is not up to the usual standard, I think it is time then to remove the queen whether she be two years old or four.

Queens reared in the spring are far superior to those reared in the fall, and if you have a number of colonies to requeen, the spring is the best time to do it.

Use the best queen mothers you have in your apiary to rear all young queens from, and also have the drove mother her equal.

S. L. WATKINS,

Grizzly Flats, California.

## FLORIST AND GARDENER.

### Flowering Bulbs and Irrigation.

EDITORS PRESS:—Your correspondent, Mr. A. L. Liance, seems to think that the bulbous plants usually sold under the name of Dutch bulbs would be likely to suffer from the daily or bi-weekly bath they would get during summer in California gardens. This may be true in many cases, but it certainly does not cover all. For instance, here is *Eucomis regia* that comes up about the first or middle of March and remains with its growing and green into the fall, the flowers appearing in summer. The bulbs of this plant, according to the catalogue I have, must be kept dry in winter, that being their resting season, and they consequently should be lifted and stored in the house until toward spring. This I have not done with one bulb purchased in the fall of 1888 but have allowed it to remain in the ground three winters and from the fact that it has quite a family around it, and is looking very lively and bright at present, it could hardly have been harmed by the exposure to which it has been subjected.

*Oxalis Deppeii* is another instance. This bulb, however, needs raising after its leaves have withered in the fall, to remove offset, the increase being some two or three hundred fold. Now, I will say, if water fails to injure these two during their quiescent, or non-growing season, why should it hurt, or destroy, the bulbs of California, or Spain, or Mexico, whose resting spell is set during the months from May or June on to November or December. The hrodiæes and the calochortus natives of this State, are sold by the Dutch florists for ordinary gardens the world over, in many of which they must be well soaked during their resting period. The four species of *Fritillaria* named by Mr. Liance in his last letter, are all catalogued and sold by our Dutch friends at good round prices, and they are not mentioned as needing other treatment than is given common garden bulbs. The crocus, hyacinth, scilla, narcissus, the alliums, most of the ornithogallums, the coopersia, many species of oxalis, the bulbous iris, the amaryllis, the lily, are all permitted to remain the year round in the border, or beds of roots beneath the lawn's surface.

The only occasion for raising these bulbs once every three or four years is for the purpose of removing increase. As to the tulips I cannot speak with any certainty. Some are now blooming in my borders that have been in the ground several years, while most that were planted two or three autumns since have disappeared, whether because of rot or a fatally mutilating thrust from the little hand fork or larger spade, I cannot say. They are usually lifted after flowering when the leaves have faded and the scape has yellowed, then stored away in paper bags or dry boxes until fall. The *Ixia*, *Sparaxis*, *Bahiana*, *Iritonia* and *Freezia* are left by me in the ground, untouched the year through. Of this group the *Freezia* seems the most satisfactory though it is not on account of any special treatment.

*Triteleia uniflora*, with its variety *alba*, are as successful as any one could wish notwithstanding they have received with all the bulbs previously named, the same amount of irrigation through the summer as the ordinary garden perennials with which they are growing. The *Triteleia* increases very rapidly both by seeds and offsets, and it would not take long for an active gardener with a start, we will say of 25 or 50 bulbs, to supply the entire population of the state with all of this one species they would need or care for.

I will say, at the same time, that it is well worth the space that might be given it, as it will cast aloft into sight for two months, at least, many pretty star-like light blue, white or purplish flowers in return simply for a sunny position and root-room in good loamy soil. I would like to see it planted in glens where it would have ample sunlight and a fair supply of moisture up to the 15th of this month. It would thrive in such places I am sure, and why not as well two miles or ten from one's house as in the garden by its side.

Mr. Liance mentions the *Zigadenus*, a prized plant abroad, two or three of our species being in cultivation there. I have two plants of *Zigadenus Fremonti* in my yard, found some 6 or 8 miles from town in the middle of a much used road and which I lifted and transplanted while growing. The entire block of earth in which they grew must have been moved with them, so that all of the buried portion of the plant remained practically undisturbed. Am sorry to say, however, that in securing the two I have, perhaps ten others were destroyed, which large loss could have been avoided by taking the plants and waiting patiently until fall to raise and transfer them. The practice, we know, is usually lacking, but it pays well, is most economical, to use a little of it in this work of wild-flower gardening. My two *Zigadenus* plants are now in flower and I hope to have seedlings from them next spring—many such if the 50 three-celled capsules of each yield me the normal number of seeds—that is to say, from 1500 to 3000.

A wonderful exhibition of fruitfulness this, but equalled, perhaps, by the *Fritillaria*, the *Eritronium*, the *Calochortus* and some others of the Liliaceæ.

Your correspondent will see, from the fact that I still lean upon the rubber hose, that my

garden is not yet one of the kind that is needed for this State. Much of my present space is stocked with the usual perennial—those of the Atlantic-side gardens—and which I find it hard to sacrifice or to part with. I am, however, looking forward, and toward the real California garden—in fact am already gathering in and studying such candidates for it as are accessible to me. The professional florist will need to lend a hand at this work and the amateur can efficiently help by taming the wildlings of his own immediate neighborhood. The larger the force of assistants we have the sooner will he reach the object sought.

B. F. L.  
Santa Clara Cal.

### Primulas.

[Read by Mrs. C. HOHWIESNER before California State Floral Society.]

Primulas are not generally cultivated by amateurs, as florists grow them to such perfection that to most people it seems easier to spend a small sum for a ready-made plant than to undertake to grow them from seed. This latter certainly is more difficult, but it is interesting and fascinating to plant these tiny seeds and watch their development into the sweet-flowered plants which most of us love so dearly.

My attempt at the culture of primulas has been very successful, and for the benefit of those who have never succeeded in growing them, I would like first to say something about the treatment of plants on hand, which are so apt to wither or decay after blooming. My treatment is this: After the old plants, that had been blooming since December, showed signs of resting—that is, when the flowers grew small and pale and a second flower stalk with insignificant buds began to grow out of the center of the first—I watered the plants sparingly, as experience and the loss of two plants showed that the primrose has a tendency to rot if given too much water when not in bloom. Then the plants were divided, if they had branched out into several parts, and all of them repotted with fresh, light soil and placed on a back shelf in the greenhouse, where they had light, but no direct sun, and here they remained till the beginning of December, when they were again repotted into five-inch pots and placed near the glass where they soon were in full bloom.

I am positive that primulas can, by division and proper treatment, be kept from two to three years, if not longer. Even the size of the flowers and brightness of their colors seemed the same. My seedling plants, though only five in number, were a pretty sight! The great fascination lay in the uncertainty of what they were going to be. They were very beautiful—one deep red, one pink with white dots and greenish center, two large white and one delicate pink. The seeds came from Deere & Co., and germinated very readily. I sowed them in May in, or rather on, a mixture of sand, leafmold and rich soil, that I had moistened and sifted very fine into a shallow seed-pot. The soil was slightly firmed down, the seed sown on it and covered very lightly with fine sifted soil. I kept the seeds moist and covered with glass, and the result was that, after about two weeks, tiny leaves appeared that grew for about eight days, when the plants were large enough to be pricked off. This proceeding is absolutely necessary to the healthy growth of nearly all seedlings, for they generally grow so thickly that unless they are thinned out and planted farther apart, they die from want of room and strength.

This pricking off or replanting is also done to induce a stronger and more compact growth. The change in a plant thus treated is noticeable after a few days. If it looked thin, spindly and overgrown in the box in which it grew, it will form longer roots and grow bushy and strong in its new, roomy quarters.

So when the seedlings are large enough, a box or pot should be prepared with soil, similar to the first, and the young plants lifted with a splinter of wood or a blunt penknife, and placed in it one by one at regular distances, say one inch each way apart. It is best to keep them covered with glass for quite a while longer, until they are strong enough to be potted off into thumb or inch pots. When these are well filled with roots, and only then, transplant to a size larger, and continue this till they are in five inch pots, when the plants will be ready to bloom, which will be about the middle of December. A five-inch pot is fully large enough for a strong plant; in fact, I have found my plants to bloom better when a little cramped for room than when they had to exhaust their strength in a large pot. At present the seedling plants that I was speaking of are still flowering. Surely, 3½ months of bloom should amply repay the previous months of care.

Everybody knows the good that lies in removing all flowers from a plant as soon as they fade. So I did the same with my Primulas, and attribute the long duration of their blooming season to this fact. When their beauty is gone, they will have to be treated the same as the old plants of last year.

I must tell you of an experiment I am trying, and that is of growing the seeds myself for my next year's supply of seedling plants. In picking off the faded flowers, I noticed on the plants some exceptionally large seed vessels, about two on each plant. The others were so small that I opened some and found them empty, as I expected. So they were all removed but the large ones, also each flower as it faded, and the result is that the seed vessels have begun to

swell and swell, until now I am in daily dread of them breaking unawares; but if fortune favors me, I will have matured seed in two to three weeks, which I will plant in May, with the fond hope of reaping a lot of young plants for next spring blooming. I noticed this peculiarly—that only those plants that are blooming in our hay-window in a dry atmosphere show a tendency to mature their seed, the flowers of those in the greenhouse decaying as soon as they fade. So my seed-producing plants must remain where they are, being no longer ornamental. *Primula obconica* I have never grown from seed, but intend to do so this year. I have been informed, though, that their treatment is the same as that of *Primula Chinensis*. This is certainly true of the large plants. We had one since February, 1890, that continued to bloom till late in fall, when I divided and repotted it just like the other species, and each young plant has had from six to eight flower stalks on it continually since Jan. 1st. Its flower stalks are very long and graceful, and even when cut and placed in water, the blooms remain fresh for fully ten days. Now, in conclusion, I would refer those who may not find anything new or useful in what I have said to some well-known book on floriculture, such as "Henderson's Handbook of Plants," and "H. J. Floriculture," in which there are long and detailed descriptions of the whole class of plants of which *Primula Chinensis* and *P. obconica* are members. I very seldom derive much good from books of that kind, practical experience and experimenting, though often rather expensive, have always and in everything been my best instructors.

## THE VINEYARD.

### Raisin Exchange Proposed at Fresno.

The Fresno *Expositor* is giving much attention to the establishment of a raisin exchange in that city. In a recent issue it says:

There is, of course, a great deal of difference of opinion as to how the Exchange should be conducted, but the necessity of such an institution is conceded by most of those who have given the subject considerable thought.

While the industry is still young, the need of protecting it is very apparent, and there is no good reason why steps that will benefit the grower and packer should be postponed until it has assumed greater magnitude. There is no necessity of going beyond reasonable expenditure in the establishment of an Exchange, and if all engaged in the industry will act together it can be conducted very economically.

"In my opinion," said O. B. Olufe, "we should have such an Exchange in Fresno. Standard samples should be established and raisins bought and sold by the same. An arbitration committee, whose decision should be final, would settle any disputes that might arise. Yes, packers and growers should combine in starting the Exchange. True, the packers may object, and this was the case once before. They were of the opinion, I believe, that if the growers joined in such an association they would raise the price of the product in the sweat-box."

"Now, an Exchange would not necessarily be formed for the purpose of controlling prices. Its object would be to facilitate business by systematizing it, to bring about regularity in the packs, and generally to put the industry on a more stable basis."

"Eastern agencies could be established for the purpose of selling more directly to the consumers, and other measures taken that will prove advantageous to the producer, packer and consumer alike. I am very much interested in this matter, and shall do my best to bring about the establishment of a Raisin Exchange in this city. I took some steps in this direction a year or so ago, but did not meet with much encouragement. I believe the present time much more auspicious, however, for the abuses of last season have had the effect of calling the attention of those interested in the industry to the necessity of some action that will do away with them. I have prepared a prospectus on the subject of a Raisin Exchange, to which I shall endeavor to get the signatures of those engaged in the industry."

### The Prospectus.

The following is a copy of the prospectus prepared by Mr. Olufe:

We, the undersigned, hereby agree to associate ourselves for the purpose of organizing and maintaining a Fruit and Raisin Exchange in the city of Fresno, and incorporating the same under the laws of the State of California, with the following objects in view:

1. To promote the interests and convenience of dealers and growers in domestic products.
2. To centralize the fruit and raisin trade of the San Joaquin valley in Fresno city.
3. To inculcate and uphold just and equitable principles in trade; to establish and maintain uniformity in commercial usages; to acquire and disseminate valuable business information and to adjust controversies and misunderstandings between the members.
4. To properly organize said Exchange, electing officers, and providing in the by-laws for proper modes of arbitration; the selection of official standard samples of the different kinds, grades and qualities of fruit, raisins and other produce, and to provide for the adoption of such measures as may promote the welfare of the fruit and raisin trade and industry.
5. And we agree to pay \$5 initiation fee and such quarterly dues (which will be for the present

the main support of the exchange) as a majority of the subscribers and charter members may regularly adopt, say 50 cents per month.

T. C. White, the well-known vineyardist, has long been in favor of taking such measures as would systematize the raisin industry and give it greater stability. He has expressed himself frequently on this subject. To an *Expositor* reporter he said:

"The exchange will not only be beneficial to producers in the matter of production, but in the matter of disposing of the product. I do not quite see at present how the packers and the producers could harmonize their respective interests. The packers might consolidate and establish grades to which the producers should conform, or they might start an exchange for the purpose of buying, packing and putting the raisins on the market. They would be inspected as received from the growers, to see if they were up to grade, being rejected if they were not. Again, the producers might combine and do their own packing and conduct the Exchange, but in either of these cases one of the two classes most interested would, to an extent, be left at the mercy of the other. The best results would be obtained if the packers and producers would harmonize their interests."

"If an Exchange were established there would be monthly meetings held at which matters of interest to those engaged in the industry should be discussed, the younger growers profiting by the experience of older ones. When the time for cultivating is near at hand let the members meet and discuss this matter; when sulphuring is about to be done, let them come together and exchange views on sulphuring, and so on with picking, curing, packing, etc."

### The Grape-Growers' Organization.

EDITORS PRESS:—The grape-growers and wine-makers of Cupertino district, Santa Clara county, have fully resolved to incorporate and co-operate, hoping by such action to better their condition. They are fully aroused to the fact that they must do something in their own behalf, or they will be driven to the wall. Several preliminary meetings have been held, as already noted in the *RURAL*, and the movement seems now to be in a fair way to succeed.

On Thursday afternoon, April 16th, the growers and wine-makers met at Cupertino, and were addressed by Col. R. P. McGlinchey of Campbell, on the advantages of co-operation and organization. The colonel is one of the best organizers in the State, having been engaged for years, when a resident of the Eastern States, in organizing the dairy farmers, and his plan, as presented to the meeting, was heartily approved of. In his address, he plainly told the grape-growers and the wine-makers that if they hoped to succeed, they must stand shoulder to shoulder in the movement; that individually, they could do nothing, but if they were in earnest, and united, they would succeed against all opposition; that they need not fear the threat of a boycott on the part of the wine-dealers of San Francisco; that the term was un-American, and showed great weakness on the part of those who used it. He suggested that the growers and wine-makers of the county organize under the State law, and form a joint stock association, erect a central winery, distillery and watering cellar, and, if necessary, go into the market and sell their own product; have a brand and make the wine of the highest possible standard, bearing in mind that quality was better than quantity.

At the close of Col. McGlinchey's address, a subscription list was prepared and some 25 persons became members, and at the meeting to be held on the 23d inst., this number will be largely increased.

Only those who own vineyards, or whose interest as growers is greater than as manufacturers of wine, will be eligible to membership. This plan is adopted so as to prevent the association from falling into hands that will work an injury to the growers who have no means of working up their own grapes. The meeting requested Col. McGlinchey to draw up articles of incorporation, and together with Col. Hall and A. Malpas to prepare a set of by-laws for the government of the association.

Col. McGlinchey and B. Rodovich were appointed a committee to visit Napa and Sonoma counties with a view of obtaining the co-operation of the grape growers there as well as in other wine-producing districts of the State. The press of San Francisco and Santa Clara county was thanked for the able manner in which it had presented the cause of the grape-growers in their fight against the wine trust of the State. If this movement succeeds, and there seems to be little doubt of it, the grape-growers, as well as the consumers of wine, will be benefited by it, and the vineyardists in all parts of the State will receive a better compensation for their labor in the future than they have in the past few years. It is a well-known fact that there is no profit in producing wine at nine cents per gallon, and that is the price offered by wine-dealers at the present time, and it does not look as if they would offer any more for the coming vintage.

Now is the time to organize; let other sections prepare for the coming of the committee from the Cupertino district.

Another meeting will be held on the 23d to complete the organization.

VITICULTURIST.

Santa Clara Co., April 17th.

## PATRONS OF HUSBANDRY.

In our Rural Press Official Grange Edition, issued every week, will be found additional matter from this and other jurisdictions, of interest and importance to Patrons. Any subscriber who wishes can change free to that edition.

## Direct Voting for U. S. Senator.

EDITORS PRESS:—Will you kindly give me space in the farmers' paper to address the readers of the PRESS, especially those who are agitating the question in favor of the voters, at general elections, casting their ballots direct for United States Senators. I have not seen as sound reason given for it as the good old men who organized this Government gave why we should elect as we do now. I know our new-fangled statesmen tell us that the times have changed, yet I doubt if any one will claim that he is more patriotic than were our forefathers.

That times have changed there is no doubt, for I well remember when the man who was industrious and saved his earnings was usually selected to represent the people. Now it is the man that spends his earnings for drinks and wants to work only eight hours a day, and very poorly at that, who appears to be the man that is looked up to. It seems to be a crime to have saved a little. But if we take for example the two last Legislatures, does it appear to farmers, who pay 70 or 80 per cent of the taxes, that it is an improvement on electing rich men.

I am farming in Colusa county and am opposed, as a rule to dividing either State or county, for I see nothing in it, but more offices. I have neither seen nor heard any one speak well of the Legislature of two years ago. It appeared to belong soul and body to some "Buckleyites." It spent the farmers' money very lavishly, and what good did they do? As worthless legislators, they can only be beaten by the last. It is generally conceded that hallo-box stuffing is ruinous to a republican form of government, yet there are many who believe that members, by a vote of 50 against 19, indirectly endorsed hallo-box stuffing. Least some of the taxpaying readers did not see what is reported to be the facts, let me state them. This county, in the first place, is two-thirds Democratic, yet the feeling is so strong against division that the Republican Assemblyman was believed to have been honestly elected. We have a railroad station called Willows, the head center for division, where the election returns at one polling-place were kept two or three days before forwarding to the county clerk, while all other returns similarly elected were handed in the day after election. When all the election returns were canvassed, it appeared that Mr. Eakle, the Democrat, was elected by, I think, 23 majority.

Mr. Campbell, Republican nominee, contested. At the examination in the proper court, before two justices, testimony is said to have been introduced showing that names (I think it was 44 names) had been taken off the great register, one after the other, just as they appeared in the register, and a ticket for each named used was stuffed in the hallo-box. It was also shown by two voters that they voted last, just before the polls were closed. It was stated that each one of the 44 men whose names were used testified that they had not voted at Willows nor had they been there on election day. Besides this, some names were voted at more than one precinct.

When the Legislature met, Mr. Campbell went down with all this reported proof in his pocket and claimed his seat, and although the complexion of the members of the Assembly was called Republican, yet the Assembly gave the seat to Mr. Eakle. Mr. Campbell is not a poor man. He farms rented land on a large scale. Mr. Eakle owns 17,423 acres. Brother taxpayers, can you see any reason why the Assembly seated Mr. Eakle? Is this not endorsing hallo-box stuffing, provided what is believed by the many here be correct?

Every voter that wishes can personally be acquainted with his representative in the State Legislature, while it is rarely he can with his representative in the U. S. Senate.

Would it not be best to postpone voting directly for U. S. Senator till we can do better at home? My somewhat long experience teaches me that it is best to let well enough alone and appreciate the grand work done by the fathers of this, the best Government known.

Sites, March 16, 1891. P. PETERSON.

## Grange Picnics.

Name.	Place.	Date.
San Lucas.....	San Lucas.	Friday, May 1.
Tulare.....	Cent'l Grove.	Sat., May 9.
Sutter Co. Granges.....	Yuba City.	Friday, May 1.
Placer Co. Granges.....	Loomis.	Thurs., May 14.
Sonoma Co. Granges.....	Bennett Val.	Sat., June 27.
Lockeford.....	Lockeford.	Wed., May 13.

Notices of other picnics will be added to the above list when received.

REUNION AND PICNIC OF MAGNOLIA GRANGE. Magnolia Grange will hold a reunion and picnic at Magnolia Grove, just across Bear river, in Nevada county, on Friday, the 24th inst. The Placer Republican says that besides numerous games, races and other amusements for old and young, a select program of appropriate exercises will be carried out by the members of the Grange, to be followed by a social dance in the evening. As the proceeds of the picnic are to be used in improving Grange hall, a large crowd is expected and desired day and night. All will be welcome.

## Starting Point.

[Written for the RURAL PRESS.]

Useful Hints by An Old P. M.

The starting point seems to be an important thing to everybody and every thing now days. When a person is called upon to open the debate or make a speech when there has been nothing before the house, 'tis then that they will appreciate the starting point or wish there were none there.

It is almost as hard to nute the first few lines in a letter or essay as it is to write the balance of the article. There is a comprehensiveness about the starting point that seems to govern the balance of subject. I like a smooth, clear starting to writing or speaking. I notice that most speakers and lecturers have an abrupt way of starting their subjects. They do not use that nice distinction of introductory remarks. I claim it is a difficulty that few succeed in surmounting. Now, as lecturers and speakers strive to please, and as pleasing means audience, and audience means living and reputation, why should they not strive to improve their manner as well as matter?

We can learn valuable lessons from the lower order of creation about starting points. For a barnyard illustration, take the frisky pullet that is contemplating a domestic life and wishes to enumerate her posterity by the score. She disdains the abrupt starting point of an incubator and baker's dozen of store eggs. With that nice sense of preliminary and introductory work, the task of the season begins by a deposit of one a day, except Sundays, when she may lay two (too). In this case, she does not trust her posterity to the uncertainty of the decision of a lyceum debate, when the subject is, "Which is the mother—the hen that lays the egg or the one that denies herself of a promenade, food and scratching for 21 days?" A good starting point is a valuable thing to possess with a balky team. So thought the Yankee when he was working the oxen he purchased from a Quaker. The former asked the latter if they were true to pull. The Quaker replied, knowing full well the judgment that befell Ananias and Sapphira, "Thee will be pleased to see them pull when at the foot of a hill."

It has been a debatable subject in my mind whether the starting point was when the girl was left on the borders of a chipyard, when returning from singing school, or when the old lady was asked if you could buy spring bonnets and shoestrings for her daughter the rest of her life.

What led to these thoughts was that I have noticed that prominent or official members of social or secret orders were always called on, first to lead off, start the discussion or entertainment. I have frequently been embarrassed and my wife taxed to their utmost to find a proper starting point. I shed my sympathy as a reptile sheds his outer garment in favor of President Harrison, while making his Western tour, as he is called upon to make a speech in every city and hamlet where he calls. If like the Czar of Russia he could command the pencil pushers and telegraph operators to take a vacation until he returns to the White House, one speech would answer the entire round, and give perfect satisfaction.

Now-a-days a repeated speech becomes stale, and the exhalations scent the buzzards afar off, and none but theatricals have a license to repeat.

Originality is not stored in every brain or purchased in every ink pot. Therefore, the greater the effort should be to avoid repeating, and try and get a good starting point.

My starting point seemed to be when my brother wrote to me from California that "I had brains and could succeed." I frequently have doubts of the first part of his assertion, so I get the letter and read it over again, to see if the ink has faded or grown dim. I think it much better to accept the statements of my brother than make the personal examination.

The text I offer is starting point; who will preach that I may listen. D. F.

## How Farmers Do in Illinois.

Charles Deputy writing from Fairmount, Illinois, March 28th, mentions about his father (W. C. Deputy) dying at Visalia many years ago and estates that the only member of the family present at his death was a brother from whom he has not heard for 15 years, and who he would like to hear from, either directly or through others. In concluding his letter he gives the following interesting items about the Grange work in Illinois:

"Farmers here are wide awake and becoming more and more interested in their own welfare. Experience has taught us that we must rely upon our own class for all benefits. We are on the right track and the rapidity with which we are gaining, proves this. We have excellent business arrangements. Our Order has broken the hindling twine trust, thereby getting our twine last year for 9 to 10 cents per pound, where we had to pay 18 cents per pound before we organized. This year we will pay only 7 or 8 cents."

"We are putting up more houses and intend shipping our own grain, and while we do not talk politics in the Grange, we manage to jog our representatives in Springfield now and then—asking them to give us a show along with the railroad corporations. Party feeling is dying out and farmers see that the only class that does them any good at Springfield is the farmer, and

the majority vote for the farmer. Our Grange numbers 10 members. This county (Vermilion) is the hanner county of the State, having the greatest number of Granges of any other county and still gaining strength."

## Old Maids, Bachelors and the Grange.

EDITORS PRESS:—"Old Maid," in your last issue, signified her belief that too much mechanical jaw movement is wickedly wasted by the Granges on taxes and tariff and transportation, and if she could have her own sweet way, she would capitalize all this energy and expend it wholly in perfecting a process by which to bring our young men into martyrdom—I meant to have said marriage. She realizes the lamentable tendency of the young men to bachelorhood, and she desires to save them. She seems to think the discussion of tariff is like chewing gum—you can masticate it, which leads to more mastication, but you cannot finish the job. She suggests the Grange take hold of the bachelor question and solve it for all time. As a sister of the Order and the mother of a wonderful boy, I wish to endorse "Old Maid's" sentiments, and to extend to her my sincerest wishes that the Grange will take the matter immediately under consideration, and help her out of her present embarrassing dilemma. The situation now for "Old Maid" is apparently desperate. It is so for all spinsters. I know this by personal experience. I have only been

Out of the Ranke a Few Years.

During my stay there of 18 years, I was a prominent figure, but without the endorsement of the Grange. I fished constantly for bachelors. I used every kind of hook, every klud of line and every kind of pole; but still my reel went empty. I tried every kind of bait, such as sentiment, love, sympathy and coquetry as I thought would best suit the conditions, but I scarcely got a nibble. When I did, it didn't amount to much. The smallest shadow would scare him away and prevent me from landing him. I used tact and tongue. The amount of power evolved by the latter would have been sufficient to run a war steamer on a three-months' cruise, with the steam shut off. I used all my feminine arts, but they were fruitless. I determined at last to use force in bringing the old bachelors to their senses, so I used a drag-net in place of a single line, and I caught more than I had any use for. I had them, and I let none get away for awhile. I asked them to make me sealed proposals, accompanied by a check as an evidence that business, and not fooling was meant, and by this means I caught my present husband, Edwin Thistle, with whom I shall live until divorced by law, or death does separate us.

I am glad "Old Maid" has brought up this subject for discussion. I know good will come from it. I know how hard it is at present to land one of the horrible old ugly things, and certainly something should be done. I know a number of poor huttonless, venerable, unmarried gentlemen, who are at present individually paddling their own crafts, who certainly are well meaning enough, but from a lack of reliable data concerning our gentleness and good traits, keep aloof from us—poor misguided men—who would not do so if proper means were devised to diffuse needed evidence to them, that we are so nearly heavenly beings, that when we sing, the angels join in the chorus. Hoping, "Old Maid," you will receive the endorsement of the State Grange for your splendid idea, I am, sisterly yours,

MRS. JANE F. THISTLE.

Union House, April 19.

## Tulare Grange Picnic.

At Centennial Grove, May 9th.

Tulare Grange was well attended Saturday, April 18th, and all arrangements for the picnic have been made. If the weather permits, we hope to make it the largest basket picnic ever held in Tulare county. The Alliance from Fresno county is expected to attend in goodly numbers. The Railroad Company will run a special train for them. At least, such arrangements are about made. It is hoped to have them stop the train opposite the grove, which will be about one-half mile from Centennial Grove. The committee will announce program next week.

I beg leave to second the motion made by Watsonville to have a State picnic. I think in a few years it would be of great benefit, both to the farmer and manufacturer. If it could be on the coast, or along the banks of a river, it would make it very pleasant for those who camp out. The last day I attended Williams Grove Picnic, Pa., there were 20,000 persons present. It was immense. I am glad the executive committee has adopted the trade-card system.

Fraternally,

E. C. S.

## Lockeford Grange Picnic.

EDITORS PRESS:—There will be a Grange picnic held at Lockeford May 13th. All Granges in the county have been invited to participate in making it a grand success. The State Master, Mr. Davis, has promised to be here and we expect a good time. Come, every body. Lockeford Grange is flourishing. New members are being added, and we know no snob word as fail. Farmers are quite busy, but will soon have more leisure. We expect much enthusiasm from our picnic.

MRS. S. L. LOCKE, Sec'y.

Lockeford, April 18 '91.

## A New Grange at Vacaville.

EDITORS PRESS:—A new Grange was organized here this afternoon with 20 charter members. Bro. G. P. Loncks officiated as organizer, assisted by the writer. As but four or five of the old members of Vacaville Grange, No. 5, were among the persons composing the new Grange, it was unanimously voted to apply for a new charter under the name of Vaca Valley Grange. The following officers were elected and installed for the ensuing year: Smith Ashley, W. M.; T. H. Buckingham, W. O.; G. W. Allen, W. L.; P. S. Bragdon, Steward; J. R. Sears, W. A. S.; Mrs. M. C. Smith, W. C.; Chas. Packard, W. Treas.; J. A. Webster, W. Sec'y; S. Z. Hartshorn, G. K.; Mrs. J. R. Sears, Pomona; Miss Hartshorn, Flora; Miss Geneva Smith, Ceres; Miss Ella Ashley, L. A. S.

Look for a good report from this new accession to the Grange ranks. The members are composed of the best and most intelligent citizens of one of the most enterprising and prosperous districts of California; then why should we not be pardoned for predictions of an encouraging character? They were hard to move, but having taken the step forward, they seem determined to hold their ground and press onward in the accomplishment of the grand purposes of our noble Order.

F. B. L.

Vacaville, April 18th.

Since the above came we have received further information from General Deputy Loncks to the effect that the prospects are good for an immediate large addition to the members. Of the charter list, 15 are new names. Many of the former members of Vacaville and Elmira Granges will renew their membership.

News such as the above we are heartily glad to receive. We are pleased also to note the fruition of the seed so ably and efficiently sown by our Bro. F. B. Logan, who has been working diligently and faithfully in the good work for the past few weeks, and we hope to hear soon of other harvests from the labors of our worthy brother.

## Gridley Grange.

EDITORS PRESS:—On Saturday, April 18th, myself and wife visited Gridley Grange, where we found a goodly number of Patrons in waiting. Shortly after our arrival the Grange was called to order by W. M., Bro. Hntohine. After going through the regular order of business the conferring of degrees was reached, when by request of the W. M., I took the chair, and conferred the third and fourth degrees on a class of three brothers, after which we repaired to the dining-hall to partake of the Harvest Feast. Two long tables were soon filled with true Patrons who did ample justice to the good things spread before them. After the banquet then came the feast for the minds. The program was fine. After this came the Good of the Order, which was participated in by Bro. Myers, W. M. of March Grange and Bro. Luther, W. M. of North Butte Grange, Bro. Fisher, and Sister Clyma. Sister Hedger recited "Take Care of the Boys"; song by Sister Humphry; Sister Friehe recited "Old-Fashioned Girl." Bro. Davis, W. C., of North Butte Grange, gave some good advice, Bro. Rean recited a poem. Bro. Maten spoke on how to make a live Grange. Then the W. M. of Gridley Grange spoke to his Grange on the importance of being prompt on time and faithful in attendance. After the rest had their say, I took the floor and addressed the members on the good of the Order. There were present 40 Grangers from North Butte Grange and 10 from March Grange, also two from Yuba City Grange. I think it was one of the best Grange meetings I ever attended. They all tried to make it pleasant for all who were there, especially the Gridley Grangers. At four o'clock the W. M. closed the Grange in due form, and all went home better Grangers, feeling that the day was well spent and a profit to all.

Fraternally,

B. F. FRISBIE, S. Deputy.

April 19th 1891.

## Quarterly Reports.

The following Granges by numbers have paid their dues for March 31st quarter, viz.: 84, 131, 16, 35, 45, 32, 279, 295, 152, 70, 129, 11, 17, 280, 147, 10, 12, 245, 51, 230, 198, 85, 7, 161, 92, 124, 65, 207, 225, 119, 130, 3, 74, 291, 261, 253, 100, making all told 37 Granges reporting up to date. We hope to be able to report the balance soon. According to those reporting Granges, the Order is improving, and in many Granges increasing in numbers materially; and also we may say that from other directions we have encouraging news for a prosperous season for both Patrons and other farmers, and as the farmers prosper so also probably will the Order of P. of H.

PRINCIPLES, NOT PARTY POLITICS. — The Farmers' Alliance has denounced Grover Cleveland, and the way some of the Democratic papers have changed their tune is amusing. The Alliance will not support any candidate who does not endorse their views on the silver question. Your correspondent does not believe they would support a New York man at all for President, as Wall street has always demanded that he shall accept their views on finance in exchange for their support for his election. — Sutter Co. Farmer.

## FARMERS' ALLIANCE.

SUBSCRIBERS wishing fuller information of the Alliance can have their names changed to the Grange Edition of the RURAL PRESS free, much to their advantage, this department being continued in the same.

## Open Alliance at Temescal.

The Farmers' Alliance held a public meeting at Temescal on Saturday, April 18th, at which speeches setting forth the aims of the organization were made by Messrs. Buckley, Tatum and others. Rastus Kelsey, President of the Oakland Farmers' Alliance, occupied the chair. The Oakland Times says that Mr. Tatum, in his speech, condemned the national system of banking and said that the mission of the Farmers' Alliance is to bring about a better state of things in the Government. It was not wholly a political organization, but was also a sort of social club, and had for its further object the betterment of buying and selling. "Five-sevenths of the farms in the country are mortgaged," said he, "and the banking system is to blame for it. Every bit of profit is made by hard labor of farmers and mechanics and it goes into the pockets of men who already have so much they don't know what to do with it. We have been robbed, plundered and beggared by the National Bank system. The Farmers' Alliance is honest. I am 72 years old and I remember no election when liquor was not made use of by the barrel. Forty-five per cent of speeches that have been made in Congress have borne upon the breath that uttered them the fumes of liquor. Political prejudice has enervated the people. If you are for honesty and equity, then join the Farmers' Alliance. Our platform is short and simple. We want more money and we want it issued by the Government and not by National banks. Mr. Buckley also made an address in which he condemned the national banks. In his speech he said: "The poor, honest old farmer only gets to Congress by chance, but the tricky, slippery, soundlessly lawyer talks his way there." He deplored the fact that English bankers influence this country's monetary system, and said that the Alliance will bring about a better state of things.

## Prison Bag Question.

EDITORS PRESS:—A few days ago the daily papers of San Francisco contained an article from our esteemed friend Mr. Hale, Warden at San Quentin, advocating selling the bage manufactured at the prison at the market rates, and I understand the market rates mean just what the bag ring of San Francisco please to make it.

I hardly think Mr. Hale carefully considered the situation. As I understand it, the plant at San Quentin was not placed there to be run by a ring in San Francisco, but it was placed there to utilize the prisoners and compel them to earn their living by the sweat of their brow if they would not do it while free men and women).

As far back as 1881 I find the people agitating the question of placing a plant in the prison, and that the bage be manufactured and sold to farmers at cost; and, secondly, that all the men in the prison could be advantageously put to work. At that time nearly one-half were idle, while the farmers were taxed to keep them in idleness. I say the farmers were taxed for the reason that farmers pay three-fourths of the taxes of the State; the railroads do not pay taxes; the banks do not pay taxes—they have special privileges to do as they please in defiance of laws, and consequently the mechanic and day laborers have to pay the other quarter.

In the last four or five years the enterprises that were in operation in the San Quentin prison have been discontinued in accordance with the demands of labor organizations for they claimed they worked an injury to the different kinds of mechanics. That is right so far as farmers are concerned, provided mechanics stand in with farmers in the management of the prison; therefore, as there is but one article (bage) manufactured there, some gentlemen want the State to make 25 per cent profit on them at the farmers expense principally in order that a few speculators may make a larger profit out of the despised hayseed ignorant farmer, the farmers holding that while the State making nine per cent on the investment in the plant at San Quentin, and having all the prisoners employed, even nine per cent is too much profit for it comes principally out of the farmer.

It looks to me as though the advocate of higher prices for bage would cinch the farmer still more until he cannot produce any grain whatever, so that the men who would advocate the cinching of the farmer on all sides would be compelled to send to India for their flour, or to China for rice to live on. It appears to be the rule in almost all legislation and among all speculators to cinch the farmer a little more every year, so that with all his savings and starving there is barely enough left out of his yearly earnings to sublet until next year. Thanks to the Prison Directors, who have so nobly stood by the producers of this State by not catering to the wishes or sophistry of any speculator, and may they ever prove true to the trust reposed in them by the Governor of the State is the sincere wish of the farmers of California.

A. FARMER.

[We are sorry "Farmer" did not put his real name at the above article.—EDS.]

J. L. GILBERT, LECTURER F. A. & I. U.

## J. L. Gilbert, Lecturer.

Bro. Gilbert, lecturer of the F. A. and I. U. of California, and official editor of the F. A. department in the RURAL PRESS, was born in Oswego county, N. Y., in 1844. When one year of age his parents removed to Wisconsin and located on a farm near Southport (now Kenosha) where they lived for 11 years. In 1855 they removed to a farm in Done county, where they reared a family of seven children. When 18 years of age, Bro. Gilbert entered Albion Academy, in which institution of learning he received the principal part of his education. In 1864 he enlisted in the service of his country, and at the close of the civil war he was honorably discharged. In 1868 he was married to Miss Delilah Ives, and one year later they moved to the new State of Kansas. In 1870, he was elected county superintendent of public schools, which position he filled for four years with credit to himself and his party friends. In 1874, he, with his family consisting of wife and two children came to California, locating on a farm in Fresno county, where they have lived since. His family now consists of wife and six children. By economy, industry and shrewd business tact, he is able to live in good comfortable circumstances.

Bro. Gilbert's writings in the F. A. department of the RURAL PRESS, give zest to that department and appear to meet with unqualified approval from members of the Order. As State Lecturer of the F. A. and I. U. he has visited different parts of this State, and is well reported as a faithful and efficient officer.

We look upon Bro. Gilbert as an able, serviceable and progressive man.

## State Lecturer's Appointments for Solano and Yolo.

T. A. Gallup, D. S. Organizer, writes: "I have made arrangements for Bro. J. L. Gilbert to speak in the following places:

Solano.		
Name.	Day.	Date.
Dixon.....	Tuesday,	April 28.
Elmira.....	Wednesday,	April 29.
Winters.....	Thursday,	April 30.
Yolo.		
Wildwood.....	Saturday,	May 2.
Fair View.....	Monday,	May 4.

SAN BENITO COUNTY FARMERS' ALLIANCE.—On Saturday, April 11th, the Farmers' Alliance held a County Convention and feast at Willow Grove. The meeting was held in the school-house, which was more than filled. Remarks were made on the principles of the Alliance and the best means to carry out these principles. The Tres Pinos Tribune says that after the secret session, an adjournment was had to the grove, and the well-laden dinner baskets were brought forth; then followed a scene neath those lovely willows that gladdened the eyes and brought a smile to the face of the most solemn person present. After this epicurian tribute to the inner man, business was resumed, and continued till late in the day.

Various economic and business matters were deliberately and practically dismissed, which, if they can be carried out, will be of much importance to the people. There were about 300 present, as opposed to 50 at the January meeting. It was decided to hold the next convention, July 6, at Paicines.—Tres Pinos Tribune.

## Our Chip Box.

That farmer is a poor supporter of his own cause who only takes a journal that advocates the interests of the old parties through which he has been so long robbed. Would it not be a good idea for him to take at least one journal in which he can see presented his own side of the questions of the day? The professions of a reformer are best judged by his actions in supporting the cause with something more than wind.—Farm View.

Watch your enemies both in and out of the Order, and remember that one foe within is more dangerous than ten foes without.—Southern Mercury.

We have had more anxious thought on this one point than on any and all other points connected with the organization of California. Here lies our greatest danger. Many persons are now within our ranks who are not eligible and do not belong with us. They are among us for a purpose. Shall they succeed? Organizers, beware!

We learn that the farmers of Canada have asked for and received an Alliance Charter from our National Alliance, and so the "Gospel" will spread till it covers all parts of America, where the producing element still have left a sufficient degree of independence and courage to assert their rights.

The owners of the mortgaged farms in the Western States burn corn for fuel and are evicted penniless from their homes, while the poor of the cities are crying for bread. And yet there are many persons, some of whom, to their shame be it said, are themselves farmers who see no necessity for organization among the farmers.—Garden City Alliance.

MONTEREY COUNTY ALLIANCE.—The Monterey County Alliance at its meeting in Kings City decided to keep from publication the important business transacted, and only routine work, some resolutions, etc., can be given. State Organizer Geo. T. Elliott of San Benito was present, and at the open meeting Tuesday evening delivered a most eloquent and forcible speech on the work and aims of the Alliance, carrying truth and conviction to all who heard him. On Wednesday he delivered another warning address to the Alliance in regard to the great importance of keeping down and out all the false Judaists who have wormed into the Alliance ranks as spies for its enemies.

The County Alliance, which met at King City April 7th, discussed the question of building a flour-mill at San Miguel. It was decided to build a \$16,000 mill at that place at once. A committee was appointed to call on the State Board of Equalization regarding the State tax. Salinas Democrat.

## San Diego Co. F. A. and I. U.

At the regular meeting of the San Diego Co. F. A. and I. U., there were 16 sub-Alliances represented. The following resolutions were adopted:

Under the firm conviction that it is the duty of honest and law-abiding citizens to take a firm position against the corrupt and growing practice of using money and patronage to secure offices and to control legislation, and realizing that the producers of wealth, upon whom rest the burdens of taxation, are everywhere deprived of their just and equitable rights by unjust legislation enacted in the interest of capitalists, and that such unjust laws have been generally secured by the unlawful use of money; and realizing further that honest legislation, that will protect the rights and guard the interests of all citizens, is imperatively necessary for the well-being, prosperity and safety of the country, and wishing in every way possible to suppress evil and to merit and sustain an honorable reputation for our State and nation, therefore be it

Resolved, That we denounce as criminal and treasonable any effort or manifest disposition on the part of any individual, company, corporation, public official, body politic, or private citizens to solicit, give, offer, receive, deposit or unmerited patronage, for the purpose of controlling or in any way affecting the result of any election, or of influencing legislation in any way or manner.

Resolved, That we will support no man or measure until satisfied that such action is consistent with the spirit of the foregoing resolution.

Resolved, That we denounce as dishonorable and unjust the action of H. M. Streeter, Senator from the 40th Senatorial District, and believe that the honor of the district demands that he should be asked to resign.

WHEREAS, Our county officials are not conscious of the sacred trust our people have placed in them; and

Whereas, They are desirous of plunging our county deeper into debt; and

Whereas, Our State Legislature has disregarded the voice of the people in that they have wasted the people's money. They have permitted bribery, money and competition to enter their ranks; and

Whereas, Congress enacts laws to favor the rich and oppose the poor. They permit trusts, combinations and corporations to exist, contrary to the will of the people. They impose unjust taxation; and

Whereas, We have learned that the California Southern Railway Co. has raised passenger rates more than 35 per cent over the old rates from Los Angeles to various points in our county (more particularly to San Jacinto), and that said advance is working great hardship to the traveling public at a time when we can least afford the additional expense; be it therefore

Resolved, That our Secretary be requested to send a strong and vigorous protest in the name of this Order against said advance to the management of the road, and also to bring the matter before the Railroad Commissioners with a view of having the old rates re-established.

Resolved, That we denounce the present Legislature as a fraud, imposition and disgrace to the good people of the State of California, and more especially is this charge applicable to our State Senator, who has proven himself unworthy of the confidence of the people.

Resolved, That we regard the recent action of Riverside, the pride of Southern California, with a world-wide reputation, in the matter of county division, as a crime against the State and an outrage against public decency, which should be condemned by every good citizen.

Resolved, That the Government assert its rights in the matter of the Pacific railroads.

Resolved, That the vitality and life of our industries are being sapped by the great trusts and monopolies, and the Government should curtail their unwarranted and dangerous power.

Resolved, That the national currency and credit be loaned, not to a few, but to many; not to a class but to any that have good and ample security and at a rate not exceeding two per cent per annum.

Resolved, That the land grant subsidies to the different railroad corporations, and not fully earned, be forfeited and returned to the public domain and subjected to homestead entry by actual settlers only.

Resolved, That we demand that President, Vice-President and U. S. Senators be elected by a direct vote of the people.

Resolved, That we favor the exclusion of the Chinese.

WHEREAS, There are, in all our towns and cities in this country, men who annually make off the farmers large amounts of money, simply by handling the grain, hay, fruit and other products of the farmers and mechanics, and give them no return profit whatever; and

Whereas, These men are strong factors in making the prices of our products, and they never fail to make the prices as low as possible, thereby causing the farmers to be in a continual press; therefore be it

Resolved, That we recommend and earnestly urge that the sub-Alliances work together, where they are near enough to each other, to co-operate and build for themselves at the most convenient locations, warehouses in which to store grain and other products for the better holding for better prices.

## Brilliant.

But if thou do thy best,  
Without remission, without rest,  
And invite the sunbeam,  
And abhor to feign or seem  
Even to those who thee should love  
And thy behavior approve,  
If thou go in thine own likeness—  
Be it health or be it sickness—  
If thou go as thy father's son,  
If thou wear no mask or lie,  
Dealing purely and nakedly—

—Emerson.

The years have come and gone,  
And brought me many a pleasure,  
And many a gift and gain  
From near and from afar;  
And dear work gladly done,  
And dear love without measure,  
And sunshine after rain,  
And in the night a star.

The years have come and gone,  
And brought me share of sorrow;  
Yet I shall sing to ease my pain  
For the hours I must stay;  
They are passing one by one,  
And I wait with hope the morrow,  
But indeed I am not fain  
Of a long, long day.

—Katherine Tynan.

"Give me a kiss, that going home  
My footsteps fall on air;  
Give me the red-tipped mountain rose  
That nestles in your hair."  
Her cheek upturned took the flower's hue  
At the touch of her lover's lips;  
The rose unbound, as it swept her face,  
Caught the blush on its petals' tips.

"Give me a kiss, I am going home;  
The links in my life's chain break.  
A kiss and a flower, my love, from you  
Will the pain from my parting take."  
Her lover bent low, as an angel light  
Came into her closing eyes.  
A kiss—the rose at her cheek he placed,  
But its petals, alas, were white.

—Anon.

## Her Dark Days.

[Written for the RURAL PRESS by HELEN M. JOHNSON.]

It was a bright, pleasant room. Its large windows admitted floods of light and sunshine (that is, they did when the sun was shining). It was evening now, and the corners were lost in shadow and you could just see by one of the windows a woman's form sitting in an attitude of deep depression, gazing with wide-open eyes into the gathering darkness. On the street people hurried hither and thither. The car-bells clanged and carriages rattled over the pavement. The street lamps were lighted, one by one, and seemed to twinkle merrily over the ever-varying scene. Still she sat motionless, a picture of woe, the room now shrouded in the settled darkness of night. She leaned her head on her hands and sobbed bitterly. She had worked so cruelly hard for the last four days, had hardly taken time to eat or sleep, but she had been buoyed up with the hope that on this night she would have the rent for the rough old landlord, who was sure to come, and who would bluster with rage when she would have to tell him that she could not get the money for a day or two longer, and she felt so weak and all done out and longed so for something appetizing to eat and not a cent to get anything. How could rich people be so cruelly thoughtless.

Mrs. Golden, chatting with her maid over her beautiful ball dress (the work of poor Miss Sterling's tired fingers), never gave even a passing thought to the fact that she had not paid for the work. In the hurry of going for the final trying on she had forgotten her purse; but, of course, Miss Sterling would not mind and she would send the money to-morrow or next day (if she could think of it) and she would speak a good word for her to Mrs. Riche and Mrs. Pinchbeck, for the dress was just perfect. Miss Gabb never made her one she liked so well and charged her almost double the price; so she felt very kindly toward Miss Sterling, and in a very complimentary frame of mind altogether. If any one had told her that even then Miss Sterling was sitting with throbbing brow and tear-stained cheeks as the result of her carelessness, she would have been horrified and sent her maid immediately with the money.

But those who have plenty, so often fail to remember that the weary ones who toil for every dollar they get need it (often very badly) when it is earned. So Mrs. Golden went to the ball with a light, happy heart, while Alice Sterling hurried down a back street till she came to a dingy shop with three glistening halls over the door.

There was no alternative now; she could not face the landlord again; she would have to pawn her only valuable, a tiny gold locket set with precious stones, containing her dead mother's picture. She had, of course, taken the picture out, but it still seemed a sacrilege

to let the receptacle that had held that dear, pictured face go in such a place, even for a day. She had never been driven to such a strait before, but being ill for three months had exhausted her little savings, and what she had been able to do, before Mrs. Golden's dress, had only sufficed for daily expenses. The old pawnbroker eyed her searchingly when she handed him the locket, and a fear seized her lest he should think she had gotten it dishonestly; but when she named the modest sum she wished to get, he handed her the money and her ticket promptly. Her cheeks tingled all the way home at this new mortification she was made to undergo (by the thoughtlessness of a rich woman), and she vowed bitterly that she would be a dressmaker no longer.

There were so few things that she had felt she could do well when she had been left to struggle with the world, but in her happy, care-free days, she had always delighted in helping to make and design her own pretty gowns, and they were always so much admired that she felt she would give satisfaction as a dressmaker; but constant work had worn her down till she had a sick spell, and she had so often to wait for her pay she was disheartened. But this night was the worst of all; she could stand it no longer. She had just removed her hat and shawl, when she heard the landlord coming. She placed the rent on the table where she knew his eagle eye would see it. The first thing, for she dreaded the rude manner in which he would be likely to express himself if he thought she was not prepared for his coming. He knocked imperatively. The moment she opened the door, she saw his eye overtly take in the money, and his burly pomposity melted into suave affability, such was the pacifying effect of the sight of money on his rude nature.

He inquired with much interest after her health, and hoped she was getting along better. She replied by handing him the money, which he took with a printed receipt from his pocket, and with much effort and flourishing marked the date in stiff, awkward figures, and with a jerky how, which he evidently considered the height of gentility, said good evening and departed.

A great sigh of relief escaped her when the door closed on his forbidding presence, and she thanked God, that by any means, she had been able to have the money, but her heart was very sore, and her mind was busy planning what more she would make that she might not be caught in such a position again. She had always paid her rent in advance for the year and a half she had been there, until since her sickness, and this month three weeks of the month were gone by, and she resolved before the other week passed she would give up the rooms, and find something else to do; surely her pride and self-respect could not suffer more at any kind of work than she endured to-night. She would advertise for a situation at once. It would have to be to care for, or instruct young children, or assist in light housework; though her education had not been neglected and she was quite a good musician, she did not feel capable of teaching any but small children, but she could bake cake, and make the daintiest desserts, and she smiled sadly as she thought of Bridget's oft repeated comment.

"It's really wonderful, Miss, the luck you has in bakin'."

Little she dreamed in those happy days that she would be the lonely, friendless creature she was this night. Her father dead; his fortune all swept away in unlucky investments and she earning her bread toiling for others. She had been very brave at first, but it seemed as if her strength were failing, and scalding tears again coursed down her cheeks; but she resolutely wiped them away and sat down to write her advertisement. She would take it to the office in the morning, which would be Saturday, so it would appear in the paper on Sunday.

Monday she started out with a strange mixture of hope and dread in her bosom, for this was a new experience. She received three answers to her advertisement. The first she read was poorly written, the spelling worse, and from a locality that precluded the possibility of its being suitable. The second one was from the aristocratic portion of the city, in a clear, masculine hand and very concise. The third pleased her most. It was a neat little note in a lady's hand, and she felt that the writer must be sweet and gentle.

She would answer both of these. She took a car and soon found herself at the gate of an imposing mansion. A stout, angry-looking girl opened the door when she rang the bell, and ushered her into the parlor. It was very dusky and a death-like silence reigned as her eyes became accustomed to the darkened room. She noticed that everything was very costly, but displayed an utter absence of taste, and the incongruity of some of the appointments was really ludicrous.

Presently the portiere of the hall door was thrust aside, and a large woman in rustling silk entered. "Dear me," she exclaimed seating herself quite out of breath. "I suppose you are the person that advertised for a place. It's so hard to get good servants. I've just turned my kitchen girl off. I told her I liked to have enough to eat, but I did not want to cook for the swill-barrel, but you can't look after 'em but they fly off in a passion, and you never know whether you have 'em by the head or the heels." I told Mr. W. to answer your advertisement (my second girl left yesterday in a tiff.) I am getting my daughter ready to go back to boarding school and if you can help the dressmaker, and do a little generally

you can come. I must go now to the employment office to get another kitchen girl. I suppose I shall have to cook dinner myself to-day," (with an expression of deep disgust.) She did not seem to expect any replies, and shaking out her rustling skirts she was gone.

Alice Sterling rose too opened the door and passed out into the bright sunshine, and felt as if she had had the nightmare. She looked at her remaining note. There was one chance left, she walked many blocks and was very tired when she reached the number, but she drew a breath of hopefulness when she saw the house, a pretty cottage surrounded by a green lawn. The hall door stood open, and a sunny-faced child met her on the porch. She looked at Alice Sterling with lovely blue eyes, and in a sweet, childish voice said "Mamma is right here come in please." And now I will give my readers only a synopsis of the rest of my story. Here Alice Sterling found a quiet happy home. The kind, gentle lady who greeted her won her heart in a moment and a few months later when a dark-eyed, handsome young lawyer, (who had achieved unwonted fame in his chosen profession) came to visit his sister during his vacation, her heart was won a second time, and ere many months went round wedding bells pealed forth a merry chime for a happy bride whose "dark days" had merged into days of sunshine and gladness.

Calistoga.

## The Blessed Little Ones.

[Written for the RURAL PRESS by MARIE.]

No one but the childless wife can know the longing she has for a hairn all her own. How she misses the caress of baby hands and the little clinging arms and tender kisses of baby lips! As the years go by and no child appears to bless the home, no matter how happy a one it is, she knows there is something wanting. When she gazes on a happy mother with her little ones with all the care and trouble they are, still making home so bright, then the hunger in her heart is greater, and she only can tell you how she longs for the caress of baby arms. She sees in the dim future the childless old age, when other interests are wanting—no son or daughter with little ones around the hearthstone to recall happy by-gone years. Children may be adopted, but there must always be a sad remembrance that she has missed something of sweet motherhood. Of course there is more freedom without children, and I often think that God does not give children to all that they may devote time and talents to other things for the benefit of mankind, or that they may look after some of the many little motherless beings in the world. On the other hand, all children are not blessings, and it would be far harder to see a beloved child turn out badly than to have had none; but the question is: Cannot all fathers and mothers so bring up their children that there will be no black sheep, or does God take these strings out of our hands for some good we cannot understand or know?

## Chaff.

THE bloom that is on the rye is all right. It is the bloom that comes on the nose that is all wrong.

"Don't you know, prisoner, that it is very wrong to steal a pig?" "I do now your Honor. They make such a row."

A BEGOLICIST claims to have discovered an insect that can count. It is not strange. Many insects multiply very rapidly.

"I AM accused of possessing talent," said a conceited man. "If you are over tried you'll be acquitted," replied one that knew him.

KISSES are like an actress's diamonds. The oftener they are stolen the better their owners' are pleased.

IF a man could live a thousand years he would probably spend the last fifty fretting over what he might have done in the previous wasted time.

DE MACUS—"I hear poor Whyte is lying at the point of death." St. Agedore—"Lying, eh? Well, well; the ruling passion strong in death, you know."

THE best method of book-keeping—don't lend them to anybody.

"CAN you lend me a five, Jack?"

"I can; here it is."

"I can never repay your kindness."

"Never mind; repay the five and let the kindness go."

THEIR LEADING CHARACTERISTICS.—If one asks an Englishman he replies promptly, but seriously, like a person who means business. The Scotchman will deliberate or answer warmly, or meet one with a cross question. But the Irishman will make a joke immediately. Three wags dining at a restaurant decided to put these national characteristics to the test. The English waiter was called and asked—"John, what would you take to sit for a night outside St. Paul's?" John answered quickly—"A guinea, sir." "Good! Now find us a Scotchman." John shortly returned with a Caledonian of his acquaintance, and the question was repeated—"Well, Sandy, and what would you take to sit all night outside St. Paul's?" Sandy after a deliberate pause and in a deliberate way inquired—"What would ye gie?" A porter from the Emerald Isle was similarly summoned, and the same inquiry put—"Now, Paddy, what would you take to sit all night outside St. Paul's?" "Faith, then, if ye want to know, I'd take a bad cowld."

## On Tramps.

We publish by request of Tulare Grange the following extract from an original paper read at a late meeting:

Remember, the Good Book teaches that we are to be as wise as serpents and harmless as doves. Again it says we are to be chastened with the rod. Therefore the question requires a great deal of consideration.

I think I hear some one say: "If she had to contend with what we have to contend with, she would be a little more severe on them." Not so. I think I know about as much of being hotholder with tramps as any of you. Before I came to this county I lived in San Joaquin county on the French Camp road. It seemed to be a favorite route for tramps. At least I thought so, for there would be as many as ten come to the door in one day. They were very impudent also. When they got what they wanted to eat, they would go in the garden and lie down under the trees. I used to go to the field with my husband and ride on the plow most all day in preference to staying at home with so much tramp company. You say, do not feed them. This I cannot advocate, as I must not preach what I do not practice.

I do not think our officers should be paid as they are for the arrest of tramps. Let them be paid a salary of so much per month for their services, and the attorneys he paid in like manner to try these cases. This would put a stop to so many needless and unwarranted arrests.

In a great many cases the officer is worse than the man he arrests. Sorry to say this; but if he arrest an undeserving man and incur an expense for us to pay, is this not stealing?

About a year and a half ago, there were three young men who started from Kansas and traveled through Texas and different States in search of a place which might suit them. They finally concluded to stop at Tulare as their means were nearly exhausted.

They arrived in the evening and took lodging at Hull's. They arose early the next morning and took a walk down to the Round House. When on their way back, one of our noted officers walked up to them to arrest them. The young men said all that saved them was that one had three dollars, the other two had a little less.

One of these young men has been working for my husband for about fifteen months, and in that time he laid up three hundred and fifty dollars. This ought to be sufficient proof of what he was.

Do you suppose that officer would have attempted to arrest these men if he were not paid so much per head? I say, do away with such laws, that tempt men to do such acts for the filthy lucre. Do I think that vagrants ought to be arrested? I do; but not to be locked up in a filthy cell to stay their time out there. Make them earn their way. Put them to work. There can be work provided for them, lots of it, if men just think so. In this way, those who are not deserving will soon prove themselves.

I have no doubt there are those who are sick arrested for vagrancy. If so, this would soon prove it; and if such be the case, send them to the hospital, where they will be cared for. Another thing I would call your attention to is the idea of paying our sheriff fifty-five cents a day per head for feeding criminals. It is an outrage.

Must our criminals live in luxury, have the first cut of the steak? I say no. Let them repent of their crime in sackcloth and ashes. If they were furnished meat once a day, bread and butter I was going to say, but I shall say bread and coffee, the rest of the time, I think this would be efficient.

I will venture to say, there is many a poor woman who washes all day, from one week's end to the other, in order to keep soul and body together, who is glad to get this, and she pays taxes on her little home to help pay bills that are incurred in this way. I really think liquor license is the greatest evil of all and is the cause of most of the vagrancy.

Therefore, wives, mothers, and sisters, let us be true to our post. We have a great work in this cause.

Though we do not go to the polls to cast our vote, we can cast it in our homes, Sabbath schools, in fact where ever we go we can leave an influence.

"Train a child in the way he should go, and when he is old he will not depart from it."

Let us endeavor to make our homes more pleasant, and give our children more amusement at home.

I do not think that God intended for woman to slave every moment away. We should read to our children, play with them, sing for them and in fact instead of mother being the slave, she should be the entertainer of the family.

I think many a child might have been saved from the disgrace of vagrancy, if the mother had paid a little more attention to these so-called, small home affairs.

Sisters, let us endeavor to do all in our power for the advancement of education, temperance, religion, and in fact everything that will elevate the principles of mankind. We have a great and noble work. Let us strive to do it bravely.

MRS. M. PREMO.

Tulare City, April 4, 1891.

SOME people get through life in much the same way as a chimneysweep gets through a crowd.

## What To Do with that Boy.

The vital difference in children of the same household is not sufficiently considered by theorists of maternal duty. Every mother of more than one child has had this conclusion forced upon her. The plans, the discipline, that approve themselves in one case fail wholly in another, and this is doubtless one reason why many admirable and conscientious parents face some disastrous and overwhelming disappointments in their children, and the boy the mother would die for, slips away from her influence and regards her advice, her commands, her pleadings, with indifference.

The mother's duties in a large family are most complicated; our very imperfect domestic service overtaxes every hour. Elder children have one set of needs, the youngest still another, while all the way between questions rise, demanding time, thought and care for their decision; and the differing temperaments are more exacting than the differing ages. It is a wise mother indeed, and a fortunate one, who can avoid conflicts, who can be the tender, sympathetic friend to the daughter just facing womanhood and to the noisy, romping boy—the life, yet the terror, of the house. She tries to restrain the one, to make the other more gentle and more patient; but mademoiselle thinks that mother *might* make Tom show some regard to the ordinary amenities of life, and Tom is sure that Nell's finery and pretty notions are not worth the sacrifice of one moment of his time or his amusements.

She reads—ah me! she knows without reading—that you must make a boy regard his home as the pleasantest place on earth; but when his tastes and habits interfere with the peace and comfort of every member of the household, how, in justice to them, can she avoid restrictions and reproofs that chafe and annoy him? Prof. Drummond says that good breeding is simply love in relation to society. "Love," he says, "cannot behave itself unseemly." Alas, how very far we are all from it, how wholly foreign is its atmosphere from the average boy's wishes or comprehension!

But the mother, the true mother, tries hard to face this difficult problem. She keeps his *Poultry Review* or *Baseball Notes* above the *Atlantic Monthly*, or the *North American*, or the *Young Ladies' Journal*, that they may arrest his eye when he comes in, though Nell thinks them "so out of taste." And when they have detained him a brief space, and he leaves them on the floor in departing, she finds an unobserved moment to fold and replace them. She plays games and tells stories, only to find that she has but tidied over an hour here and there, while the restless nature ever craves something different, from the familiar routine. Chiefly, this craving is for the companionship of boys of his own age. And now I come to my practical thought. How may he, with the least danger, have that companionship?

Nearly always a group of neighboring boys will have some tie that unites them—a baseball nine perhaps, and in summer their active exercise and merry shouts reassure her who carries this ceaseless question in her heart.

It is the silence and the darkness that hold the seeds of doubt, of danger. Now let the mothers of these boys (they may not have much else in common, but they can make common cause for this purpose), let these plan that each one will, on a given evening in every week or fortnight, welcome all the group of boys to her home. Let her plan on that evening to be at home, and to avoid any company for the other members of the family that can interfere with the boys' good time.

Let them have a room to themselves, bright and warm, that they may feel at home, plenty of games and pictures, and some very simple evening treat that cannot be burdensome—of nuts, popcorn, plain cake, fruit. Let her watch at a distance, and be ready to help change the atmosphere if discord enters or the interest flags. Now this little bit of planning makes all the difference in the world; each mother acts as a sort of committee for the others; the absence of one boy, if he is tempted to slip away, is noticed and reported. Being allowed this diversion on some evenings of each week, the others should be more easily controlled or endured.

Some mothers say: "My boy can always bring his friends home, and I would rather have them here;" but the boys like change; each one wants to play the host, and the games and books have more variety in this plan.

Above all, the fixed evening prevents Tom from bursting upon the tea-table with: "Mother, the boys are coming up to-night, and I want all those old helmets and uniforms out of the attic," on the very evening when Nell's new and fastidious acquaintances are coming to practice duets with her, or the "master of the house" has an important business engagement to the parlor; and the poor mother has, perhaps, reached the last point of neuralgia and endurance which must come to us all sometimes, and has to say: "Not to-night, Tom, it is impossible; you must go and tell them not to come."

So Tom goes off, declaring that he "never can have any fun."

Let him see that he shall have his share of good times of the kind he likes, but that other members of the household have their rights; and surely he will value such consideration and try to be reasonable.

Then the special guest or occasion, when

needed restraint is irksome and uncongenial to him, can come on an evening when he is safe and happy elsewhere. This only touches one side of a many-sided subject; but it seems to me helpful, and so I give it to you.—A. C. P., in *Country Gentleman*.

## YOUNG FOLKS' COLUMN.

## Little Pat.

(Written for the RURAL PRESS by LUPA.)

His father had a place in one of the paper mills, so, of course, little Pat and his mother came to live in the village. Never mind the name of this particular "collection of houses and inhabitants," for it is one of many such in New England where the water of the brook which runs sawmill, gristmill, chairshop and paper-mills waltzes over and around the stones in its way between the dams, singing of the cranberry marsh it has left behind, and of the big, three-mile wide pond at the foot of the mountain. It was a real village and the little Irish boy moved into it.

We all "felt above foreigners," why, I cannot tell, for the grandfathers and great grandfathers of most of us were certainly foreign, and we also felt above and rather afraid of the real native, the Indian, though few of us had ever seen him. I think we considered ourselves the true owners of that "rock-bound coast." Not that we girls ever expected to have anything of our very own, but we might shine in second-hand glory. We had fathers and brothers, and expected to have husbands, so we could play moon to their sun. Yes, of course, we meant to have husbands. Didn't we coax some one to name the seeds of every apple we ate? Didn't we carefully throw its peeling over our shoulder, and trace in its coils the letter we wanted to find, even slyly pushing it into place if it was not quite correct? Didn't we begin at the neck button of our dresses, and label them "rich man, poor man, beggar man, thief," and didn't we feel proud when the last was rich man, with varying preferences as to whether it should be "lawyer, doctor, or merchant-chief"? Of course! but he must certainly not be a foreigner, especially an Irishman or "Paddy," as he was generally called.

So, on that summer morning when little Pat first came to our school, he started on a thorny road to knowledge. He had bright, dark eyes and rosy cheeks, but his hair was sheared close to his little round head, according to a style not so fashionable then as it is now. At that time men and boys had their locks cut square across from ear to ear, and left thick and bushy, if that was natural; if they were soft and the brain beneath rather soft also, they were trained to roll under at the ends, and the rest was oiled flat and smooth. Perhaps you can imagine how odd he looked in contrast to the rest, but we grew accustomed to that and tired of teasing him after a time, for he was generally good natured, quick with his answers, quick with his lessons, and active at play. We were almost beginning to respect him, when one Monday morning he came shyly into the schoolroom just as the bell was ringing and slid into his seat. Such a fusillade of half-suppressed giggles as were smothered in handkerchiefs and hid under desks just then is seldom heard. He wore, instead of his usual trousers and jacket, a girl's calico dress that reached halfway down his coarse boot legs, and the whole effect, from the cropped head down the limp, unstarched skirt to the red ends of the ten toes just inside the ragged boots, like waiting peas in opening pods, was so comical that even the teacher could not keep serious for the first minute.

At recess the cruel sport began. I can see now how desperately he pulled to get away as his tormentors held to the skirt, pretending to drive him, while the rest stood around laughing. The thin cloth was torn in the struggle, but that was nothing when there was fun on hand and few cared for the angry tears that scarcely cooled the hot face.

When we took our places again, little Pat was not with us. At noon we saw him alone by the brook below the last dam. Farther down, where the water was still deep and swift but not as turbulent, two narrow boards meeting on a flat rock in the middle of the stream served for a bridge. It was just dangerous enough to be delightful for us to run back and forth on these boards, daring the more timid ones to follow.

Mary Gray had brought her three-year-old sister Bessie as a visitor that day, and we almost quarreled for a chance to speak first and oftenest to the little beauty. We were excitedly watching Mary's victorious landing in the enemy's country in spite of Janet Woods' teetering on the other end of the board (for the fate of imaginary armies and nations was often decided at this Rubicon), when Bessie skipped from us, calling jocosely, "Oh, my Pat!" and was on the middle of the bridge before we knew it. Then Mary turned, saw her, and screamed, "Go back, Bessie!"

The dear, swaying little fairy stopped, looked around, staggered, and then one blue slippered foot went down toward the water. There was a flash of white skirts and fluttering of blue ribbons, then the brook shivered and went waltzing on its way as before.

We shouted, wrung our hands, ran against

each other trying to do something without knowing what, crowded on the slender plank till it dipped, and some started to wade out. She had come up once below the bridge, fluttered like a wounded white bird and gone down again, just as another skirt—a limp, calico one—spread out like a shadow on the water and in a moment was gone before we thought what it meant.

"There she is coming up again," cried Susie May, "down by that flat rock. Something is pushing her up on the rock. Look! look! run!"

But the big boys had heard our screams and were there first.

"O dear! O dear! Is she dead?" and Mary's sobs started anew at sight of the white face and dripping curls.

"No," answered Jim Nelson who held her, "but she will be if we don't hurry. I'll run with her to Pat Murphy's. That's the nearest place."

"Where is Pat? How came Bessie on that rock? She never could have put herself there; she didn't know anything then," demanded big Tom Green who had all the time been Pat's friend.

Some of us stopped following Jim to answer "I don't know" to both questions, and we looked at each other with a new horror growing very fast in our minds.

"O girls," said Susie, "don't you know I thought something was pushing her up?"

Then we remembered the limp, calico skirt that had spread out like a shadow on the water and in a moment was gone. Three bounds of Tom Green's long legs took him down the bank and out to the rock, but nothing was in sight and the brook kept all it knew to itself. So Tom stooped till his shaggy head went out of sight. In a few seconds it came up, but dodging and swaying as if he was pulling at something; then he stood straight with a bundle in his arms—a bundle wrapped in—yes, in that limp, calico skirt, now limper and more clinging than before, and, oh, how frightened we were! It was little Pat, looking more like death than had fairy Bessie.

At that moment we were pushed right and left as Mrs. Murphy fairly flew to the spot, and we never thought of laughing or sneering when she snatched him from Tom, sobbing:

"Och! me b'y, me b'y! that iver I should live till this day! Sure and wasn't it enough that Norah must be thrown into the dirty old salt water, an' me a-longin' for the blissed turf of old Ireland to lay her in, an' no praste nor howly candles at all, at all? An' now me b'y, me only wan, that was named for the blissed saint, must go by the water, too, an' with that same little dress on that she wore last! If niver I had put it on ye, Pat, my little Pat! But he said the scholars tazed him for the jacket and throwers that were getting ragged, an' I said, 'Shtay at home till I wash an' mind them,' an' thin he said, 'No, I should miss me lesson' (he was that set to learn, was Pat), an' thin I said, 'There's yer sister Norah's dress. D'ye mind wearin' that the day?' an' he said, 'No,' so I put it on him. O Howly Virgin! an' what will his father say?"

She stopped, suddenly faced us with eyes glaring like a wild animal's screaming: "How came he in there?"

"I don't know," answered one frightened voice.

"I think he was trying to help Bessie," said another.

"I guess he reached too far over the bridge, and fell in, and the water carried him along."

"Didn't ye see him after that?"

"No."

"His dress was caught on a stick on the bottom so he couldn't get loose," said Tom, whose lips were quivering so he could scarcely speak.

"An' ye all forgot to look fur him! May the saints forgive ye!"

It was not the cold that made Tom tremble so, though he called it that and said:

"Come, let's go and see if we can warm him;" but the mother answered mournfully:

"It's no use. He's dead intirely."

Baby Bessie had been wiser than we, and had loved him before it was too late.

At the funeral, the dear old minister said so that we all could hear:

"Greater love hath no man than this: that a man lay down his life for his friends."

## A Stanley Episode.

EDITORS PRESS:—On my way home from San Jose yesterday, I had the pleasure of seeing Mr. and Mrs. Henry M. Stanley. On arriving at San Mateo, two minutes were very pleasantly ha by our townspeople as well as by scholars from our different schools. Prominent in them were about 40 orphan children, boys with short-cut hair in tidy, wholesome snits of gray. Standing on the platform of their coach, Mr. and Mrs. Stanley viewed all with kindly expression, and particularly those little ones without parents. Mrs. Stanley gave them tokens in pictures as they presented a mammoth package of full-blown flowers. Three rousing cheers followed as our left.

I. T. HOYT.

MAMMA—"I hope my little boy while dining with friends remembered what I told him about not taking cake the second time?" Little boy—Yes, mamma, I remembered, and took two pieces the first time."

THE Chinese carry devils with them wherever they go. They are great imp-porters.

## GOOD HEALTH.

## The Sugary Watermelon.

The following, from an old exchange, will be read with interest in view of the approaching season for indulgence in melons and fruit:—It is delightful to have science spare here and there a tree of loved and old fancy. There has been such a sweeping and mowing down of human comforts that we once at least esteemed as such, in regard to eating and sleeping and the general manner of living, that it has seemed at times that the sanitarians and the scientists were determined to convert us into the veriest machines, and leave us nothing of the sweet and old-time indulgences that in the innocence of youth and the maturity of age we thought to be harmless.

For instance, we have been told that the watermelon is "aquish" that it contains but a very small percentage of nutritive elements—as if man must indulge in nothing except with an eye single to the hrawn of his composition; that the melon is a seed and home of malaria, that convenient scapegoat for every ill not otherwise defined; that, in short, the less of the rich, ripe and toothsome melon we eat the better for us. Such has been the gospel of science, or at least of preaching by a grand army of advisers, that the small boy has heroically defied and grown up to stout manhood "just the same."

Now, after many years, the scientists settle down to the doctrine that the watermelon is not dangerous to health, provided always we wrestle with this filling and luscious fruit of the field when it is fully ripe. That, indeed, its action upon the secretive organs is rather beneficial than otherwise, unless our indulgence degenerates into the glut of intemperance; that more of melon and less of meat in the summer season, is decidedly beneficial. As for the age they now tell us that there is no more of that shaking ill in the dripping sugary melon than in any other fruit, and there is none in any if it is taken at the right time and in due moderation. Unfortunately we do not know who to thank for this generous advice, and this overthrow of a hugaboo that has occasioned many a boy exquisite tortures because of enforced abstinence. But as an integral part of the grand army of melon lovers science has our thanks."

HAS EVERY DISEASE ITS REMEDY?—The theory that for every disease there is a remedy, if we could only find it, is as pleasing as it is plausible. It labors under the doubt-inspiring fact, however, that it is of a *priori* origin. So many speculative hypotheses of this kind have been scattered to the winds by the labors of the inductionists that one is some times tempted to take up the unphilosophical position that whatever rests solely upon an *a priori* basis must necessarily be false. That would of course be absurd. But is it the case, as matter of fact, that for every disease there is a remedy, if it could only be found. Before answering this question we must turn the ambiguous word "remedy" into something more precise. If by "remedy" is meant "cure," then an exceedingly strong position may be taken against the hypothesis and the position is this—that up to the present time experience has not furnished us with a single remedy which can properly be called a "specific cure" for a "specific disease." Now, this is clearly a fundamental and also a staggering fact for those who believe in the doctrine that a remedy for every disease under the sun will be found if only we look carefully enough for it. If the world is not very old, neither is it very young; and if past experience has not furnished us with one single substance which definitely and certainly cures any one certain disease, there is a strong presumption that such substances will be as difficult to find in the future as they have been in the past.—*London Hospital*.

REST AS A MEDICINE.—A physician, writing of rest as a medicament, recommends a short nap in the middle of the day for those who can take it, as a beneficial addition to the night's sleep. It divides the working time, gives the nervous system a fresh hold on life, and enables one to do more than make up for the time so occupied. A caution is given against the indulgence in too long a sleep at such a time, under a penalty of disagreeable relaxation. There has been much discussion regarding the after-dinner nap, many believing it to be injurious, but it is, nevertheless, natural and wholesome.

A CAUSE OF PNEUMONIA.—Dr. F. W. Norton reports two cases of pneumonia which seem to have a traumatic origin. A boy of eleven was forcibly struck on the left side of the chest with a hatchet. Cough and dyspnea came on in four hours, and the physical signs of pleuropneumonia at the base of both lungs later. The second case was a man of 22 who strained his right side by trying to prevent the fall of a sack of malt. He developed all the signs of pneumonia and died, both lungs being in a state of red hepatization.—*Brit. Med. Jour.*

LENGTH OF DAYS.—The longest day of the year at New York is 15 hours, at London 16½, at Hamburg 17, at Stockholm 18½, at St. Petersburg 19, at Tornea, Finland, 22, at Spitzbergen three and one-half months.

## The Week.

The elements seem to be settling down for a run of fine spring weather. The atmospheric conditions have changed so that expansion is invited. The face of man relaxes into smiles of comfort as the balmy air and genial sunshine invite and plant and tree respond to warmth and moisture in delightful ways. May Day will come upon us possessed of full resources for its celebration. The backwardness of the season hitherto makes the revival more noticeable. The roses in the bay region are just upon their grandest unfolding and the

Show of the State Floral Society which will open at the Academy of Sciences on May 6th will be the occasion for the gathering of as fine a display of roses as the State has ever seen. Every rose grower should contribute to this display, compete for its awards, and enjoy its manifold beauties and lessons, and all who love flowers should visit the exhibition.

Crop prospects, as a rule, are as good as could be asked, though there will be deficiencies here and there, as has been previously noticed. The aggregate result to the State in returns for surplus products sold bids fair to be greater than California has ever before secured in a single year. Both weights and prices are now promising.

## General Farming in California.

We desire to have several hundred readers of the RURAL submit to us at once brief statements of their experience in general farming in California. It matters not whether this experience be on a small or large scale; we wish to have an outline of methods and results. The chief questions are: (1) How much land have you farmed? (2) What have you produced, and (3) What have you accomplished in paying for the land, building up a home and securing life's comforts?

We ask for hundreds of brief statements covering these points, because we see that in the reports of a recent meeting of the State Board of Trade a prominent citizen is credited with saying: "It is not an advantageous step for an average man to come here to do general farming." We do not give the name of the speaker, because the report of the remark may do him injustice; but the idea is one we wish to combat and to meet with an overwhelming array of facts and experiences such as our readers can furnish us.

We wish to combat this idea that general farming does not favor California, because we see it constantly cropping out in city agricultural circles, and an impression is thereby produced which does our State injustice. Take notice that we do not claim that a man should come to California without some capital to invest and to maintain himself for a time. Thousands have come to this State empty handed and have won competence and affluence, but we never advise a man to do it. If he desires the struggle, let him take it up himself and rise or fall upon his own responsibility.

But the impression which we would combat is, that new citizens are not desirable in California, unless they bring thousands enough to purchase and plant fruit land and maintain themselves until the trees or vines come into bearing. Those who come thus endowed are desirable and there is small risk to their undertaking if they have ordinary gumption in buying and improving lands. There are, however, thousands who have come to California without money enough to support themselves for so long a time without income, and have also succeeded. It is the experience of such readers of the RURAL that we wish to draw out.

The general question, then, is this: Does the general agricultural principle that the safest course is to produce what will support the family and secure ready money by sale of small surplus products apply to California, or must we install a new principle, viz., buy everything needed for maintenance and take the chances of profit from a single crop a few years hence.

If we admit that the old safety principle does not hold here, then we must say to the world, there is no use of your coming here to buy small farms with the view of equipping them with a few horses, cows, sheep and poultry, and with the intention of producing the food these animals need, while you may be growing vines and trees upon another portion of the farm. There is no chance that you can support your family wants by selling now and then a young horse, a cow, a few lambs or pigs, a lot of dairy produce, fowls and eggs. This old-fashioned, thrifty style of farming, by which people build up homes in other States and in other lands, is not practicable in California. We don't want people who think they can advance that way. "It is not an advantageous step for an average man to come here to do general farming."

This is the doctrine to which we most emphatically demur. Not only is it true that California offers a chance for most satisfactory

advancement upon small-scale general farming, providing a man has means enough to make a fair start; but we really believe no part of the world offers such notable advantages for such work. Where can so much be gained of any crop from an acre of land in a region of sufficient rainfall, or by irrigation from well or ditch? If this introductory query can be answered for California, then the whole question goes with it. But it may be said, what is the use of great production if the crop can't be sold? The answer is, that the general farmer has no great amount of any single crop to sell, and he has all around him the means for converting his crops into different forms, some of which are sure to find a local market, and to secure the limited amount of ready money, which is needed by a farmer who is operating upon a self-supplying policy. Of course, this kind of farming cannot be followed on dry land, but it is possible now throughout a great area of the State, and every new well or new irrigation ditch increases the area available for it. It is true, perhaps, that it does not furnish so much work for the railroads, as does a style of farming in which everything produced must be hauled out of the region and everything consumed must be hauled in; but we have supposed that the traffic in a thickly settled region of small farms had always proved satisfactory. It is not necessary to expand the matter further at this time. We have said enough to show the point we desire to make for or against California as a place for general or mixed farming, and to this end we invite short statements of local experience.

## The President's Visit.

As we write on Wednesday evening the President is in Los Angeles. His westward journey has been an ovation throughout. The Presidential party entered the State of California at Fort Yuma at 4:50 o'clock this morning and was presented with a large quantity of beautiful flowers and fruits. The entire party was asleep at the time, so did not see the presentation committee. When the Presidential party reached Indio at 8:15 o'clock, it was received by a large and influential delegation, headed by Governor Markham, who made the following address of welcome:

**Mr. President:** As the Governor of California, and in her name and on behalf of her people, I greet you on the very threshold of her territory, and bid you a most hearty welcome to our State. This I do on behalf of all her people irrespective of party affiliations, and, sir, as a proof of this, I shall soon take pleasure in introducing to you distinguished representatives of both political parties, who are with me and who heartily join in welcoming you as the Executive of our great nation.

Let me assure you that we fully appreciate the great effort you have been obliged to make in order to visit our coast; but I am confident that you and your party will feel repaid when you see the wonderful features so peculiar to our State, and of which every Californian is so justly proud, and of which so little is known or correctly understood by the people of the great East.

California, Mr. President, is an Empire of itself, 700 miles in length and 300 miles in width, thus affording every gradation of climate and almost every production of any country under the sun.

And, sir, permit me to say that, though we are hundreds of miles from the National Capital, and separated from the people of the East and South by what may seem endless plains and impassable mountains, yet we are in close sympathy with them in all national affairs and are exceedingly proud of the position we occupy in the great sisterhood of States over which you have been called to preside.

You will be convinced of these facts, Mr. President, by the cordiality with which you, as the representative of the whole country, will be received in every portion of the State.

I think it but just to the immediate portion of the State upon which you are entering, to say that almost the whole of the wonderful development which you will witness is the work of the last decade. Ten years ago, with few exceptions, what is termed Southern California was a desert, barren and unlivable, but now a veritable garden, beautiful to behold, and producing millions of dollars annually, bidding fair in time to control the markets of the world with her products. Ten years ago Los Angeles was but a back-country village, with less than 12,000 inhabitants, but now a city with nearly 60,000, with all the modern improvements for the comfort and convenience of man. What is true of her progress is also true of San Diego, San Bernardino and many other places.

Pursuing your journey to the north, you will see the beauties of Santa Barbara, the immensity of the San Joaquin valley—the natural granary of the world, developing like magic into orchards and vineyards, and so on to the magnificent city of San Francisco.

And, Mr. President, when you reach that great city I want you to remember that all the evidences of prosperity you will see, and they are countless, are but evidences of the immense resources of this State; for that city has been created, built and sustained out of the money flowing in from the sale of our own products,

which can be said of few cities of importance in the United States.

It has been arranged for you to see the central portion of the State fairly well, and I need not dwell on what is in store for you, as I do not believe such a country exists outside of California.

I regret that your visit is so arranged that you will not see in detail the northern counties, which, I assure you, are of themselves worth a trip across the continent. It is impossible to describe them and I will not attempt it.

In some of these counties lie millions and millions of dollars in gold, awaiting the discovery of a process of development, which will not injure other important interests and for which we must depend upon the General Government. I am confident that did these mines lie in either France, England, Germany or Russia those governments would take immediate steps to work them.

I regret exceedingly that the short time you will stay among us will not permit you to see the natural scenery for which our State is so noted, among which I need only mention the wonderful Yosemite Valley, the great redwood forests of the north and the mighty mountains with their wealth of beauty.

Mr. President, before closing, I want to ask you to take particular notice of our great lack of national public improvements, of our extensive shipping interest, our almost endless coast lines, almost defenseless and absolutely without harbors of refuge except at San Diego and San Francisco, either of which could accommodate the commerce of the world, but located nearly 500 miles apart.

The President in reply said he would not undertake, while almost choked with the dust of the plains he had just left, to say all that he hoped to say in the way of pleasant greetings to the citizens of California. Some time when he had been refreshed by their olive-oil and their vineyards he would endeavor to express his gratification at being able to visit California. He had long desired to visit California and it was the objective point of this trip. He had seen the Northern Coast and Puget Sound, but had never before been able to see California. He remembered from boyhood the excitement of the discovery of gold and had always distantly followed California's growth and progress. The acquisition of California was second only to that of Louisiana and the control of the Mississippi river. It secured us this great coast and made impossible the ownership of a foreign power on any of our coast line. It has helped to perfect our magnificent isolation, which is our great protection against foreign aggression. He thanked the Governor and committee for their kindly reception and assured them that if he should have any complaint to make of his treatment in California, it would be because its people had been too hospitable.

The program for the journey from Los Angeles northward was given in last week's RURAL. The division of the time in this city and at other California points up to departure for Oregon will be found on another page.

On arrival the President will be requested to change his program so as to visit Stockton en route for Sacramento. We hope the change will be feasible. Stockton should be included if possible.

## California at the World's Fair.

There is an unfortunate outcropping of affairs with reference to the representation of our State at the Columbian Exposition. The State Commissioners, whose appointment was noted in the last RURAL, find on assembling for conference that their work may be sharply arrested by the attitude which the National Commissioners may take in shaping the rules for the fair. It has been reported by telegraph that some of the National Commissioners, including at least one of California's representatives in that body, will take ground against separate State displays, and order all the articles placed under the headings contemplated by their scheme of classification. This would be a serious disappointment to the people of California who have been moved to generous appropriation for this work wholly upon the idea of having a separate California display, and not only that, but not to do this would render the appropriation of \$300,000 unavailable, for it was not made as a contribution to the World's Columbian Exposition's general fund. If it is not expended as intended by the Legislature, for a special exhibit, it cannot be expended at all, because the Constitution requires that expenditure of State money should be made under State auspices and not otherwise.

The chances are, then, if the National Commissioners insist upon a segregation of California material, that the State Commissioners would resign as having nothing to do, and the \$300,000 would remain in the State Treasury, which may be the best place for it after all. This will certainly be the popular decision on the matter if the National Commissioners do not show more regard for the wishes of the California people than they have hitherto.

## State Board of Horticulture Meeting.

Address by Hon. Ellwood Cooper.

In accepting again the position of President, I am not unmindful of the duties or responsibilities involved in so doing. We will be called upon to do more and make greater efforts in advancing the fruit industry. The attempt to abolish the State Board by the last Legislature ought to convince us that we will have to watch with the greatest care all legislative action so as to prevent the possibility of such a calamity as would result in any change in our organization. Among the fruit-growers and intelligent citizens of the State there can be but one feeling as to the importance of the work we are called upon to perform. We must accept the position only with the conviction that more is required of us.

The first Horticultural Bill was found to be inadequate, and required many amendments, which have been secured from time to time, until, as I thought, we had succeeded at the hands of the previous Legislature in getting a law that enabled us to render the greatest service to the fruit industry. We found that after all this struggle, and the devotion to the cause that stimulated our members in giving their time and best thoughts to the welfare of the State, that an attempt by ignorant legislators, either from partisan motives or for mere sensation, tried with one sweeping stroke to wipe us out of existence. The thing that we

plan (in writing) to be discussed at a Board meeting to be held in Marysville November next, before the convention convenes, as to how the legislative matter is to be presented to the fruit-growers at said convention. If there is to be uncertainty in the permanency of the work, I for one will feel discouraged and must decline any longer to take an active part.

An appropriation of \$5000 has been given to us for the purpose of defraying the expenses of an entomologist to Australia and adjacent islands to search for parasitic insects and send same (if to be found) to California for colonization and distribution among our fruit-growers to counteract the ravages of noxious insects so destructive to the fruit industry. We have written to the Secretary of Agriculture at Washington asking of his Department to place at our disposal Mr. Albert Koebele to send on such mission.

The importance of such a mission cannot be overestimated. I recommend that we pass a resolution of thanks to the Legislature and to his Excellency Gov. Markham for placing this amount at our disposal. Something ought to be done, some plan organized by which our horticultural reports could be reproduced. We are now without books, with a constant and increasing demand. At the meeting of the next Legislature we must be prepared to present definite information as to the size and probable cost of reproducing our entire work—that is, to abridge, selecting all the most important parts and putting in such shape that all the reports, commencing with 1885 and 1886 down to 1891, and including the same, would make one

roundings of little children, as soon as their notice and attention, their responsibility, is turned toward the care of plants, their watchfulness and guardianship is manifested in a remarkable degree. No instinct in children is so susceptible of development as the love of animals, the love of plants; it can be strengthened to such a degree as to be a bar against their selfish nature, a bar against surrounding evils.

We need a larger appropriation to prosecute our searches for parasite insects. Hundreds of thousands are expended in fighting insects by the various methods, which at best are only partially effective, and may in the end be given up. We should not relax our efforts in the direction of procuring the natural enemies to destroy all noxious insects that disturb our fruits. If our intelligence is not employed in the right direction we will surely be defeated. Then let us adopt nature's plan and call to our aid that which was created for the special purpose and placed within our reach. Our efforts will be crowned with success, and will pass down through history to the credit of California fruit growers, that they were first to practically demonstrate this part of the plan of creation.

The question of economy in the State appropriations should not deter us from demanding ample funds for such purposes. The State has appropriated \$300,000 that the different industries could be properly exhibited at the coming World's Fair. In the past few years millions have been appropriated for prisons, insane asylums, homes of different kinds, places for the

## Haywards.

The town of Haywards is called by its friends the most beautiful place in California. They declare that it ought to be called "Eden," the name of the township in which it stands. Its situation is well chosen. It stands where mountain and valley meet; a favored location at the entrance of the beautiful and fertile Castro valley. It is at an elevation above the Alameda valley sufficient to clear it effectually of the fogs that sometimes beset the lower valley, and to command a view of great compass and beauty, and yet not high enough or steep enough to make the ascent more than a gentle rise. The town is traversed by the magnificent macadamized highway known as the Oakland road, the main traveled way from Oakland to San Jose, a road that is almost an avenue of beautiful orchards and homes from end to end. Back from the town, roads, all of them excellent, lead to the many interior valleys among the mountains and through the picturesque canyons with which they abound. The hills are accessible and favored with fine-beaten roads, so that it is an easy matter to scale their heights and admire the splendid view of town and broad rich country surrounding it.

Our view of Haywards is taken from such a hill—the hill at the south of town upon which the cemetery. From it five counties can be

HAYWARDS, ALAMEDA COUNTY, AND ITS ENVIRONMENT.

have to do is to prevent the possibility of such action in the future. If each coming Legislature is to tamper with the horticultural interests, we cannot do effective work nor secure the best service in our executive officers.

We have now a very effective working department; our officers command the respect of fruit-growers, are intelligent, energetic workers and doing a service to the State that would be difficult to replace in the event of a change that might take place if their holding was insecure. Bordering States have seen the wonderful development of our fruit industry. All of them are untiring in their efforts to follow California's example. They are creating similar laws on the subject and will outbid us for effective service. We must therefore secure permanency to valuable workers. We must have an understanding among all the fruit-growers of the State that any legislator who dares to tamper with the horticultural interests must be debarred from any further political position requiring the suffrages of our people. This will be simple and tangible, because we represent all political parties. In the event of corruption or misapplied funds, I am confident that each member of the Board would be first to denounce it and eager in his efforts to bring about a change. The law is sufficiently explicit and has been wisely drawn. If the Governors do their duty, bad appointments will not be made. That our enemies were insincere is proved by the fact that not a single vote was recorded against us when it came to a final passage.

In our interview with his Excellency Gov. Markham, I am happy to state he is in accord with the fruit industries and fully agrees with the great feature of our work—that is, to furnish the literature that will inform the fruit-growers how to be successful in fruit-growing.

Now, gentlemen of the State Board of Horticulture, I call upon you each one to present a

volume of about 700 or 800 pages. Such a book could have no equal in horticultural importance. It would be invaluable to our public schools, in fact it is a necessity.

A certain number will be required for every school in the State. These books are now required by the curriculum of the schools. The children will not only be acquiring a knowledge of entomology but a practical knowledge of fruit-growing. Eastern tourists are purchasing lands in all parts of the State. It seems to be the ambition, the one desire, to possess a fruit orchard. We should encourage this and furnish such information as would encourage them as well as save them from serious mistakes. To satisfy this demand will require 20,000 copies. Some arrangement should be made to sell copies to other States and foreign countries. Probably 5000 copies would be sufficient for this purpose. Such books could be sold at a large profit to the State. I shall, at an early day, get the estimate from the Superintendent of Public Instruction of the probable number necessary for the public schools, and at a future meeting present my final recommendation.

The horticulture industry is the growing industry; it will sooner or later be the all-absorbing interest. We cannot take any steps backward nor remain in a stationary position; we must advance. Our greatest advancement will be through the medium of the public schools. There is a fascination in the study of natural science, and the development of plant life. It has been demonstrated already, even with the little that has been done, that the school children have been eager in the pursuit of this knowledge. Baron Fred Von Mueller maintains in his valuable lectures on arboriculture that the human mind cannot be properly developed without coming in contact with growing plants. The care engenders a sentiment, a feeling, for the protection of their best development. No matter how degrading may have been the sur-

wicked and unfortunate. The criminal is better housed and fed than some of our worthy and most industrious. Are these classes to absorb all our surplus, or shall we do something to encourage the worthy, the industrious, who are struggling for mere existence. We are rapidly multiplying inmates for these various institutions. The misery and degradation caused by drunkenness, by idleness and the whirl of shams in the extravagances of modern society is appalling. Let us turn our sympathies a little from the vicious and unfortunate to the virtuous, industrious and self-supporting; our best thoughts and greatest energies should be given in their behalf. By education alone can we counteract the growing evils. The laws of creation in their relation to the products of the soil, is the one important element in the instruction of our youths. It transcends everything else. Horticulture is the highest branch in this department. Our scope must be enlarged; we must assume a position adequate to the importance of our calling.

**BLUE LAKES.**—Professor Frank Soule has recently returned from an inspection of the water rights and works of the Blue Lakes Water Company in Amador county. He says that at the point in the Mokelumne river where the inlet of the company is established, the stream is a fine, large, wide river of the purest water, fresh from the melting snows of the Sierras. By its rights, the company practically holds control of the stream, which in volume would easily supply the whole of San Francisco, Oakland, Stockton and Sacramento combined. Some of the water is carried along a canal and flume to numerous mines and mills 30 to 50 miles below.

**A DOUBLE TIRE WHEEL,** with springs between the outer tire, is the subject of a recent patent granted in British Columbia.

seen, San Francisco and Oakland being plainly visible. The environment of Haywards is one of its charms. The stately groves of encycypus that intersperse Castro valley are especially a distinguishing feature. Where man has not interfered, as on the hills and elsewhere, the oaks stand in pleasing clumps. The orchards of fruit trees, apricots, cherries, peaches, plums and prunes, nut bearers, oranges and lemons, not to speak of ornamental and other trees, are present in every charming variety. The broad avenue that leads from the depot to town is lined with almond and walnut, thick sturdy stems that prove great depth of soil.

One advantage of Haywards is its proximity to San Francisco, the metropolis of the coast. In an air line it is only 12 miles, and by rail and ferry only 21 miles. From Oakland it is 14 miles, and is joined both by carriage road and train.

Haywards is an interesting town. It has a splendid system of water works, being supplied by large wells whence the water is pumped to a capacious reservoir upon the hill, descending by gravity to the streets, which are thoroughly piped. The town is lighted by electricity. It is a place of business activity. Its business houses are many and strong, and they command an important trade. It is estimated that the town is the center of supply for about 11,000 people, a statement borne out by reference to the table of populations given elsewhere, when it is remembered that a considerable section of Contra Costa county looks to Haywards.

**THE TACK INDUSTRY.**—Several attempts have been made to establish the tack industry in the South, but they have failed from difficulties in handling the material. This branch of the iron trade is in the hands of New England manufacturers, and is practically confined to Massachusetts. More than two-thirds of the tack business is controlled by that State and fully three-quarters by all of New England,

# AGRICULTURAL NOTES.

## CALIFORNIA.

### Butte.

**ORANGE PLANTING.**—Oroville Register, April 16: L. N. Eyer will this fall and winter set out 5000 orange trees. Half of these will be seedlings and the other half Washington naves. Mr. Eyer is enthusiastic over the cultivation of the orange and thinks that this fruit is just beginning to be planted in this section.

### Colusa.

**IRRIGATION IN COLUSA.**—Gridley Herald, April 6: There were on Saturday last shipped from Sacramento for Maxwell, Colusa county, several carloads of horses, to be used by them in constructing an irrigating canal in that vicinity. This canal is to extend from Stony creek to a point near Willows. It is expected to greatly benefit a large district that usually suffers from a lack of rain.

### Fresno.

**GRAIN CROPS IN FRESNO.**—Herald, April 18: Farmers assert that this year's harvest of cereals in Fresno county will be the largest yet produced. Several causes unite to effect the result. Last winter was so rainy that much of the land prepared could not be seeded and consequently it lay idle through the year. All the land thus lying idle was seeded this season, in addition to the acres worked last year, besides much new ground, consequently the present acreage of grain is very large. The cold and rainless weather which prevailed up to a short time ago prevented the grain from growing above ground, but the roots spread under the surface, and now that the weather is favorable grain is springing up rapidly and exceptionally heavy, a fact which promises a large yield to the acre. The rains since January have been sufficient to insure good crops, even should there be no rains henceforth, although such showers as have been falling lately would be welcomed in the early part of next month.

**RAISIN PLANTING AT OROSI.**—Oro. Exponent: The Arroyo Raisin Company, under its efficient superintendent, Mr. C. A. Suider, is planting 1,000,000 cuttings, and has now 50 acres to orchard and 100 acres to vines. It will plant, next season, 160 acres more to trees and vines.

### Kern.

**RAISINS AT BAKERSFIELD.**—Californian, April 16: Last year the first concerted effort to plant raisin vines was made in this locality. Already this year, from one dealer, 30,000 trays have been ordered, upon which to dry home-raised grapes.

**EXTENDING ORANGE-GROWING.**—Bakersfield Echo, April 15: John Barker is preparing to plant a large orange grove. He will, next spring, set out 120 acres, nearly all in orange trees. The ground selected is a tract along the bank of Kern river; many trees were lately there, but have all been cut down, the stumps rooted out, and now the ground is ready for the plow. Thorough plowing and other cultivation, together with exposure to the sun and air during the year, will bring the ground into the best condition for receiving the young trees, and planting will be begun as early next year as possible. For many years past, Mr. Barker has made regular and careful observations of temperature and other atmospheric changes; the lowest temperature marked by his thermometer during all that time was 28°, and that very seldom. At Riverside and other places now famous for oranges, the temperature often falls much lower than this.

**DELTA FRUIT CO.**—Bakersfield Californian, April 15: Since the 6th of January, the day work commenced, the land has been fenced with a rabbit and stock proof fence and placed under irrigation, and 160 acres set with raisin grapes—a job that was accomplished in 12 days—which are now in fine condition, and 150 acres sown with wheat. Ten acres were reserved for buildings and other purposes, and from the site of the dwelling to the public road an avenue 600 feet in length and 32 feet wide was constructed, bordered by rows of Adriatic fig trees. Along this avenue also are planted 2500 fig and 250,000 grape cuttings for future use. Water is supplied by means of a windmill which, as the air is always in motion, runs almost constantly. The water is raised into a large tank at the top of a tank house, and thence conveyed through pipes, under pressure, to all parts of the premises when needed. Contiguous to the dwelling is a lawn and flowers, and conveniently near a vegetable garden. The wheat will be cut for hay and the ground occupied by it (150 acres) will next year be planted with all kinds of fruit trees, including semi-tropical, but chiefly with peaches and prunes.

### Monterey.

**HORNED CATERPILLARS.**—Pajaronian, April 16: The horned caterpillar is showing up in such numbers that orchardists are anxiously wondering what the harvest of fruit will be. A prominent apple-packer visited a number of orchards in the valley during the month, and he had yet to find one without the presence of the dreaded caterpillar. A parasite in the shape of a fly has been very destructive to the caterpillar eggs whenever it could force its way into the nests. Where the nests were in exposed places, the fly did good work; but enough of the eggs were left to hatch out enough caterpillars for local business and leave a big surplus for export. Myriads of the caterpillars—now not larger than a pin-head—can be seen in the orchards where the caterpillar with horns made

his appearance last year. Extra precautions have been taken this year to prevent the spread of this pest, but they are here in numbers, and it is going to take lots of work or the presence of a speedy and destructive parasite to keep back the fruit-loving crawler with horns. More attention has been paid this season to spraying trees than ever before, but the washes used have not had a very perceptible effect in diminishing the number of caterpillars, though the spraying has been of benefit to the trees in other ways. In the northern counties, orchardists claim the most efficacious remedy has been a wash of one pound of Paris green in 160 gallons of water. Most of the growers claim that the damage from the caterpillars will not be greater than it was last year, but it is yet too early to make any estimates.

### Los Angeles.

**A MODEL ORANGE GROVE.**—Cor. L. A. Express: The 700-acre tract of the Alcazador Orange Grove & Fruit Company is being rapidly put in order and planted. At the head of each ten-acre lot, a brick flume is being built, making ten miles in all, with two miles of open stone ditch, cemented, with iron head-gates, etc.—everything built substantially and for durability. It has about 150 men, and from 15 to 20 teams at work, and has 400 acres set—200 to oranges and 200 to prunes and peaches, and the trees are doing well, and the remaining 300 acres will be set as soon as water is on the ground. A deep orange trimmed with green is the color adopted by the company, its wagons, etc., all to be of the same color.

### Napa.

**THE HESSIAN FLY.**—Napa, April 15: G. W. Watson of Napa Junction called at the Register office, bringing with him a handful of wheat stalks which he had pulled in a bunch from one of his fields. On examining them, in nearly every one was discovered that terrible pest which a few years ago did so much damage in that vicinity—the Hessian fly. Mr. Watson said that a few weeks ago the grain around the Junction never looked better, but that now it is nearly all infested.

### Orange.

**VINE DISEASE DISAPPEARING.**—Alhambra Review, April 18: The vine disease which caused such consternation in this and other localities, seems to have spent its strength, and courage is reviving among viticulturists. In Orange county over 100,000 grape cuttings will be planted this season.

### Placer.

**FRUIT AT GOLD RUN.**—Cor. Republican, April 15: The fruit industry is progressing rapidly and it will be but a short time until it will give a great deal of employment to labor. The late mountain apples have been going to San Francisco quite lively the past two weeks, where they find a profitable market.

### Sacramento.

**CROPS IN SACRAMENTO.**—Florin, April 13: Crop prospects were never better at this time of the season; all kinds of fruit and a larger acreage sown this year than ever before in this county, and feed for stock everywhere is in great abundance, and I see no reason why we should not have one of the most prosperous seasons that has fallen to our lot for many years past.—G. W.

**WARNING TO APRICOT GROWERS.**—R. B. Blowers, Woodland, in Bee, April 15: It is imperative that the apricot grower, if he desires clean fruit, should immediately spray his trees, for the shot-hole fungus has already attacked the young fruit. I am using this formula: To 25 pounds of whale-oil soap (another good, strong soap will answer), add 30 pounds of sulphur. Pour in a small quantity of water and thoroughly mix the soap and sulphur, adding a little water at a time as it is stirred; water until this mixture amounts to 40 gallons. To this add two pounds of dissolved bluestone. This will make, when properly diluted, 100 gallons of tree wash, which should be strained through ordinary butter cloth. This remedy can be used for codlin moth by the addition of one-half pound Paris green to the above quantity. This will be a good codlin moth remedy as well as for preventing any fungus disease which is liable to attack the pear at the present time. However, it is more necessary to immediately attend to apricots, and in a few days the Bartlett pear will be ready to receive the attention of the fruit grower.

### San Benito.

**BARLEY HEADING.**—Hollister, April 17: Barley is heading out in the Fairview and San Felipe sections.

**YIELD OF ALFALFA—FIRST YEAR'S SEEDING.** Advance, April 17: Any person with the idea that a crop of alfalfa hay cannot be cut the first year of seeding should pay a visit to the alfalfa fields south and west of town. From lands irrigated and seeded in the middle of January of this year crops of hay will be ready to cut in three or four weeks. The yield will average two tons to the acre.

### San Diego.

**OFFERING PRIZES TO KILLERS OF GOPHERS AND SQUIRRELS.**—Escondido Times, April 16: The Oakdale Horticultural Committee, to whom was referred the matter of organizing a squirrel and gopher exterminating club, made their report. The plan reported was that two purses be made up—one for squirrels and one for gophers. Any person may join the club by paying 50 cents into either purse, or by paying \$1 may compete for both purses. The one

presenting the most scalps in either case will receive three-fourths of the purse, and the one the next largest number, one-fourth of the purse. The object of the club is to present a stimulus for the extermination of the pests. The capture and presentation of scalps began on the 1st of March, and is to run for six months.

### San Joaquin.

**WATERMELON PLANTING AT LODI.**—Valley Review: Many of our most prominent melon raisers will decrease their acreage this season, as suitable soil and location cannot be obtained owing principally to the increased acreage of wheat which has been planted this season. All the summer-fallow land available has been secured for this season's plant and the patches will be perceptibly smaller. In former years there has been as high as 250 or 300 acres in a single patch of melons, while this year it will be hard to find a melon field of more than 160 acres. Following we give a list of the names of planters and the number of acres each will handle: Sam Broddus, 100; Mr. Bancroft, 150; A. J. W. Green, 80; T. N. Smart, 80; scattering, 40. The foregoing is all the land planted north of the Mokelumne river, while for this side of the river we give the following: L. O. Gillispie & Son, 160; J. Thompson, 50; S. H. Tyndell, 80; H. Tecklenburg, 80; Pope & Trorr, 80; Andy Harmon, 80; J. Lang, 80; Carver & Coleman, 80; H. C. Gillingham, 60; John Acker, 50; John Hutchins, 60; Troy & Harker, 80; Wilson & Edlemon, 80; John Kelly, 30; J. Perrott, 50; J. F. Parson, 10; renters on Brook place, 150; Chinese planters, 180; scattering, 90; making a total of 1880 acres.

**WOODBIDGE IRRIGATION CANALS.**—Stockton Independent, April 16: The flume is 30 feet wide and the water is to pass through it into the main canal, which is 30 feet wide on the bottom and three-quarters of a mile long. At its terminus, the east branch which runs to the Calaveras river, 13½ miles, begins. Of this branch several miles are ready to receive the water. The west branch, which extends eight miles to Sycamore slough, is well under way and the north branch will extend to Ferson slough, seven miles. Other branches are contemplated to the extent of 15½ miles, which will make a total of 44 miles of canals. The land in the immediate vicinity of the canals shows the influence of its commencement. Large areas are planted to fruits and vines, and all along the Lower Sacramento road for miles southward are fields with 10 and 20-acre patches, and some far larger, where vines are just beginning to show. In the immediate vicinity of Woodbridge is one field of about 100 acres that is intersected by the main canal. It is planted with figs and vines, which look beautiful and thrifty. The water will be put upon these new orchards in June and will be kept supplied as long as it may be required. Several residents of the vicinity are experimenting with a great variety of fruits and making close observations of the results. One man has about 20 varieties of figs, another as many of grapes, and each is determined to know to a nicety which is the most profitable and best adapted to the climate, soil, etc.

### San Luis Obispo.

**BEAN PLANTING AT OAK PARK.**—Cor. S. L. O. Tribune: Bean planting is the order of the day. This locality comes well up with Arroyo Grande as a bean country. Beans seem to grow well here, and there are no "Bugs" to prey upon them as is the case at Arroyo.

### Siskiyou.

**CROP PROSPECTS IN SISKIYOU.**—Yreka Journal: The farmers have been enabled to plow and put in good crops lately from the advantage of several rain storms. Considerable new ground has been plowed up during the winter, and if we have frequent spring showers until the last of May, we may anticipate the largest production of grain ever realized in Siskiyou, and also a heavier harvest of hay than usual. The fruit prospect never looked better than at present, the trees blooming luxuriantly, with certainty of a great abundance of all kinds of fruit, unless very heavy frosts occur at the dangerous time during middle or last of May.

### Solano.

**BEES SAID TO INSURE A CHERRY CROP.**—Vacaville Enterprise, April 18: The cherry crop of Vacaville valley has been an uncertain quantity. The famous Smith orchard has not had a first-class cherry crop since 1885, at which time they succeeded in bringing cherries of the early Purple Guigne variety into Vacaville on the 31st day of March, and which were shipped to the city and there sold April 1st. Other seasons the cherry crop has been only partially a success. The reasons for this have been unaccountable, though it has been attributed to the varying conditions of the season, at one time a north wind, another a chilling rain. That these incidents had some effect is no doubt true, but that they were solely responsible was not believed by the Bassfords. These observant gentlemen, whose experience in cherry-growing goes back to a time when the neighborhood of Vacaville was not, as now, a vast orchard, recalled the fact that cherries used to be a sure crop, and sought for the cause of the change. It occurred to them that the bees, which in the early beginning of the fruit business in this section were numerous in the orchards, and which for several years back had been conspicuous by their absence, had something to do with the success of the cherry crop. Acting on the theory that the fertilization of the cherry blossom was affected beneficially by

the presence of the bees, the Bassfords secured several hives and waited results. Last year, the first in which the matter was tested, the result was favorable, the Bassfords having cherries while the other ranchers found their crops an entire or partial failure. This year the Bassfords have about 65 hives of bees.

**SHORT ALMOND CROP IN SOLANO.**—Republican, April 18: The almond crop will again be short this year, and not over half a crop is expected. Generally when the almond crop is short, the crop following is larger than usual, but this year it will be different. Some orchardists seem to think the trees have not fully recovered from the effects of the continued rains of last year.

### Sonoma.

**RAMIE PLANTING IN SONOMA.**—Index-Tribune, April 18: Capt. Boyes has set out five acres, or 12,000 roots; T. S. Gleister of Green Oaks has planted 5500; Weaver of El Verano, 2500; F. Grothaus 200, and T. O. Wilkinson 1000 roots. A number of other farmers have ordered roots and will also plant.

### Stanislaus.

**LARGE RAISIN VINEYARD IN STANISLAUS.**—Modesto News, April 17: L. M. Hickman has just planted a 360-acre tract of raisin-bearing vines on his land. The tract is entirely surrounded with two rows of choice fig trees, with a driveway of 60 feet between. The land is also crossed with the trees from both sides. About 2000 trees are thus used. In the center of the land a plat has been reserved for orange trees. A rabbit proof wire fencing is now being put up and will be surrounded by a two board fence.

### Sutter.

**RAMIE PLANTING IN SUTTER.**—Marysville Democrat, April 18: Among those who will plant ramie is M. Marcuse, who will plant 10 acres; N. A. Rideout, 10 acres; F. Hines, 5 acres; J. Cohen, 5 acres; H. P. Stahler, W. H. Phillips, C. J. Coville and others will plant various numbers of acres.

### Tulare.

**INCOME FROM A TULARE ORCHARD.**—Times: Paige & Morton, only two miles west of Tulare, have 119 acres planted to peach trees that are four and five years old which last season gave a return of \$522 per acre; 25 acres of apricots that paid a net income of \$211.70 per acre; 20 acres to pears, five years old, \$350 per acre; 1000 prune trees, four and five years old, \$308.20 per acre. There are 800 acres of the ranch planted to raisin grapes. Two hundred acres of these vines, three years old, yielded 400,000 pounds of raisins, which were sold for the sum of \$24,000, in the sweat-box. There are three-year-old vines in this vineyard that gave a net return of more than \$100 per acre. There are orchardists here who, last season, could have sold their fruit crops at one cent per pound and then have realized a net average income of \$100 per acre. The success attained by those engaged in orchard and vineyard culture has caused many people to engage in the business this season; and that all might have an opportunity, numerous colonies have been laid out.

**THE EXPERIMENTAL STATION IN TULARE COUNTY.**—Times, April 15: Located one-half of a mile east and one mile south of Tulare City is the experimental or culture station. There are 20 acres of land connected with this station, which is cultivated to trees, vines and a numberless variety of seeds, the object being to ascertain what can be grown with the greatest profit on such lands as are to be found in this part of the San Joaquin valley. Last season 60 varieties of wheat and 18 of barley were grown at the station. The three varieties of wheat giving the best returns, or yield, are known as the California Spring, Archer's Prolific and the Whittington. Cultivation is more depended on for raising cereals at the station than irrigation—in fact, there is no ditch-water used on the place. Some water is needed for trees and vines, and this is secured by pumping from a well with a horse-power. The land on which wheat and barley are raised is first stirred with a plow to a depth of 10 or 12 inches, and the clods thoroughly pulverized with a harrow. There is now growing on as poor alkali lands as is generally found in this county several varieties of wheat, well headed out and that would give a good yield if allowed to mature. However, the crop was grown for hay, and is now ready for the mower. Valuable experiments are being made there as to what can be produced on alkali lands, what can be grown without irrigation, the varieties of wheat or barley that will give the largest yield per acre, the grasses that can be grown for hay, as well as experiments in the growth of trees and vines that yield fruit. It has been demonstrated that sorghum can be grown on alkali lands that will yield neither wheat nor barley. Sorghum can be used for feeding stock, and is a profitable crop for that purpose. Farmers having a number of acres of alkali soils on their ranches could make the land profitable by growing this crop.

**SMALL CLIP OF WOOL IN TULARE.**—Enterprise, April 17: The wool clip this season was the smallest in the memory of the sheepmen in this county. It is due to the scarcity of feed and the cold weather, which depletes the weight of the wool by lowering the quantity of natural grease which emanates from the sheep's body and is absorbed by the wool.

**STOCK PURCHASES.**—Porterville Enterprise, April 10: On Friday last L. D. Whitt shipped

(Continued on page 404.)

## Getting their Catalogues.

WE value to the utmost our out-of-town post office acquaintances. Uncle Sam is our hard working ally and we have no disposition to make his tasks lighter. He grumbles a little during busy seasons when an avalanche of mail orders flood his office here, but that matters little so long as you get your goods on time.

In these days of steam and electricity it is a luxury to be an out-of-town shopper. No jostling, no confusion—a catalogue, pen and ink, and you receive as much attention as your city friend. The catalogue is a great help—a silent salesman, perhaps the best. You may know, for instance, that you want ten yards of cashmere for a gown, but the catalogue reminds you of linings and other accessories at such a saving in prices that your postage is a cipher. Then it illustrates a new trimming which takes your fancy and your cashmere gown develops into a stylish affair quite impossible in village shopping. By a systematic turning of its pages other necessities confront you which might as well be ordered one time as another, saving time and money, too.

Our new Catalogue is fuller of illustrations than any previous one. We think seeing things as they are is a help—a two-inch illustration tells you more about a lace pattern or a suit of clothes than we could explain in a column.

If the new Catalogue shows an improvement on older methods, the out-of-town people are responsible for it. An unusual order generally puts an idea into our heads—which we think out, and put in force in the next issue. This is why our Catalogue is such a useful book and constantly growing larger.

Send your address and a catalogue will be sent you free.

### Weinstock, Lubin & Co.

Nos. 400 to 412 K St., SACRAMENTO, CAL.

RETAIL DRY GOODS, CLOTHING, HATS, MILLINERY,  
SHOES, NOTIONS, HOUSE SUPPLIES, ETC.

## STANDARD MOWER

ONE MAN AND TEAM instead of two.  
TWENTY ACRES A DAY instead of ten.  
**CUTTER BAR** has no nuts or obstructions on top; the obliquely  
**RECESSED GUARDS** bolt to finger bar with nuts on under side, leaving upper side of cutter bar perfectly smooth surface.  
**MAIN WHEELS** made interchangeable—one wheel fits either side of mower.

**NO SIDE DRAFT**  
as CUTTER BAR is carried entirely on Main Wheels.

**7-FOOT** mower will do as much with one team as two 4-foot machines, SAVING half the corners.

THE FOOT LIFT raises cutter bar with perfect ease without the aid of hand lever, the first ever made.  
**EASILY TILTED.**  
THE STANDARD MOWER can be entirely taken apart and put together again by the farmer with a common wrench. SEND FOR SPECIAL CIRCULAR.

IN ORDER TO CLOSE OUT OUR RETAIL CARRIAGE BUSINESS in San Francisco, we will sell our large stock on hand of first-class Carriages, Top Buggies, Phaetons, Four-Spring Wagons, Carts and Harness at Cost. Now is the time if you want to buy a good carriage cheap. Salesrooms, 220 and 222 Mission St., San Francisco, Cal.

**BRIGGS CARRIAGE CO., C. Grego Agent.**

## WOODBURY'S IMPROVED ROSIN WASH.

Perfect removal of scales guaranteed and invigoration of Trees without possibility of injury. Now is the time to apply.

This is the best wash yet produced for all kinds of fruit trees and shrubs. It removes scale from deciduous, citrus or ornamental trees without injury. One application every year is all that is required. From hundreds of testimonials we print the following:

WALNUT GROVE, February 14th, 1891.—MR. C. J. WOODBURY, 123 California Street, San Francisco, Cal.—Dear Sir: I have been using the Rosin Tree Cleanser, as put up by you, for the past two years, and find my trees a most free from scale. It does its work more thoroughly and is less trouble to work than any wash I have ever used. I have tried most all the washes that have ever been compounded. Yours respectfully, L. D. GREEN.

Directions (most simple, easy of application) sent with each shipment. This wash is guaranteed not to harm the leaf, buds or in any way keep them from forming.

Please observe the price. Put up in cases, 45 pounds in each can, two cans in a case, two cents per pound; in barrels, 1 3-4 cents per pound; by the ton, 1 1-2 cents per pound. Weight, nine pounds to the gallon. To one gallon add seven gallons water, result eight gallons ready for use, at a cost of thirteen and one-half cents. Correspondence solicited.

Harvest Oil for Farm Machines, guaranteed anti-gumming, superior to Castor, 50 cents per gallon. ADDRESS

A. T. DEWEY } Dewey & Co.'s Scientific Press Patent Agency { ESTABLISHED  
W. B. EWER. } 1860  
GEO. H. STRONG.

INVENTORS on the Pacific Coast will find it greatly to their advantage to consult this old, experienced, first-class Agency. We have able and trustworthy Associates and Agents in Washington and the capital cities of the principal nations of the world. In connection with our editorial, scientific and Patent Law Library, and record of original cases in our office, we have other advantages far beyond those which can be offered home inventors by other agencies the information accumulated through long and careful practice before the Office, and the frequent examination of patents already granted, for the purpose of determining the patentability of inventions brought before us, enables us often to give advice which will save inventors the expense of applying for Patents upon inventions which are not new. Circulars of advice sent free on receipt of postage. Address DEWEY & CO., Patent Agents, 220 Market St., S. F.

### Whitewashing Machines & Tree Cleansers.

Complete Outfits at prices from \$3 to \$50.

The Pumps are all BRASS, with BRASS AND RUBBER VALVES.

For Orchardists, Florists, Stockmen, Poultry Raisers

THERE IS NOTHING LIKE THEM.

Pump sent complete as in cut for \$14. Send for Illustrated Catalogue.

WAINWRIGHT SPRAYING APPARATUS CO., 1409 Jackson St., S. F.

Contracts taken for Large Jobs of Whitewashing.

## Agricultural Notes.

(Continued from page 402.)

one carload of cattle from Visalia to the San Francisco market. On Sunday, he shipped 55 hogs and 9 beef cattle from Porterville; on Monday, one carload of beef cattle; on Tuesday, he purchased from W. F. Jordan of Yokohama 200 beef cattle, and on Saturday 35 beef cattle from J. S. McGahey of Deer Creek, 100 head of cattle from W. Simmons of Deer Creek, and all the cattle and calves and two carloads of sheep from John Heard of Lewis Creek.

**PUMP IRRIGATION A SUCCESS.**—Visalia Times, April 15: Samuel Richardson has demonstrated the fact that orchards and vineyards can be irrigated from wells at small cost. He has a 10 acre vineyard near Tulare City that he irrigated by the pumping process in five days, using a horse-power and a triple-action pump. He did not use a reservoir, but pumped the water into a ditch, and there conducted it into furrows plowed on each side of the vines. The well used was about 200 yards distant from the vineyard, and the soil is of a sandy character. The land was as thoroughly watered as it could have been by the use of ditch water, and there was an advantage in this method of irrigation, in the fact that no noxious weeds were conveyed to the land, as is usual where ditch water is used. Mr. Richardson feels confident that a 20-acre vineyard can be thoroughly watered and kept in a good stage of growth by the pumping process, using a common horse-power, and where a gasoline engine is used, a larger acreage could be irrigated. E. W. Holland, G. Q. Gill, Caleb Thompson and Irwin Wilson own an 80-acre tract of land, 40 acres of which is in vines, which is also being irrigated from wells. These gentlemen state that though their property is in the Tulare Irrigation district, they will have no use for water from the canal when constructed, as they prefer the water from wells for irrigating purposes, for the same reason advanced by Mr. Richardson—well-water does not convey noxious seeds on the land. The property on which these vineyards are located is a very sandy soil to a depth of 10 or 20 feet. Each of the gentlemen will procure a gasoline engine in the near future with which to pump water to irrigate their vineyards. They do not consider that it will be necessary to construct expensive reservoirs either for holding water, but will pump directly into a ditch and conduct the water to each row of vines. The wells used are only 40 to 50 feet in depth, and furnish an abundance of water. The first stratum of water in these wells, however, is reached at a depth of only 10 or 12 feet.

## Ventura.

**CONTRACTING FOR APRICOTS.**—Ventura Free Press: A. Gandolfo has been contracting with growers for a term of three years at the rate of \$20 a ton, everything on the trees to be counted. It is learned that he has contracted for nearly all the fruit on the avenue, estimated at 1200 tons, except from N. B. Smith and a few others. Contracts have also been made with Santa Paula growers, and, generally speaking, they are well pleased with the prospect and the price, as it means an average of \$100 an acre for the fruit crop.

## Yuba.

**LARGE SHEEP.**—Wheatland Four-Corners, April 18: Last season Mr. Jasper received a number of Leicestershire sheep from the East. This week, when the shearers commenced work on his flock, these sheep were the chief subject of comment on account of their unusual size and the length of their fleeces. It took two men to shear one of the ewes, which weighed 225 pounds after yielding to the shears a 10-pound fleece of long, clean wool. Mr. Jasper hopes at some future time to have a large hand of this breed.

## Yolo.

**EARLY FRUITS AT ESPARTO.**—Independent: W. E. Cole states that the peach crop will be heavy, and the young apricots are so numerous on the trees that he will have to hire help at a cost of \$200, to pick off some of the half-formed fruit, in order to save the remainder. Fully three-quarters will have to be removed. On some half branches, only five inches long, there are from 20 to 40 apricots now. This, he says, is due to his having summer pruned. The apricots are turning red and the crop promises to be early and large. Prune trees are set fuller than they can bear. But, as some of the prunes always fall off after getting half-size, no thinning will be needed.

**GRAIN CROPS IN YOLO.**—Mail, April 18: Farmers say that the late rains were sufficient to insure crops, and that no more rain during the season will be required. Present indications point to an unusually heavy harvest of wheat and barley. The barley crop will be larger this year than it usually is on account of the high prices that cereal has commanded during the winter. Summer-fallowing is the present occupation of the ruralist. Most of the ground plowed before the rain will have to be plowed again to keep down the weeds and oats.

## ARIZONA.

**ARIZONA BEEF CATTLE FOR CALIFORNIA.**—Tucson Citizen, April 18: The cattle pens at the railroad this morning were the scene of bustle and confusion. There were being loaded for Los Angeles 15 cars of feeders, 2, 3 and 4 year olds, purchased of prominent ranchers of the county. The price paid is for four years

old and over, \$14; for three-year-olds, of which there were most, \$13, and for two-year-olds, \$10. The stock are, so cattlemen say, as fine a shipment of feeders as has ever been made from Tucson. A shipment of 175 head of steers will be made from the pens to-morrow, also a quantity of calves, from Marsh & Driacolls ranch, for San Francisco. The price paid is 2 cents a pound cash for the steers, and \$7 per head for the calves. This shipment is all beef cattle, and nice fat stock it is reported. Cattlemen report that cattle prices are having an upward tendency. The stock of Arizona are of a better grade than of former years, and the intention of the ranchers is to keep up the improvement. They are no longer all horns, and the diffusion of good blood is indicated by better weight and better prices. Shorthorn and Durham bulls have been bought of owners of herds of those breeds, and the Hereford breed will next be crossed on the present stock. S. Otero intends buying 150 Hereford bulls of Salt River and San Pedro valley ranchers.

## THE VETERINARIAN.

## Red Water in Cattle.

**EDITORS PRESS:**—I have some cattle affected with red water. Please ask Dr. Buzard to advise me what to do in the columns of the RURAL PRESS. I have been told that salt is good to give them. Kindly attend to this at your earliest convenience, and oblige.—C. S. W., Guerneville, Cal.

The causes of this most troublesome complaint, "Red Water" (*Hæmo-albuminuria*), are still in dispute; probably they are as varied as the theories that have been advanced to account for it. Among them are irritant and unwholesome food, a poor diet generally, acrid plants found in the pastures (such as *colchicum*, *ranunculi*, etc.), stagnant water, roots grown on unimproved soils, woody districts, overdriving, sudden changes of temperature, changes of pasture, besides many other reasons. It has also been considered as a variety of anthrax, and classed, like "black-leg," or "quarter-ill," as an anthracoid disease, and therefore due to specific influences. All these reputed causes cannot, of course, be right, but some of them may predispose to attacks by inducing digestive and liver derangement. Its prevalence in certain districts, on particular farms in a given district, and even in certain pastures in these farms, is very generally recognized, and periodic dressings with salt is spoken of as an effectual preventive. A free allowance of rock salt to the stock is also reputed a useful preventive, while some profess to find an efficient cure in a solution of salt administered as a medicine. I am inclined to think, however, that some useful remedies may be found, and my experience is that salt as a cure does not compare with salt as a prophylactic. Whatever the exciting cause, an impoverished condition of the blood, owing to malnutrition, is present. The albumen of the blood being degraded in quality, becomes unfit for the nourishment of the tissues and is therefore excreted by the kidneys and expelled. Farmers recognize red water principally by the color of the urine, which varies from a mahogany or port wine color to that of porter, and they invariably describe the urine as containing blood. This altered secretion is one of the prominent eruptions and is especially diagnostic. Blood, as blood, does not, however, exist in the urine as red water, or, as in true hæmaturia, it would clot. The color is due to the escape of the blood-coloring matter, the principle called hæmatin, through disintegration of the cell walls of the red blood corpuscles. The liver is probably the organ at fault, but with our limited knowledge of its functions it is not yet clear how these changes are produced.

The treatment is happily more successful than investigations into its causes have hitherto proved. To rid the bowels of irritant material and stimulate the liver, give: Barbadoe aloes, one ounce; nitrate of potash, half an ounce; ginger, half ounce; sulphate of magnesia, 12 ounces; in a quart of warm beer. A cathartic is indicated even if diarrhea be present, which is sometimes the case. In three hours after the above, give: Turpentine, two ounces; spirits of niter, 1½ ounces; linseed oil, one pint. Give a change of pasture or remove from the one in which the attack commenced; or if stalled, change the diet, which should be highly albuminous. If the color of the urine still persists, a course of tonic medicine must be given, such as sulphate of iron, one drachm; chlorate of potash, half an ounce, in warm water twice daily. Milk and eggs are highly useful in chronic or persistent cases.

A. E. BUZARD, M. R. C. V. S. L.  
11 Seventh St., S. F.

## Treatment for Caked Bag.

**EDITORS PRESS:**—This being the season when cows are dropping their calves, at such times there is more liability to derangement of the udder than at any other time. The diseases most commonly met with are inflammation and hardness or oake of the udder and garget. For the above conditions there is nothing better than *Phytolacca decandra* (poke root), which has long been used over a wide area of the Atlantic States by the country people for garget or caking of the udder in cows. For garget keep the udder moist with the dilute tincture. In case abscess is threatened, then *R. Tinct. phytolacca dec.*, four

ounces; aqua, one pint; mix sig., to be used as a dressing or external application. It should be warm when applied. For internal use, from two to four drachms of the tincture of *Phytolacca* is to be given in bran or other suitable feed three times a day. We have seen marvelous cases performed by use of the above remedy, and, used in connection with other necessary sanitary regulations, never fails to effect a cure, and especially in the case of garget. O. F. SHAW, M. D.

Santra Cruz, Cal.

## The New Law on Contagious Diseases.

The following Act to amend Sections 400 and 401 of the Penal Code of the State of California, relating to contagious diseases among animals, was approved March 10, 1891.

Any person who shall knowingly sell, or offer for sale, or use, or expose, or who shall cause or procure to be sold or offered for sale, or used, or expose, any horse, mule or other animal having the disease known as glanders or farcy, or who shall bring, or cause to be brought, or aid in bringing into this State any sheep, hog, horse or cattle, or any domestic animal, knowing the same to be affected with any contagious or infectious disease, shall be guilty of a misdemeanor.

Every animal having glanders or farcy shall at once be deprived of life by the owner or person having charge thereof, upon discovery or knowledge of its condition; and any such owner or person omitting or refusing to comply with the provisions of this section shall be guilty of a misdemeanor.

## Air-Blasting for Rain.

We have all heard of aerial concussion as a mooted cause of rainfall. Systematic trial of this method is now to be made, by order of Congress, under the auspices of the Department of Agriculture. We read in the *Scientific American* that Senator Farwell of Illinois proposes to devote himself to the scientific work of trying to produce rain by the firing of cartridges of gun-powder or nitro-glycerine high up in the air. During the last session, Congress appropriated \$2000 for carrying on experiments of the kind, but Senator Farwell does not intend to limit himself to this small sum, and will, if necessary, contribute from his own pocket such sum as may be necessary to complete the trial to his satisfaction. The main fact on which the theory of the experiments is based is the circumstance that heavy cannonading is often followed, after a day or two, by rain. Acting on this observation, attempts have been made at intervals, during the last hundred years, to produce rain by firing cannon and producing concussions of the air in other ways, but without much success. Senator Farwell, however, says that during the construction of the Central Pacific railroad through the arid region east of the Rocky mountains, where a great deal of blasting was necessary, it rained every day that there was blasting. For this reason, he thinks that a sharp explosion of nitro-glycerine, produced high up in the air, would be more effective than cannon firing near the ground, and he proposes to send up balloons in the dry portions of Western Kansas and Colorado, furnished with torpedoes and slow matches, by which he hopes to obtain a concussion extending for 50 miles in every direction.

## One of Our Large Mercantile Houses.

Growth and development are always interesting. Everybody knows this is true in the physical and intellectual world. Is it not equally so in the realm of business? The J. Dewey Company is a striking example of such growth. The concern began in this city in 1860 as F. Dewey & Co., the business then consisting of Pacific Coast Agency for one or two subscription books. From the first the firm name was a synonym for that energy and business ability and integrity which rarely fail of success. We have not space here to trace even in outline the various stages of growth. Gradually and surely the business was enlarged. Five years ago, the Dewings were joined by Mr. William L. Oge, at which time the company incorporated under the present name, with James Dewey, president, M. S. Dewey, vice-president, and William L. Oge, secretary and treasurer. Soon after, an art-printing establishment was opened in New York City for the publication of Picturesque California, the superb art work, which makes the name of this company a household word throughout the United States, and bids fair to make it well known all over Europe as well, doing more for California doubtless than all the direct advertising that has ever been done. The company in earlier years became thoroughly identified with subscription-book business of the better sort, in their hands having been placed the sale of most of the large and important works, *Encyclopedia Britannica*, the great histories of the last two or three decades, Grant, Blaine, Fremont, Sheridan, Sherman, McClellan, Battles and Leaders, Century Dictionary, and just now the wonderful Life of Lincoln by Nicolay and Hay and the history of the great war. They have become so widely known in subscription-book business that many of their friends hardly realize the vast scope of their present business. They keep a full line of miscellaneous books and stationary, one of the largest and most varied stocks kept on the Pacific Coast; they manufacture and deal in pianos and organs; they have recently opened an extensive art department; they are perhaps the leading house in school furnishing, libraries, maps, charts, globes, apparatus, supplies, school furniture and bells. All in all, their salesrooms and warerooms are well worth seeing, even by those interested only as sightseers.

## LAND

## WORTH LOOKING AFTER

—AND—

## Likely to Double in Price Soon.

## FINE VINEYARD CHOICE FRUIT RARE RAISIN AND ALFALFA

## LAND

## EXAMINE THIS RARE CHANCE.

A well-cultivated farm of 160 acres, with miles of fencing and cross fencing, good improvements, 7-room, two-story, hard-finished house, nearly new, plenty shade trees, large barn, blacksmith shop, milk house, grain house and other outbuildings; 7 acres of bearing orchard; 20 acres of alfalfa; large flowing artesian well of splendid water, and first-class surface wells of water; pleasantly located 7 miles from Tulare City; is offered for sale at about cost of improvements, on easy terms, by the owner, who is engaged in other business. Land sold, in lots, without improvements, at \$25 per acre. The readers of this journal are assured that this chance is worth looking after. Parties in San Francisco who know the property can be referred to. Some adjoining land can be secured at favorable rates if desired.

Address E. M. DEWEY, Porterville, Tulare Co., or A. T. DEWEY, 220 Market St., S. F.

## New Books for Horticulturists.

**A New Book on Propagation of Plants.**—"THE NURSERY BOOK," by Prof. L. H. Bailey, Editor of *The American Gardener*, has been prepared with the utmost pains. The book is absolutely devoid of theory and speculation. It has nothing to do with plant physiology, nor with any abstruse reasons of plant growth. It simply tells plainly and briefly what every one who sows a seed, makes a cutting, sets a graft, or crosses a flower wants to know. It is entirely new and original in method and matter. The cuts number almost 100, and are made especially for it, direct from nature. The book treats of all kinds of cultivated plants, fruits, vegetables, greenhouse plants, hardy herbs, ornamental trees and shrubs, and forest trees. A "nursery list" is the great feature of the book. It is an alphabetical list of over 2000 plants, with a short statement with each, telling which of the operations described in the first five chapters are employed in propagating them. About 300 pages, 16mo. Price, in library style, cloth, wide margins, \$1; pocket style, paper, narrow margins, .50 cts.

**The New Potato Culture**, by Elbert S. Carman, Editor of the *Rural New Yorker*. For the past 15 years the author has given a part of his time to potato experimentation, in the hopes that he might throw some additional light upon the various questions involved in the central problem, "How to increase the yield without proportionately increasing the cost of production." The object of Mr. Carman's book is to show all who raise potatoes, whether for home use solely or for market as well, that the yield may be increased three-fold without a corresponding increase in the cost; to show that the little garden patch, of a fortieth of an acre perhaps, may just as well yield ten bushels as three bushels; to induce farmers and gardeners to experiment with fertilizers, not only as to kind, that is to say, the constituents and their most effective proportions, but as to the most economical quantity to use. Price, cloth, 75 cts.; paper, .40 cts.

Address DEWEY & CO.,  
220 Market Street, San Francisco, Cal.

## Treatise on the Horse and His Diseases.

By B. J. KENDALL, M. D.

35 Fine Engravings showing the positions and actions of sick horses. Gives the cause, symptoms and best treatment of diseases. Has a table giving the doses, effects and antidotes of all the principal medicines used for the horse, and a few pages on the action and uses of medicines. Rules for telling the age of a horse, with a fine engraving showing the appearance of the teeth at each year. It is printed on fine paper and has nearly 100 pages, 7x5 inches. Price, only 25 cents, or five for \$1, on receipt of which we will send by mail to any address.

DEWEY & CO.,  
220 Market St., S. F.

THE "TRIUMPH"

The Best Pulverizer in the World.

ALL METAL SPADING HARROW.

HORTICULTURISTS AND FARMERS, TRY IT.

JUST THE THING FOR WORKING SUMMER FALLOW LAND.

SPECIALLY ADAPTED FOR ORCHARDS AND VINEYARDS.

FOR TWO HORSES. Works the soil about six feet wide. Angle of teeth adjustable to work the soil at desired depth. THIS HARROW is something entirely new. IT IS THE GRANDEST ACHIEVEMENT of its inventor, C. LA DOW, who is the recognized authority on Harrows, there being but few leading harrows at the present time not built under his patents. We have made exclusive arrangements for its sale and it can be obtained only through us or our agents.

THE NAME "SPADING" refers to its action on the soil. The action of each cutter is like that of a small spade, lifting and turning the soil from a depth of four to six inches, doing more perfect work than is possible with any other harrow in the world.

THE BLADES are made from spring steel, in operation vibrating and shaking off sticky soil. IT NEEDS NO SCRAPERS to clean the revolving cutters.

Considering the immense amount of labor done, the draft is very light, as the pulverized soil passes through the gangs of revolving cutters, being left smooth. THE GANGS are so arranged that the most uneven ground is thoroughly harrowed and left level. It leaves NO FURROW or ridge; when the field is harrowed it is all left smooth. 10, 12 and 14-ft. sizes in stock. SEND FOR CIRCULAR.

TESTIMONIALS.

H. C. SHAW PLOW WORKS, Stockton, Cal.—DEAR SIR: Your Triumph Spading Harrow is all that is claimed for it. It is the most perfect pulverizer I ever used in my orchard and is not wearing or exhausting on the team. Yours truly,

HAYWARDS, CAL., Jan. 15, 1891.  
WILLIAM C. BLACKWOOD.

SANTA ANA, CAL., Jan. 16, 1891.  
The man using the Triumph Spading Harrow we bought of you, writes us as follows: "The Spading Harrow is all that could be wished. In one hard work it can be run nearer to the trees than any other kind, and does away with hand hoeing to finish with. I have also used it to harrow new soil, and it is first-class for that. It takes nine days only with one span of horses to harrow my orchard of over 100 acres, and does it better than with any other cultivator I have ever seen.—DWIGHT WHITING, El Toro, Cal." Yours truly,

SAN FRANCISCO, CAL., Jan. 16, 1891.  
The gentleman using the Triumph Spading Harrow we bought from you for him writes us as follows: "That the Triumph Spading Harrow is in fact a triumph over all the harrows I have ever used. The first trial I made was on a 30-acre field sowed with barley; 15 acres were harrowed with the Triumph in one day as perfect as it is possible to be. The other 15 acres I harrowed with a common harrow and it took me three days, and then it was not in as good condition as that harrowed with the Triumph. The Triumph does splendid work and as a harrow I consider it worth three times as much as the ordinary harrow, as well in the field as in the orchard and vineyard. It is a perfect pulverizer and weeder.—C. STROEBEL, Eagle Home Farm, Searsville, Cal." Yours Truly,

COLMENA ORANGE GROVE; Capital Stock, \$100,000; A. F. ABBOTT, Pres.; G. W. PEACOCK, Treas.; E. P. McDANIEL, Sec. MARYSVILLE, Yuba Co., Cal., Jan. 20, 1891.

Messrs. H. C. SHAW PLOW WORKS, Stockton, Cal.—GENTLEMEN: Enclosed find check for payment of your bill for Spading Harrow sold to me by Mr. Hill. I shall take pleasure in recommending it to my friends, and think the Triumph will have a large sale in this locality. I am pleased to say to you that the machine is a most excellent one for cultivating the ground and pulverizing it in good shape. For an all-round useful machine, I feel sure any one buying it will appreciate its value. Yours truly,

TESTIMONIALS.

CHAMBERS OF THE JUDGE OF THE SUPERIOR COURT, JOHN C. GRAY, JUDGE. }  
OROVILLE, BUTTE CO., CAL., Jan. 27, 1891. }  
H. C. SHAW, Esq., Stockton, Cal.—DEAR SIR: I purchased from your Agent, Mr. Hill, one six-foot Triumph Spading Harrow, and sent the same out to my olive farm to try. My foreman declares that it will do the work of four plow teams, and requests me to get another to put into the field by the first of March. He is highly delighted with it and calls it the greatest improvement in farm machinery he has yet seen. Instead of putting a number of teams into the field to plow and then harrow the ground, I shall go over it with the Spading Harrow twice and the work will be more thoroughly done, and at one-third of the expense. This is one of the most complete pieces of farming machinery that I have yet seen, and I cheerfully recommend it to those, who, like me, want the most and best work done for the money. It gives entire satisfaction. Yours truly,

JOHN C. GRAY.

WALNUT GROVE, CAL., Feb. 21, 1891.

H. C. SHAW PLOW WORKS Stockton, Cal.—DEAR SIR: The Spading Harrow arrived all right and gives perfect satisfaction. I put it on a piece of very rough sod that had been used for pasture for several years, and when it was plowed it was as rough as it was possible to make it. I also had one of the leading Disc Harrows (6-foot) side by side with the Spading Harrow, and we gave them a thorough test, and it was conceded by all present (and there were five or six present) that it was the best thing in the way of a rolling harrow they had ever seen. It did better work and the draft was at least one-third less than in the Disc Harrow, and when we were through the man who owned the Disc Harrow said he wished he did not own it, as he would buy one of the Triumph Spading Harrows. Yours truly,

L. D. GREEN.

BAKERSFIELD, CAL., Jan. 26, 1891.

H. C. SHAW PLOW WORKS, Stockton, Cal.—DEAR SIR: After using your Spading Harrow in all kinds of work, I will say it is the best pulverizer that I have ever seen. I used it to cultivate my orchard and vineyard, and it does not only cut up all weeds, but leaves the roots up to the sun, which is sure death to them. You may praise it as high as you like, as you cannot say anything it does not deserve. Yours respectfully,

C. A. MAUL.

LOS ALISOS RANCH, EL TORO, ORANGE CO., Jan. 25, 1891.

Messrs. H. C. SHAW & Co., Stockton, Cal.—GENTLEMEN: The six-foot Spading Harrow which I purchased through Messrs. Nichols & Ulm of Santa Ana has given much satisfaction, and it does its work thoroughly and quickly. I have given my orchard several harrowings to keep down weeds, and with one pair of 1200-pound mares I harrow 8 to 11 acres per day. You can get nearer to trees than with any other rotary harrow I ever saw used. I have also used the harrow for seeding barley and for fallow land, and I consider it the best machine in use, as for a lump or clod breaker and an orchard evenner it does its work better than any harrow I have ever used. Yours truly,

DWIGHT WHITING.

EUREKA, HUMBOLDT CO., CAL., Feb. 17 1891.

Messrs. H. C. SHAW PLOW WORKS, Stockton, Cal.—DEAR SIR: We would have written sooner in relation to the Triumph Spading Harrow, but we have been waiting for the foreman's report on the Harrow's work. He says it is a "daisy" and beats anything he ever saw. Send us another at once, and oblige, Respectfully yours,

H. H. BUNNE & CO.

PIXLEY, CAL., Jan. 12, 1891.

Messrs. H. C. SHAW PLOW WORKS, Stockton, Cal.—DEAR SIR: Regarding the Triumph Spading Harrow would state that we are satisfied it is as light draft as any, and lighter than the average cultivator of its kind, and, as to its work, we think it cannot be beat. Yours truly,

PIXLEY COMMERCIAL CO.,  
By L. E. SMITH, Secretary.

## DOMESTIC ECONOMY.

## Hints on Dishwashing

[Written for the RURAL PRESS by Mrs. CARRIE ROBINSON.]

In so common an operation as dishwashing there is a "best way," which if carefully insisted on will assist greatly in the labor of doing this work, and greatly add to the appearance and the safety of the table furniture:

The first requirements for this work, are two large dishpans, plenty of suitable dish-wipers and a variety of dishcloths, among which we will place the iron one, which is a collection of iron rings, for the washing of kettles, etc., and the little flat brush made of the stiff wood fibre, like the scrubbing brushes. Add to these, a bar of good soap, a package of pearlina, and when you have a good supply of water heated, you are as ready as possible to begin business.

All dishes having been once washed in the first pan, with soap and hot water should be placed right side up in the rinsing pan, and boiling water poured upon them, and immediately wiped, while as hot as can be handled, and as soon as wiped, put in their places, be it in cupboard, or returned to the table, which has been prepared for them.

The glassware, is the exception, in regard to the hot water shower bath. This should be washed first of all. The drinking glasses, should be held in the fingers one at a time, given a sideways dip, a quick roll, and each one wiped on a dry, clean linen towel at once, and it will shine like a jewel. When all are done, put away in their proper place, and all danger of accidents are avoided. Take care that you do not have too much soap in the water for the glass, as it makes it harder to wipe them, and is not called for. Other glassware should be held in the hand and the hot water applied with the dishcloth that the heat may be even. If care is taken there will seldom be breakage of even the most dainty glassware, but never set these dishes into hot water, or pour hot water into them even in the warmest day.

The same plan followed with delicate china is very wise, though this will stand a little more heat than glass; but upon this you should never pour boiling water, for china is too precious to run risks on. It does seem as though it was unnecessary to give such directions as these, but it was only one day last week that I rescued two glasses from the dishpan just as the uplifted tea-kettle was about to disgorge its contents upon them and the thermometer was below zero; yet the girl who poised the kettle was supposed to have common sense.

Silver also should be washed with very hot water and a little baking soda used instead of soap, and should be wiped very dry while hot. This will save the need of polishing often, and then a few rubs of the chamolite skin and a little whitening will accomplish what is necessary. Should silver be discolored from the use of eggs, prepared chalk will quickly remove it. A small bristle brush should always be kept at hand to clean the chasing or raised work on silver. These are prepared for the purpose, and should be kept handy in your box of whitening prepared chalk.

Wash the cups and saucers next, followed by the cleanest of the side or vegetable dishes. If plates and platters are well scraped, the need of frequent changes of water will be avoided and greater comfort secured in the operation of washing.

In preparing your wiping towels, some of them should be made of the "glass linen," so called. This is white with red or blue hars, and soft from the first. There is also a variety of crash, which is called "Russia Crash," which is pretty soft when new, and which washes easy. Don't be beguiled into buying the ordinary brown toweling for any use about dishes, for you will find it a vexation of spirit and a tiresome waiting for the stuff to "break down" to business. Rather than use this, I would take a coarse grade of cheesecloth or of unbleached cotton flannel. Always hem your dishcloths as much as the wipers, and have them washed in the weekly wash the same as other towels; if you must use a rag let it be only for the outside of the saucepans and kettles, and these burn, after, and take a fresh one. Use your fine, or "glass linen" dishcloth only on the fine dishes, replace with one made of crash, and this again when you come to the iron utensil, with one for the purpose, as the outside of these will leave stains upon the cloth that you will not want afterward in your first dish-washer. Always scald and wipe your cooking utensils, and dry them perfectly on the stove before putting them away, or you will find rust or a thin film upon them next time you use them and a reminiscence of the dinner the day before, when you dish up the second day's meal. Perfect cleanliness of cooking utensils goes far toward making the flavor of the dish. Fine and perfect fitting covers to the cooking utensils is a great facility in cooking as well as economy of fuel.

When the dinner is dished, put water into each cooking dish and put on the cover. The condensing steam will soften all the particles of food left clinging to them, and save much time, patience and temper. When haking, if a pan of good suds is set handy, when done with a dish, you drop it at once into this water, and when ready to wash your dishes, set for a few moments upon the stove to make the water suitably hot, and you will be surprised to see how much easier that dreaded job of washing up the haking dishes will be. The baking-

board should always be carefully scraped before washing. This also lessens the disagreeable work.

When all your dishes are well done, never fail to wash your dishcloths perfectly, and hang, if possible, to dry out of doors; if not, spread or hang up in good shape; never squeeze them out in a wad, and just throw into the dishpan, or stick in a wad on a nail behind the stove to sour and get musty, as I have seen done by some who thought themselves good housekeepers. If you have not in abundance of dish-wipers, wash and scald these also, and hang out of doors to dry; but I think so great an economy of time and labor to have plenty of these, that none will neglect it, and it is hard to wash them properly in the small way one must in a dishpan. As haking the stove is one of the things which naturally comes at the same time, or following the washing of the dishes, let me urge that for this purpose you have the proper brushes—a large, coarse paint-brush to lay the blacking on with, and the very best fiber brush you can obtain, with a handle like a scrubbing-brush, or rub the blacking "down" with. With these you will be able to keep your hands from contact with the blacking. Be sure to hake your stove before you wash out your dishcloths, as this operation will probably remove what blacking may have been intrusive enough to have crept around your finger-nails.

Immediately after the dish-washing is the proper time for the cleaning of the lamps, which should be done with the greatest care, as a large portion of the comfort of the family depends on good light in the evening. The chimneys, if smoked, should first be brushed out with the ordinary swab-brush, or lacking this, one made by tying short strips of thick cotton cloth on a stick until a little mop is made; use this dry, then hold the chimney over the steam of the tea-kettle, and wipe dry with a clean cloth. Old sheets and pillow-cases make excellent chimney towels. Clean all the chimneys first, then take your lamps where if you spill a little oil it will do no harm, or set them on a newspaper, remove the burners with the wicks from the lamps, and fill all the lamps, then put the oil away, return your burners to the lamps and screw down tight. Make a point of this, as serious accidents have happened from a little carelessness at this point; turn the wicks up so that the burner part is even with top edge of the brass cap, and trim perfectly with sharp shears. I emphasize sharp because it is too frequently the case that the shears devoted to the lamps are dull as a hoe, and to try to make a clean cut with these is out of the question—a little thread left, or a crook in edge of the wick will spoil the flame, and prove an annoyance for a whole evening to the one who uses it, if it does not break a chimney before bed-time. When you have the wicks perfectly trimmed, be sure to turn the wicks down below the top of the tube which holds the wick. By doing this you avoid the probability of finding your lamps dripping with oil when you take them down to light for the evening's use. If the wicks are left above the top of this tube, it will draw the oil from the lamp and distribute it over the outside.

Now, girls, you cannot be too particular about lamps. If you have gentlemen callers, for instance, in the evening, and your room is not well lighted, you may be sure it will be noted, and whether you think it or no, you will be held accountable; I know a lady whose "fortune," so to speak, came from the fact of her always having her lamps well trimmed, which first attracted the attention of a very "eligible party," who from this first good impression, pursued her acquaintance, and at length married.

## TO SUCCEED IN THE DAIRY.

Good cows are essential. Perfect cleanliness is necessary. But nothing is of greater importance than the use of a good color. Wells, Richardson & Co.'s Improved is guaranteed the strongest and most natural. It has been improved recently, and is now far ahead of all other colors. The largest butter buyers urge their customers to use this color, for it is sweet, pure, and its use can never be detected.

Don't allow your dealer to sell you any butter color but Wells, Richardson & Co.'s Improved. Tell him the size is what you want and you must have the Improved. It excels in strength, purity and brightness, never turns rancid, always gives a natural June color, and will not color the butter milk. Thousands of the best creameries and dairies use it.

PAPER HORSESHOES.—There seems to be a great interest in seeking for the best material out of which to make horseshoes. The latest application is paper, which, it is said, will never become smooth or slippery. The shoe, it is said, is simply glued to the foot by some substance which is not affected by water. The shoe is cut out of a plate of papier mache, made as solid as metal by great hydraulic pressure.

## MAPLE GROVE STOCK FARM.

L. W. Green, Indianapolis, Ill., writes: "Send me one more bottle Quinn's Ointment. It does more than represented." For Cuts, Splints, Spavins, Windpuffs, Bunches, unequalled. Trial box, 25 cents, silver or stamps. Regular size, \$1.50 delivered. Address W. B. Eddy & Co., Whitehall, N. Y.

To make paper stick to a wall that has been whitewashed, wash the wall with vinegar water.

Use "Dead Lock" Gopher Traps. They are the best. See advertisement in this paper.

## TO SHIPPERS!

## California Ventilated Barrel

EXCELS ALL OTHERS!

IT IS LIGHTER, STRONGER, MORE DURABLE AND BETTER VENTILATED THAN ANY OTHER BARREL.

This engraving of the CALIFORNIA VENTILATED BARREL makes plain to the practical shipper its points of superiority over the common barrel, which may be enumerated as follows:

It weighs from five to seven pounds less than the ordinary barrel, making a material saving in freight charges.

It costs less than one-half for trimming, and does not require an experienced hand to cooper it.

It is the only thoroughly ventilated barrel made, a very important point.

The heads are warranted not to come out in transit, and no liners are required.

It is stronger and more durable than any other barrel. Never varies in size, even to the extent of a quart.

— ALTOGETHER MAKING IT —

The Cheapest and Best Barrel on the Market.

It is Made of the Best Quality of Spruce, Woven Together with Copper Wire, And can be furnished in any size desired.

THE CALIFORNIA BARREL IS ADAPTED TO SHIPPING THE FOLLOWING ARTICLES:

Apples,  
Oranges,  
Onions,  
Potatoes,

Sweet Potatoes,  
Dried Meats,  
Bottled Goods,

Glassware,  
Canned Meats,  
Crockery,

Eggs,  
Poultry,  
Walnuts,  
Almonds,

And Vegetables of All Descriptions.

A factory making these barrels is now in operation in San Francisco, with a capacity of 4000 barrels a day. The success of the barrel is almost unprecedented, and it is bound to become the package in a very short time. EVERY ONE USING IT IS ENTHUSIASTIC IN ITS PRAISE. IT HASN'T A FAULT. When shipped in knock-down form, about 2500 barrels can be placed in a single car. Special rates given on car lots. WRITE FOR PRICES AND PARTICULARS.

## Cotton in California.

That the owners of the California Cotton Mills at Twenty-third avenue have spent several thousand dollars and a great deal of energy trying to induce the farmers of California to grow cotton is a fact not universally known, but nevertheless it is a fact. The degree of success of their efforts was ascertained by an Enquirer reporter in an interview with William Rutherford, superintendent of the cotton mills.

Mr. Rutherford said that they were now using a small amount of California-grown cotton in the manufacture of a certain class of articles. Its use is not large, from the mere fact that it is not grown extensively and consequently cannot be obtained.

Realizing that the best quality of cotton can be grown successfully in California, as has been determined by experiments, the California Cotton Mills made a persistent effort to interest the farmers of California in the raising of the useful product. Thousands of pamphlets were printed, which were sent to all who contemplated trying cotton as a crop, or who might be induced to give it a trial. One pamphlet on "Cotton versus Wheat" showed the advantage to the individual and to the state from the production of cotton. The other treated on "Cotton Culture in California," and gave explicit directions for the growth of the plant.

In addition to issuing these pamphlets, tons of seed were distributed gratis to all the farmers who applied. Seed has been distributed, and is distributed yet, to farmers all over California, but Mr. Rutherford does not believe the results justify the effort, and he has few hopes of ever seeing California become one of the cotton-raising States of the Union.

Superintendent Rutherford is receiving most of his California-grown cotton from the southern part of the State. The largest plantations are in San Bernardino county, and the largest growers are G. A. Chandler, Lea K. Mball and Crawford. The combined cotton crop of California is but a drop in a bucket compared to the enormous consumption of the California Cotton Mills, but Mr. Rutherford pronounces the California-grown cotton of the very finest quality. Requests for seeds and instructions are received by Mr. Rutherford daily from all parts of the State. A number of communications are received from farmers in San Mateo county and elsewhere, asking for seed and expressing the belief that cotton can be grown there with great profit.

The large amount of cotton consumed yearly at the California Cotton Mills comes principally from Texas, India and Tahiti. From the latter place is obtained the best sea island cotton grown in the world.

That cotton can be grown to advantage and with great profit, and that the lands of California are peculiarly adapted to its growth is shown in the pamphlet on "Cotton vs. Wheat," issued by the California Cotton Mills. Under the head of "The importance of cotton culture to Texas," it says:

"The cotton crop of Texas this year, 1889, shows a great increase over that of any previous one, and it is generally admitted cannot fall far short of 2,000,000 bales of 500 pounds each, worth, if we include seed, \$100,000,000, a sum which is equal in amount to the value of all the wheat, barley, fruit, wine, lumber, gold and silver produced in California last year. This vast crop is raised on less than 4,000,000 acres of land; an area not much greater than twice that of Colusa county. To move this crop of cotton it would require 1660 trains of 30 loaded cars each, and to carry the seed to the oil mills would require 100,000 cars, loaded 10 tons to the car, a quantity of seed equal in weight to the entire average surplus wheat crop of California. Texas is not more thickly populated than California, and yet little difficulty is experienced in harvesting this immense cotton crop. Such a showing for one staple product cannot fail to tell on the material prosperity of the people. The people of Texas owe but a small amount of mortgage indebtedness, only \$20,000,000. Let the farmers of California give these facts and figures due consideration, and this question of cotton culture that attention it deserves, and it cannot fail in beneficial results to all concerned.

"There are vast tracks of land in California, much of it almost unoccupied, capable of producing cotton equal to anything grown in Texas."—Oakland Enquirer.

## The Stanford University.

Dr. Jordan has completed his arrangements for the appointment of the Faculty for the Stanford University, and has made the following names public:

Dr. Andrew White, ex-president of Cornell University, to be non-resident professor of history.

F. Stanford, Lake Forest University, associate professor of physics.

Horace B. Gile, Washington University, St. Louis, professor of mechanical engineering.

Professor Joseph Swain, Indiana University, associate professor of mathematics.

Douglas H. Campbell, Indiana University, associate professor of botany.

## THE DAIRY.

## Calf Rearing.

Prof. W. A. Henry gives the *Live Stock Gazette* the following notes on raising calves for milking cows or beef:

On the range of course the calves run with the cows, and there the question is a simple one. Upon the cheaper farming lands of the West a good cow by a little careful management will bring up two or three calves, and where labor is high this is probably as economical a system as any. Farther east, where lands are assessed at high figures and where the art of butter-making is well understood, few farmers can be found who are willing to follow the simpler methods of the West. In such districts, if the calf lives on full milk for a few weeks it may thank its lucky stars while reveling in that luxury. The common practice is to wean the calf as soon as it has relieved the mother of the colostrum milk, that is, within two or three days from the time it is dropped. When taken from the mother place the calf where it is quiet, and where the mother cannot hear it "bleat." Do not attempt to feed until it is hungry, when it usually can be readily taught to drink milk by use of the fingers in the mouth. Much of the trouble of breaking calves to drink comes from trying to feed them when they are not hungry. If a calf will not soon learn to drink the milk better get it out of the way at once, for such animals are usually unsatisfactory later on. Start with full milk, taking care to have it of the natural warmth and not feeding too much. Two quarts three times a day are ample for the beginning, increasing gradually. After two or three weeks substitute sweet skim-milk for part of the full milk, and gradually make the change. Calves can be reared entirely upon skim-milk after they are three weeks old, and grown into fine dairy animals.

The greatest trouble in using skim-milk is that it is fed in excessive amounts, being considered cheap food and being fed cold. We must not expect a calf to thrive that drinks several quarts of cold milk two or three times a day. The feeder should use a thermometer and warm the milk to 100 degrees; this is easiest done by pouring in sufficient very hot water to raise the temperature the required amount. A better way is to use the hot water in making a gruel of a little oil-oake and then pouring in the milk. A tablespoonful of oil-oake made into gruel each meal per calf is ample to start with, increasing according to the requirements and age of the animal.

Scorning is the common trouble with feeding skim milk. This is due to feeding too much, feeding too cold, or feeding at irregular periods. As soon as detected reduce the amount of feed at once, putting the animal on short rations. If the trouble continues, give strong coffee or use parched flour or eggs. If possible at once move the patient to other quarters. The change is often a great benefit. Avoid the trouble by carefully regulating the amount of feed, giving the milk at blood heat and at regular periods. Place an inverted sod where the calf can get its nose into the fresh earth and eat what it wants.

Teach the calves early to eat grain by placing a handful of whole or ground oats in the mouth immediately after it is through drinking at the pail and when it is eager for something to suck. At first it will spit out the oats, but after a few days it will begin to chew them, when a handful may be placed in the feeding box. Place no more feed before the calf than it will eat up clean soon after being fed. Great care should be taken that nothing remain over from one feed to another to be tainted and rendered unpalatable. But very little feed will be consumed at first, and only a very small amount should be given.

Under the system I have described grade Jersey calves usually gain with us a pound and a half a day. We have pure-bred Jerseys and Shorthorns that have gained two pounds a day for a considerable period.

After suffering horribly for years from scrofula in its worst form, a young son of Mr. R. L. King, 706 Franklin St., Richmond, Va., was recently cured by the use of Ayer's Sarsaparilla. No other medicine can approach this preparation as a cleanser of the blood.

WITH  
TILTING  
BAR.

This Reaper is not only effective in good standing grain, but in the worst crops of kind it will save where other reapers cannot work.

Is the lightest-weight Reaper in the world, yet the strongest, and is often available where land is too rough for others.

The broad sweep of the rakes delivers the grain so well that men can bind after it better and faster than after many other side-delivery reapers.

The driver has perfect command of the machine without turning his head from the team. With the levers he can adjust the height of the machine or tilt it to any angle independently or regulate the size of the gavel by setting a lever.

LIGHT ENCLOSED GEAR REAPER.

THE GEARING is compactly enclosed in a dust-proof box and has the motion for heavy cutting and light draft.

THE UNEQUALLED HEIGHT TO WHICH THE BAR AND DROOP FRAME CAN BE RAISED permits passing obstacles, whether under the bar or between the wheels, which would otherwise have to be driven around.

The Mower combines Great Strength with Lightness of Draft. **HIGH WHEELS, WIDE TREAD, IMPROVED PITMAN.**

LIVERMORE, CAL., April 22, 1889.

FRANK BROTHERS, San Francisco:—We sold a Mower to-day to a man who had three acres of fox tail and clover that he couldn't cut with a mower. He had to back up and clean out every 50 yards, so gave it up and came to town looking for some one to give him a mower on trial, on condition that if the mower did the work he would buy it; so we took a 4 ft. 3 in. Wood's, and put his team that only weighed 1800 pounds together, and they cut it as easy as though they were going on the road. While cutting it there were several farmers on the ground, and they all said the "Wood's" was the Boss, and the lightness of draft beat them, for they thought there was no machine that would cut the fox tail. I have sold six different kinds of machines and I must say that the "Wood's" beats them in every respect.

N. D. DUTCHER.

# WALTER A. WOOD SELF-DUMP RAKES.

THREE SIZES: 8-FOOT, 10-FOOT AND 12-FOOT.

OPERATED BY ANY ONE WHO CAN DRIVE.

The Walter A. Wood Rake is both a self-dump and a hand-dump, though generally operated as a self-dump. A light touch of either foot of the driver causes it to dump and resume raking without noise or jar and without skipping any hay.

Steel Wheels of the Best Design ever used on a Rake. Steel Axles.

The Rake is strong, free from dead-lock, neck-galling, side-jerk, dirt-scratching and liability to breakage. If desired, an attachment is furnished so the shafts on this 8 foot Rake can be quickly changed to a pole for using the mower team in place of bringing out a single horse. Seat is instantly changeable to accommodate a man or child.

— ADDRESS —

FRANK BROTHERS, | WALTER A. WOOD, President,  
33 & 35 Main St., SAN FRANCISCO, CAL. | 68 Front St., PORTLAND, OR.

Machines and Repairs to be had at all principal points.

B. HAYMAN, Los Angeles; KILGORE & CO., Sacramento; JAS. PORTEOUS, Fresno, Etc., Etc.

# The Harvest Queen COMBINED HARVESTER.

The Lightest Draft Harvester in the Market.

ENDORSED BY ALL FARMERS AND RANCHERS. SATISFACTION  
GUARANTEED. NONE EVER RETURNED.

## POINTS OF MERIT:

FIRST—Having two pivot wheels on the ground enables it to turn square corners like a mowing machine.  
SECOND—All of the frame work about this cylinder is the best of oak lined with sheet steel and put on with screws. Other parts built of the best of material and painted inside and out.  
THIRD—The driver is NOT isolated by a ladder from the machine, but is safely seated on the separator where he can hear and see the working of the machine and drive to suit.  
FOURTH—The new cleaner put on last season works perfectly.  
FIFTH—The machine is so geared that the cleaner, separator or header can be started independently of each other.  
SIXTH—The header is portable. By the use of our supplemental truck we can pass a 16-foot header through a 12-foot gate.  
SEVENTH—The shaftings are all made of steel.

SIZES, 10 TO 16 FEET.

Send for Price List.

With all our Machines we furnish Straw Dump and Header Truck separate from Machine. Machines delivered on board cars or boat.

## Death of Dr. O. C. Wheeler.

On Thursday, April 16th, there died in Oakland, Rev. Osgood Olinch Wheeler, D. D., L. L. D., probably one of the best known, personally and by reputation, pioneers of this State. His long residence in California and the many beneficent enterprises which marked his unselfish, active life endeared him to all classes, and made his name a household word.

He was born in the township of Walcott (now Butler), Wayne Co., N. Y., on March 13, 1816, being the tenth of a family of twelve children. His early educational opportunities were exceedingly limited, but on leaving home at the age of 21, he resolved to make it his first business to obtain the most thorough education the schools could afford, which was certainly a daring aim considering the fact that he had but 37½ cents in money and one suit of clothes, and was suffering from ill health. That he made good his resolution is evidenced by the fact that he worked his way through an eight-year course at Madison University, graduating with high honors from both the college proper and the theological seminary, and was married and settled as a pastor before the age of 30.

Mr. Wheeler's first pastorate was at East Greenwich, Rhode Island, where he was ordained and became the first pastor of the Baptist Church in that town. He was very successful here, remaining until called to a larger field of labor in Jersey City, and while at the latter place he was requested by the Baptist Home Missionary Society to go as its pioneer missionary to California. He yielded to this call upon his energies after some reluctance, and on the first day of December, 1848, left New York on the steamer Falcon bound for Yerba Buena. This was three days before the publication of the fact that gold had been discovered.

He arrived at the Chagres river in 19 days, thence to Cruces in a dug-out, thence to Panama on a mule and thence to San Francisco on the steamer California, arriving there February 23, 1849. Dr. Wheeler, after a brief survey, arranged to hold religious services and organize a Sunday-school in the dwelling of C. L. Ross, there being at that time no church edifice in San Francisco. When the hour arrived for Sunday-school, but one child put in an appearance—the little son of the late Gov. Geary of Pennsylvania. For four Sundays there was the solitary pupil and two teachers, and finally Mr. Ross advised the abandonment of the attempt, especially as there were only about half a dozen people who attended the sermons. Dr. Wheeler persisted, however, and in a few weeks he had organized a church of six members; and in July, 1849, he bought a lot on Washington street for \$10,000, cleared off the chaparral and, being himself possessed of no little skill as a mechanic, commenced with his own hands the erection of the first Protestant church in California, which he completed and dedicated in 22 working days. The structure was 50 feet in length by 30 in width, framed of 3x4 scantlings, with 12 posts and covered with cast-off sails of vessels that had been abandoned in the harbor. It cost \$6000.

At the request of Mr. John C. Pelton, a Massachusetts teacher of experience, Dr. Wheeler donated the free use of the church for a school, and there was started the first public school on the Pacific Coast.

During the summer and autumn large numbers of Colonel Stevenson's volunteers and others were taken seriously ill, but found careful nurses in the doctor and his wife. In recognition of these services Col. Stevenson subsequently presented him with a letter of thanks and a handsome gold watch and chain.

Dr. Wheeler, from a stand erected in the plaza, delivered the first Fourth of July oration ever delivered upon the soil of California. Thousands gathered to hear him, and the effort gave such satisfaction that it was printed at the public expense, and is still looked upon as one of the gems of California oratory. His fame as a speaker spread, and he was called upon on every occasion to display his talent.

In 1852 he removed to Sacramento where he took charge of the church and edited the first religious paper of his denomination on the coast, his first year's experience costing him \$3000. In 1854 he was elected secretary of the State Agricultural Society, and again in 1856.

In 1863 he was appointed unexpectedly Collector of Internal Revenue for the Fourth California District, and while engaged in that work he was called upon to go to San Francisco to take charge of the United States Sanitary Commission on this coast. Within ten months he had organized 375 "Soldiers' Aid Societies," and from these sources had collected and forwarded to the Commission in New York \$197,000.

THE LATE DR. O. C. WHEELER.

In 1869 his wife died, and this so prostrated him that for a time his own life was despaired of, but he finally regained his health and in 1871 he accepted the invitation of the Central Pacific Railroad Company to organize and build up their work in the baggage department and achieved great success.

In April, 1871, Dr. Wheeler married his second wife, Miss Ellen R. Frisbie of Quincy, Ill.

Dr. Wheeler early identified himself with the Masonic order, passing through all the departments, including those of Knights Templar and the "Egyptian Masonic Rite of Memphis," 95 degrees, and appointed in nearly all "stations" and "chairs."

In May, 1879, California College conferred upon him, in view of his eminent learning and ability in the department of theology, the honorary degree of D. D., and in July of the same year the University of Jackson, Tenn., conferred on him the honorary degree of LL. D.

In mental labor he was a man of wonderful endurance, and after office hours and work he was regularly in his library from 7 to 12 P. M., working often 16 hours a day. He was very thorough in research, as shown in his lectures on "Music," "Libraries," "Masonry," etc.

As a manager he was respected by those from whom he exerted the most rigid compliance with his rules, while as a presiding officer he was noted for his promptness, decision and urbanity.

In the temperance field Dr. Wheeler was always an active worker, and held many of the highest positions in the organizations to which he belonged.

**MATCH-MAKING MACHINERY.**—Ingenious machines for the various operations of manufacturing matches have been in use in Scandinavia for some time, and more are expected. Machines for packing the matches have recently been introduced, one of these—the invention of two young Norwegian engineers—having a capacity of 1000 boxes per minute.

**HOW THE MUSKRAT BREATHES UNDER ICE.**—Animals that breathe by means of lungs can prolong their stay under water only through special anatomical arrangements, or by having recourse to some extraneous means. Mr. W. Spoon of the Elsieha Mitchell Society, who has hunted the muskrat in winter, asserts that the animal, when obliged to traverse, under ice, a

pond so wide that it cannot keep up its breathing, stops from time to time and exhales the air from its lungs. This air, being confined by the ice, becomes oxygenated in contact with the water, and the animal, taking a fresh inspiration, dives in order to begin its swimming again a little further along. It appears that other observers have found that if this air is dispersed through the ice being struck, the animal is killed through asphyxia.

## THE STOCK YARD.

## Law Creating a Lien for Services of a Sire.

**SECTION 1.** Any owner or person having in charge a stallion, jack, or bull, used for propagating purposes, shall have a lien for the agreed price for the service of such stallion, jack, or bull, upon any mare or cow served for pay by any such stallion, jack, or bull, and upon the offspring of such service; provided, that the owner or person having in charge such stallion, jack, or bull, shall, within 90 days after such service, file in the office of the County Recorder of the county where such mare or cow is served or kept, a verified claim containing a particular description of the mare or cow so served, the date and place of serving, the name of the owner or reputed owner of the mare or cow so served, a proper description, by name or otherwise, of the stallion, or jack, or bull, performing such service, the name of the owner or person in charge thereof, and the amount of the lien claimed, which claim, when filed as aforesaid, shall operate as notice to subsequent purchasers and incumbrancers of such mare or cow, for the term of one year from the date of the filing of such claim; and provided, that any willfully false representations concerning the breeding or pedigree of such stallion, jack, or bull, made or published by the owner or person in charge of such stallion, jack, or bull, or by any one else at the request or instigation of such owner or person in charge, shall invalidate any lien claimed under or by virtue of the provisions of this Act.

**SEC. 2.** Suit to foreclose any lien created hereunder may be brought in any county where said mare, cow, or offspring from such service may be found, and the plaintiff, at the time of issuing summons, or at any time afterward

prior to the rendition of judgment therein, may have the mare or cow upon which said lien subsists, and the said offspring, attached as further security for the payment of any judgment he may recover, unless the defendant or person in possession of such mare, cow, or offspring, give him good and sufficient security to pay such judgment, in which event the mare, cow, or offspring shall be forthwith discharged by the Sheriff from such attachment and from the lien hereunder created.

**SEC. 3.** The Clerk of the Court must issue the writ of attachment upon receiving an affidavit by or on behalf of the plaintiff, showing:

*First*—That the defendant is indebted to the plaintiff upon a demand for services rendered by the stallion, jack, or bull, belonging to or under charge of plaintiff, upon the mare or cow of defendant, for which his claim has been duly filed, in accordance with Sec. 1 of this Act.

*Second*—That the sum for which the attachment is asked is an actual bona fide existing debt, due and owing from the defendant to the plaintiff, and that the attachment is not sought, and the action is not prosecuted to hinder, delay, or defraud any creditor or creditors of the defendant.

**SEC. 4.** The writ must be directed to the Sheriff of the county in which suit is brought, and must require him to attach the mare or cow specified in such lien, and the offspring of such service, unless the defendant or person in possession of such mare, cow, or offspring, give good and sufficient security, as provided in this Act, in which case, to take such security and discharge any attachment he may have made, and to deliver up such mare, cow, or offspring, to defendant, or to the person from whom he has taken the same, who shall receive the same free from the lien upon which such suit is brought.

**SEC. 5.** Sections five hundred and thirty-nine, eleven hundred and eighty-nine, and eleven hundred and ninety-eight, and eleven hundred and ninety-nine of the Code of Civil Procedure are hereby made applicable to this Act.

**SEC. 6.** This Act shall take effect from and after its passage.

## The Law Fixing a Bounty on Coyote Scalps

**SECTION 1.** Any person who shall kill and destroy any coyote or coyotes, in any county of this State, after the passage of this Act, shall be paid a bounty of five dollars, out of the general fund in the State Treasury, for each coyote so destroyed.

**SEC. 2.** Any person who may kill and destroy a coyote as provided in the last section, may go before any person authorized to administer oaths, and present the scalp, containing the ears and nose of the coyote destroyed, to such officer and make and subscribe to an affidavit showing the time and place that such animal was killed, which scalp and affidavit may be deposited with the clerk of the Board of Supervisors of the county in which such coyote was killed.

**SEC. 3.** The Board of Supervisors of each county of the State shall, quarterly, determine the number of scalps deposited with the Clerk of such Board during the preceding quarter, and by whom, and shall give to each person who may have deposited scalps a certificate certified by its clerk, showing the number of scalps deposited by such person and the sum due him at the rate of five dollars for each scalp. Such certificate may be presented to the Controller of State, who may draw his warrant on the general fund in the State Treasury for the sum named therein in favor of the person entitled thereto.

**SEC. 4.** When the certificate named in the last section is directed to be drawn, the Board of Supervisors shall, at the same time, cause the scalps to be destroyed by fire.

**SEC. 5.** No bounty shall be paid for any scalp unless presented within three months after the coyote is killed.

## Our Agents.

OUR FRIENDS can do much in aid of our paper and the cause of practical knowledge and science, by assisting Agents in their labors of canvassing, by lending their influence and encouraging favors. We intend to send none but worthy men.

GEO. WILSON—Sacramento Co.  
J. C. HOAG—San Francisco.  
F. W. KNAPP—Amador Co.  
M. S. PRIMER—San Mateo Co.  
F. B. LODGE—Solano and Yolo Cos.  
D. G. CLARY—Sonoma Co.  
E. H. SCHAEFFLER—Central California.  
W. W. THEOBALD—Oakland, Cal.  
G. B. GILL—San Luis Obispo Co.  
A. DUNLAP—San Benito Co.  
E. L. RICHARDS—Escondido, Cal.

WM. HOLDER—Oregon.  
WM. OLSON—Washington.

## NEWSPAPER AGENTS WANTED.

Extra inducements will be offered for a few active canvassers who will give their whole attention (for a while at least) to soliciting subscriptions and advertisements for this journal and other first-class popular newspapers. Apply soon, or address this office, giving address, age, experience and reference. Special inducements to old agents.

DEWEY & Co., Publishers,  
No. 220 Market St., S. F.

A REVOLUTION  
IN PLOWING.

# Best's Traction Engine.

## THE MONARCH OF THE FIELD!

IT WILL DO THE WORK OF 100 HORSES.

Plowing Reduced to a  
Minimum Cost,

And from 35 to 45 acres plowed each day at an expense of 50 cts. to 60 cts. an acre.

Three Sizes Built,  
30, 40 & 50-Horse Power,

—AND—

22 Best Traction Engines

AT WORK NOW.

A Fifty-Foot Harrow  
is Used,

With which from 100 to 125 acres are harrowed each day, doing the work much better than horses.

Messrs. Reed & Frieble of Kings City are pulling a gang of 25 ten-inch plows, moving at the rate of three miles an hour and plowing eight acres an hour with a Best's Traction Engine.

Plowing by Sunlight by  
Day and Headlight  
by Night.

GOLD MEDAL

Awarded the Best Traction Engine by THE STATE AGRICULTURAL SOCIETY at Sacramento, 1890.

SEND FOR CIRCULARS.

## SWEET'S PATENT Kicking Preventive.

SURE PREVENTIVE AGAINST KICKING.

Simple, Easy to Apply, Practical.  
THE VERY WORST KNOWN KICKERS permanently cured with this device.  
KEEPS THE ANIMAL FROM STEPPING ABOUT.  
This Harness is a Grand Success for BREAKING IN HEIFERS and renders them perfectly docile.  
Will GUARANTEE SATISFACTION or Money Refunded. Price of Harness Complete for Use, \$3.00.  
Write for testimonials from users.

## SILVER MILKING TUBES.

For Sore and Obstructed Teats and Hard Milking Cows.

An Entire Success

For the Relief and Permanent Cure of Garget or Stoppage of Milk, or when from any cause the teat cannot be handled in the usual way. Cows' teats are frequently injured by being stepped on in the stable, or torn in the pasture; they are also liable to be troubled with cracked teats when first turned out in the spring, making milking a very painful operation; and injurious experiments are too frequently resorted to, from the results of which many valuable animals are rendered worthless, because their owners have not the means at hand to give the needed relief. The article which we offer is a simple instrument and can be applied by any person. Will quickly give relief and permanent cure in all cases without the slightest injury to the animal.

A single Tube can be made to answer for an entire herd and is the cheapest insurance possible against loss. Don't be caught without one; order it at once.  
Single Tube, postpaid, 75c. Set of four, postpaid, \$2.00.

Also SURGICAL INSTRUMENTS FOR DAIRY USE.

## HILL'S IMPROVED LIGHTNING BALER.

Capacity, 32 Tons per Day.

AWARDED FIRST PREMIUM BY THE CALIFORNIA STATE AGRICULTURAL SOCIETY FOR 1890.

MULES  
VERSUS  
MEN.

CALIFORNIA'S  
TRIUMPH.

No tramping. No forking from the stack. No cutting of stacks necessary. You can sit at a hundred-foot stack and bale it without a move. It makes the best bale in the market. You can put ten tons in a car. The forking from the stack is all done by the horses. The Baler can turn out more hay in less time and better style than any other Press. Here is one of the recent endorsements of this wonderful machine:

J. F. HILL—Dear Sir: We baled on James Ryan's Ranch on the Cosumnes, one mile from the Slough House, 277 bales of alfalfa hay, that weighed 32 tons and 35 pounds, with one of your Lightning hay presses on the 21st day of July, 1890. Yours respectfully,  
CONNOR & ANDERSON.

—MANUFACTURED BY—

## The Birds of Spring

If they could be weary of their songs, would fled, in our great stock, an almost infinite variety of new melodies. 40,000 kinds of our old music are still called for, and the new are more numerous than the old.

CHRISTMAS—THE JOLLY FARMERS, Sargent, [40 cts., \$3.00 doz.] New, bright, easy, and all jolly farmers and their friends will like it. HEROES OF '76, [51, or \$9 doz.] Trowbridge, for 4th of July; and NEW FLOWER QUEEN [60 cts., \$5.40 doz.] Root, for flower time.

Sunday Schools like PRAISE IN SONG [40 cts., or \$4.50 doz.], Eternity; SONG WORSHIP [35 cts., or \$3.60 doz.], Emerson and Sherwin; NEW SPIRITUAL SONGS [35 cts., \$3.60 doz.], Tenny & Hoffman.

Choirs constantly send for our octavo music—8000 numbers of Anthems, Sacred Selections, etc., 5 to 8 cts. each. Send for lists.

Organists furnished with Voluntary and other music, and players on Violins, Guitar, Mandolins, Banjos and all other instruments, supplied with appropriate music. Send for lists and information.

EMERSON'S VOCAL METHOD for ALTO, BARITONE and BASS VOICES [51.60] is a new and superior method.

Any book mailed for retail price.

OLIVER DITSON COMPANY, BOSTON.  
C. H. DITSON & CO., 867 Broadway, New York City.

## ORANGE CULTURE IN CALIFORNIA.

Now that the interest in the culture of the orange is extending so as to embrace nearly all parts of the State, a book giving the results of experience in parts of the State where the growth of the fruit has been longest pursued will be found of wide usefulness.

"Orange Culture in California" was written by Thos. A. Garey of Los Angeles, after many years of practical experience and observation in the growth of the fruit. It is a well-printed hand-book of 227 pages, and treats of nursery practice, planting of orange orchards, cultivation and irrigation, pruning, estimates of cost of plantations, best varieties, etc.

The book is sent post-paid at the reduced price of 75 cents per copy, in cloth binding. Address Dewey & Co., Publishers "Pacific Rural Press," 220 Market St., S. F.

PARTIES DESIRING, IN GOOD FAITH to purchase from the U. S. Quarter-Sections of Sugar Pine Timber Land, should write or apply for information to STORY & CUTTING, Surveyors and Land Agents, Rooms 26 and 27, No 420 California St., San Francisco. Best of references furnished.

# FRANK BROTHERS, 33 & 35 MAIN STREET, SAN FRANCISCO, GENERAL AGENTS FOR FISH BROTHERS RANCH AND SPRING WAGONS

THIMBLE SKEIN, STEEL SKEIN OR STEEL AXLE.

No. 2A Tilting Seat Cart.

You can make no mistake if you purchase the Fish Wagon.  
TIP SEAT BREAKING CART, with Shafts made separate from Spring Bar, thereby saving expense in case of breakage, and having three holes in each iron at back end of shafts for adjustment for large or small horse to keep seat level. Axle 1 inch, Wheels 4 feet, Tire 1 1/2, Red Gear, Green Body.

Bugies, Carts, Buckboards and Harness.

Bracket Front Four-Spring Wagon, Leather Trimmed.

FOR SALE!

PINOLITO OLIVE RANCH!!!

FORTY-SIX ACRES OF HILL LAND

In the Town of Auburn, Placer Co.

Red soil, superimposed upon upturned, friable, decomposing slate, yielding iron and alumina, thus furnishing a soil which, as Prof. Hilgard said after his analysis, will retain moisture, will not require irrigation, and will not allow the vegetable mold to leech away; thus suited to the growth of fruit trees, especially the olive, as has been demonstrated both by the remarkable growth of the tree and the yield and the quality of oil.

It is situated only 15 minutes walk from Auburn Station—the C. P. R. R. passes along one side—and is a less distance from the Court House. Thirty acres improved and planted to olives, set at long distances for permanent growth, and other fruits planted between the rows for temporary profits, mostly peaches of three best varieties, ripening in succession; prunes, mostly Petite; plums of several varieties, as Kelsey, Japan, Shropshire Damsen, etc.; figs of several best varieties; a few apples, nectarines, blackberries, etc. Two acres of table raisin grapes, never irrigated, the vines remarkably vigorous and in full bearing. The trees, especially the 1500 olive, have all been planted with regard to permanency. About one-half of them have an orchard growth of seven years; fruited last year 300 pounds, this year nearly one ton. They are mostly Mission and Picheline, with a few trees of other choice varieties. Two crops of the olives have been pressed. The yield has been, for the first press, 14 per cent of very clear delicious table oil, and four per cent from the second press—the Picheline yielding this, of a peculiarly clear, nutty oil.

There is on the ranch a few acres of grain sown for hay; two acres of well-set alfalfa, below the Auburn ditch, which crosses one corner of the property; also a small house of four rooms and a kitchen; a well of good water; a small barn; a strong, permanent spring of soft, cold water, which wells up through the slate; a two-inch iron pipe connects the spring with an iron-bound 20,000-gallon tank, situated on a beautiful pine clad hill 40 feet above the spring, a point which overlooks the town and gives very charming distant views, and is one of the most lovely sites for a residence to be found. The water is pumped to the tank by a duplex pump; the power, a four-horse steam engine, which furnishes power sufficient to pump, saw wood, run an olive crusher and do all needed shop work.

The land is all suited to fruit, excepting along a rocky ridge, which furnishes three very desirable residence sites and the olive, set promiscuously, thrives finely among the rocks. The property can be conveniently divided along a sag which separates two of the high knobs, and water from the spring can be pumped to each of them.

This desirable property is now offered for sale for less than the improvements cost. The land is fenced, the title good and unencumbered. It is connected by a roadway, which is one of the improvements made, with one of the principal streets of Auburn.

The sale will convey the entire plant, furniture in the house, all utensils, etc. If sold before April 1st the sale will include the coming crop. If later, the crop will be reserved, unless otherwise by special agreement. If desired, one-half the purchase money can remain five years, secured by mortgage at eight per cent. For price and any further information desired, address

A. H. AGARD,

No. 1259 Alice Street, - - Oakland, Cal

## Raisin, Fruit and Grain Lands

AT EXTREMELY LOW PRICES,

Seven miles S. W. of Tulare city. 164 acres of rich land is offered for sale, with well-improved homestead, large flowing artesian well, reservoir, alfalfa, orchard (seven years old), pasturage, one of the healthiest and most comfortable seven-room, two-story residences in Tulare valley. Must be seen to be appreciated. Will be sold soon at a very low price and extraordinary reasonable terms to a good purchaser. Some 320 acres of good and well-cultivated land adjoining is also offered low.

Address E. M. Dewey, Publisher, Porterville, Tulare Co.; A. T. Dewey 220 Market St., S. F.; or call on Capt. Thos. H. Thompson, Tulare City, Cal.

## Organization of Olive Oil Producers.

A meeting of olive-oil producers and manufacturers, called by the State Board of Horticulture, was held at Horticultural Rooms, Sutter street, April 16th. Frank A. Kimball of National City called the meeting to order, J. L. Mosher acting as secretary.

By request, Mr. Kimball stated the object of the gathering. In his judgment, the time has arrived for olive-oil producers to protect themselves. A statute has just been enacted of a protective nature, but it is not all as it should be. There is no fear of competition among genuine producers if oils put on the market are thoroughly known. Some scheme to result in a test by scientific men of all oils, and the filing at headquarters of the exact value of labels, with a clear explanation of analyses, was contemplated in the general idea of organization. The commercial value of all oils must be determined, and if this is properly done there is no fear of the judgment of a discriminating public, and spurious oils will be run out of the market. A San Diego merchant lately was offered oil by a runner at \$6.50 a case, but after close investigation the agent admitted his belief that there was not one per cent of pure oil in the article offered.

Secretary Lelong, of the State Board of Horticulture, explained details of the protective bill lately passed by the Legislature. It provides that adulterators of oil shall be prosecuted, and all producers shall send samples of oil in bottles or tins to State Board headquarters, and also samples of all labels. The bill was much more specific when first submitted, but it was amended to its present form in legislative committees.

Mr. Cooper said he had found great difficulty in disposing of his oil in this city unless he would agree to its sale at a price which would be prohibitory. His output this past year is over 28,000 large bottles. Oil, which is made in the cellars of this city, is offered as a substitute for the pure oil.

Mr. Wetmore said, emphatically, that the best grocers' trade in this city is opposed to the proper encouragement of first-class products of agriculture. The Cooper oil and some of the best brands can be obtained at few places in the city. The State Analyst and the State Board of Health should aid the pure-oil producers. Good oil has the greatest medicinal value. Infants that cannot take other sustenance will thrive on pure oil. Precisely what tests shall be deemed sufficient and how they are to be determined must be considered. To organize and have an oil-distributing agency in this city would be a good plan.

E. D. Sawyer thought a reduced price of California-made oils would be more helpful than anything else. The Sunday law was recited as an instance of inoperative and ineffective legislation. Pure oil and low prices will result necessarily in ready sales; native oil can never compete with imported unless prices are made equal. If oil-producers try the fraud prosecuting method they must fail in the end, for the merchants have more money than the producers.

Messrs. Cooper, Goodrich, Wetmore, Kimball and Lelong were appointed a committee to select permanent officers and formulate a plan of organization.

This committee, at a meeting held the following morning, submitted the following plan of organization:

That an association be formed, the leading object of which shall be to establish in the city of San Francisco, a depot where the olive oil approved by the association may be seen and sampled; where information may be procured as to place of production, quantity, price, where sold, etc., especially with a view of influencing the local retail trade to sell those brands without prejudice or misrepresentation; such agency also to be especially organized for the purpose of disseminating to the public, information concerning the dietetic and hygienic therapeutic values of pure olive oils, and collate and preserve records of individual experience of general information on the subject.

That the membership shall be confined to those having olive orchards and producing olive oil at those orchards for the market, to be sold under their own trademark.

That the first list of invitations for membership shall be first considered by the committee and unanimously adopted before being issued.

That further membership shall be on application in writing, and signed by two members

of the organization, and elected by ballot by a three-fourths vote of all the membership of the association.

That in carrying out this plan, no attempt will be made to interfere with the legitimate trade any further than is necessary to carry out the purpose already set forth.

That a committee be appointed to confer with the State Analyst, the State Board of Health, and the State Board of Trade with regard to securing their aid in the enforcement of the law against the adulteration of olive oil, and to report at the next meeting of this committee.

## TEXTILE INDUSTRIES.

## A Ramie Meeting at Yuba City.

EDITORS PRESS:—The Sutter County Horticultural Society had a regular meeting in Yuba City April 15th, and much interest in fruit-culture was manifested. Several new members were elected, after which the following officers for the ensuing year were placed in nomination and elected: President, R. C. Kells; vice-president, A. D. Cutts, secretary, Hon. H. P. Stahler; treasurer, G. W. Carpenter; entomologist, H. P. Stahler.

After the election, a paper on Ramie Culture was read by the superintendent of ramie culture for California, that was of interest to all—both ladies and farmers—present, after which a committee was named to introduce the ramie plant in this part of the State. M. Marouse, H. Hawes, J. C. Geary, J. G. Jones, Hon. H. P. Stahler, the secretary, were named as a committee to look up the matter referred to.

We learn that a large acreage will be planted this season in ramie in Sutter and Yuba counties.

## Prominent Ranches.

The Marouse ranch, located 13½ miles from Knight's landing, and 14 miles from Marysville, is one of the best improved California ranches that your correspondent has had the pleasure of visiting for some years, by invitation of Mr. M. Marouse, an old pioneer merchant of Marysville, and one of her most enterprising and progressive farmers. What was seen may be of interest to your readers. The ranch is a large tract, of 2460 acres, all under cultivation, being located on the Woodland and Marysville Branch R. R. The managers of the railroad have located a station at this point, also Wells, Fargo & Co. an express office, postoffice, and large grain warehouses will be built this season; new scales for weighing the grain—all showing improvements in the right direction. We are fully warranted in saying all this is justified, as this station is bound to be a go-ahead section of the valley.

The ranch has 1920 acres in wheat, and over 30,000 sacks of wheat are expected; also 320 acres in barley; a total of 1240 acres in grain, the remainder made up in diversified farming products, fruit trees, grapes, all varieties of vegetables, several acres peanuts are being planted on the sandy soil near the Feather river. A sample of wheat, "The Pride of Butte," will be sent to you to show the wonderful production of the soil. The wheat was planted Dec 15, 1890 and April 16th, the stand was four feet, six inches in height, good wide leaves. We have not noticed better grain in any of the fields from Tulare City to Marysville. Several acres of ramie will be planted in the above-named ranch, the soil and climate being peculiarly adapted to the growth of the stalk.

The next large ranch adjoining this Marouse plantation visited is known as "White Horse Ranch." Prominently can be seen for miles away a large white horse, fine harnes and out houses surrounded by green fields of waving grain. This is located on Feather river opposite Nicolans, in Sutter county, and steamers come up to this point for freight. The property is Hon. N. D. Rideout's, the prominent banker at Marysville, Cal., he being a practical farmer and an old pioneer. Here we find 2000 acres all in cultivation surrounded by a high levee. Mr. W. F. Mason is the resident superintendent, and is, we learn, a most practical and progressive farmer.

It will be remembered that N. D. Rideout Esq., commenced to build the railroad in 1888 finished only a few months since, that opens up railroad communication to Knight's Landing on the Sacramento river from Marysville.

## The President's Program.

The following is the official program, which has received the sanction of President Harrison, through his private secretary:

Saturday, April 25th—Arrive in San Francisco at 7:45 P. M.; will be received by the military and escorted to Mechanics' Pavilion by most direct route; public reception at Pavilion for two hours. The ladies of the party will take carriages at the ferry and go direct to the Palace hotel, instead of the Pavilion.

Sunday, April 26th—Rest.

Monday, April 27th—Leave hotel at 10 A. M., and drive to the Park to be met by the school children; lunch at the Cliff House; return to hotel via Presidio; 9 P. M., official invitation reception in first-floor parlors of Palace hotel.

Tuesday, April 28th—Take steamer in morning for tour of the bay, stopping at military posts; on return to Union Iron Works, to participate in launch of warship Monterey at 4:30 P. M.; evening, dinner with Senator Stanford.

Wednesday, April 29th—Leave San Francisco 9 A. M., for Menlo Park; visit Leland Stanford Jr., University and Palo Alto stock farm; lunch with Senator Stanford; leave Menlo Park at 3 P. M., and arrive at San Jose at 3:30; reception till 5; leave for Monterey and arrive at Del Monte at 7 P. M.

Thursday, April 30th—Spend all day at Hotel del Monte and vicinity.

Friday, May 1st—Leave Monterey 9 A. M.; stop at San Jose five minutes; continue to San Francisco, via Niles, arriving at 12:15; after lunch at Palace hotel, proceed to Mechanics' Pavilion, escorted by G. A. R., to witness children's May-day festivities, to be followed by a reception to comrades of G. A. R.; evening, banquet by representative business men of San Francisco.

Saturday, May 2d—Leave San Francisco at 12:15 A. M.; arrive at Sacramento at 4 A. M.; citizens' reception at Capitol from 8 to 10 A. M.; leave Sacramento at 10 A. M.; arrive at Broadway, Oakland, at 1 P. M.; reception by citizens and school children; leave Broadway at 4:15 P. M. and arrive at San Francisco at 5 P. M.; Saturday night, rest.

Sunday, May 3d—Rest.

Monday, May 4th—Leave San Francisco 12:15 A. M. for the north.

## QUERIES AND REPLIES.

## Cement Cisterns.

EDITORS PRESS:—Can any of your readers inform me of any cisterns being made in this State by putting the cement directly on the walls of the soil; that is, without lining the same with brick or stone. I have seen many so made in the East and want to know if any one has tried them here.—J. G. WRIGHT, Berkeley.

Cisterns and reservoirs are thus made in this State. Will readers report methods and results?

## Planting Pink Beans.

EDITORS PRESS:—Can you, or any of your readers, inform me as to the proper time to plant pink beans. It is a pretty hot climate here, and I think when planted too early the heat strikes them just in bloom. Please inform me or have some experienced bean-raiser give the necessary information.—ANDREW REID, Bryson, Monterey Co.

The subject is one upon which experience can be profitably compared. We await reports from "experienced bean-raisers."

DAIRYING IN CALIFORNIA.—The illustrated article in the May *Overland Monthly* is to be a continuation of "Dairying in California," this time treating of butter and cheese making. The processes are described at length, and many valuable and surprising facts and figures are given relating to the magnitude and development of the industry. The pictures are very beautiful and show the most attractive side of dairying in California.

KILLIP & Co. announces that the date of the sale of Henry Pierce's trotting and road horses has been changed from Saturday, May 2d, to Tuesday, May 5th, at 1 P. M. By reference to the advertisement it will be seen that the offering includes several well-known blooded animals.

DANIEL DEWEY, an old settler in Wisconsin, died at Berlin, in that State, on the 11th, of "grippe," at the age of 84 years.

## A New Enterprise.

## The California Ventilated Barrel Company.

This company has recently established a plant in this city for the purpose of manufacturing the *Ventilated Barrel* upon a large scale. The enterprise bids fair to be of more than common interest, both to the producers and the shippers of fruits, vegetables, nuts, meats, etc. A package for the safe conveyance of these leading products, presenting so many advantages, such as cheapness, lightness, thorough ventilation, simplicity, durability and strength, cannot fail to be quickly recognized by the wide-awake business men of this coast, and as speedily adopted. That such is the case is proven by the rapid increase in the demand since starting the works in January, 1891, books for that month showing sales of between nine and ten hundred, February fifteen hundred, March, two thousand, while the sales for April, to the 25th, have risen to nearly four thousand. These gratifying results are as good evidence as need be furnished that the Ventilated Barrel supplies a want and fulfills all the claims that are made for it. The extensive works of the company are situated at the corner of Powell and North Point streets, on the water front. They consist of a substantial three-story structure, covering a ground space of 60x72 feet, with an annex, or warehouse, 30x72 feet. Here, upon a recent visit, a representative of the PRESS found a scene of activity that indicated lively business. Wagons were unloading the spruce strips of which the barrels are made, while other wagons were being loaded with the finished barrels for distribution or shipment to various points. The cheerful whir and buzz of machinery was heard within, and upon entering, the reporter was met by the energetic manager, Mr. James Patterson Jr., who kindly furnished the information sought. "Our present capacity," said Mr. Patterson, "is about 4000 barrels per day. We are well equipped with machinery built expressly for the work, for instance," pointing to one of the many rapidly moving pieces of intricate mechanism at which two men were busily employed, "that machine receives the strips, cutting them to the proper length, at the same time weaves, crosses and chimes them ready for the hoops and heads.

They are then passed to other hands where they are drawn around the spreader or inside hoop, three-eighths of an inch thick, and fastened. Still another set of workmen spring on the outside or end hoops, putting the heads in place, and the barrel is complete. The process is rapid and looks simple. This is largely due to the perfect system which prevails throughout the factory. "Our standard sizes," continued Mr. Patterson, "for nuts, vegetables, fruits, eggs, etc., are 19x30, 16x27½, 16½x28½, 17½x29, 18½x30; for hams and dry salt meats we make them 22x32 and 24x34. However, we are prepared to fill any order for odd sizes. The barrel has been adopted by the United States Government for the carriage of potatoes and onions, and our sales thus far bear proof that it has met with a flattering reception by private shippers. We ship the barrels either set up or knocked down. When in the latter condition a workman will be sent to put them together, and to show how simply it is done. We will also supply the necessary tools for the purpose.

When shipped in this form, we can place about 2500 barrels in a single car. Arrangements have been made for the erection of another large building adjoining the warehouse which will be completed soon, and our working force, which now numbers from 15 to 20 men, will be increased as the requirements of the business make it necessary."

A side from being the only thoroughly ventilated barrel on the market, other strong points in its favor are, that it costs less than one-half for trimming, and does not require a skilled workman to cooper it; its heads will not come out in transit, and no liners are used. It is strong, durable, and the sizes do not vary; and an important feature, by no means to be overlooked, is its extreme lightness, which effects a saving in freight charges, that shippers will not be slow to appreciate.

The California Ventilated Barrel Company was incorporated in November, 1890, and is composed of the following named gentlemen, well known, and prominent in business circles: A. Hamilton, President; E. A. Denicke, vice-President; Wm. Clark, Secretary; James Patterson Jr., Manager; T. J. Parsons, Pres. and Mgr. of the Del Monte Milling Company; P. A. Wagner, Mgr. of the Judson Mfg. Co.; E. B. Grace, Agt. for the Dold Packing Co. of Kansas City; Asa M. Simpson, Pres. of the Simpson Lumber Co. and T. H. Miner.

The general office of the company is at No. 403 Market street. Circulars will be sent upon request.

## WHEN YOU BUY, —BUY— THE BEST! —THE— H. H. H. Horse Liniment

Is certainly the best preparation of its kind in the market. Ranchers, Stock Raisers and Horse Owners of every description will tell you that it does good work every time.

MESSERS. H. H. MOORE & SONS, Stockton, Cal.—GENTLEMEN: In answer to your inquiry, would state that I used your H. H. H. Liniment on my Holland prize-winning cow, "Lena Menlo," for a wrenched shoulder, and it relieved her very much. She calved the next day, and while still suffering from the sprain gave the largest authenticated quantity of milk ever given on this coast (10½ gallons per day), showing conclusively the great relief received from your remedy. I consider it a necessity in my stables, and when away from home feel perfectly safe, as inexperienced men can do no harm with it, as they can with the more powerful liniments. Respectfully yours,  
**FRANK H. BURKE,**

## S. H. MARKET REPORT

## Market Review.

## DOMESTIC PRODUCE, ETC.

SAN FRANCISCO, April 22, 1891.

General trade in farm products the past week has been fairly active, with cereals making quite an up move. The local money market is easy, with more funds offering than can be readily placed. The promised large crops of cereals, if realized, will require large sums to move, and with such a contingency, it is said that the banks are shaping their course accordingly. The European and Eastern wheat markets have advanced very materially. The following is to-day's cablegram:

LIVERPOOL, April 22.—Wheat—Quiet but steady. California spot lots, 8s 11½d; off coast, 46s; just shipped, 46s 6d; nearly due, 46s; cargoes off coast, nothing offering; on passage, quieter; Mark Lane wheat, turn dearer.

## Foreign Grain Review.

LONDON, April 20.—Mark Lane Express, says: English wheat continues in sellers' favor; foreign active during the week, there were large sales at a rise of 6d. Barley is in demand at an advance of 1s. Oats are 6d higher. For Maize there was an increased inquiry at an advance of 1½d; trade is realizing big profits. At to-day's market the London average for English Wheat was 39s 4d, while 43s 6d was paid for good reds and 45s 6d for good whites; foreign was higher for reds and 1s 6d for whites. Flour went up 1s 6d. Maize was strong and advanced 2s 6d being quoted at 31½s.

## Liverpool Wheat Market.

The following are the closing prices paid for wheat options per cwt. for the past week:

	April.	May.	June.	July.	Aug.	Sept.
Thursday.....	8s7d	8s7d	8s7d	8s6d	8s6d	8s6d
Friday.....	8s7d	8s8d	8s8d	8s8d	8s8d	8s8d
Saturday.....	8s7d	8s8d	8s8d	8s9d	8s9d	8s9d
Monday.....	8s8d	8s9d	8s10d	8s10d	8s10d	8s11d
Tuesday.....	8s11d	9s0d	9s0d	9s1d	9s1d	9s1d

The following are the prices for California cargoes for off coast, nearly due and prompt shipments for the past week:

	O. C.	P. S.	N. D.	Market.
Thursday.....	43s0d	43s0d	43s0d	Strong.
Friday.....	43s0d	43s6d	43s6d	Very strong.
Saturday.....	44s0d	44s3d	44s3d	Excited.
Monday.....	44s0d	45s0d	45s0d	Very strong.
Tuesday.....	45s0d	46s0d	46s0d	Excited.

## Eastern Grain Markets.

The following shows the closing prices of wheat at New York for the past week, per cental:

	Day.	April.	May.	June.	July.	Aug.	Sept.
Thursday.....	194	190	183	180	179		
Friday.....	200	196	191	185			
Saturday.....	203	198	194	187			
Monday.....	203	203	198	190			
Tuesday.....	207	202	197	188			

The closing prices for wheat have been as follows at Chicago for the past week, per cental:

	Day.	May.	June.	July.	Aug.
Thursday.....	180			176	
Friday.....	184			181	
Saturday.....	187			183	
Monday.....	191			187	
Tuesday.....	188			186	

NEW YORK, April 22.—Wheat—\$1.22½ for May, \$1.20 for June, \$1.17½ for July, \$1.13 for August, \$1.10½ for September, and \$1.11½ for December.

CHICAGO, April 22.—Wheat—\$1.11½ for May and \$1.09½ for July.

## Visible Supply of Grain.

NEW YORK, April 20.—The visible supply of grain in store and afloat, as compiled by the New York Produce Exchange, is as follows: Wheat, 22,186,000 bushels, a decrease of 211,000 bushels; corn, 2,230,000 bushels, a decrease of 100,000; oats, 2,508,000 bushels, a decrease of 85,000; barley, 811,000 bushels, a decrease of 129,000.

## Dried Fruits.

NEW YORK, April 18.—Another week's drain upon raisins will materially remove the gloom that has been so long oppressive in them. Apricots are a trifle better, prime and better selling at 15¢@16¢. Peaches, regarded well, sold at 12¢. An encouraging grocery demand attended raisins. Brisk trade in Forty prunes, which is tempting the price of 10¢. Must be sound and black; other sizes neglected.

## Hops.

NEW YORK, April 18.—Fair local demand for hops. Some export orders. Selected quality filled numerous small interior sales. Spot strong. The rumored large movement in olds did not go, though London is stiffer.

## California Raisins.

NEW YORK, April 20.—A fair quantity of California raisins was moved in this market the past week. It would appear that the aggregate movement into channels of distribution has been better than for some time previous. This improvement has been attended by a slight turn for the better in values. Sales were chiefly at \$1.30@1.40 for ordinary quality of Three-Crown loose, in boxes; \$1.45 was secured for good, little better than the average. Three-Crown, loose, in bags, brought 5½¢ and that price is said to have been offered Saturday for the carload.

## Wool.

NEW YORK, April 20.—Though not openly confessed, there is a softer tone to the wool market consequent upon this attendance and an effort to regain some of the demand that has dealt freely in Australia. This is true of fleeced, but the few holders of commercial lines of unwashed good staple territory show no promise to sell. Not much Texas shearing is expected before the middle of May. In goods fine fall dress fabrics and blankets sell well; few other orders. Sales, 411,000 lbs domestic, mostly private; old ranges made for the rest, and 700,000 lbs foreign, chiefly China and Douskie. From London sales 3000 bales in all, taken for America. An English woolen manufacturing firm is seeking a new English site. Philadelphia market dull, but light supplies in strong bands. Boston's sales were 1,871,200 lbs domestic; California, no feature in sale or supply; 400,000 of foreign of which 150,000 lbs were Australians.

## Local Markets.

	Buyer Season.	Seller 1891.	Buyer 1891.
Thursday.....	144½	139½	104½
Friday.....	145½	145	106½
Saturday.....	145	145	108½
Monday.....	146½	146½	112
Tuesday.....	151½	118½	112½

\*After August.

## WHEAT.

	Buyer 1891.	Buyer Season.	Seller 1891.
Thursday.....	166½	171½	170
Friday.....	167½	173½	172½
Saturday.....	167½	173½	173½
Monday.....	168½	175½	175½
Tuesday.....	177½	181½	179½
	188	191½	189½
	180	188½	187½

\*After August.

BAGS—The market is essentially unchanged at 7½¢ to 7½¢ for June-July delivery.

BARLEY—The sample market has held to strong and higher figures under a fair demand and light receipts. On Call, dealings in futures have been quite active at steadily advancing prices up to today, when a shade lower range is recorded. The following are to-day's reported sales:

Morning Session: Seller 1891—100 tons, \$1.09½; 100, \$1.08½; 100, \$1.07½. Afternoon Session: Seller 1891—200 tons, \$1.08½; 100, \$1.07½.

BUTTER—The market is weak at lower quotations. With receipts increasing, packers are trying to get further reductions in prices. Large lines of butter, it is claimed, can be bought for less money than we quote. The outlet is restricted.

CHEESE—The market is easier, with stocks accumulating and receipts increasing. Buyers confine purchases under the belief that lower prices will obtain.

EGGS—Although receipts do not show any material increase, yet by reason of increased local supplies throughout the coast, the outlet is restricted, consequently fewer are required by the trade.

FLOUR—The market has made several advances the past week, closing strong.

WHEAT—In the sample market trading is almost suspended, causing accurate quotations to be hard to get. Nearly all holders of wheat are those who sold on Call. Very little, if any, is now held by farmers. On Call, futures have been actively dealt in at higher prices, and attractive fluctuations. Many short sellers were forced to fill or compromise at heavy losses. It is said that there is still a large line of shorts out which, if so, may cause prices to go still higher. The following are to-day's reported sales on Call:

Morning Session: Spot, season's storage paid—500 tons, \$1.80. Buyer 1891—100 tons, \$1.80½; 100, \$1.80. Buyer season—200 tons, \$1.80½. Buyer 1891, after August 1st—300 tons, \$1.78; 200, \$1.77½; 700, \$1.77½; 200, \$1.77; 100, \$1.76½; 100, \$1.76; 200, \$1.75½. August-September—100 tons, \$1.68. Seller 1891—100 tons, \$1.69; 200, \$1.68½; 100, \$1.68½; 200, \$1.67; 300, \$1.67½; 100, \$1.66½; 100, \$1.65½; 400, \$1.66½. Afternoon Session: Buyer 1891—600 tons, \$1.78; 200, \$1.78½; 100, \$1.78½. Seller 1891—200 tons, \$1.64; 400, \$1.64½; 100, \$1.65; 100, \$1.64½. Buyer 1891, after August 1st—100 tons, \$1.73½; 300, \$1.73½; 300, \$1.73; 400, \$1.73½; 100, \$1.73½. 600, \$1.74; 100, \$1.73½; 400, \$1.73½.

## Market Information.

## Produce Receipts.

Receipts of produce at this port for the week ending April 21st, were as follows:

## Cereals.

To use a trade expression, wheat has been climbing. The price the past week ran up in this market \$4 to \$5 a ton. The careful readers of the RURAL PRESS are well informed what has brought about the advances, for each week, in this department of the paper, full advices have been given regarding the influences which would create higher prices. The market has made such rapid advances that it would seem the better part of prudence for those who are still holding wheat not to hold too long. New crop wheat will be in market by June and receipts become quite free by the end of that month and, as the crop will be the largest before known, it is hardly reasonable to believe that prices will continue up. In saying this, the writer believes that prices will not go below \$1.50, if that, per cwt for No. 1 white shipping. This opinion is based on the statistical position of wheat the world over. These statistics have, from time to time, been given by the writer in this department. The excited condition of the local market makes it very difficult to give correct quotations. There is, or at least was, a large short interest on Call, and as supplies in the State are well concentrated, prices may go still higher when these sellers are forced to cover.

Barley has moved up the past week, under light supplies and more buying. The stock in this State is almost exhausted, which makes it difficult for buyers to have their wants met, except by paying well up. The crop will be large and of good average quality, but the carry over will be almost nothing, and, as the consumption in this state is increasing,

it looks as if good prices, but not as high as now, will rule throughout the season.

Oats show more strength, in sympathy with barley. The stock in this city is being reduced quite freely, under a freer feeding demand. The supply up north is said to be light. Crop prospects in this State are uniformly good.

Corn continues strong. The supply is light. It is said that it will barely equal the demand up to harvest, and that prices for corn in the Central States will not admit of shipping to this coast.

Rye is steady and firmer.

## Feedstuff.

Ground feed is higher and strong under a growing scarcity. The demand is fair.

Hay has taken another step upward. Higher prices are now ruling than for many years. Even at the advance, receipts are only fair. Nevada is unloading on us. At the present rate of shipments from that State, the surplus will soon be worked off. New hay will begin to come in soon, as the fields in the more southern part of the central counties are said to be ready. It is a question whether, owing to the high price of cereals, enough hay will be cured this season to last into next season.

## Fruits.

California apples are in light supply. By the last steamer from Australia 1587 boxes were received, which, being beaten on passage, are having poor sale. Other imports from that quarter are expected. The fruit industry in Australia is increasing quite rapidly. With free tinplate and cheap sugar refineries in this State, under the bounty on sugars, exporters can and doubtless will sell refined sugars delivered in Australia cheaper than they do here. The fruit canning in duty in South Australia has more than doubled the past year, and this year it will show another large increase. We sent formerly large quantities of canned fruits from here to Europe and other foreign ports, but Australia is getting that trade now.

Strawberries are coming in more freely. Prices do not show any material change yet, but with warmer weather, the market under liberal supplies will shade off.

Cherries and apricots will soon be in the market. They would have been in by this date had the weather turned warmer. Cannery men in the market contracting for fruits. Orchardists will confer a favor by sending to us the prices being paid in their particular locality.

Lemons and limes are in good supply. Cool weather was against sellers, but with warm, clear sunny days prices will do better.

Choice oranges continue scarce with desirable sizes fetching more money. Scrubby oranges are in large supply, and sell at low figures. There are large quantities of rough thick skinned and also scaly oranges on the market.

Dried fruits are cleaning up under an increasing distributive demand at the East. It looks as if the new season will enter on a fairly bare market. It is stated in well informed circles that there will be a large increase in the quantity of fruits to be dried this year.

Raisins are fairly steady. Eastern advices are more encouraging.

## Live-stock.

Bullocks are weaker, but not quotable lower. The condition is generally excellent. Mutton sheep are barely steady. Hogs are firm, particularly small to medium sized suitable for the block. Milch cows are slow. The high price of feed and low price of butter are against much of a demand.

The market for dressed cattle is quoted as follows (to obtain the price on foot, take off from the price for stall-fed one-third to one-half, according to the nature of the feed and time fed; and for grass-fed take off the price from 40 to 60 per cent):

HOGS—On foot, light grain fed, 5½¢@5¾¢ lb. dressed, —@—¢ lb.; heavy, 5½¢@5¾¢ lb.; dressed, —@—¢ lb. Stock hogs, 4¼¢@4½¢ lb. BEEF—Stall fed, 6½¢@—¢ lb.; grass fed, extra, 6¢@—¢ lb.; first quality, 5½¢@—¢ lb.; second quality 5¢@—¢ lb.; third quality, 4¢@—¢ lb.; bulls and thin cows, 2¢@3¢ lb.

VEAL—Small, 6¢@7½¢ lb.; large, 5¢@6½¢ lb. MUTTON—Wethers, 8¢@8½¢ lb.; ewes, 7½¢@8¢ lb.; spring lamb, 9¢@10¢ lb.

## Vegetables.

Seasonable garden truck is coming in more freely. Peas and string beans, owing to cooler weather, are in lighter receipt and temporarily higher. With warmer weather the supply will increase rapidly, as a larger acreage has been planted. Tomatoes are backward; we have still to depend on Los Angeles. Rhubarb has a wide range. Asparagus is slightly stronger. More is being canned than ever before. Old onions are about gone—quotations on for new. The quality is poor. By the last Australian steamer 2702 packages were received. Owing to beating, the quality is poor. The next incoming steamer will bring in more.

From Australia 20 cases of garlic were received the past week.

New potatoes are coming in freely. While the quality averages better, yet it is still poor. Large-sized, well-matured new are wanted to fill distant orders. The receipts of old are large, yet the market does not shade off. Oregon is sending us increasing quantities.

## Miscellaneous.

From reliable advices up to April 22d the following summary of tonnage movement is compiled:

On the way to	1891.	1890.
San Francisco.....	265,146	177,766
San Diego.....	18,000	14,570
San Pedro.....	6,807	11,055
Oregon.....	23,947	24,278
Puget Sound.....	37,349	20,789

Totals.....351,249 248,458

In port at

San Francisco, disengaged.....	3,525	22,426
" engaged for wheat.....	46,446	46,249
San Diego.....	4,862	
San Pedro.....	1,999	
Columbia River.....	11,889	
Puget Sound.....		

Totals.....68,631 87,033

To get the carrying capacity, add 65 per cent to the registered tons as given above.

From July 1, 1890, to April 17, 1891, the following are the exports from this port:

Wheat, cts.....	11,278,164	11,299,484
Flour, bbls.....	977,636	910,851
Barley.....	216,264	919,125

Poultry toward the close shows a firmer tone, for the better kinds. Scrubby is slow.

Honey is coming in quite freely, causing large buyers to hold off, unless offered inducements.

Wool is in fair demand. Buyers are sampling more freely. Buying in the country is reported to be at a slight advance on city quotations.

Hops are unchanged. The supply is light. English advices just to hand point to higher prices as the supply there is not equal to requirements up to harvest.

Provisions are strong with an advancing tendency. White beans are tending up under a good distributive demand. Colored beans are slow.

## Domestic Produce.

Extra choice in good packages fetch an advance on top quotations, while very poor grades sell less than the lower quotations.

List of U. S. Patents for Pacific Coast Inventors.

Reported by Dewey & Co., Pioneer Patent Solicitors for Pacific Coast.

FOR THE WEEK ENDING APRIL 14, 1891.  
450,362.—CHILDS FOLDING CARRIAGE—Fred. Bornemann, S. F.  
450,134.—HARNESS—J. H. Bradshaw North Yakima, Wash.  
450,484.—TRACTION WHEEL—Geo. R. Duval, Benicia, Cal.  
450,230.—CAR AXLE—L. Hall Jr., Glendale, Or.  
450,486.—DOOR SPRING—Harvey & Root, Los Angeles, Cal.  
450,236.—ORE MILL—C. S. Jones, Redding, Cal.  
450,378.—INK-ERASER—W. H. Robinson, Ocean-side, Cal.  
450,434.—SURF POWER PUMP—H. E. Thomas, S. F.  
450,436.—FOOT RASP FOR HORSES—G. Tompkins, San Leandro, Cal.

The following brief list by telegraph, for April 21, will appear more complete on receipt of mail devices:  
California—William N. Anderson, San Rafael, means for operating elevator doors; Miles B. Dodge, S. F., steam engine; Peter D. Horton, Oakland, assignor of one-third to J. M. Walling, Nevada City, penholder; George H. Merrick, assignor to himself and G. Knoell, S. F., faucet; Willis H. Ostrander, Merced, assignor to Ostrander Repeating Gun Company, S. F., repeating breech-loading gun; John T. Smith, S. F., journal box; John T. Smith, S. F., packing; Frank Walker, Los Angeles, sewer manhole; Frank Zan, S. F., crate and display stand for brooms; Frank Zan, S. F., shield for brooms. Arizona—Andrew J. Rutter, assignor of one-half to D. A. MacNeil and F. L. Moore, Tombstone, thill coupling. Oregon—Olin H. Bagley, Astoria, gold-saving apparatus; Miles S. Cody, Anacortes, reaping machine; Martin Rosenheim, Tacoma, combined extension show table, toilet stand and bureau.

NOTE.—Copies of U. S. and Foreign patents furnished by Dewey & Co., in the shortest time possible (by mail for telegraphic order). American and Foreign patents obtained, and general patent business for Pacific Coast inventors transacted with perfect security, at reasonable rates, and in the shortest possible time.

The Farmers' Alliance in Kansas

—AND—

Its Great Paper, The Advocate.

To the Alliance Brothers and Sisters of California THE ADVOCATE desires to send greeting, and to say through the columns of the RURAL PRESS: Send for a sample copy of THE ADVOCATE and it will tell you how we are "Holding the Fort" here in Kansas and pushing the movement along with the same zeal and enthusiasm as the RURAL PRESS tells us you are doing on the Pacific Coast. THE ADVOCATE has over 125,000 readers in Kansas and sister States. It contains 16 pages, 64 columns, and bears the proud distinction of having been the most potent factor in the glorious political victories of the Alliance in Kansas. We will send you sample copy free, and 62 copies, one year, for \$1. Yours Fraternally,  
ADVOCATE PUBLISHING CO.,  
Topeka, Kansas.

We will send the RURAL PRESS and the ADVOCATE one year for \$3 to any address in the United States.—PUBLISHERS PACIFIC RURAL PRESS.

— PACIFIC COAST AGENTS FOR —

PLANO RUSTLER.

Changeable Speed.

A "fast motion" and a "slow motion." It will be found the simplest, most durable and most effective device for obtaining a fast or slow motion for the knives, ever put on a mower.

Never Chokes or Clogs in any Grass.

PLANO RUSTLER MOWERS—4 ft. 3 in. Cut.....\$45 00  
5 ft. " ".....55 00

The Most Perfect Floating Bar and Tilting Lever.

One Lever performs the important duties of tilting the guards and also of raising and lowering the cutting apparatus.

A Coupling Frame, complete, with only one piece of iron.

No bolts or joints to bother.

KNOWLTON MOWER.

The first Mower made with Sickle Edge Guard Plates.

The only Guard that sharpens itself by use.

THE SPRING,

Carrying the weight of the bar on the Drive Wheels, gives great cutting power without side draft, and making the draft of the 5, 6 and 7 ft. Mowers but a trifle more than other makes cutting but 4 ft. 3 in.

The only Guard preventing the grass from slipping forward when the section strikes it.

KNOWLTON MOWERS—4 ft. 3 in. Cut.....\$ 75 00

BUCKEYE HAY RAKES.

FIVE REASONS

Why the Buckeye Rakes are the Best for the Farmers to Buy:

1st—The Teeth being adjustable as to height and curved the proper shape and so hung to axle makes it the ONLY SULKY RAKE that will carry the hay on the teeth when raking, and will not roll the hay in front of them nor rake the dust and clods into it.

JUMBO.

The only 12-foot 2-horse Rakes that have been a success on this Coast.

BUCKEYE HAY RAKES—

	Wood Wheels.	Steel Wheels.
A 1, Drop-tooth, 8 ft.....	\$27 50	\$28 50
A 2, Coif-tooth, ".....	28 50	29 50
A 3, Spiral-spring, ".....	29 50	30 50
A 4, Drop-tooth, ".....	31 00	32 50
A 5, Coif-tooth, ".....	31 50	33 50
A 7, 10 ft. Drop-tooth.....	35 00	37 50
A 8, "Jumbo" 12 ft. Drop-tooth.....	40 00	42 50
A 9, " " Spiral-spring.....	42 50	45 00

2d—Is a PERFECT SELF-DUMP and LOCK-LEVER without cogs or ratchets.

3d—Has perfect swinging cleaner bar in place of the stationary iron rods called cleaners that are so annoying, always loosing or breaking.

4th—Wrought iron and steel being used in place of cast iron, make them the strongest, simplest and most serviceable Rake ever made.

5th—Dumps much higher and makes a rake that does the bunching as well as the raking.

THE JUDSON RABBIT-PROOF WIRE & PICKET FENCE.

fence colored RED by boiling in a chemical solution that preserves the wood. Address JUDSON MANUFACTURING COMPANY, 14 and 16 Fremont Street, San Francisco.

CHEAPER and BETTER than Ever. Their 2-ft. high 3-cable fence has taken the trade. Farmers put barbed wire above it and have the CHEAPEST GOOD Fence that can be made in ANY WAY. Rabbits cannot get through. Hogs cannot break it and Horses or Cattle cannot get over it. All our

**FACTS ABOUT ELECTRICITY.**—"All the energy in the world," said Dr. C. F. Chandler, in a recent lecture before the Columbia School of Mines, "come from sunshine. Even the energy in the electric battery that rings the doorbells of our homes has its origin in the light of the great solar system. The force in the copper wire that sets the bell to ringing comes from the zinc plate in the battery jar. The energy in the zinc plate comes from the Anthracite coal with which it was burned when taken from the mines, and, finally, the energy in the Anthracite coal was put there by the sunlight that fed and nourished it when it existed, ages ago, as trees and plants. An interesting misapprehension that exists in the minds of a good many persons, is concerning the vital dangers that lurk in the pressure of, say, a thousand volts. The newspapers often tell us that a man has been killed by such a pressure, whereas, in fact, such a pressure alone could not kill a humming bird. I have frequently caught in my hand sparks possessing an electro-motive force of 100,000 volts without feeling anything more than a very slight burn. The danger arises only when the volts are reinforced by a good many amperes or currents, as when one takes hold of a charged wire. Then one feels a shock that is unmistakable, because the force of a great many currents in the wire suddenly decomposes all the fluids in his body. The salt in the blood at once turns to chlorine gas, and the man whose veins are charged with this deadly poison cannot in reason be expected to live long."

**A SNEAK THIEF** is usually regarded as a creature of low and depraved tastes. But there is one who was one a few weeks since in Providence, R. I., who seems to have an ambition to reach a high elevation in some way. He climbed by night to the top of the Electric Light Co.'s chimney, 250 feet high, presumably by the lightning rod, and stole the platinum tips from the top of the rod. The theft has entailed considerable expense upon the company as the rod will have to be retipped, and can only be done by building a platform about the top of the chimney. Human audacity could scarcely attain to a greater height, especially by such slender means. The company ought to forgive the theft and appoint him trimmer to their lofty light towers.

For nearly half a century Ayer's Cherry Pectoral has been the most popular cough remedy in the world. The constantly increasing demand for this remedy proves it to be the very best specific for colds, coughs, and all diseases of the throat and lungs.

**USES OF THE RARE METALS.**—Some rare metals, possessing special qualities are required for certain work. Thus palladium is used in making some parts of time-pieces, and iridium for the points of gold pens, and the uninitiated have no idea of the value of such products. Vanadium costs, for instance, 123,900f. per kilogramme; zirconium, 79,295f.; and lithium, which is the lightest of metals, 77,090f. per kilogramme. Rhodium, which is extremely hard and brittle, and is only fusible at a very high temperature, fetches 25,330f.; and iridium, the heaviest substance hitherto discovered, costs 12,005f. per kilogramme. It will, therefore, be seen that gold and silver are far from being the most precious metals, as far as their market value is concerned.

**TERRA COTTA LUMBER.**—Near Melbourne, Australia, is a factory of terra cotta lumber from clay and hardwood sawdust. In the process of manufacture, the sawdust is spread and left lying on the clay in the pit from 36 to 40 days to allow it to sweat. Both are then mixed thoroughly, stones being eliminated, the mass is molded to the desired shapes, steam dried, and the sawdust roasted out in a kiln. The product is guaranteed to be proof against fire, heat, cold and vermin.

**WELL-SEASONED WOOD.**—To test wood whether it is well seasoned, put a small quantity of tincture of iodine on a part freshly sawn or cut. If it assumes a dark, nearly inky color, then the wood is good and at least one year cut; but if the place assumes a yellow color, then the wood is quite new and not fit to use.

#### ONLY A DIME

Well invested often brings large returns. Buy a "Horse Book" and it will save you many a dollar. Tells you about the horse, what ails him, and how to cure him. About the Pioneer Buggy and where to get it. Sent for a dime. Pioneer Buggy Company, Columbus, Ohio.

#### Don't Fail to Write.

Should this paper be received by any subscriber who does not want it, or beyond the time he intends to pay for it, let him not fail to write us direct to stop it. A postal card (costing one cent only) will suffice. We will not knowingly send the paper to any one who does not wish it, but if it is continued, through the failure of the subscriber to notify us to discontinue it, or some irresponsible party requested to stop it, we shall positively demand payment for the time it is sent. LOOK CAREFULLY AT THE LABEL ON YOUR PAPER.

#### ORANGE PLANTERS

Should read the advertisement of the Aloha Nurseries. The best varieties are offered at rates so low that no one need hesitate about planting for experiment, or for investment in places where the orange is known to thrive.

#### Unitarian Literature

Sent free by the CHANNING AUXILIARY of the First Unitarian Church, Cor. Geary and Franklin Sts., San Francisco. Address Mrs. B. F. Giddings as above.

## A Great Event

In one's life is the discovery of a remedy for some long-standing malady. The poison of Scrofula is in your blood. You inherited it from your ancestors. Will you transmit it to your offspring? In the great majority of cases, both Consumption and Catarrh originate in Scrofula. It is supposed to be the primary source of many other derangements of the body. Begin at once to cleanse your blood with the standard alternative,

## Ayer's Sarsaparilla

"For several months I was troubled with scrofulous eruptions over the whole body. My appetite was bad, and my system so prostrated that I was unable to work. After trying several remedies in vain, I resolved to take Ayer's Sarsaparilla, and did so with such good effect that less than one bottle

### Restored My Health

and strength. The rapidity of the cure astonished me, as I expected the process to be long and tedious."—Frederico Mariz Fernandes, Villa Nova de Gaya, Portugal.

"For many years I was a sufferer from scrofula, until about three years ago, when I began the use of Ayer's Sarsaparilla, since which the disease has entirely disappeared. A little child of mine, who was troubled with the same complaint, has also been cured by this medicine."—H. Brandt, Avoca, Nebr.

## Ayer's Sarsaparilla

PREPARED BY

DR. J. C. AYER & CO., Lowell, Mass.  
Sold by Druggists. \$1, six \$5. Worth \$5 a bottle.

MRS. PRESIDENT HARRISON.

#### Our Distinguished Guests

California has done herself much credit by the cordial welcome extended to President Harrison and his party. Everywhere the most sincere enthusiasm has prevailed and exceptional marks of esteem and honor have been paid to the chief executive, in which those of every shade of political opinion and interest have eagerly participated. There have been tokens of welcome most unique in design and in spirit characteristic of the State and its citizens. The "California style" has cropped out and seems very agreeable to the recipients of our honors. No doubt the effect upon those high in the National affairs will be toward a truer appreciation of our Western spirit and the resources which we are developing, and this will be of inestimable value to us in many ways. Next week the President and his party will be in Oregon and Washington, and the northern part of the coast will continue the welcome which has been sounded on so high a key by the people of California.

We are pleased to introduce to our readers this week two more of the distinguished visitors, and thus complete our quartet of the people's guests. Mrs. Benjamin Harrison has won universal esteem and admiration by her womanly beauty, gentle manners and keen cordial in-

terest in the efforts to entertain and welcome her. She has borne the fatigue of the long journey splendidly, and it is the judgment of all that her pictures do not do her justice either in lineament or expression. The portrait which we present on this page is the best we have seen, and it must serve as the foundation for such conception of the lady as the reader can form by bestowing a more gentle expression and a more graceful pose than the artist has secured.

Mrs. Harrison is a native of Ohio, the daughter of Prof. Scott, who was teacher of chemistry at Miami University, at Oxford, Ohio, the institution at which Benjamin Harrison graduated in 1852, at the age of eighteen. Young Harrison then did well at college, capturing not only a diploma, but the heart of the professor's daughter, who also bestowed her hand upon him, two years later. Mrs. Harrison has proved a most valuable helpmeet to her husband during all the experiences of his life from his first struggle for a \$5 fee as a young lawyer, up to his career as the chief executive of a great nation. Mrs. Harrison is a leader in all good words and works, and we trust that many years remain to her.

Another portrait upon this page presents the strong face of Hon. John Wanamaker, Postmaster-General. Mr. Wanamaker has proved

a very acceptable member of the President's party, and has received marked tokens of appreciation from the people. Mr. Wanamaker will be 54 next July, and is a native of Philadelphia. His youth was a laborious struggle, rewarded in early manhood with the means to open a clothing establishment in Philadelphia. Untiring, honest, straightforward, shrewd, the young merchant prospered, until to-day he owns and conducts one of the largest retail establishments in the world, and is supposed to be worth \$10,000,000.

Mr. Wanamaker is well-known throughout the country as a devout Christian and a zealous worker for religious interests. He has always taken a prominent part in public movements for the relief of suffering humanity, and his contributions have always been among the first and the largest.

In personal appearance Mr. Wanamaker is not particularly a handsome man. He has a full, round head, a broad forehead, a strong nose, heavy-lidded eyes that flash with energy, heavy jaws that denote strength of will, and tight-closed lips that just droop at the corners, giving an ever-present touch of sedateness. He has that quality which above all signifies the possession of genius—the quality of absolute concentration of mind on the subject in hand, so that on every occasion he is able to be at his best. His power of organization is, of course, masterful; and, like all busy men, he never appears hurried, and always seems to have abundant time for everything.

In his work as Postmaster-General, Mr. Wanamaker has struck several popular chords.

His work for the postal telegraph and postal savings banks has commended him widely.

LAND QUESTIONS IN NEW MEXICO.—The telegraph states that while at Deming on his way westward, President Harrison spoke as follows: Thinking that you labored under disadvantages by reason of the unsettled state of your land titles, because no country can settle up and become populous while the titles to its land remain insecure, it was my pleasure to urge upon Congress, in both the general and a special message, the establishment of a special land court, to settle this question once for all. [Cheers.] I am glad that statute is now a law, and immediately upon my return from this trip, I expect to announce the judges of that court and to set them immediately to work upon these cases, so that you shall certainly within two years have all these questions settled. I hope you will then see an increase of population that has not as yet been possible, and which will tend to develop your great mineral resources and open up your lands to settlement, and make you a prosperous people.

DESPITE the fact that there is a State bounty of \$5 per scalp on the coyote, and a county bounty of \$6, sheep raisers in Mendocino county are so annoyed by coyotes that a call is out for a meeting of sheep-owners, to take measures for the destruction of the depredators.

ONE day last week, while herding cattle on the "Grant," near Lemoore, Tulare county, a vaquero discovered an elk in the brush and succeeded in capturing it with his lariat. Elks are very nearly extinct in that section.

HON. JOHN WANAMAKER, POSTMASTER-GENERAL.

## CORRESPONDENCE

Correspondents are alone responsible for their opinions.

## Through San Geronimo Pass.

EDITORS PRESS:—From San Bernardino, eastward to the sandy plains of the Colorado desert, there is a gradual rise until one reaches the summit at Beaumont, and from there it is one slow descent until one reaches the railway station at Salton, 250 feet below sea level. From San Bernardino, the Southern Pacific railway traverses the San Mateo canyon, where the cultivated fields are too frequent to be very interesting to a botanist.

From Redlands, on the 9th of April, '91, I took a wood road which led off to the left, among the unsettled hills, where nature still rules supreme. The canyon, and hillsides were covered with a thick growth of brush, *Rhus ovata*, shrub oaks and California lilacs being especially conspicuous. *Castilleja foliolosa* grew in clumps among the bushes, a foot or more high, and forming a brilliant display on the steep canyon sides. The floral bracts are of a bright orange—vermillion at the tips—each an inch or more long, forming a dense head, among which the shorter light greenish-yellow corollas of the flowers are entirely eclipsed.

In open places, *Nemophila insignis*, with its bright "baby eyes," grew in clusters of surpassing beauty, and lined the roadside until the eastern descent to the desert commenced. The flowers averaged nearly an inch in diameter, of a lovely cyanine blue, with a lighter or a white center. It covered the hillsides in places for acres in extent, appearing like a patch of the blue sky reflected upon the earth.

Growing on some of the steeper canyon sides were clusters of a species of *Phlox*, suffrutescent, two or three feet high, with a profusion of light rose-purple flowers, measuring 1½ inches across. The hirsute stems and foliage rendered the plant more admirable at a distance than in the hand, but it is one which would command admiration and attention anywhere, and one well worth further cultivation.

Among the annals were *Lupinus hirsutissimus*, with hirsute stems and foliage, attaining a height of three feet or more, with spikes of aster-purple flowers. In some of the open fields grew *Sanicula bipinnatifida*, with its dense, ball-like umbels of deep dahila purple flowers. This species of sanicle seems abundant in Southern California, especially on adobe lands, in grain fields, or scattered over the broad plains of the larger valleys.

*Layia elegans*, with a center of cadmium yellow color, the rays of a clear lemon yellow, tipped with white, grew abundantly on the western slope from Riverside to the summit of the pass, and for a ways down the eastern slope. At the summit another *Layia* without the white tips to the outer rays made its appearance, while a third species of a clear white throughout, extended from the sandy plains around Colton to the eastern or desert slope. The *Layias* are all elegant plants, husky and erect in habit, with flowers two inches across and of a metallic brilliancy. *Layia elegans* has already become favorably known in cultivation and the other varieties must soon follow.

*Orthocarpus purpurascens* is a peculiarly beautiful and showy annual, a foot high, diffusely branching, erect in habit, producing numerous dense and thick terminal oblong or cylindrical spikes of flowers. The yellowish corolla is tipped with bright and lemon-yellow on the lower lobes, the upper part tipped with brilliant magenta, the whole encircled and crowned with brilliantly colored floral bracts of a rich magenta or crimson-purple.

*Peonia Brownii* (*P. Californica* Nutt.) with its coarse "brick-red" flowers was observed in bloom on these hills, and rattleweed (*Astragalus*) was also abundant. The delicate, lovely rose-purple flowers of *Gilia dianthoides*, growing in large patches by the roadside, commanded the admiration they invariably elicit. The popcorn flowers (*Krynitzkia* species), of a snowy whiteness, dotted the fields of alternate green and blue and gold.

At Beaumont, at the summit of the pass, single roots of the fragrant *Viola pedunculata* formed masses of foliage and flowers two feet and more across, six inches high, and bearing hundreds of the peach-scented blossoms. The color of this violet is beyond comparison, being a shade between lemon and cadmium yellow, of a metallic brilliancy, deep and clear, the backs of the petals veined or tinged a rich prune-purple. The profusion and luxuriance of this violet was here greater than I had previously noted in any other locality, and it seemed to reach its maximum growth in the cultivated fields. Other lovely annuals, noted in profusion at Beaumont, were the delicate sulphur-yellow cream-cups (*Platystemon Californicus*), the popcorn flowers, *beris*, wild hyacinth (*Brodiaea capitata*), *nemophila insignis*, *orthocarpus*, *viola*, *sanicle*, *sidalcea malvaeflora* and last, but not least, *Eschscholtzia Californica*—the State floral emblem of California.

The Golden *Eschscholtzia* was here in the height of its beauty. Single plants would measure one to two feet high, and over a yard across. I estimated that one of these plants would bear over 500 flowers, and each flower that I measured was fully four inches in diameter or over, some measuring five inches! This was evidently the typical form, as the large,

snoculent roots are perennial. The intensely brilliant coloring of the flowers, words cannot depict, and the artist has yet to correctly imitate and do justice to the coloring. It is most nearly described as of a deep orange color, and yet, a touch of crimson or scarlet exists in its composition, which makes itself felt when a large field of the flowers are seen at a distance.

Single fields of this magnificent flower, hundreds of acres in extent, were observed, which, at a distance of 5 or 6 miles, were of a uniform vermilion hue—a lake of fire amid an emerald sea. Such a sight, viewed from near and from afar, is one never to be erased from memory, but the true artistic beauty of the flower is lost beside the magnificence of such a vast display of brilliant, rich but, uniform coloring.

From Beaumont to the White Water river is a gradual descent and one continuous garden of flowers with now and then an alternate field of grain. *Phacelia tanacetifolia*, with its heads of pale blue or rather lavender-colored flowers, lends color to the bushes that border the roadside. *Chia* (*Salvia caruacea*) grows in profusion in the fields, and conspicuous for its large, lavender-colored flowers. *Baerlas* and *Oenotheras*, pop-corn flowers, *Amoinklas*, *Lupinus* and *Gilias* form alternate spots of orange, lemon-yellow, blue or purple amid the green of wild oats, alfalfa, clover and grasses. Spikes of brilliant flowers of a species of *Delphinium*, of a rich Berlin blue, rise among the clumps of bushes, over which also the delicate *Megarhiza* vine with its clusters of white flowers trail in profusion.

Last but not least amid this vast garden of flowers rise the Spanish hayonets on every side, like sentinels of war on the western margin of desolate sand, rendering due tribute to spring in high clusters of waxy-white, bell-shaped flowers, that lend their sweetness to the busy bee.

Beyond stretch the iron rails, where no flowers are, and where wind and sand reign supreme.

San Diego, Cal.

C. R. ORCUTT.

## FORESTRY.

## Prof. Lemmon's Report on California Conifers.

The botanical portion of the 1890 report of the California State Board of Forestry is commented upon by *Garden and Forest* as follows:

An account of the true Pines of California appeared in the Second Report of the Board of Forestry of that State from the pen of the botanist of the board, Mr. J. G. Lemmon, who now supplements this with a paper on the other coniferous trees of the Pacific forest, which occupies the larger part of this third report and which is enriched with many admirable illustrations made from photographs of trees, forest-scenes, and fruiting branches of many of the species. In this paper, after some remarks upon conifers in general, their history and distribution, Mr. Lemmon describes their classification, and then proceeds to give an account of the different species (exclusive of the Pines) found in California, and in the regions of which California must be considered, from the botanical point of view, an integral part, that is, all the great territory of western America which extends north and west of the State. An account of the different species is preceded by notes on the genera to which they belong, and to this is added some information relating to species which occur entirely beyond the region. In the case of the Hemlock, for example, there is a short account of our eastern species, and of the Asiatic species of this genus; and under the Spruce, not only are the Pacific coast species described, but the White and Black Spruces of the east as well, the European Spruce, and some of the Japanese species. Changes in the generic and specific rank of a few trees are proposed. The Alpine Hemlock is here removed from *Tenga* and made to compose the genus *Hesperopice* (Engelmann's sectional name), a genus characterized by Mr. Lemmon by its alpine habitat, its cones, which are longer than those of any Hemlock Spruce, oblong-cylindrical, and two to three inches long, with numerous scales, nearly all of the same size, and reflexed at maturity, broader than long, four to eight lines wide, and striate with a thin, wavy, rounded border; by the small, spatulate bracts three to four lines long, by the angular seeds with resin vesicles, and elliptical wings three to six lines long, and linear scattered quadrangular leaves keeled above and below with a solitary and large resin duct. "The propriety," he says, in speaking of this tree, "if not the scientific necessity, of separating it from *Tenga* may be justified upon the ground that the conifer family is so large, and the necessity for dividing it into groups for convenience of comparison is so apparent, that comparatively slight differences (so they are fundamental) must be taken for generic distinctions"—a view of genera in which, we fancy, all students of conifers will hardly concur.

The large-cone Douglas fir of the mountains of Southern California, which Engelmann considered a variety of the widely distributed *Pseudotsuga taxifolia*, is now restored to specific rank under the name of *Pseudotsuga macrocarpa*, because the author recognizes "in it elements that certainly point to such separation. It must be borne in mind," he remarks,

"that the evidence of distinctness does not depend so much upon the number of characters as upon their permanence. Now the characters of this spruce are always uniform—no transition trees connect it to the other species; again, the other species is both north and south of it, particularly north. If this big-cone development is a recent variation, what has produced it? If a southern climate, why are not the Arizona and Mexican trees still larger cones? If a dwarf variety, why so prolific in fruit?" Mr. Lemmon, in a note, calls attention to the fact that when he visited the headquarters of this tree, in the San Bernardino mountains in 1876, "the cones of the preceding year's crop lay on the ground so abundantly that they were two or three feet deep under the trees—a degree of fecundity never observed in the taxifolia species."

The red fir of the Sierras (*Abies magnifica*) is well described, and the variety of Northern California, which so long puzzled botanists by its long, exerted cone-bracts, resembling those of *Abies nobilis* of Oregon, is described as the variety *Shastensis*. The peculiarity of this variety of fir, aside from its locality, is connected entirely with the fact of its cone-bracts becoming long and protruded, a half to a full inch between the scales, rendering the large purple cones, thus decked out with tasseled fringes, a most beautiful object. The trees of this variety, Mr. Lemmon tells us, are "very large and lofty, though not so immense and high-headed as in the typical southern form, but they become, on the southern slopes of Shasta, a dark, gloomy assemblage of massive black trunks, colored on the north side, from base to the limbs, with bright yellow lichens or tree moss; the lower limbs draped here and there with long sweeping festoons of black, filmy lichen, giving a funereal aspect to the whole scene, soars relieved by the twitter of a red squirrel, the long, wailing note of a woodpecker, or the occasional cry of a bald eagle." A second variety of this species is distinguished as variety *xanthocarpa*—"a smaller, less symmetrical tree than the typical, with smaller cones averaging four to five inches long, half as thick near the base, tapering slightly to the apex, and of a yellowish color." It is found in the high Sierras around Meadow lake, Sierra county, where, Mr. Lemmon tells us, it forms the greater part of the noble forest of that region.

Mr. Lemmon considers the white fir of the Sierras and of the mountains of Southern Oregon simply a somewhat modified form of *Abies grandis* of the Northwest coast "distinguished by having a rather rigid habit, the branches relatively shorter and stouter than those of *Abies grandis*. The young shoots are olive-green, the buds ovoid, the leaves dark-green above, whitened with stomata below (also with a few rows above), the leaves relatively very long—one and a half to two inches—nearly all of the same length, obtuse at the apex, not usually two-ranked except on lower branches, yet all are twisted half around at the base, which allows the light to reach through to the branchlets past the distorted leaves. It is, in fact, midway both in locality and in characters between the green-leaved and green cylindrical-coned *grandis* of the moist northern forests and the white-leaved and light-green elliptical-coned *concolor* of the southern arid interior regions." It is this tree which is called *Abies Loviana* in English plantations, and which, from a horticultural point of view, is very distinct from the species of the Northwest coast, although hardly distinguishable from the long-leaved form of the Rocky mountains.

It is not quite clear whether our author intends to consider the California Sierra tree one variety and the Colorado tree a second variety or not. He adopts for the California tree the name of *Abies grandis*, variety *Loviana*. If he considers it distinct from the *Abies concolor* of Colorado, his seems to be the correct name; but if he holds that there is really but one mountain form of *A. grandis* worthy of a distinct name, then this should be known as variety *concolor*, it having been named *Abies concolor* before the name of *Abies Loviana* was bestowed upon it.

Mr. Lemmon, in his very full and interesting description of the Big Trees, raises an interesting point as to the origin of the name Sequoia. The name was made by the Austrian botanist Endlicher, who published the genus in 1847, but, unfortunately, did not give the etymology of this name. It has been generally supposed that it was formed from the name of the half-breed Cherokee Indian, Sequoyah, a man distinguished in having invented a syllabic alphabet for his tribe. Gordon, however, in the second edition of his "Pinetum," published in 1875, states that the name was probably formed from "sequence, separated or following in order of succession after Taxodium, from which Prof. Endlicher separated it." Mr. Lemmon now says that Prof. Gray, at the time of his visit to the Pacific Coast in 1877, informed him that "the report of its being derived from Sequoyah the Cherokee was doubtless an afterthought; that undoubtedly Endlicher derived his name from aequi or aequor, alluding to the well-known fact that our redwoods are the followers or remnants of several colossal extinct species."

Further investigations do not throw much additional light on this subject, and the answers sent in reply to Mr. Lemmon's inquiries by a number of distinguished men are not very satisfactory in their conclusions. The venerable De Candolle writes: "The supposed origin of Sequoia from Sequoyah or Sequamal is entirely

fanciful. By the appearance of the name it is probable that it originated from or was taken up from some native word and written more or less correctly. Historically, it is a matter of regret, of course, that any doubt rests upon the origin of the name of the two trees which surpass all others in size and in the interest attached to the history of the genus to which they belong; but, after all," as De Candolle writes, "it matters little—a name is a name. The essential things are, first, that it be the expression of a natural genus; second, that it has not been employed before; and third, that the genus has not previously received another name."

Mr. Lemmon's paper contains, in convenient and acceptable form, a great amount of useful and interesting information, botanical, historical and economic, relating to the trees which compose the larger part of the Pacific Coast forests, and which make these forests the most wonderful and important forests of conifers known to man. It will be welcomed by all serious students of American trees, and will take its place in the permanent literature of the subject.

[We recently stated that copies of this report can be had (sending 10 cents to pay for mailing) by application to Prof. J. G. Lemmon, 1015 Clay St., Oakland. He can also supply a limited number of the Report of 1889, which contains his essay on the Pines of the Pacific Coast—not the "prices" of the Pacific Coast as the type had it in our issue of April 18th.—EDS. PRESS.]

## THE DAIRY.

## Notes on Grasses in Oregon.

Prof. F. T. Frensch, in Bulletin No. 11 of the Oregon Experiment Station, gives the following notes on grasses:

The varieties of grasses and clovers found growing on the college grounds have made good progress during the past year in nearly every instance. The yield of hay, cut from several of the plants, will be found in the table.

Of the Fescues, *Festuca Elatior* (Tall Fescue), is the most promising. There is very little difference between this grass and the *Festuca Pratensis* (English blue grass). The former, Tall Fescue, made a larger growth, but is rather coarse for the best quality of hay. These grasses grow in tufts or bunches, spreading slowly by the growth of these tufts. The *Festuca Pratensis* did not make as coarse a growth as the former, and for this reason we would place it first for hay. Both of these grasses are said to be very nutritious and readily eaten by stock. Of the smaller Fescue, the *F. durinacula* (Hard Fescue), gave a light yield of hay. This grass is better adapted to sow with a mixture for pasture. It is of little value for hay. The other Fescues have maintained a very good growth and are worthy of a trial for pasturage purposes.

Meadow foxtail and sweet vernal grass are both thinly set and do not spread very much. These would be more valuable when sown with other grasses, and would give better results for pasturage purposes. These varieties of grass mature earlier than any other varieties grown on the Station grounds; however, they do not maintain their vigor through the dry weather.

Orchard grass and tall oat grass mature about the same time and are among the most vigorous grasses grown on the experimental grounds. These grasses can be sown with clover successfully, for they mature at about the same time and add to the value of the hay. There is some criticism upon the orchard grass when grown exclusively for hay, from the fact that it is inclined to be coarse. No doubt this is mainly due to the fact that it is not generally cut early enough. This grass, like many other varieties, passes the point for making the best hay very quickly. When it begins to turn brown it is beyond the best stage for hay. If grown for hay this grass should be sown very thick, not less than 10 to 14 pounds of seed to the acre.

T. A. Cole, Madison county, N. Y., in the New York Tribune, says:

"After 20 years' experience, I have settled down upon orchard grass as possessing greater merits than any other, for both pasture and meadow, for fattening animals or for dairy stock. When cut for hay just before bloom, and cured with as little sun as possible, it will make more milk than any other variety known to me; if left to ripen, it is worthless."

Further notes on orchard grass will be found under remarks on pasture grasses.

Next to the orchard grass, perhaps, we would place the tall oat grass. This produced a large yield of hay, which, when cut at the proper stage, is of very good feeding value. Like the orchard grass, this grass should be cut early with no delay, for it changes very rapidly after blooming. For woodland pasture and for valley pasture as well, we believe the oat grass has many advantages, for it withstands long-continued drouth better than many of the finer growing sorts.

The matter of growing early maturing grasses becomes of very great importance throughout a large portion of the State. Those varieties which will grow rapidly and mature from the moisture which remains in the soil from the winter rains will be most successful. The growth of timothy, because of the lack of mois-

ture, was very materially checked last season. The growth of the red-tops, except on moist land, was also materially shortened by the lateness of the season at which they start to grow and reach maturity. Common red clover, which is several weeks earlier than the mammoth red clover, made a larger growth owing to the dry weather affecting the latter after the common red clover had reached maturity.

Such varieties should be grown as will reach maturity before the dry season begins. The average rainfall during the months of April, May and June, is very low throughout a large portion of the valley, and for this reason the moisture which remains over from the winter rains must constitute the principal source of moisture for plants.

The English or Perennial ryegrass made a larger growth than the Italian ryegrass, both on the white land and on the higher dark land; and the English ryegrass made an excellent second growth as well. Of the grasses which produce a good, firm sod on the white land, there are none which have done better than the *Agrostis Stolonifera* (creeping bent grass). This grass grows close to the ground, the stalks not reaching more than a foot in height at any time. The leaves are very fine, and the tufts spread rapidly, forming a thick mat which would withstand much treading by stock, no doubt. At this date, March 1st, there is no grass on the white land that produces a better sod than the creeping bent grass, hence for pasture purposes this grass is worthy of a more extended trial.

Texas bluegrass (*Poa Arachifera*) has made a good growth during the past year, and has spread very rapidly, until now it covers the entire plat, and is sending up shoots in the path which surrounds the plat. While the stalks sent up are thinly distributed over the plat, the ground is well covered with leaves, which grow at the base.

This grass starts early in the spring and maintains a green, fresh growth throughout the dry weather, and has kept green all winter. This variety of grass has proved valuable in some of the States where a hotter climate prevails; and so far, its indications are favorable for a pasture grass, throughout a large portion of this State. More seed has been procured, with a view of testing the value of this grass on a larger scale. The habit of this grass is to send out numerous shoots from the root stalks, thus enabling the plants to spread very rapidly.

Of the grasses which were grown on the white land, tall fescue gave the largest yield of hay, and mesquit next; but neither of these were as good in quality as orchard grass, oatgrass or redtop, all of which did fairly well. Hard fescue, Italian ryegrass and meadow foxtail are thin set, and did not give as large a yield as some others. *Avina Flavescens* (yellow oatgrass) has made a better sod on the white land than the tall oatgrass, and it starts earlier than the latter and keeps green later in the season. These grasses, which grow in tufts or bunches, would give better results if sown in a mixture; and, in fact, there are very few of the grasses that would not give better results if sown in this manner. A mixture of grasses makes a better quality of hay, and more pasture of a better quality, than when the same varieties are sown separately.

Timothy and Alsike clover, sown in mixture, made a good set, and yielded a large amount of hay of excellent quality. These were sown upon land just bordering on the white land. The Alsike clover matures later than the common red clover, hence is better adapted to sowing with timothy. There is a strong objection to sowing Alsike clover, from the fact that it is inclined to fall down and become entangled so much that it is difficult to cut and cure. The timothy helps to support the clover, thus preventing its falling on to the ground.

While the results of the plat experiments are valuable, as being indicative of more or less success in practice, yet definite conclusions can not be reached until a more thorough trial has been made in the field. For this reason a series of plats, consisting of several acres each, will be seeded with different varieties of grasses and clovers, and a mixture of these, to determine their value in a more practical way.

There has been some inquiry regarding the growth of alfalfa. Small plats were sown to alfalfa, but has not done as well as some of the clovers. The dry weather injured the alfalfa more than it did the common clovers. Throughout the valley, where the soils are undrained, and are what is termed heavy, I do not think alfalfa will be a success.

Five sheep were confined on some of the plats, at different intervals, to determine something regarding the power of the grasses to start again after close pasturing. Orchard grass possesses this requisite to a remarkable degree. This grass was pastured until there were no green leaves in sight, and then allowed to recover, which it did in about four weeks, producing an average growth of eight inches. It was again pastured to the ground, after which it was allowed to start, and it made an average growth this time of five inches, before being checked by the dry weather.

The mesquit, rye grasses, and the brome grasses were not so readily eaten as the other varieties which were pastured. While the tall fescue is a coarse grass it was closely cropped, and seemingly very much relished by the sheep. Sheep's fescue and meadow foxtail were only fairly well eaten, however, the latter was too far matured for the best results. The oat grasses were readily eaten, and put forth a very vigorous second growth.

This matter of testing grasses for pasturage is an important one, and one which we shall pursue further, hoping to reach results that will be of some benefit to those who are interested in producing good permanent pastures.

## THE FIELD

### Agricultural Production in the United States.

Hon. J. R. Dodge, Statistician of the Department of Agriculture, will soon issue in his April report an essay on "Permanency of Agricultural Production," to meet the views of some that the United States is approaching its limit of capacity for population. From advance sheets we quote as follows:

Some modern disciples of Malthus are wrestling with the limitation of production in this country. Some citizens of an adjoining country, of large superficial area in great proportion unoccupied, have sought to impress upon the popular mind, through our press, the idea of near approach of a "pressure of population upon subsistence," which has been in other countries the hush of an age of primitive and superficial agricultural cultivation. A corollary of this idea would be the necessity of enlarging our productive area by some form of dependence upon neighboring agricultural resources. It is natural that self-interest, coupled with a partial acquaintance with the natural resources of this country, should lead outsiders to take this view; but there is no such excuse for depreciation of the capabilities of rural production in the United States by citizens of this country.

Europe has four times as many people as the United States, and very few of the countries represented by this eastern continent fail to produce nearly or quite enough for their own subsistence. All Eastern Europe has an agricultural surplus, and Italy's exports equal her imports. Even the Netherlands, with only 2½ acres to each inhabitant, require only a few million of dollars' worth of agricultural imports in excess of agricultural exports. France requires from foreign sources only about seven per cent of her consumption for a population nine times as dense as ours. Insular and factory-studded Great Britain feeds one-half of her people from her soil, through a labor of one-eighth of her population, and her game preserves and pleasure grounds are enough to feed the other half if utilized for agricultural production.

It would seem to be an absurdity to claim a necessity of four times as much area to feed one person in this country as it requires in Europe, with whatever allowance may be necessary for more liberal dietary. The contention becomes the more unreasonable in view of the fact that half of the area of Europe could easily double its production under more general and higher cultivation.

Mr. Dodge then introduces arguments and statistics to prove first, that the surplus production is not unlimited; second, that the wheat surplus is not immediately exhaustible; third, that wheat production is not declining in Europe; fourth, that the Indian wheat scare is nearly over; fifth, that the wheat production of the world is not declining; sixth, that there is much danger in false statistics and irrelevant deduction. He concludes his paper as follows:

This country has not reached the limit of agricultural production. It has not even approached it. One-third of its area is either too dry or too wet for present cultivation, awaiting irrigation or drainage. Of the other two-thirds there is much not included in farms; its farm area is not all utilized, and the cultivated area may become far more productive.

Farm labor is not sufficiently effective; its distribution could be more harmonious and profitable. Prices of cereals have sometimes been reduced by oversupply. Cotton with a product of 22,000,000 bales in three years, a quantity greater than the production of six years prior to 1860, begins to decline in price. At the same time there is a failure to produce the sugar required, though there is cane land sufficient for an ample supply, and beet-sugar lands *ad libitum*, without mentioning the possibilities of sorghum. There might be tens of millions of dollars annually coined from various fibers, large extension of fruit-growing, and introduction of many economic plants to be made the basis of new industries. The material now produced for food consumption might be put in more attractive form for market, and a large contribution levied upon the gastronomic and aesthetic tastes of consumers.

It is not true that the wheat of the world is declining. It is not difficult to prove the existence of 2,300,000,000 bushels as an average, and there is no prospect of decrease. Annual fluctuations, from climatic causes, will produce variation in price, which the distribution of harvests of different climates through the year and increase of international transportation facilities will help to equalize. The United States will continue to produce a surplus for export, until the wheat culture of the plains shall have given place to more varied and profitable culture, and increasing numbers of non-agricultural population shall require for bread the entire crop.

It is proper to say that the tendency is toward a better distribution of crops, and to higher prices and greater profits. The propor-

tion of agricultural labor will decrease, non-agricultural will increase, agricultural production will be more varied, rural intelligence and skill will advance, and the farmer in better position to demand and secure an equitable share in the net proceeds of national industries.

### The Broom Corn Product.

In view of what was recently said in the *RURAL* about high prices for broom corn in this market and the market for our product in Australia, the following from the *American Cultivator* will be read with interest. In nearly every part of the United States broom corn can be grown successfully, and at a profit. It is, however, a business that requires more watching the market than any other connected with farming, for the prices fluctuate from fifty to several hundred dollars per ton. The grower should be able to hold his crop over until higher prices are ruling. Where it is grown as a business it is made to yield good profits, but only on good soil and with great labor.

Broom corn requires more warmth than Indian corn, and succeeds best on sandy soil when it is warmed by the sun. The land should be prepared in the fall or spring, and only such seed used as will sink when floated in water. The standard variety is the Evergreen, and when good seeds of this are obtained from reliable seedsmen a good crop may be anticipated. The dwarf varieties are only used for whisks and clothes brushes, and the demand is not so great for them. The planting and cultivation do not have as much effect on this crop as its harvesting and after-preparation. The seeds are planted in two ways: on very light, clean, rich land, in drills three feet apart; but on other land, in hills three and two feet apart, with six to eight stalks in the hill. The seeds then need a light covering and cultivation similar to Indian corn.

The time of harvesting is important. It must be cut before the seed has ripened, and yet not when it is too green. A good time for harvesting is when the blossoms fall. The brush then has a good color, and is the strongest and best for the market. Some farmers let it stand longer, and then use the seed for stock; but the gain in this does not equal the loss sustained in harvesting a poorer quality of brush. Before the stalks are cut they are tumbled. A man goes through the fields and breaks two rows, laying one across the other almost at right angles. The center then follows with his sharp knife, which is placed against the stalk about eight inches from the brush. As the stalks are cut they are carried from the field in wagons and scraped. The scraper is one or two-horse power, according to the size of the farm. In this scraping process all of the seeds are taken off, after which the brush is ready to be cured. This requires a shed or building through which the air can circulate freely. When green the stalks should be laid out very thinly, but as it grows dry it may be piled up more in heaps. So much depends on curing the brush that the price obtained for it may be doubled or trebled if it receives intelligent attention. If sheds are constructed for it the brush may be held over from year to year, and sold when the price is high. The facilities for doing this are essential to success in this work.

So far Illinois leads all of the States in growing broom corn, but New York and other States are rapidly following in this industry. The demand for broom corn has steadily increased in this country for the last 50 years, and with slight fluctuations the prices have also advanced. Successful culture of it, however, requires not a little study of the conditions and necessities of the market, with a pretty practical knowledge of the plants and their special needs. It is a crop that cannot very well be cultivated along with other farm products.

## HORTICULTURE.

### Prune-Growing in Washington.

E. J. Estep writes for the *Olympia Tribune* as follows: It is only within four or five years that any definite knowledge of the ability of this part of the country to produce prunes of a high commercial value has been demonstrated. It is true that it has been much longer than that since prunes and plums of a great many varieties have been raised here and in Oregon, but it is only of late years that any definite knowledge of the varieties, kinds of soil and climatic conditions have been attained.

The earliest experiments were made on the Columbia river, mostly in Clarke county, where the largest commercial orchards are now located. But from an experience of ten years on the Sound, I have no hesitation in pronouncing this section of the State equal to the best prune lands in Clarke county.

About nine years ago, I planted an orchard of plums and prunes, three miles from Olympia, on Budd's inlet. The land is what is known as shot clay, that is, clay intermixed with small stones about the size of shot. Without any former experience at all, it is not any wonder that I should commit the very common blunder of having too many varieties; not but that all kinds grew and produced abundantly, but there is a vast difference in the commercial value as to varieties, and those planting orchards from now on will have the experience of those of us that have gone before, and need not repeat those mistakes.

### Varieties.

Experience has reduced the number to three, though some growers say one. I will mention them in the order of their merit: "Italian," "French" (Petite d'Agen), "Silver," or Coo's Golden Drop. The "Italian" is pre-eminent the prune for this country. It outranks in quality any other prune, foreign or domestic. It always brings from two to three cents per pound more than any other variety, except the Silver prune. So far as known, this is the only part of the United States where this variety is grown to perfection. California, the only State that produces prunes in any appreciable quantity, does not produce this variety. The tree is one of the hardest, and out of 250 trees of that variety, I only lost two or three.

The "French Prune."—This variety is the one almost entirely planted in California now. It does not bring the price the Italian does, but still can be recommended in a degree for other reasons, mainly because they are ripe and can be run through the drier before the Italian prune comes on. I had about 100 trees of this variety, but from the fact that my orchard was located immediately on tide water, the fruit had the bad habit of hursting open before ripe. But I notice trees of this variety two or three miles from the water do not have this habit.

The Silver Prune.—This prune is the largest of all. The highest rating I have ever noticed of imported French prunes was "60's," (that is 60 cents to the pound). I have now silver prunes grown last year that will not go over 25 or 30 prunes to the pound. This prune brings the highest price of any, but its planting cannot be recommended except in small proportion for the reason that the trees are not hardy. They are swift, rapid growers, and grow so late in the season that the frost splits the bark of the trunk and either kills or partially kills the tree. However, if the tree gets over the first two or three years it is about safe. But undoubtedly time and further experience will entirely overcome this difficulty. This prune has the further advantage of being later still than the Italian, thereby lengthening the season.

### Soil, Etc.

The best soil is either shot clay or clay with some sand intermixed, and if the subsoil is clear sand, all the better, for the reason that the drainage would be perfect. It is of prime importance that the soil should be dry; that is, have reasonable natural drainage. There are thousands of acres in Thurston county that would fulfil these conditions.

The first expense is the clearing of the land. This is a costly business here, and any one who thinks it too big a job for him had better go into some other business. The first plowing must be done with a big team and go deep. It would probably not be an over estimate, on an average, to place the cost of planting an orchard at \$250 per acre. This includes cost of land, clearing, plowing and cost of trees and planting. The orchard once planted, it will pay its way by raising something between the trees, until they come into bearing. Anything that requires cultivation will do.

Seasons vary some here, but not much. There will be a crop every year. Taking one year with another, it is a moderate estimate to place the average crop of dried prunes at one ton per acre. My orchard last year (eight years old) did something better than that. At the prices last year, 10½ cents per pound, by the ton, this yields over \$200 per acre; or say a net profit of \$150 per acre. It costs no more to cultivate and take care of an acre of prunes than it does an acre of corn. The only additional cost is drying and boxing.

### Whitewashing Fruit Trees.

EDITORS PRESS:—Please tell me regarding the whitewashing fruit trees; is it considered to be beneficial or otherwise. Any light given will be appreciated by  
Kirkwood, Cal.  
L. R. EARNESTINE.

It is useful in preventing sunburn and possibly may have some good effect on insects. The subject has been considerably discussed in the *RURAL* and the weight of opinion is in favor of whitewashing. C. J. Barry, a farmer in Tulare county has been troubled by having borers attack his fruit trees. In a communication to the *Visalia Times* he claims that he has found a remedy and concluded by saying that he has tried it successfully for the past five years. Following is the remedy: "Take one pound of whale oil soap and dissolve in one gallon of water and add whitening enough to make a good white wash, and then applying to the body of your trees from the forks down to the surface of the ground, you will not be troubled with borers or sunburn. Your trees will grow symmetrical, and you will be entirely satisfied with this remedy."

This prescription has been largely used by other fruit-growers and widely approved.

### Walnut on Oak.

EDITORS PRESS:—It has been stated in several papers that a man in San Diego has successfully grafted the English walnut on the oaks that grow in the foothills. Please oblige a subscriber by stating in your valuable journal whether it is a botanical possibility.—JOHN W. FRETWELL, Parkfield.

Theoretically it is impossible, or at least improbable, but actual practice sometimes accomplishes things not in accord with theory. Who can tell what has actually been in the direction mentioned by our correspondent?

## PATRONS OF HUSBANDRY.

## Our Grange Edition.

The Grange news of most general interest is given through all editions of our paper on this page. Several supplemental pages, devoted to Grange interests, are added in our Grange edition, which any subscriber can receive in lieu of the regular edition without extra cost, by addressing the publishers.

## The Master's Desk.

R. W. DAVIS, W. M. S. G. OF CALIFORNIA.

Better leave unsaid that harsh word.

Softly spoken words are like rays of sunshine. Whether or not we see the work begin, the result will soon show.

Do some good. It will be an item in your favor when the account is closed. A credit item is a safe item in a settlement. Sure it is.

A fine horse is sold on his record, and the better the record, the larger the price paid. Why not size up men by their records? If we did, don't you know a lot of our big Statesmen would sell for a small sum?

Better to be right and not do, than to do and not be right.

Be as a ray of sunshine every day.

It was no fault of the W. M. that no words appeared from his desk in last week's RURAL. The manuscript was mailed in due time. Possibly the coming of the President and the Postmaster-General may have "rattled" the railway mail clerks. One thing is sure—the coming of the Secretary of Agriculture did not annoy the Grangers. Let us hope that hereafter there will be no delays.

Let every farmer who wants to see the producer elevated in the social, financial and political world, subscribe for and read a good Grange paper. Help the editor who helps the farmer. Take the RURAL. It ought to be in your house. You can profit by its perusal. Write for it, and ask your wife, sons, daughters and neighbors to do so, too. Let them all read it.

"We propose buying together" (Declaration of Purpose). Have you tried the Trade Card Plan? Do you know how to purchase by the means of that "little card"? If you don't want to go in person, let the Secretary of your Grange "hulk" your orders, take the money, and order under seal of the Grange. There is some good sure to follow the honest and prompt use of the "Trade-Card Plan."

Improvement is the watchword. Can you suggest ways and means for improvement? Tell us how to farm more successfully; how to live more satisfactorily; how to educate more thoroughly; how to run Government more prudently; how to extend the power and influence of the Grange more widely; how to be more useful and more progressive. In short, tell us all you can about improvement.

There are a great many wrongs to be righted. Can any one do more to make equal and fair laws than the husbandmen of the land?

How the new leaves on the trees glisten with these April showers and this spring sunshine! Have you noticed them? If not, why not?

Petaluma is soon to have a Grange.

Two Rock Grange is to celebrate FLORA'S DAY, Thursday, May 7, 1891.

Do you know that each subordinate Grange proclaims its purposes, in Faith, in Hope, in Charity and with Fidelity.

The Grange wants to do away with any fashion, or custom, that tends to prodigality.

Sonoma County Pomona Grange has appointed a committee to arrange for a Farmers' Institute at an early date.

Are you going to the Oregon State Grange session.

Standing committees for next session of State Grange are announced in this issue of the RURAL. See if your name is on the list. If so, prepare at once for the work. Don't say you can't serve. Just huckle on the harness and try.

If you will read, recite, sing, declaim or prepare an essay for the State Grange, please notify Miss Josie Sharal, at Hayward, Cal. She is chair(woman) of the Literary Committee.

Be sure to avoid intemperance. All Patrons are taught to be temperate in eating, drinking and language.

Do you help the fatherless and the widow? Remember them in your hours of joy and plenty.

Santa Rosa Grange has lost one of its truest and most progressive Patrons. In the death of Bro. E. A. Rogers, a Past Master of Santa Rosa Grange, the long chain of its Past Mas-

ters is broken. Bro. Rogers is the first one of those who have filled that chair to pass to the silent land. He was a progressive, sincere, faithful, zealous and devoted Patron. His love for the Grange knew no limit. His willingness to sacrifice any personal pleasure for the Good of the Order was unprecedented. A regular and interested attendant of all the meetings, his place will long be vacant. Truly, we shall miss him. The family, all of whom are members of the Order, have our love, sympathy and prayers. We shall emulate his example, and always remember his many virtues and kind words.

## Remember Floral Day.

EDITORS PRESS:—"Floral Day" is rapidly approaching, and I wish to ask sisters through the PRESS if they have prepared some tribute in the way of a happy thought—an article upon the decoration of our beautiful garden, the Grange hall, a suggestion upon the care of these priceless gifts from our Master above, or, better still, are you able to give to your brothers and sisters of the Order some of the good advice that you receive every day from these silent though eloquent messengers? Who will favor us with an essay on the career of Flora of old, that Italian diety whose court was ever a bower of beautiful flowers which teach us nothing but what is elevating and good? Will our Worthy Lady Assistant Steward kindly tell us all about her "flower show of last fall"? I was not fortunate enough to visit it myself, and know that others who shared my fate would be well pleased with a description from her able pen. Sister Ceres always has a pleasant smile and cheerful word for the "bud and bloom" as well as for the matured "grain" of our Grange. Sister Pomona, we have no fruit in the summer that does not bloom in the spring. Have you the germ of some sweet "thought flower"? A word from you is always received with interest. What a charming bouquet will be presented on this happy day, when each contributes thoughts and ideas! Do not say you lack a subject, for is the very air not heavily laden with the rich perfume of the thousands and thousands of beautiful wild flowers of the field? And remember each little flower has a legend attached to it; even the modest little four-leaf clover has a beautiful history, if we will but interest ourselves enough to look for it—the story, I mean, not the four-leaf. What maiden does not search diligently for this symbol of love and constancy? Our Worthy Master, it seems, could not wait for the day set apart by the Grange, for we are told that he has already plucked one of Sonoma's fairest young roses for himself alone, and as we send our congratulations to him, let us hope that he will keep this fair flower ever fresh and bright, shielding it from the rough winds and biting frosts of life.

MATTIE U. JOHNSTON,

Flora Cal. State Grange.

Sacramento April 21.

## How to Get to Tulare Grange Picnic.

EDITORS PRESS:—If arrangements are not made for special train to the picnic, then all who come by railroad will find it much better to go to Tulare as the grove is about 2½ miles from that place and seven or eight miles from Visalia. Bro. Albert Wood, at Tulare, will look after Patrons from abroad who will make their whereabouts known to him.

There will be sports of various kinds for which a premium will be given to the best. There will be dancing between times, also at night, a convenient building having been engaged for that purpose close to Tulare.—Fraternally,

E. C. SHOEMAKER.

Visalia April 25.

## March Grange Open Meeting.

March Grange, Pennington, Sutter county will hold an open meeting and harvest feast on Saturday, May 9, 1891. Bro. B. F. Frisbie, State Deputy, will be present and confer the third and fourth degree upon a class. Grange will convene at 10 A. M. The feast and afternoon meeting will be public. Members of neighboring Granges are cordially invited to attend.

JAS. MYERS, Master.

Gridley, Cal. April 28 1891

## Danville Grange.

EDITORS PRESS:—An invitation has been sent to Eden and Temescal Granges and Contra Costa Granges, to meet with Danville Grange, Saturday, May 16th. W. M., Davis of State Grange will speak. A Harvest feast will follow. Grange will open at 10 A. M. In the afternoon an open meeting will be held. Fraternaly,

J. C. BALDWIN,

Danville, April 21. Sec. Danville Grange.

GRIDLEY GRANGE held a meeting on April 18, at which time there was work in the fourth degree. There were three initiations namely, John Traynor, J. S. Crane and Mr. Robinson. After the initiations the lodge adjourned to the banquet hall where the ladies had prepared a grand "feed." There were about 60 members of the Live Oak Grange present, and all expressed themselves in glowing terms of the manner in which they were entertained. The Grange is in a prosperous condition and the future prospects look very bright.—Gridley Herald.

## A Pen Sketch of Flora Day.

EDITORS PRESS:—Watsonville Grange held another of those enjoyable meetings, so in keeping with the advanced spirit of the age, so much in harmony with the organic laws of the order, and so far reaching in beneficial effects to every individual honored by the name of Patron. The occasion was the celebration of Flora Day. The program being somewhat out of the ordinary, perhaps a detailed description may lend a thought to the inquiring mind of some other Grange, which may result in as pleasant a day to them as this proved to us. The hall was profusely decorated with flowers, flowers, flowers everywhere, beds and banks and clusters, which the magic hand and ready genius of woman had deftly woven into innumerable shapes and forms of grace and loveliness. Flora's throne was something to be seen and never forgotten.

A high canopy of crimson curtains and flowers formed the first arch, the second being a beautiful crescent of Calla lilies, while her anchor of California popples occupied a position nearly in front. At the appointed time Flora (Miss Susie Cowles) arrayed in her Grecian robes, and supported by 20 young ladies in white, wearing floral crowns, entered the hall, and to the inspiring strains of a grand march, approached the position arranged for her coronation. This interesting ceremony was performed by the maids of honor with appropriate remarks from each. After being crowned, Flora, bearing a beautiful scepter which had been presented to her, was led to her throne, and there in a neat and instructive address thanked the Grange for its homage, after which the Grange band discoursed its sweetest music. The officers, Trustees and Past Masters then repaired to the ante-room, and forming in a line of twos led by the Gate-keeper and Assistant Steward marched into the hall, counter-marched through the arches formed by the implements of the Assistant Steward, finally reached the position of Flora, and opening to the right, left the Assistant Steward guarding the goddess with the Steward and Gate-keeper in close support, all with their decorated implements in hand. The Master now stepped to one side of the throne, called up the Grange, and spoke as follows: "Worthy Flora, from out your flowery realms of beauty we greet you. We salute you with the pure flowers of faith, the bright flowers of hope, the sweet flowers of charity, the everlasting flowers of perseverance, and the undying flowers of fidelity, the flowers of the long ago, the sweet forget-me-nots of justice, so carefully planted and so tenderly nurtured by the beautiful Grange have blossomed into the exalted flowers of the manhood and womanhood which to-day honors you—not alone as the Goddess of Flowers, but as a type of that precious flower revered by us, pure, glorious, affectionate woman; that flower on which, as an anchor of hope, we entwined our dearest treasures, our most sacred sentiments, our earthly all and our blissful flowers of futurity. Ever cherishing in our hearts the kindest feelings to all, with malice nor envy toward none, we honor you as a representative of your sex—one of the cornerstones of the matchless Grange, which ever supports woman with its budding flowers of friendship, its blossoming flowers of love and its fruiting flowers of equality and honor. Sisters and brothers, these being our sentiments, let us exemplify them as becomes the Grange."

Here grand honors were given by all, after which the lines were again formed and the march resumed to the outer gate. The Grange Glee Club, catching the enchantment of the hour, now broke in and captured the large and appreciative audience by one of their most soul-stirring songs. The song with the cheers it produced had scarcely subsided when the enthusiastic band, not to be outdone, launched a very tempest of hewitching music. The Glee Club now appeared costumed as sunflowers, and with appropriate song and action acquitted themselves so creditably that they were roundly encored.

Like the audience, I have been so interested in the Love Feast as to almost forget the Harvest Feast—but no matter; that needs no description. Songs, instrumental music, recitations and addresses made up the balance of the program, which will be long and pleasantly remembered by all classes of our people.

Numerous applications for membership were received. This is the beginning of a series of meetings, which will only culminate in the celebration of our Natal Day—Dec. 4th—planned in June, Pomona Day and Patriotic Day in July, Ceres Day in September, with regular entertainments and practical discussions at each meeting, not to mention occasional Harvest Feasts. If any person thinks this Grange is not living up to its motto "No drones in our busy hive," we cordially invite them to visit us and give us a thorough waking up; and if there is any one so benighted as to think the Grange "don't pay," it must be some one who cannot compute compound interest, and compounded every day at that.

INVITED GUEST.

Watsonville, April 27th.

Bro. A. P. ROACHE writes: "The State Chairman of Woman's Work has received contributions from several Granges for the Nebraska sufferers. Santa Rosa Grange heads the list."

## Standing Committees.

In accordance with a resolution of the State Grange of California, the following announcement of members of standing committees is made. If there are any persons named who find it impossible to serve, I hope they will at once notify me, so that some one else may be appointed. But let no trivial excuses, no ordinary circumstance, no belief that some one else can do better, prevent any one from serving. These Patrons have been chosen from all sections of the State, hoping thereby to have every interest represented. Patrons throughout the State are invited to correspond with the chairman of each of these committees, and submit suggestions, in writing, at once, or at least some time prior to the meeting of the State Grange.

It will be noticed that no elective officer of the State Grange has been placed on a standing committee. It is believed this is for the Good of the Order, as, during the sessions of the State Grange, the officers have many duties to perform in the hall and in entertaining and receiving visiting Patrons, as well as in preparing for degree work.

In this connection, it is well to state that all persons who may be willing to assist in the literary and musical part of our program should communicate, before it is too late, with the Chairman—Sister Josie Sharal, at Hayward—of the Literary Committee.

I hope these committees will do the work expected of good, faithful Patrons, and that each committee will be ready to report at the first opportunity when the State Grange shall have convened at Hayward, October 6, 1891.

## Why Reorganizing the Buckeye Grange Was Deferred.

EDITORS PRESS:—Special Deputy F. B. Logan called a public meeting at Winters on April 16th, to consider the matter of reorganizing the old Buckeye Grange. Worthy District Deputy B. F. Frisbie of Yuba City was present and delivered an entertaining address. Upon canvassing the house, as barely the number willing to organize was present, it was decided best to adjourn to a date when a larger number of proper persons could be enlisted in the movement. On Bro. Logan's return from Vacaville, where he had met with encouraging success in instituting a new Grange, he again went to work to reorganize the Grange here, and succeeded in having 19 persons sign the petition. At the second meeting, which was called for this afternoon, most of the petitioners were present, but it was the opinion of the old members to defer organizing for fear sufficient interest could not be kept up with the Farmers' Alliance in the field at the same time.

My chief object in making the above explanation is to exonerate Bro. Logan from any adverse criticism, which might possibly be made, in not having done everything he could to revive the Grange. Had he been here one month ago and labored as faithfully for this object, there is no doubt but he would have succeeded. While there should be no rivalry between the two organizations above named, it is nevertheless a fact that some who have united with the one will not join the other, thus reducing the available material for each.

Having been an old-time member of the Grange, and still interested in its prosperity, and at the same time Secretary of our sub-Alliance, I am prepared to wish both Orders a hearty godspeed.

V. MORRIS.

Winters, April 25.

## Grange Picnics.

Name.	Place.	Date.
Tulare	Cent'l Grove	Sat., May 9.
Sutter Co. Granges	Yuba City	Friday, May 1.
Placer Co. Granges	Loomis	Thurs., May 14.
Sonoma Co. Granges	Bennett Val.	Sat., June 27.
Lockeford	Lockeford	Wed., May 13.

Notices of other picnics will be added to the above list when received.

## FARMERS' ALLIANCE.

## Alliance Edition.

Subscribers can receive our FARMERS' ALLIANCE EDITION WITHOUT EXTRA COST, by applying for the same. That edition contains several supplemental pages of Alliance matter, in addition to that which appears on this page through all editions.

## From State Organizer Col. Barbee.

EDITORS PRESS:—Once more I am home, and to-day, after a long absence from my wife and daughter, am enjoying their sweet society. Notwithstanding I have been absent nearly one year in this great work of reform, yet there is "no place like home" to me, and no society like that of my family.

I have borne the heat of the mid-summer sun in the San Joaquin valley, and the rain and the cold of Northern California winter. And not for money, "loaves and fishes; neither for honor and vain glory, neither has it been in the interest of or against either of the old parties, but from a sense of duty I owe to my fellow-beings, the people of the Golden State, whose sunshine or shadow will be my earthly abiding place. I have never been a politician; neither have I held a public office, nor been defeated for one; and while I could time and again have held offices of distinction and trust, I have invariably refused, preferring the pleasure and quiet of home to the vain, shadowy and uncertain honors of public life. In the work I have done for my State, I have only performed my duty, for which I ask nothing and expect nothing from California except a just recognition of the rights of the farmer, the mechanic and the day laborer. This we ask from every political party. We demand "equal rights to all and special privileges to none," nothing more, nothing less. At last

## Hayseeders Are Aroused.

They have awakened from more than a "Rip Van Winkle" sleep; they realize that patience has ceased to be a virtue, and now "swear by the eternal" that taxation without representation is not only wrong and unjust, but must cease. We are non-partisan, strictly so; we demand justice, and that of both old political parties, we ask honest men to represent us; we demand that hayseeders be heard, and ask it only through the watch words of our order, "truth, justice and equity." Will they be heeded, or will they continue to "rule or ruin?" thus forcing upon the people the necessity of a third party. The work that has been done in one short year in California should admonish the old parties to be careful, go slow, and tramp lightly on the rights of the farmer. The following

## Account of One Year's Work.

Means something. "He that hath ears to hear, let him hear" what the Farmers' Alliance say.

Less than one year ago, or on May 3, 1890, the first County Alliance (Santa Barbara) was organized. The first sub-Alliance was formed April 11, 1890 with eight members. The following County Alliances, beginning with 1st, Santa Barbara and following up in regular order as they were organized are as follows: 21, San Luis Obispo; 31, Monterey; 4th, Fresno; 5th, Tulare; 6th, Ventura; 7th, San Benito; 8th, Los Angeles; 9th, Santa Clara; 10th, Yolo; 11th, Merced; 12th, Stanislaus; 13th, Colusa; 14th, Santa Cruz; 15th, Orange; 16th, San Joaquin; 17th, Sonoma; 18th, Alameda; 19th, Humboldt; 20th, Sacramento; 21st, San Diego; 22d, Sutter; 23d, Butte; 24th, Contra Costa; 25th, Placer; 26th, San Bernardino; 27th, Calaveras; 28th, Amador; 29th, Solano, with other counties ready to come in and the remaining counties calling for organizers.

Bros. Hines and Osborn go this week to Napa, Marin, Lake and Mendocino, Burdette Cornell takes charge of Yuba and Nevada; Town of El Dorado, Cook of Tuolumne and Mariposa, and I learn Bro. Elliott will take charge of Tehama. This means that every county in the State will send delegates to the State Alliance in Los Angeles on Oct. 20, 1891. On April 11, 1890, there were eight members and on May 3d one County Alliance; now there are 29 County Alliances and a membership of 25,000. This means that the next State Convention will represent a membership of over 50,000. Does this indicate anything or not? Answer it, ye members of the last Legislature. Let them not forget that the Farmers' Alliance in California is asking for just recognition, that is all, and nothing short will satisfy.

Hear ye not the voice of the people: Prepare ye the way of the "Farmers' Alliance and Industrial Union" for 1892, asking justice! only justice!! from the rich and powerful organized "few." I leave the

## Farmers' Alliance Field

In fine working order. Everything is in a most prosperous and promising condition. Everything is very hopeful indeed. All along the line, from San Diego Co. to Tehama Co., I have found good and true men who would have gladly joined us, but were not eligible on account of business interests. I told them, "at a more convenient season, I would call for them; and now that the Farmers' Alliance is a 'fixity' and here to stay, I would say to those I left, that I am now conductor on the 'National Citizens' Alliance train, and will stop at

MRS. J. KINNEAR, CHAPLAIN F. A. &amp; I. U.

all the principal stations in the State, and take in all who were left by the Farm train. The Citizens' Alliance train has a wide, solid and safe platform, with ample accommodations for all honest men in the State. The managers of the road have issued orders forbidding the sale of tickets to political bosses or sorehead politicians, which orders will be carried out to the letter.

## The F. A. &amp; I. U. Work

Is booming in Washington and Oregon, and Bro. Turner writes they will be in the Union inside of 90 days.

Bro. Wardall of Dakota writes that he has just organized the State Alliances of Minnesota and Iowa, and from a visit to the Texas State Alliance he will return to his home by way of California.

President Polk will visit us and deliver a number of lectures in the State, followed later on by Gen. Weaver and Senator Peffer and maybe the Sockless Jerry Simpson. Hon. J. N. Harden of South Dakota writes me that he is in the National Lecturer's Bureau, and is ready to visit us when we so desire. Bro. Harden has been in the harness in Kansas and Dakota for six years. He is a devoted worker and a fine lecturer. He and his wife were delegates to Ocala, and it was there I had the pleasure of hearing him speak. As I will be on the wing in a few days again, all mail to this place will be promptly forwarded.

JO. S. BARBEE,

National Organizer Citizens' Alliance.  
Santa Barbara.

## Mrs. J. Kinnear, Chaplain.

Among the representative members of the Order gathered together at San Jose last November to organize the State Farmers' Alliance we were pleased to meet a number of able and faithful assisting matrons, several of whom on divers occasions, during extended discussions, seemed to possess just the right kind of mother wit to say in the nick of time the very thing wanted to settle perplexing questions.

In the selection of State officers for leading the work until the next annual session, the sisters were not slighted in offers of positions, but some shrank from the duties involved, and Sister Kinnear, who was unanimously elected Chaplain, stands as the only representative of her sex in the grand list of officers of the State of California.

Her husband, who lives at Modesto, is a long-time subscriber to the PACIFIC RURAL PRESS, and so Sister Kinnear is one of its best readers and friends. She also takes an active part in the anti-saloon cause. From all we have seen and can hear, she is certainly a most worthy representative of the official ranks of the Alliance in California.

Sister Kinnear, whose maiden name was Jacobina Lawrence, was born at Sackville, New Brunswick, in 1839. Her father, George Lawrence, was a farmer, on whose place she grew to womanhood. After her school days she followed dressmaking for several years. Being of an ambitious turn, she decided to come to this State (California), arriving in San Francisco early in 1866, where she worked a few days; then, at the earnest request of relatives to visit them at San Jose, she went to the latter place and remained several months. At San Jose, on Dec. 18, 1866, she married James Kinnear, a young farmer. They lived in Santa Clara county up to 1868, when they moved to San Mateo county, living there till 1879, when Stanislaus county became their residence, where they continued to live. From a private note we take the liberty to excerpt the following:

"I was a farmer's daughter and a farmer's wife all my life. I am the mother of five chil-

dren, three sons and two daughters, four of whom are grown.

"I have always been a warm advocate of the temperance cause, a worker and supporter of the church, and also a supporter of the RURAL PRESS since its birth."

## Tulare County Alliance.

Among the resolutions reported by the committee and adopted by the Tulare Co Alliance says the *Farm View* was one indorsing the action of the Legislature in submitting to popular vote at the next general election, the question of electing U. S. Senators by direct vote of the people. The new Australian ballot law and the law for the semi-annual payment of taxes were also indorsed and the belief expressed that these measures had been secured by the influence of the F. A. & I. U. A committee was appointed to consider the proposition to form an Alliance real estate agency, to co-operate with similar agencies in the East, for the sale and exchange of property, and the County Business agent was authorized to act for the present in receiving applications for the sale or purchase of lands by members. It was resolved that in government ownership of the telegraphs and control of railroads, lay the true solution of the transportation problem; and that it is the duty of the government to foreclose all liens, declare forfeited all unearned franchises, and take possession of the roads and rolling stock for debts long overdue and unpaid. In consideration of the rapid increase of membership a resolution was adopted, placing the basis of representation of sub-Alliances in the County Alliance, at one delegate for the charter and one for each twenty members and majority fraction thereof.

## State Lecturer on Wheels.

We are glad to see, according to the appointments announced last week by Bro. Gallup, that our Worthy State Lecturer has been called out for a series of lectures. This is right. We hope he will be called for in all parts of the State until his time is pretty well occupied. It may be a little hard for Sister Gilbert, but it will be good for the Order. We want Bro. Gilbert to give us a written mention of every place and meeting held, and, besides that, we want some good brother or sister to tell us what Bro. Gilbert says, reporting his good conduct, etc.

STATE LECTURER J. L. GILBERT will speak at Dixon on Wednesday of this week, at Winters on Thursday, April 30th, and will speak on Saturday, May 2d, at Dunnigan, Yolo county. At the latter place they are to hold a large picnic. We ask for Bro. Gilbert a large attendance, well knowing that no one will regret having heard him. On May 25th he will speak at San Jose, and we hope neighboring Alliances will not fail to turn out at the meeting. He will do the cause good. We would like to see arrangements made to have a county meeting in Alameda county held on or about May 23d or 26th, either at Irvington or Niles.

SOLANO COUNTY Organizer, Bro. T. A. Gallup, writes: "Will you make the change in the meeting at Egbert schoolhouse, about five miles northwest of Rio Vista, to May 7th. It was set for May 5th."

BRO. BURDETTE CORNELL will speak at Stockton on Saturday, May 2d, and address the Alliance picnic to be held at Lodi, on May 6th. We bespeak for Bro. Cornell a large attendance at both places.

## The President's Gavel Taps.

[MARION CANNON, Pres. Cal. State F. A. & I. U., Ventura, Cal.]

EDITORS PRESS:—I send herewith some rulings in accordance with my promise when in San Francisco, that I would from time to time send you for publication, some of the many sent out from this office, that the members in this State may see and profit by them without writing so many letters to me upon these questions. I shall only send you such as are of general interest to the Alliances in this State, leaving the many local questions to be answered in the usual way.

A question comes up from Monterey county: "Can the County Alliance deprive the officers of that body of the right to vote on all questions coming before them?"

No. The officers of a County Alliance are as much a part of that body as the delegates elected by the sub-Alliances, and are of more importance to the good government of the Order than the other delegates, for it almost always happens that the most intelligent delegates are elected to rule over the county legislative bodies, and it would be absurd to say that they were not to be trusted.

From San Luis Obispo county comes this question:

"Can the President of a sub-Alliance give the password to a visiting brother, when he produces vouchers under seal that he is in good standing?"

No. Sec. 5, Art. 5, of Constitution defining the duties of the State Secretary reads: "To distribute the semi-annual password to the Secretary of each County Alliance, who shall distribute it to the President of each Farmers' sub-Alliance, who shall give it to the members of his Alliance, and this password shall be given in no other manner." By this section the President can give it only to his Alliance members, and he cannot give it to "visiting" brothers. This password is not only a test of membership, but it is also evidence that the brother having it has paid his quarterly dues, because the President cannot give it to his own members until their dues are paid.

From Sacramento county comes this question: "Upon the death of the President can the Vice President, who is a young lady, appoint committees and preside over the County Alliance?"

Yes. It is her duty to assume all the duties and responsibilities, as well as the honors, of that important office. I have learned, however, that at the last meeting of the County Alliance she took a seat on the left of a man who was called to preside. This was wrong. She should have seized the gavel and wielded it over their deliberations, if for no other reason than to vindicate her own sex. Yours fraternally,  
MARION CANNON.  
Ventura, April 23, 1891.

EDITORS PRESS:—There has come up from Colusa Co. the following question:

Who has the authority to dismiss ineligible members who have been initiated into the Order by the Organizers?

This question has caused more discussion than any other in the sub-Alliances, and I therefore hope to make the situation so plain that there will be less wrangling over it hereafter. In Sec. 2, Art. VIII, of the National Constitution, we read: "It shall be the duty of the Supreme Council to enact a uniform eligibility clause for the various State Constitutions, also to enact laws defining the eligibility of persons of mixed or unusual occupations or residence."

When this question was brought before the Supreme Council, it enacted a statutory law as Sec. 20, which reads as follows: "That the question of eligibility be left to each State, subject to the limitations of the Constitution." This State adopted Sec. 1, Art. VIII, upon that question, and after the admission of persons under that section, the sub-Alliances have exclusive control over them by Sec. 24, Art. IX, of the Constitution, and no County or sub-Alliance has any authority to dismiss ineligible members other than in their own sub-Alliances. The State President may demand of a sub-Alliance the dismissal of clearly ineligible members, and if they refuse to dismiss them, he could arrest their charter for a plain violation of the law, but neither he nor any other person can dismiss them in the face of a two-thirds majority of a sub-Alliance; and this is right, because no sub-Alliance would refuse to dismiss a member by a two-thirds majority if he was not engaged in a mixed occupation, and they are the best judges of all the circumstances surrounding such cases; therefore those members in your county who are trying to weed out members of other Alliances than their own should cease their warfare and patiently submit to the rule of a two-thirds majority. I will try to protect the Order from its enemies, both inside and outside of the organization, and when a plain case of ineligibility comes up, the snbs will not refuse to dismiss them at my request. When occupations are mixed, I prefer that the snbs decide by a two-thirds majority whether they will dismiss them or not, and no other Alliance has any authority to interfere with their action. If one Alliance was permitted to dismiss the members of another, confusion would reign throughout the State, and this whole movement would be paralyzed. Therefore let the sub-Alliances extend due courtesy to each other, and all wrangling will soon cease.

MARION CANNON.

Ventura, April 27.

### To-day and To-morrow.

High hopes that burn'd like stars sublime,  
Go down in the heavens of freedom;  
And true hearts in the time  
We bitterlest need 'em!  
But never set we down and say  
There's nothing left but sorrow,  
We walk the wilderness to-day,  
The promised land to-morrow.

Our birds of song are silent now,  
There are no flowers blooming!  
Yet life is in the frozen bough,  
And freedom's spring is coming!  
And freedom's tide comes up alway,  
Tho' we may stand in sorrow;  
And our good bark, aground to-day,  
Shall float again to-morrow.

Tho' all the long, dark night of years  
The people's cry ascended,  
And earth is wet with blood and tears;  
But our meek sufferance endeth!  
The few shall not forever sway,  
The many moil in sorrow;  
Tho' powers of hell are strong to-day,  
But Christ shall rise to-morrow.

Tho' hearts brood o'er the past, our eyes  
With smiling futures gladden;  
For, lo! our day bursts up the skies;  
Lean out your souls and listen!  
The world rolls freedom's radiant way,  
And ripens with her sorrow;  
Keep heart! who bear the cross to-day,  
Shall wear the crown to-morrow.

O youth! flame-earnest, still aspire,  
With energies immortal!  
In many a heaven of desire,  
Our yearning opens a portal!  
And tho' age wears by the way,  
And hearts break in the furrow,  
We'll sow the golden grain to-day,  
The harvest comes to-morrow.

Build up heroic lives, and all  
Be like a sheathen sabre,  
Ready to flash out at God's call,  
O chivalry of labor,  
Triumph and toil are twins; and aye  
Joy suns the cloud of sorrow;  
And 'tis the martyrdom to-day,  
Brings victory to-morrow.

—Gerald Massey.

### After Many Days.

It was a beautiful September morning.  
Fleecy clouds floated across the sky, and the  
sun shone languidly through a thin mist that  
softened without obscuring its brightness.

A few maples had donned their splendid liv-  
ery in honor of King Winter's coming, and  
their brilliant color formed a fine contrast to  
the somber evergreens among which they grew.  
Here and there one caught gleams of light from  
the river, that mingled its voice with the  
plaintive melody which that master musician,  
the wind, was making among the pines.

Sweet sounds they were to Rachel Palmer,  
as she stood for a moment listening to them.  
All her life she had loved them, as only those  
love nature who have known little human com-  
panionship. The girl had always been alone,  
for the nearest neighbor was three miles away,  
and in those days, little time was spent in vis-  
iting.

But within two years, two great joys had  
come into Rachel's life. The first was the pur-  
chase of a farm near her home by a Boaton  
man, who brought his family out there to live.  
The family comprised himself, his wife, two  
boys and a girl. The girl was winsome and  
merry, and to Rachel Palmer she seemed the  
most beautiful and accomplished person in the  
world. Had she not been to school all her life,  
and could she not sing like an angel? Then,  
too, she was so graceful and pretty that she  
seemed like a sweet, fair blossom out here in  
the woods.

On this girl, Rachel lavished all the love of  
her warm heart. Rachel was a dreamer, and  
the busy flax-wheel at which she sat for so  
many hours each day flew far less swiftly than  
her own bright thoughts.

Yet a sadness ever mingled with her dreams,  
for the moaning river and sighing pines lent a  
pensive to her thoughts and manner.

Since Grace Wilson came, all Rachel's  
dreams were about her. She longed to be an  
artist, that she might paint a portrait of her  
friend that would rival even the greatest; a  
poet, that she might make her name immortal;  
rich, that she might load her with gifts. Oh,  
that she could make some great sacrifice to  
prove her love!

A year ago the second joy came. It had all  
come about through a visit Rachel made to  
Portland; such a wonderful visit that all events  
were ever after dated from it, for a person of  
few pleasures has always some event that serves  
as a Christian Era in his life. During this won-  
derful visit, she met David Brewster, and he,  
so handsome, so noble and good, had asked her  
to be his wife.

A visit to her parents followed, and they, as-  
certaining that he was a young man of good  
family and steady habits, gave their consent to  
their union.

To-day he was coming again, and Grace  
would see him for the first time. Rachel felt a  
little anxious about this meeting, but who  
could help loving Grace or fail to admire  
David?

Rachel turned from the doorway, where she  
had been standing, and looked about the room.  
Yea, all was in readiness for her guest. The  
floor of the keeping-room was as white as  
scrubbing could make it, the curtains were  
snowy, and not a speck of dust appeared on the  
tall clock in the corner. The andirons shone  
like gold, and the blue and halsam boughs in  
the fireplace perfumed the air.

She stepped into the spare bedroom and  
smoothed an imaginary wrinkle from a sheet  
smelling of roses and sweet clover. She paused  
for a moment before the mirror, to arrange the  
bow at her throat, and a tender smile flitted  
over her face as she thought whose face would  
be reflected there to-morrow.

Rachel went out into the kitchen, where her  
mother was at work. "Can I help you?" she  
asked.

"No," replied Mrs. Palmer, looking around  
with a satisfied air. "Dinner will be ready  
when they get here, and I don't believe your  
beef gets any better in the city."

Rachel took her wheel and went out on the  
little porch. How merrily the river sang, and  
how sweet and tender were her thoughts; for  
what waiting is so beautiful, so fraught with  
joy, as that of an innocent girl waiting for the  
coming of her lover!

At length she catches a glimpse through the  
trees of her father's white horse; then they  
come fairly in sight. How she trembles as she  
goes shyly forward to meet her lover. She  
holds out her hand, but David takes her in his  
strong arms and kisses her, right before her  
father! She hears them both laughing as she  
runs away to hide her blushes.

Dinner followed, but Rachel did not eat  
much, for her heart was too full. How tall  
and handsome her lover was! How clever and  
merry was his speech, and how often his eyes  
sought hers!

The afternoon passed quickly away and even-  
ing came, bringing Grace, who had been invited  
to meet David. Before the evening was over,  
the two young people were chatting like old  
friends, while Rachel watched them, pleased  
and happy.

Oh, the golden days that followed! How  
full of joy they were, and how swiftly they  
flew! Rachel was supremely happy. Father,  
mother, home, lover, friend—all were hers.  
What other joy could earth give her?

Grace was with the lovers a great deal; to-  
gether the three drove home the cows at sun-  
set; together they wandered by the river, gath-  
ering wild flowers and making the woods ring  
with gay laughter.

Mrs. Palmer looked on, well pleased. "The  
child never had a holiday in her life before,"  
said the good woman. "She must make the  
most of this one, for it's precious few she'll get  
after she is married."

Grace and David were as merry as children.  
They pelted each other with flowers, ran races,  
sang duets, and played mad pranks which  
astonished sober Rachel.

If a pang of loneliness and sadness sometimes  
smote Rachel's heart, when her two loved ones  
seemed unconscious of her presence, she was too  
unselfish and loyal to admit it, even to herself.  
Yet she often felt a vague longing to be like  
other girls. She had no gift of song; she could  
not say witty things. Grace and David could  
talk of so many things about which she knew  
nothing. All she knew was how to toil for  
those she loved.

But after all David loved her, and she would  
try to make up to him for her want of clever-  
ness by her love and self-forgetfulness.

One afternoon the three young people plan-  
ned a nunting expedition, but as Mrs. Palmer  
was suffering from a severe headache, Rachel  
could not go. "You must not give it up," she  
said to David and Grace. "If you do, the  
nuts may be gone." They were very unwilling  
to go without her, but at length yielded and  
set out together.

Rachel stood watching them as they walked  
away. How pretty Grace looked that after-  
noon. Rachel never forgot the quiet beauty  
of that day; the picture was burned into her  
brain, and in many a fevered dream she after-  
ward beheld her two friends as they stood at  
the bend of the road waving their hands in a  
laughing good-by.

Rachel went about her work with a song on  
her lips, and when her tasks were all done, she  
sat down with her wheel by the window to  
watch for the return of her two friends.

At length the afternoon drew to a close. The  
sun sank low in the west and cast long shad-  
ows among the trees, yet they did not come.  
The hunter's moon rose above the dark pines,  
and still they tarried. How the river moaned!  
Surely it had never sounded so dismal before.  
Rachel grew anxious, went often to the door.  
Her father was away for the night, so she and  
her mother were alone. The moon rose higher  
and higher. Deceived by the flitting shadows,  
Rachel thought again and again that she saw  
them coming.

But at length she really saw a man coming  
up the path, and never doubting who it was,  
she ran to meet him.  
"O David!" she cried, "why are you so  
late?"

"It is I—Mr. Wilson," replied an anxious  
voice. "Where is Grace?"

Every drop of blood left Rachel's face, and  
her heart stood still with fear. "O Mr. Wil-  
son!" she cried, "something has happened!  
They have not come."

Mr. Wilson was now thoroughly frightened,  
and set out to alarm others, and to obtain their  
aid in searching for the lost ones. Soon after  
Mr. Wilson's departure Rachel persuaded her  
mother to retire, and took up her vigil alone.  
The first, poor soul, of so many.

She neither wept nor moaned all that terrible  
night. For hours she stood on the doorstep,  
the night wind blowing her hair about her face  
unheeded, as she listened in vain for her loved  
ones.

At dawn the searchers returned unsuccessful.  
David's parents were notified, and tried  
every means of finding their son, but to no  
avail.

After the search had been kept up several  
days, Mr. Wilson appeared before Rachel with  
such a stern, set face that she was alarmed.

"Have you news?" she asked in faltering  
tones.

"Yes," he replied, grimly. There need be  
no further search. Two days ago, a man and  
a woman answering their description embarked  
in a vessel bound—God knows where; some-  
where to hide their guilt. She is no daughter  
of mine, henceforth."

Rachel arose and stood before him. She was  
a tall woman, and she looked as stately as one  
of her own pines, as she said with quiet dignity:

"Mr. Wilson, if you are so little acquainted  
with your daughter and Mr. Brewster as to  
think them capable of what you insinuate, let  
me tell you that I know them better." Rais-  
ing her arm above her head, she continued  
with deep solemnity: "Something has be-  
fallen them; what, I know not. This I know  
—God, who sees all, will reveal this mystery  
to me before I die. This I know, they have  
done nothing wrong."

Mr. Wilson was touched, and though uncon-  
vinced, left her without a word.

Rachel said very little about her trouble to  
any one, but one day her mother said to her:

"It seems childish of you to declare that  
David and Grace did not go away together.  
People will think you demented if you talk so."

The girl threw herself at her mother's feet  
with a passionate cry. "O mother!" she  
moaned, do not take away my only solace! I  
am but twenty! Think what a long, dreary  
time I must bear this burden. With my whole  
heart I believe in them. If I lose that belief  
I shall indeed go mad!"

Alas, poor child! As a traveler gazes with  
sinking heart at the desert over which he must  
go, so she, standing at the threshold of life, be-  
held only paroled and barren wastes stretch-  
ing out before her. For passionate young  
hearts are slow to learn that even a great sor-  
row cannot rob life of all its sweetness.

After this outburst the mother respected her  
daughter's feelings, and never mentioned her  
trouble to her. Slowly and quietly the years  
went by. Many a weary night Rachel sat by  
her window, looking wistfully down the path  
her loved ones had taken, listening to the moan-  
ing of the river, and ever murmuring the same  
prayer with dreary persistency.

As time went on the red gold of her hair  
changed slowly to silver, and the corners of her  
mouth drooped more than of yore. Sorrow  
came to her in many ways. Mr. Palmer fell  
from his horse one day, and was so injured  
that he lay helpless till death released him, and  
left mother and daughter alone.

All day Rachel sat at her wheel, spinning, for  
bread to feed her mother, who had grown old  
and infirm. Many changes took place about  
her. Mr. and Mrs. Wilson died and their sons  
went away. A little village sprang up near  
her home and neighbors grew plenty.

Every country neighborhood has one or more  
"old maids," angels of mercy, whom God has  
baptized with fire and set apart to comfort and  
aid the needy.

Such a one Rachel had become. Quiet and  
sad, she moved among her neighbors with a  
heart and hand ever ready to help. Many a  
dying one turned to her with a last look of  
gratitude, and many an orphan child sank sob-  
bing to sleep on her bosom.

At length the mother died and Rachel was  
all alone. Soon after her mother's death a  
neighboring farmer asked her hand in marriage,  
and was refused, gently but firmly.

Many years passed away and Rachel grew  
old and bent. Her hair was snowy and her  
steps feeble. No beautiful castles grew with  
the threads she spun now, no bright dreams  
mingled with the hum of her wheel. Yea, one,  
the dream of a life beyond and a long eternity  
with her loved ones.

She was wont to go to the neighboring wood  
to gather sticks for her fire. On her return one  
evening, she found an old man sitting on her  
doorstone. His white beard lay on his breast,  
and his hollow eyes had an unnatural bright-  
ness. Rachel spoke kindly to him and invited  
him in. He rose with tottering steps and en-  
tered the little keeping-room.

He looked wistfully around and tears filled  
his eyes. "O Rachel, Rachel!" he cried bit-  
terly. She turned and looked at him for a  
moment, then fell on her knees beside him.

"David, my own!" she said softly, "Have  
you come at last?"

The old man uttered a sharp cry.

"They told me you were dead!" he ex-  
claimed. "Curses on them! Curses on them!"  
Rachel drew his head down on her bosom.

She put her withered old arms around him and  
laid her cheek against his. All the long, sad  
years rolled away, and she was a girl again;  
for in her arms she held David, her David, who  
could never grow old to her.

"Who told you I was dead?" she asked  
gently. "Where have you been all these  
years, and where is Grace?"

"Grace?" he cried. "Did she not return  
that night and tell you where I was?"

"She never returned. The people all be-  
lieved that you and she eloped; but, darling, I  
never believed it for one moment! There would  
have been no need. Had you loved each other,  
I would never have kept you apart."

"O Rachel! we were never untrue to you in  
thought or word. My poor girl! to think that  
all these years you have not known what be-  
came of me!"

Then he told her that he had been taken by  
a press-gang that afternoon. The last he saw  
of Grace, she stood on the river bank waving  
him a brave farewell, and trying to keep back  
the tears.

He had sent a message to Rachel, which, of  
course, she never received. David had been  
unable to escape, and at Portland he was car-  
ried on board a ship. A few weeks after the  
vessel set sail, a storm came on and she was  
wrecked.

David was cast on an island, where he lived  
alone for many years. He told her of the long,  
weary watching for a sail, and how the thought  
of her had buoyed him up and kept him from  
despair. At length, he had escaped from the  
island and reached Portland, to find his par-  
ents and most of his old friends dead. There  
he had met the man who had asked Rachel to  
marry him. Ascertaining in some way who he  
was, David told him his story. He told  
David that Rachel and her parents were dead,  
and that Mr. Wilson had moved away, he did  
not know where.

Overcome with grief, David had again em-  
barked, and for years had lived in a foreign  
country, till a longing to see Rachel's grave and  
to be buried near her brought him back to find  
her.

Rachel could see that he was very ill, and the  
following morning she called in a physician.  
He told her that the man's days were num-  
bered. On the fourth day he died, watched  
by Rachel, who had never left him. She had  
told no one who he was, but when the ques-  
tion of his burial arose, she put her little sav-  
ings in the doctor's hand, saying simply: "It  
is my right; he was to have been my husband."

It was not an imposing funeral. The only  
mourner was a trembling old woman with sil-  
ver hair. Many neighbors, some prompted by  
the respect they felt for Rachel, others by  
curiosity, followed him to his last resting-  
place.

Long hours she sat by her window that night,  
thinking, thinking of by-gone days. The silver  
moon rose and glided across the sky; the winds  
ceased their sighing, and the great stars grew  
pale before she sought her bed. At length, she  
turned from the window with a smile, while  
perishing softly:

"Only a little while, David, and I shall join  
you."

Shortly after her lover's death, Rachel was  
again in the wood, when she was suddenly  
startled by a groan. Walking in the direction  
of the sound, she discovered an old man, evi-  
dently a tramp, lying on the ground. He  
seemed in great pain and moaned incessantly.

Rachel bent over him and asked him what  
was his trouble. He looked at her wildly:  
"I am dying!" he cried. "Dying right where  
she died! Oh, I can't die till I tell some one!"  
Then glaring at space, and throwing out both  
hands as if to ward off something, he shrieked:  
"Oh, don't come any nearer! I didn't mean  
to do it! You know I didn't! Why do you  
torment me!"

Rachel knelt beside him and put her cool  
hand on his brow. Her touch seemed to soothe  
him, for he ceased raving and lay quite still.

"May I tell you?" he asked finally.

"Yes," replied Rachel calmly.

"Fifty years ago, on this very spot, I mur-  
dered a girl. But I didn't mean to. I only  
meant to take her gold necklace; but she was  
brave and fought like a tiger. I took hold of  
her throat to stop her screaming, and she fell.  
I felt her heart, but it did not beat. Then I  
dragged her to the river bank and filled her  
dress skirt with great rocks and threw her in.  
She sank quickly, but her pretty, white face  
has been before me night and day ever since."

Rachel grasped his shoulder with an iron  
grip.

"Man!" she said sternly, "when did this  
take place?"

"Fifty years ago, in the month of October,"  
he replied. "The girl wore a white dress, and  
the necklace had the letters G. W. engraved on  
it."

"O Grace, darling Grace," moaned Rachel,  
"who knew you best?"

Hearing the sound of wheels, she ran into  
the road and called. The passer-by happened  
to be the physician who had attended David,  
and to him Rachel made the dying wretch re-  
peat his story.

He lived but a few minutes after he had  
ceased speaking. Rachel turned to the doctor  
with a sad smile. "My prayer is answered at  
last," she said.

A few days after, she was found dead in her  
bed, with her hands folded across her faithful  
heart.

All the villagers knew her story, and the  
tidings of her death spread rapidly. Young

lovers wept and drew closer together as they spoke of her. Loving hands placed roses and lilies and smilax in her withered hands and on her quiet breast, and above them lay the sweet, old face, purer than the lilies, tenderer than the clinging vines, with no shadow of pain on it now.

So they laid her to rest among her own pines, where every wandering breeze woke their music and wafted their incense abroad. And beside her slumbers he whom she loved so well.—*Dora Annis Chase in American Cultivator.*

Farm Life.

There is poetry even in farm labor if we only can find it. One man sees only his tools, by which he earns his daily bread; another with the same tools performs his tasks just as faithfully, but finds joy in the beauty of his work, and the refining influence it exerts upon others. One woman finds in her house only a place where she can make a martyr of herself, while another with the very same conditions, makes of her home a beautiful center, from which bright lights radiate, and the inmates go forth strengthened and equipped for the battle of life. The homely and prosaic realities will disappear in the sunlight of the poetry, which will surely be found by a diligent search for it. It is the philosophy of life to make the best of the present. Let us cultivate our little corner with care.

"Better to weave in the web of life  
A bright and golden filling."

Not forgetting that only noble thoughts and high aspirations can ennoble any calling. Carlyle, in his *Sartor Resartus*, I think, says something about fitting the man to the clothes. A satire, to be sure, but all the same, if our surroundings do not fit us, can we not fit ourselves to our surroundings? Many of our best and brightest men and women were born and bred upon a farm. Emerson says: "Keep the town for occasions," but the habits should be formed to retirement, and after all, isn't the country the very best place? That "man made the town, but God made the country" is evident.

Another correspondent says: "Many would soon to live upon a farm." True enough, but so would a philosopher soon to be a merchant; a professor of Greek or Latin to be a business man; a poet to be a lawyer, and a true farmer thinks his own calling one of the noblest of the many, by which men make their living, for that is what it all amounts to. But that is not all. There is work on every hand for us, aside from our own immediate surroundings; we can forget our own trials in ministering to others. Our own trials will seem small when we look around and find others hearing so much greater burdens. Because we live upon a farm is no reason why we should not have our part in life's great work. Let us determine to make the most of farm life. Let us realize the fact that there as much as anywhere we can enjoy opportunities of making our lives wider and richer. Life is not easy anywhere. It is not all poetry and brightness in any sphere. But let it be our endeavor to make our lives so bright, and our homes so pleasant that they will serve as encouragement to all who already live upon the farm, and awaken a desire in others to try farm life. Let us appreciate and be content in the place in which we find ourselves, bringing all the good there is in us to bear upon it, and

"Sometime, when all life's lessons have been learned,

And sun and stars forever more have set,  
The things which our weak judgments here have spurned

Will flash before us out of life's dark night,  
As stars shine most in deeper tints of blue;

And we shall see how all God's plans were right,  
And if through patient toil we reach the land

Where tired feet with sandals loose may rest,  
When we shall clearly know and understand  
I think that we will say: "God knows the best,"

—Mrs. Wm. P. Marshall.

Chaff.

THE faster a man runs in debt the less he is apt to get ahead.

SIMILARLY SITUATED.—A lady was one day driving her husband down a narrow lane in Scotland, when, on turning a sharp corner, they encountered a brewer's van. Neither had room to pass. The lady very tartly said: "He must go back, for I shall not; he ought to have seen us before entering the lane." "But how could he," replied the husband, "when there is this sudden turn in the lane?" "Never mind, I don't care; here I'll stay till doomsday, if necessary, before I give way to that man." The brewer's man, overhearing the colloquy, said: "All right, sir, I'll back out of it;" and then significantly added: "I've got such another one at home."

"Oh, John!" said Mrs. Smith, tearfully, "ma bae out her thumb dreadfully, and the doctor says there's danger of lockjaw."

"He needn't be afraid of that," replied Smith sarcastically. "She'll never give it a chance to lock."

G.—ROBINSON is a great free-trader.

P.—I never knew that. How do you make it out?

G.—Why, he never pays his bills.

PRISONER—"I don't think there will be any need of your addressing the Jury." Lawyer—"Why not?" Prisoner—"My insanity will be instantly plain to them when they see that I have retained you to conduct my case."

YOUNG FOLKS' COLUMN.

Margery's Title.

"You may laugh, but I shall earn one," said Margery Ellis.

"Ha, ha! How you would look to have a remarkable string of abbreviations to please out your cognomen!" her brother replied.

"I didn't intend that you should hear me say anything about it."

"Who could help it, I should like to know, when you proclaim it from the housetop?" Ned Ellis questioned, teasingly.

"'Twas only from the doorway; and I don't know why a girl may not have titles as well as a boy," said Margery, impatiently.

"Not the least reason in the world, Lady High Jingoism de Fiddle de—o-ooch!"

"Well, I don't mean to be laughed at any more," Margery half laughed at the sudden turn in his form of address which her unfriendly pinch had evoked.

"Say, Margery, when are you going to begin?" questioned Ned, rubbing his arm ruefully. "I'll have to change it if you're going to set out to torture a fellow."

"You're right. I'm going to begin right now. Of course, I must be a lady first of all; so excuse me for that pinch," Margery impulsively exclaimed as she turned to go.

"Whew! Well, that is a new wrinkle!" Ned gazed in astonishment at her retreating form.

Only last June, Margery Ellis had graduated from the high school with great hopes and ambitions filling her breast; and how she was to realize them was the question that filled her thoughts day and night. As yet, the horizon had not widened very much to her view; but her ambition was dauntless. She felt very sure that out in the world lay some great work which would crown her with the coveted laurels, and she had resolved to win them.

This little episode with Ned, though, had produced a suddenly formed resolution, which she determined to carry rigidly into execution, "heavens," as she said to herself, "it will not hurt, but help, me in great things if I am careful about little things."

"Oh, pshaw! Don't be mooning about encompassing the earth just now. My hall wants a brand-new cover; and here it is all out—just want's your needle to finish it up," Ned said a few days later. So, with a sigh for the great things, Margery hunted for her work-box and soon completed it.

"Thank you, my lady," was Ned's return for the work, coupled with a lordly how.

"Margery, don't think of leaving me alone this year; I need you," her mother remarked one day, as she was planning for the accomplishment of her wishes. And she was not sorry that she had relinquished the plans readily, when, a few weeks later, her mother rallied from a severe illness to whisper faintly: "You have saved my life. Your presence has relieved my mind of responsibility, and your care has been most faithful."

Yet even this did not make her lose sight of what she had in view. It would be longer now, but some day the coveted distinction should be hers.

"Margery, you are worth a whole Chinese laundry!" exclaimed her older brother Ben, as he took his share of the glossy linen from the ironing-table. "You are surely a professor if Ah Ling is."

"I had never thought anything of such work. I like to see it look well, so I try my best," she answered, with a glow of satisfaction at praise from Brother Ben.

"O Margery! If you only would teach us music!" was the delighted exclamation of the minister's daughters at Margery's casual offer to do so, knowing of their talent and inability to pay for a course.

"Why, it would be a pleasure. I must keep busy while here," she said, as she thought of the opportunity to keep fresh in such accomplishments.

It was this that led her to form a class for the work girls, and teach them many things to render life brighter for them.

"Keeping my hand in will make it easier, too, for me, when the time comes to win my honors," she confidentially whispered to her aunt one day.

But would the time ever come when she should see the world hovering to her for great deeds, when she would be greeted by and welcomed among the titled of the land? It seemed a long time from the day Ned had overheard her at the doorway expressing her desire for a title.

All of this came back to her when that misfortune came to her eyes, and so many weary weeks had to be spent in her darkened chamber.

"What shall I do? I had planned so much, and I have done nothing toward it—nothing at all," she moaned, with an overpowering feeling of disappointment, when she was lovingly told of the weeks yet to come that she must pass in patience.

"You may see yet that you have done something already," said tender Aunt Clara, when she broke the news to her.

But it fretted her so sorely; yet she curbed the impatience, that others might not fret.

"Patient Margery!" said a friend in Ned's hearing one day.

"I guess she is," returned Ned, emphatically.

ally; "and I don't see what she wants to get well and go away for to get titles. That's one she has earned right here."

"Make a list," suggested her aunt, "and see if she'll not be satisfied to stay."

"That's just what I'll do, for I want her. She doesn't refuse to fix halls or anything else for a fellow," he fretted. "It isn't everybody that's so willing."

"Put that down, too," said her aunt.

"Hurry and get well; we can't spare you long," said the girls for whom she had worked; and the minister's daughter's added, "She never seemed to think of self."

"Unselfish Margery!" was what Aunt Clara whispered to Ned.

"Hurry, Margery, and get well; no one can do my starched things like my little professor," said Ben, cheerily; and grandma plaintively added, "Nobody nurses me like Margery."

"My, and ain't the list growing!" exclaimed Ned in admiration, as he showed it to Aunt Clara one day. "And it isn't a speck too long," he stoutly added, "for she's the best sister out."

"Be sure and add that," laughed Aunt Clara.

But Margery was growing wan under her affliction, while her former gentle offices were swelling Ned's list; and all rejoiced when the day came that she could again look upon the world.

"I can't wait," said Ned, and it was his hand that laid before her weak eyes the heavy sheet that his boyish band had gotten up "in regular diploma style," as he asserted.

"You've earned 'em all, sis, every one; and I tell you, Margery, they're a heap better than if you'd been my Lady High Jingoism. We shouldn't've had you, nor you these, if you had."

"And I guess I'm a great deal happier, too," she answered tremulously. "Though I thought I had done nothing," she added.

"If you had not done the little things, see how much time would have been wasted," said her aunt.

"And I should perhaps have earned nothing, for it will be a long time now before I can go out into the world. And I don't know as I wish to now," she finished, slowly looking again at the sheet before her.

"Hurrah, that's just what we wanted!" exclaimed Ned. "But which do you like best?" he questioned. "You can take your pick, for the 'trilog' is longer than any of those F. R. S. A. E. *Pluribus unum* fellows wear."

"I think I prefer the best Sister Margery," she answered after a moment's thought. "Bless your heart!" said Ben. "Who'd've thought it!"

"Cricky!" exclaimed Ned. "You don't say so! Why, we thought professor or doctor would be the least you'd look at."

"Loving home titles are of far greater worth than those the world may give," answered Aunt Clara, gently, adding, "and the highest and best of honors come to those who uncomplainingly do the duties that lie next them."

And Ned supplemented it with a promising aside to his brother,—

"What say, you, Ben, to our both going in to win one, too?"—*Register.*

An Essay on Education.

[Written for the RURAL PRESS by NELLIE HOLDER—Aged 11 Years.]

For my part, I cannot see how people can get along without some education—anyway so that they can read and write. I know some men and women and children that cannot read or write; now is not that awful? Why are we not all studying? It is because we hate to study. But when we all get older we will see what we have missed in our young days.

Oh, you will say we were foolish for not getting an education when we were young. You ask, why shall we get an education? Because when you get an education you are looked up to and you can talk on any kind of a subject and can do anything you want. You can help your parents.

You ask, why shall I help my parents, they have never helped me? They have helped you ever since you came into the world. Oh, a person never has too much education. I am studying every day and I expect to make a graduate out of myself.

Now how bad you will feel when you go into company and they go to talking about anything they read and you cannot say anything without showing your ignorance.

There are boys and girls who are too poor to go to school and get an education, but if they are encouraged they will work their way into school. I have heard of a man who was just a poor boy and he could not read or write when he was twenty years old, but he worked out when he was twenty-one and got enough money to go to school and pay his board with, and he kept on going to school until he made a graduate and then he taught school. What do you think of that? We ought to try as that boy did.

If you just set your head to get an education, and stick to that, you will get an education, but until you do that you never will. Why is it, do you think, that some people don't get an education? It is because their parents were too poor to send them, and they could not think of sending themselves to school.

Some children do not care for books. Why

is it? It is because they are lazy. When any one sees a child that does not like to read, you may just say they are lazy; and you see a child that does not like books, they will never amount to any thing.

A girl may do housework three months and she will get \$36, and a girl can teach school three months and she will get \$136. Now which is the best—the girl that works in a house or the school-teacher? Why the school-teacher, of course. A child that does not go to school is a clod upon the wheels of time. They are scorned at, and they are called "blockheads," and now how would you like to be a blockhead? I am sure I would not like it, nor other little boys or girls ought to either, and when they do like it, they are more than lazy, don't you think so? *Grass Valley, Oregon.*

DOMESTIC ECONOMY

The Orange Cure.

The orange cure is not unlike the famous grape cure practiced in some parts of Germany. Oranges should be free as water. You take two or three, at least, before breakfast; and after breakfast, as you saunter out in the grove, you sample two or three more of the different varieties. There are always more or less of "drops." The juice contains the main curative principle. As with grapes, you must avoid seeds and skins; so with oranges. The more Navels the better, destitute of seeds and filled to the bursting with the rich orangeade. One reason why we would recommend the Navel is that you can regard the skin as a kind of cup, and drink your generous glass full of the pure juice even from one orange. We have often seen a Navel that would weigh a pound. A large orange of other varieties is liable to be coarse, and, having a coarse-grained pulp, which is not palatable but comparatively dry, so that you must cut several such oranges to obtain the amount of the healing juice that you get from the Navel; the latter, too, has a finer flavor than the large oranges of other species. On the whole, we give the preference to the Navel for all the purposes for which an orange is grown, and particularly in our orange cure.

"What will it cure?" Well, we have mentioned dyspepsia, but this has almost numberless manifestations and symptoms, and often is at the basis of coughs, bronchitis, liver trouble, kidney trouble, heart trouble, and is almost certain to involve one or more of these vital organs. Get the stomach and liver right in the way indicated and the kidneys will soon be healthy. The blood comes pure, the lungs work normally, the nerves tone up; headaches, hiccups and neuralgia even pass off. The orange juice acts very directly to benefit the liver and all the disorders that may infest the alimentary canal.—*Exchange.*

HOW TO LAY A CARPET.—Lay the linings on the floor, putting a small tack here and there to keep them in place. Put the carpet on the floor, unrolling it in the direction in which it is to be laid. Begin to tack it at the end of the room which is the most regular. If there be a fire-place or bay-window in the room, fit the carpet around these places first. Use large tacks to hold the carpet temporarily in place; they can be withdrawn when the work is finished. When the carpet is fitted to a place, use small tacks to keep it down. Tack one end of the carpet, stretching it well; then a side, then the other end, and finally the other side. Be careful to keep the lines straight and to have the carpet fit tightly, for if it be loose it will not only look badly, but will not wear well.—*Ladies' Home Journal.*

MILK TOAST.—Slice some bread, toast it of a nice light brown on both sides. Boil a pint of milk; mix together two teaspoonfuls of flour in a little cold water; stir this into the boiling milk. Let it boil about one minute, then add a little salt and stir into it two ounces of butter. Dip the toast in the milk, place it on a dish, and pour the remainder of the milk over it. The toast may be made much richer by increasing the quantity of butter.

BALLOON MUFFINS.—Place your gem pans on the range to get very hot. Take one pint of flour, half-pint milk, half-pint water; heat thoroughly with a keystone or wire heater. Butter the pans; fill two-thirds full and bake in a quick oven twenty minutes, or until they are puffed and nicely browned. Use no salt or baking powder. Salt is easily added when they are broken open to eat.

HOT SAUCE.—Set a bowl in a basin of hot water, refilling so as to keep it hot. In the bowl heat one egg and one cupful of sugar; flavor. When ready to serve, heat in one-half cupful of hot milk. Stir as it is served, so it will be thick only on top. Wine will improve the sauces in addition to vanilla.

APPLE SAUCE.—Pare, core and slice your apples, put them in a kettle with water enough to keep them from burning, cover them, and as soon as they are soft mash them very fine. When they are nearly cold, sweeten them to the taste.

BLACK PUDDING.—Three cupfuls of flour, one and one-half cupfuls of milk, one and one-half cupfuls of raisins (stoned), one egg (or without), butter the size of an egg, teaspoonful of clove, cinnamon, salt, one cupful of molasses. Steam four hours.

## The Week.

Our tidings from the agricultural regions bring as a rule encouraging information. The growing weather which was alluded to last week has continued, and glorious days of warmth and brilliance have brought forward field crops and fruit trees wonderfully. In the regions where the year's rainfall has proved too short, and unfortunately they are wider than we could wish, the warm weather but shows the fatal lack of moisture, and hastens the sad

end of many sowings which will not even make hay.

Over great expanses, however, the grain is growing rapidly, and except very small areas where the grain has lodged, there promises to be a magnificent yield, providing blasting winds are withheld as the heads are filling. Fruit prospects are, as a rule, as good as could be desired all around, though there have been small local disasters.

This has been President's week in the city, and the whole town has been *en fete* day after day. Never was welcome more elaborate or more hearty than that extended to President Harrison and his associates.

## Proposed Meeting of Dairymen.

There have been notices in the daily papers of this city for the last few weeks, stating that a meeting of dairymen was about to be held to secure united action for mutual self-protection and the promotion of the interests of the legitimate producer. We have appreciated the fact that such action would be desirable if properly taken and responsibly backed; in fact we have urged upon our dairy producers time and time again, the desirability of employing the power of organization to advance their interests, as such power has for years been employed at the East. We did not discover, however, what dairymen proposed the meeting, and therefore did not participate in the announcement. To make such movements effective, there should always be names of organizers given to win the confidence of others in the same line of work.

We did not discover any reports of the meeting which gave any clue as to who was participating, but about a week after the date there appeared an article in the *Chronicle* from which we take the following:

An informal meeting of some of the larger butter manufacturers was held in this city a week ago, and a call issued for a general convention of dairymen at the Commercial hotel on Monday, June 1st, next. One of the gentlemen who was present at this meeting, and who ships thousands of pounds of butter every week to this city, explained the objects of the convention to a *Chronicle* reporter yesterday:

"The adulteration of our butter," he said, "not only reflects upon the honesty of the manufacturer, but it overstocks the market and demoralizes prices. In butter, as in everything else, the supply regulates the price, and you can easily see the effect in the buying price, when a 10,000-pound shipment is one-third adulterated and retailed out as the pure article. Down goes the market and the dairymen suffer while the commission men pocket the extra profits."

"Another serious complaint we have to make is the fraud practiced by commission men in their sales. This entails a loss of thousands of dollars each year to the dairymen. Our protests have been to no purpose, and now we propose to dispense with the middlemen, and handle our own produce. Our plan is to establish a large, co-operative market, which shall be a central point for distribution. If the commission men wish to deal with us, it is their privilege, but they will have to accept our terms and conditions. Nearly all the dairymen in the State are interested, and we expect to have them all represented at the convention."

This statement seems to imply that mixing of butter and oleo is done in this city. We doubt it for the very reason given by a commission merchant when interrogated on the subject, that the adulteration of butter is too difficult and intricate a thing to do to make it likely that commission merchants are doing it in this city. We have no doubt that bogus butter is being largely worked off here, and is depressing the value of the genuine. We have stated that a number of times, but that any one is mixing butter and oleo here we seriously doubt. Still that and all other mooted illdoing which work against the legitimate producers' profits could be easily verified or disproved by a good active organization of dairymen.

The second point in the alleged interview with a butter producer, as given above, is in relation to the ill deeds of city commission merchants and the proposition on the part of the producers to do their own business through a central depot controlled by themselves in this city. We know there is quite a wide sentiment among dairy-producers that this would be to their advantage. It might be so. The dairymen of other States have accomplished this, to a certain extent at least. Whether it could be done depends, first, upon whether the dairymen will act together; and, second, whether they can find parties to do their business, not only honestly, but in an enterprising, business-like way, which shall secure them better re-

turns for the product than they are now obtaining. These things could be determined, also, by an association which includes a sufficiently large support and co-operation among the producers.

These propositions are certainly worthy of attention among dairymen, and as a meeting has been called for June 1st in this city, there should be some action taken which shall ensure a representative character to the meeting and wise action by it. This can be best done by meetings of dairymen in the different producing neighborhoods, discussion of the matter, inquiry as to whether the call for the meeting is *bona fide* and well backed and designation of delegates to attend as representatives of the different sections, and with well-defined ideas of what the needs and wishes of the different regions are. We can but urge, though, as we have said, we have not been informed as to the source from which the call to the meeting proceeds. Possibly the matter may be brought to the attention of dairymen by means of private circulars bearing reputable names. That would be a business-like way of proceeding. We are, as we have always been, in favor of association of our dairymen for their own good, and we hope the present movement may be the one which we have long anticipated.

## Ramie Distribution.

The law passed by the last Legislature, providing for the encouragement of ramie cultivation, authorizes the State Board of Agriculture to expend not more than \$1000 for the purchase of ramie roots for free distribution to farmers. At a meeting in Sacramento on Monday of this week, the Board decided to expend \$1000 in that way, and consequently the plants are now offered to all who apply for them. Applications should be addressed: "Supt. Ramie Culture, care State Board of Agriculture, Sacramento, Cal." We are not informed how the distribution is to be made, but we presume the plants are to be sent by express, the charges to be paid by the applicant. It is very late in the season to handle ramie roots, and if they are to succeed at all, they will have to be well packed, and the receiver should take extra care that they do not dry out before he gets them into moist ground.

If the ground is dry the plants will have to be well watered and then thoroughly cultivated. This distribution is unfortunately about two months too late for the best success in planting out.

The State Board at its meeting on Monday, appointed W. H. Murray, of this city, its Superintendent of Ramie Culture. Mr. Murray proposes to have a fiber garden at the next State Fair, and various fiber plants will be at once planted out in one of the angular spaces around the State Fair pavilion.

The Board proposes to publish at once a circular on ramie culture which will be sent to all who apply for it to the same address given above for applications for ramie plants.

## Tasmanian Apples.

We had last year antipodean apples in good condition, and we notice that they are being spoken well of in the London journals. It seems that the southern hemisphere with its reversal of our seasons ought to be able to supply our markets when completely bare of the same fruit from our adjacent regions. But there is much to be learned in the shipment of fruit such long distances. On a steamer which arrived last week from Australia, were about 1700 boxes of apples, shipped through the agency of W. D. Peacock of Hobart, Tasmania, and consigned to D. G. Camarinos of this city. An examination of them was made by Captain Metcalfe, the surveyor for Lloyd's; Captain Wilson, Port Warden; Mr. Camarinos and his attorney, W. H. Cook, and it was found that the apples were in every condition of baking, roasting and stewing, and were entirely unfit for use. It appears that they had been stowed improperly, and whether it was the heat of the hold or the natural heat of the tropics that destroyed them does not appear.

The value of the consignment was about \$3500, and in addition to the freight and duty Mr. Camarinos had been drawn upon by Mr. Peacock for \$350, through the Bank of British Columbia. A suit against the consignee of the vessel will probably be commenced in the United States District Court to-day by Mr. Ca-

marinos, Captain Metcalfe having prepared a certificate stating that the ventilation of the hold was bad.

## Meats Advancing in the West.

From the facts stated in these columns several times during the last few weeks, our readers will not be surprised at a sharp advance in meats, which is telegraphed this week from the markets of the great west. From St. Louis it is announced that the price of meat has gone up and is still advancing. Packers, butchers and dealers say that they think it will continue to advance until about July 1st. At present the prices of dressed meats, excepting pork, range from 9½ to 12½ cents per pound at wholesale for first-class grade. Pork is beginning to take an upward turn. At retail choice steaks sell well at from 17½ to 20 cents per pound, while round steak is worth 12½ to 20 cents, and roasts 15 and 22 cents. This is an average advance from 6 to 7 cents since the first of the month.

According to the telegraphic reports, the large dealers and slaughterers of Western cattle cite the same reasons for the advance that have been previously set forth in these columns. Representatives of Armour & Co., Nelson Morris and others, say the advance is due to natural causes; mainly of the scarcity of good stock. Then the failure of the oat crop and this shortness of the corn crop and minimum amount of hay for several years, and other causes, and the removal of the cattle from the Cherokee strip is still another. The cattle, they say, were taken from the strip and put on the market at once. This took away one source of obtaining feeders of the spring market. Then, on account of the short crops last year and the consequent high price of grain, feeders could not afford to fatten and did not have the feed, and so put all surplus stock on the market at any price. This took away another and the remaining source of obtaining feeders.

The Department of Agriculture issues notice that cattle which have been at least 90 days in a described area in Northern Texas may be moved by rail into Colorado, Wyoming and Montana for grazing or slaughter in accordance with the regulations of said States, provided they shall not be shipped into any other State or Territory, or be allowed in pens or on trails or ranges to be occupied or crossed by cattle going to Eastern markets before December 1st. All cars used must be disinfected upon unloading.

## Progress With Beet Sugar.

Our California firm, E. H. Dyer & Co. of Alvarado, Alameda county, bids fair to carry the beet sugar business all through the United States. They have just contracted to build a 350-ton factory in Iowa, and will have this one and the one just constructed by them in Utah both in operation next fall. E. H. Dyer goes East in a few days and expects to be absent all summer.

The new sugar factory at Chino, San Bernardino, is progressing favorably since the rebuilding from the damage done to the walls by a storm some weeks ago was undertaken. It will be all ready for the beets this fall.

The U. S. treasury department has triumphed for once over red tape and the fact is worth noting. The Western Beet Sugar Factory had a lot of such machinery in a San Francisco bonded warehouse. The construction of the factory had not commenced. It became necessary to move the machinery. Owing to its cumbersome character transportation was difficult, and the owners appealed to the Secretary of the Treasury to relieve them of the necessity of paying duty on it. They claimed that they intended to use it in a beet sugar factory which will be in operation shortly.

In the Congressional act granting a bounty to beet sugar makers, it is expressly stated that no duty will be charged on beet sugar machinery imported prior to July 1st. The Secretary of the Treasury in his letter foregoes the duty, with the stipulation that the owners shall execute a bond covering the amount as a guarantee that the factory will be established.

WEATHER-CROP BULLETIN.—Sergt. Barwick's weekly publication will soon have to be printed on wall-paper if his list of volunteer observers increases much more. The last issue contains about 40 special reports from different parts of the State.

# THE ORNITHOLOGIST.

## Twelve California Song Birds.

(Written for the RURAL PRESS by C. L. ANDERSON, M. D.)

This list has grown out of a request from a lady friend and educator to furnish her with a list of a dozen California song birds interesting to children, stating habits, color, time of being here, nesting and other facts. The request was for "principal ones."

Having to draw a line somewhere, this list is confined to Santa Cruz county, although it might answer for a large part of California.

I cannot say whether this list is selected wisely and well, or not. If not, suggestions and revisions will be in order.

It seems a pity to stop with a dozen birds while there are so many singers and non-singers, prominent characters that seem just as meritorious as any on the list. There are sparrows and finches, warblers, blackbirds and linnets, goldfinches, vireos, chats and thrushes, and indeed a great many more that will doubt-

forth from its haunts a flood of melody; remains all the year.

**CALIFORNIA THRASHER** (Sickle-billed Mockingbird): *Harporhynchus Redivivus*, Caban.—Quite a large thrasher found in "chapparal" and other bushes along valley borders. It sings much like the common mockingbird, and also mimics the songs of other birds.

In color a dark, oily, olive brown above and a pale shade below. Throat whitish; bill as long as the head. Builds its nest in bushes near the ground, of sticks, grasses and leaves. Eggs three, bluish green; remains all the year. Their wings are so short they do not make prolonged flights.

As a musician this bird is a fine artist, but he must be approached quietly and listened to carefully in order to get a full appreciation of his merits, and his performance pays us to do that.

**WATER OUZEL** (American Dipper): *Cinclus Mexicanus*, Swain.—This curious little bird is quite at home along secluded streams and rapids. While we are pondering over some sweet strains of music and wondering if that plain little bird on the half submerged rock is the author, both bird and song disappear as if

*glodites Pacificus* (Baird), Ridgw.—Commonly found in bushes or about dead stumps and waterfalls, for it has a passion for water. Hardly distinguished from the common wren of Europe, but its habits are different. It will run under a large root through a hollow stump or log, or between the cracks of rocks more like a mouse than a bird.

They build their nests about here near waterfalls in cliffs and on rocks, using lichens, mosses, fur, hair, etc., neatly interlaid. Has a strong voice and a cheery song. Said to sing under gloomy skies as well as sunshine in the forest as well as the open hillside. "Happy under adverse circumstances."

**HORNED LARK** (Shore Lark): *Eremophila alpestris cornuta*, Wils.—Inhabits open treeless places. A small bird, about the size of the English sparrow, with a dark band across the crown and two little tufts of feathers each side of head resembling horns, and which stand out plainly when the bird is excited. Said never to alight on trees. Is at home on the ground or high in the air.

The color of the adult bird is a pinkish-brown on the back, with dusky streaks; lighter beneath. Has a narrow white band over the

west of the Mississippi, yet the notes are different.

The nest is made on the ground, generally under a bunch of grass, which is skillfully arched over it.

The eggs, four or five, are white, with a few purplish brown dots or blotches towards the larger end.

They feed on insects and seeds, but do not injure the farmers' crops.

Their notes are ringing, clear and musical, except when rudely disturbed then they utter a harsh, angry chirp.

**CALIFORNIA LINNET** (Crimson-fronted Finch, Red-headed Linnet, Spanish-Burton): *Carpodacus Purpureus Californicus*, Baird. *Carpodacus Frontalis*, Schlater.—In studying the three or four species that visit us—some remaining all the year—I find it difficult to distinguish them. Probably, as this is a bird bordering on domesticity, its colors, habits and songs become changed by circumstances in time. The two varieties above mentioned are often found together singing and feeding on buds of trees, especially blossom buds of cherry, apple and peach when these contain a sweet sap. They also eat fruit, seeds and insects.

Their nests are built almost any place, of vegetable fibers, stems of grasses and woody fragments. Eggs pale green, spotted dark brown near the larger end.

These finches (for they are not linnets) are fine singers and are often caged and readily tamed, serving in place of canaries, their notes resembling somewhat that favorite.

**BLACK-HEADED GROSBEEK**: *Zamelodia Melanocephala*, Cones.—This beautiful bird arrives here from the South about the first of April and leaves in September. It is one of our best singers. Dr. Cones says: "Its song is superb, a powerful and melodious succession of clear, rich, rolling notes somewhat like those of the Baltimore oriole."

Its head above and on the sides, with its chin, back, wings and tail all black. Wears a well-marked, light-colored collar all around the neck. Has a yellow vest under wings and belly, while the outer three primary tips are white.

Builds its nest of a few sticks and weeds, with a lining of fine grass. Eggs, three, pale bluish-white, densely spotted with brown near larger end.

This concludes the dozen, but there is one more that, for good count, might be added to the list; because, if it is not here already, it is so near that I fancy having heard it a few days ago. It is the

**MOCKINGBIRD**, *Mimus polyglottus* Lin.—On the authority of Dr. Cooper and others, this bird, so well known in the Eastern States and Southern California, finds its habitat as far north as the Salinas valley and Monterey.

Santa Cruz.

## Gas Treatment for Insects.

California can claim credit for the suggestion and practical development of many insecticides and insecticidal apparatus. Perhaps the most striking is the treatment of large trees with gases for the destruction of scale insects. This treatment is now being largely used for scales infesting citrus fruit trees in the southern part of the State. We have from time to time published information on this point and illustrated some of the devices employed for bringing the poisonous vapors directly to bear upon the scales. We give herewith a very complete arrangement for enclosing trees in tents in which the gas is generated—two tents being employed to save time, because while one tent is being filled with the gas the other can be adjusted upon another tree. The engravings are from the 1890 report of the State Board of Horticulture and represent the apparatus built by S. W. Preble of Tustin City, Orange Co., Cal., and is used in his orange grove. The measurements were taken on the spot by J. A. Shilling, and, in connection with the drawings, should convey a full idea of the construction of the device. The scale is  $\frac{1}{2}$  inch to 1 foot. The apparatus, attended by two men, worked most perfectly in all its parts.

In the figures the lettering is thus explained: A. Wagon. B. Tents (2). C. Main yard. D. Mast. E. Crossbars (2). F. Ladder. G. Mast stays (6). H. Main yard truss (2). a. Trail boards (8), to bottom edge of tents. b. Guide lines (8), one-half inch diameter to trail boards, 30 feet each. c. Six-inch blocks (2), double sheave, for hoisting tents. d. Four-inch blocks (20), single sheave, for hoisting trail boards. e. Belaying pins (4), galvanized iron, to fasten ropes. f. Main rope (2), three-quarters inch diameter, for hoisting tents, 190 feet each. g. Trail ropes (8), for hoisting sides of tents, one-half inch diameter, 120 feet each. h. Rope thimbles (32), one-half inch diameter, galvanized iron, for trail ropes of tents. i. Six-inch sheaves (2), brass, in main yard, for hoisting tents. k. Five-inch sheaves (6), brass, in main yard, for hoisting tents.

The process of generating the hydrocyanic gas to fill the tents to destroy the scale and the duration of exposure necessary to kill the insects, etc., has already been published in our columns.

STEAM is a willing servant, and will turn any crank and ask no questions; but it depends upon who made the crank how long it keeps turning.

SIDE AND FRONT VIEWS OF APPARATUS USED IN THE GAS TREATMENT FOR KILLING SCALE INSECTS.

less feel slighted (especially among the singers) because they are not on this list.

A dozen will scarcely begin to include the throng, or flock, that fly around me. May I hope that somebody some day will make a list regardless of numbers.

We hear complaints that song birds are scarce in California. I do not think so. Opportunities may be wanting—groves and streams—but wherever these occur, there is no lack of music.

It would be a good work for some of our ornithologists to write up the musical talents and accomplishments of our feathered songsters, so little known and appreciated in this extensive State of ours. It might be a means of inducing some of our human songsters to become better acquainted with our original native singers.

In compiling this list, I am under obligations chiefly to the published writings and observations of Dr. J. G. Cooper, who once, for a time, resided at Santa Cruz. For many years, he has been our standard authority on Pacific Coast ornithology.

**WINTER ROBIN**: *Merula Migratoria Pro-pingua*, Ridg.—This bird is different from the Eastern robin. It is of a light buff color and has a longer bill. Its head is not as black or dusky. The song is nearly the same, but shorter, softer and less forcible. Toward evening and early morning it may be heard on the taller trees, where it also builds its nest. It comes in November and departs in April, going north for the summer, although a few are said to remain in our neighborhood for nesting.

**RUSSET BACKED THRUSH**: *Hylecicla ustulata*, Baird.—Inhabits bushes, where it also builds its nest and lays four or five bluish eggs, spotted. Has a buff colored ring above each eye and a scorched or singed color of upper part of body and an olive-gray spotting of the whitish breast; abundant and one of our finest singers. After sundown until quite late it sends

by magic, and we only see some diamond-like bubbles rising in the water. We begin to think this music was a delusion, a figment of the brain, when at some distance the bird comes again to the surface, and if we are duly attentive, the music may be heard again.

Its nest of green moss lined with grass, shaped like an oven, with a doorway, is near or perhaps just behind some little cascade, and contains about five pure-white unmarked eggs. The Water Ouzel does not migrate.

Dr. Cooper tersely describes this bird: "It combines the form of a sandpiper, the song of a canary and the aquatic habits of a duck."

**GROUND WREN** (Ground Tit): *Chama fasciata*, Gambel.—A curious little wren, found on dry plains and "chapparal" bushes, but not in the forest. Can live away from water many weeks.

In color, olivaceous; brown tinged with gray on the head, with faint, dusky streaks on the throat and breast. With tails erect they hunt insects on the ground or low trees. They are very shy, but if we sit quiet, out of curiosity it will come quite near.

It makes its nest of straw twigs and feathers firmly interwoven in low bushes. It lays three or four plain bluish-green eggs.

It is a charming little musician, "original and selected," for it is said at times to imitate other birds when tired of its own notes. Not migratory.

**BEWICK'S MOCKING WREN**: *Thryothorus Bewicki var spiliurus*, Vigors.—Inhabits open groves and dense forests. Color, ashy-brown above, and pure-white beneath and inside the wings, with a speckled tail. Nest in holes of trees or low bushes. Eggs, five, white with brown specks near larger end.

It is a fascinating singer, gliding at times into notes of other birds, but his arrangement is original and interesting. Not migratory.

**WESTERN WINTER WREN**: *Anothura Tro-*

eye and a wide frontal or breast band, which extends up over the throat, of a light color. Remains with us nearly all the year.

"In May or June the males rise nearly perpendicularly into the air until almost out of sight and fly about in an irregular circle singing a sweet and varied song for several minutes, when they descend again nearly to the spot they started from."—Cooper.

They build their nests in a depression on the ground under a tuft of grass or a bush, lined with hairs. Eggs, four or five, bluish white with darkish spots nearly covering them. Walks, but does not hop on the ground like many other birds.

**WESTERN ORIOLE**: *Icterus Bullockii*, Swain. A most beautiful and musical bird. Arrives about March 1st from the South. They resort to the open roads, gardens and small groves, where they sing and feed on insects, doing the farmer and gardener a good service in two ways—cheering him with the sweetest music while clearing his trees and grounds of injurious insects, for which they deserve and should have humane protection. They are beautifully colored with black and yellow-orange in varying bands.

Their nests are usually built near the extremity of a limb on some small tree, and are composed of the down of plants, wool and fine bark, sometimes white horsehair or cotton twine. Eggs, four to six, bluish white with pencilling or winding streaks. They are closely allied to the Baltimore oriole. When once seen or heard, they cannot be forgotten.

**WESTERN MEADOW LARK**. *Sturnella neglecta*, Audubon.—Lives near the earth, loving grassy fields and plains. Of large size, singing at all seasons. In early spring it holds "musical contests" with its neighbors. Even the female is a good singer, which is unusual among birds.

Although it is said to be identical with the Eastern meadow lark, and the one of the plains

# AGRICULTURAL NOTES.

## CALIFORNIA.

### Fresno.

**TREE PLANTING AT REEDLEY.**—*Exponent*, April 23: John Fairweather has set out 40 orange trees of the Oonshin and Navel varieties, among his grape vines on his five acre colony lot adjoining town. It is his intention to set out a great many more orange trees and in time, when they become of a good size, to let them occupy the land in place of the vineyard. Wm. Wootton has, this spring, set out 100 orange trees in Wootton's Valley, in the foot hills, 15 miles east of Reedley. He will set out 75 more this season.

**WHEAT CROPS NEAR REEDLEY.**—*Exponent*: The recent cool weather which has been rather unusual for this season of the year, has been of great value, and has had not a little to do with the present prospects for a big wheat harvest.

### Laessen.

**RANGE CATTLE IN LASSEN.**—*Mail*: Stook on the range could not do better and our hills and plains show there was little or no loss last winter; with the addition of a vast number of young calves and colts the prospect is fine.

### Los Angeles.

**STRAWBERRIES FOR DENVER.**—*Covina Argus*: Arrangements are being perfected for shipping carloads of strawberries to Denver in refrigerator cars. The parties who are in charge claim to be able to put the berries in Denver in three and one-half days, at a cost of two cents per pound.

### Orange.

**DISCUSSING HOW TO SET OUT TREES.**—*Blade*, April 23: At the recent meeting of the Garden Grove Farmers' Club the subject of setting out trees was discussed. Mr. Ware thought, from his observations, that the opinion was pretty universal among horticultural men that leaning the tree toward the southwest was necessary to prevent sun-scauld of the bark. He also thought there were very few, if any, orchards in this part of the county that had not suffered more or less from ann-scauld. J. Sturges thought his trees were not affected by it; gave care and attention as a reason for his lack of trouble; also low heading trees. F. P. Chaffee thought good cultivation the best preventive measure. Several spoke of using clay or whitewash on the bark of the trunk to protect it from the rays of the sun. Others believed in setting the tree straight and pruning it so as to shade the trunk. It was pretty generally admitted that if trees could be kept in a constantly vigorous condition through the growing season there would be little ann-scauld to bother, but owing to the long rainless summer season, it was conceded to be a difficult thing to do, hence the desirability of shading or in some other way protecting the tree from the direct rays of the sun.

**PLANTING BLUE GUM TREES.**—*Post*: Mr. C. Hopkins of Pasadena recently purchased 100 acres of land on the Garden Grove road, near the Santa Ana river, which he is planting to blue gum trees. The trees are planted 12 feet apart. The tract of land which has heretofore been almost valueless, will, in course of a few years, net Mr. Hopkins a nice little sum of money. There is considerable land in that neighborhood that is now growing to sagebrush and willows, that might, with a little effort, be made to pay handsomely.

### Sacramento.

**A FIVE YEARS' HOP CROP CONTRACT.**—*Bee*, April 24: It is stated that the Lovdals have contracted directly with brewers to furnish 1500 bales annually for five years, the price not to be lower than 15 cents per pound. The Lovdals have over 300 acres in hops.

**LIGHT HAY CROP.**—*Galt Gazette*: It is the general opinion that hay will be a scarce article next fall. It is said that nearly all the land heretofore used for meadow purposes is planted to wheat and barley this season.

**CROPS NEVER LOOKED BETTER.**—*Record Union*, April 27: Supervisor E. Greer told a *Record Union* reporter that the outlook in the county for the fruit crop is unusually bright. "I think we're going to have a phenomenally prosperous fruit year. Everything except the peaches look beautiful and healthy throughout the county, and particularly in my district. When I say 'except the peaches' I don't mean to say that the peach crop is a failure—not by any means. The leaves of the peach trees have been falling considerably from some unknown reason, and this may hurt the crop some, but not enough to call it a failure. But everything else is in magnificent condition—particularly cherries, plums, almonds, strawberries, blackberries and raspberries. I tell you California is rushing to the front like greased lightning, and Sacramento county is right in it." L. Scatina of San Francisco, who had been for a week inspecting the orchards and gardens along the Sacramento river, south of this city, says: "I never saw such crops in that section. The trees are fairly loaded down with young fruit." "Which variety," he was asked, "appeared to be in the lead?" "Every kind is doing well, and the yield will be very great. The orchardists thought they had a big crop of apricots last year, but they will have more this year. The same is true of cherries, pears and all other fruits. And what is more, the ground crops will be just as heavy. There isn't an article grown in those orchards and gardens along the

river that doesn't give promise of the heaviest yield ever known. The same conditions are manifested on the islands. You never saw things growing as they are on Grand Island. The potatoes and other ground crops will be immense, while the trees are as heavily loaded with fruit, as on the main land. I tell you, people will have an opportunity this year to realize the value of fruit and garden lands in that locality." Farmers and fruit-growers from various parts of the county were also seen on Saturday, and all said they had never known brighter prospects than those which now confront the tillers of the soil. The cool weather has prevented cherries and strawberries from ripening as rapidly as usual, and there will probably be few of the former shipped within the next two or three weeks, but by that time they will be coming in in considerable quantities. Other varieties of early fruits will soon follow, and almost before we become aware of it, the fruit-shipping season will be upon us.

### San Benito.

**THE CROP OUTLOOK.**—*San Benito Hollister Advance*, April 24: Favorable weather of the past week added greatly to the prospect for good crops. The late-sown grain is looking especially well. Wild oats are heading out, and haying will commence in a week or so. The high price of wheat will tend to restrict the cutting of hay. Hay will therefore command a good price.

### San Bernardino.

**IMPROVEMENTS AND CROP PROSPECTS.**—*Editors Press*:—On the 17th and 18th the long deferred rain came and made the farmers smile as the prospects were looking hard. The crops are light and harvesting is later coming on than last year, though some of the neighbors have commenced outing volunteer grain for hay. Hay has been very scarce and high lately, the price going up to \$20 per ton. Corn is up and looks well. A great many trees are being set out, mostly orange and prune trees where they expect water this season, and peach, blue gums, pepper, etc., on the higher dry land. All are starting finely. It is expected that the water will be in the valley in a few days, for the pipe is all laid on the north side of the hills and the tunnel is completed and ready. Ditch digging and pipe laying is being pushed vigorously, about 5½ miles per day. The many houses of the settlers, and the white tents of the diggers and graders give the valley quite a different appearance from what it had as a sheeprange.

Bees men complain that their bees are not doing much this spring so far, but hope when the warm weather sets in they will do better. This has been a very windy season, but grain has kept remarkably green and fresh through it all, and some that looked as though it would not amount to anything is taking a fresh start since the rain. The farmer needs to keep his weather eye open and try to get some of the good prices that his produce will bring, and not let speculators get it all.—L. S. LYMAN, Alessandro.

### San Diego.

**CROPS INSURED.**—*Editors Press*: We have just had the best rain of the season when we think of computing or undertake to compute the good it will do in this part of the country. We are now sure of a good crop of hay and grain all through this county. This rain will no doubt guarantee our honey crop, which is no small part of our calculation in this "land of milk and honey."—L. Y., Elsinore, April 18th.

**CROPS AROUND SANTA MARIA.**—*Cor. San Diegoan*, April 23: We are having showers now in good earnest, and by and by we will have plenty of flowers, and the "busy bees" will with their present extra good condition reap the benefit. Bees never had a better spring to build up in and I never saw them in better condition, and I have been in the business since 1875. The farmers will greet you with a smile now and treat you with the best they have, for with the present showers, the grain crops have revived, and look 100 per cent better than they did two weeks ago. In fact the prospects were never more flattering than at present for good crops of all kinds. There are about 2600 acres of wheat and barley sowed in the valley this year.

There have been about 20,000 fruit trees planted in the valley this season, mostly French prunes and some oranges. If no unlooked for pests or disease prevents, this valley will in a few years be one of the best fruit producing districts in the county, as the soil and climate seems to be especially adapted to growing healthy and thrifty looking trees. So far our worthy fruit inspector has not found any bugs. A good many farmers and orchardists will now be able to commence plowing for summer fallow to plant to grain, trees and vines next year. Quite a lot of corn and potatoes will also be planted.

### San Luis Obispo.

**ADELAIDE CROPS.**—*Cor. The Moon*, April 24: Farmers are busy preparing for the large harvest and the grain is mostly well headed out. The old settlers declare that the outlook for a bountiful crop was never so good. Small beads and harvesters will soon be in demand.

### Solano.

**NEW INVENTION TO PULL UP DISEASED VINES.**—*Dixon Tribune*, April 25: Dr. W. H. Wells is grubbing up the vines in his vineyard, which have been infested with phylloxera for several years past. It was found necessary to remove nearly every vine on the place, many of which were very old and deeply rooted, and would

have been a task of considerable magnitude under the old method, which required the services of three men and a span of mules. The process has been simplified through the ingenuity of Ross Richards, an employe on the farm, who has invented a stump-pulling machine of simple construction but marvelous power, and requires but two men to operate it. The new machine will pull about 150 stumps a day against 30 or 40 in the old way.

### Tulare.

**FRUIT PESTS IN TULARE.**—*N. W. Motheral in Sentinel*: A few days since my attention was called to the fact that the young trees planted this season were being killed or the buds destroyed by some insect, and as the buds were being eaten out the young tree would not bud again. Parties thought it was a black bug that did the work. Close scrutiny revealed the fact that the black bug was attracted to the tree for the gum issuing from the wounded buds, and that a little active nocturnal worm, the larva of a moth, also nocturnal, known as *Anarsia Lineatella*, is doing the work. This is also known as the peach moth or strawberry root-borer. There is said to be three crops of this insect in a year. Later in the season they will be found in the apricots, peaches and plums. If we have no first crop of these pests we will have no second or third. Remedy: Spray in January with sulphur and lime.

**FRUIT YIELD NEAR HANFORD.**—*Hanford Sentinel*: C. M. Blowers says the Royal apricot trees are heavily loaded and will yield from 350 to 400 pounds to the tree. Other varieties, the Thomas Late, Hemskirk and peach apricots are a light crop. His prune crop will be fair, but will not reach the phenomenal yield of last season. He thinks it is a question as to whether the frosts are as much responsible for the small crops reported by some orchardists as is the lack of water. He believes in early irrigation of orchards and the shutting off of water after the first of May.

**FRUIT PROSPECTS IN TULARE.**—*Times*, April 23: Orchardists generally report that the peach and prune crops of this county are much heavier this season than last. Here and there apricots were damaged by frost, but the yield will be larger than for several years previous. All damage from frost is now passed, and every one knows what his crop is to be. All of the peach crop will have to be thinned out to prevent the trees from breaking down as the crop begins to ripen. This labor alone will give employment to many people. Where prune trees have not been pruned of late, the indications are that trees will be broken all to pieces as the fruit matures.

**WEASELS AND GOPHERS.**—*Hanford Journal*: One of the greatest pests which the farmers of this country have to contend with is the gopher. W. S. Camp, the real estate agent, who owns a farm near Grangeville, has been greatly bothered with them. One day last week, while walking over his alfalfa field, Mr. Camp noticed that the gophers were not doing the usual amount of work therein, as the mounds they throw up were not so numerous as of yore. He could not account for the disappearance of the rodents, but in the afternoon he found out the cause. While walking about the place with a neighbor, H. L. Parker, showing him his vines and trees, alfalfa, etc., Mr. Parker's attention was attracted by what appeared to be a squirrel scampering across the field. He watched it and saw it disappear down a hole. As the men were walking toward the place where the animal disappeared, they observed it appear again, but this time it bore in its mouth another animal of nearly its own size. Out of curiosity, the men chased the live animal and forced it to drop its burden and make for its hole only a few feet away. It turned out to be a weasel and its burden a dead gopher, which had been but recently killed. Mr. Camp at once saw why the gophers were getting scarce in his alfalfa field, as he had seen a good many weasels about and had killed two that morning.

**SUMMER FALLOW IN TULARE.**—*Register*: Last spring M. Premo plowed 26 acres of his land for a vineyard, but failed to get his vines in and the past winter it was planted to wheat with the rest of his land. He says that on this 26 acres the grain is looking remarkably well and will go from ten to 12 sacks to the acre without another drop of rain. Not more than a dozen yards from the edge of this piece the grain is yellow and well-nigh a failure. He expresses himself as being a convert and says he will summer-fallow hereafter if it does cost a little more to get a crop in. The chief argument against summer-fallowing is that it gives the weeds a chance and that they choke out the young grain. The cure for this is in selecting the proper time to plow. If plowed in the winter, run over again lightly in May and then plowed in the fall when the grain is planted the weeds will not get sufficient start to do any material damage.

### Yuba.

**HOP CROP NOTES.**—*Wheatland Four Corners*: There is en route from England two casks of hop roots for planting on Bear river bottom. The roots are of the English best varieties. Several carloads of trellis poles arrived from the hill this week for the Wood, Roddan and Duret yards.

**FRUIT CROP.**—*Marysville*, April 25: B. G. Stabler has 44 acres of bearing apricot, peach and nectarine trees, which he says have four times too much fruit on them. He thinks it

will require five men three weeks to thin them properly. He says the orchard fruits are early this year, but not quite as early as he has known them to be in other years. Mr. Stabler has planted, during the past season, 1700 orange cling and 350 fig trees and 9000 Thompson's seedless grapes. He has also planted 30 acres to melons, and will plant about 20 acres more. He plants his melons between the trees, and usually after he has done his cultivating.

### OREGON.

**WESTERN OREGON WEATHER CROPS.**—*Weather Bureau Report*, April 25: The rains the past week were very beneficial to crops on uplands. On the lower lands seeding is not all done and it will now be further delayed. Fall sown wheat and oats have fine growths, and in sections it is being pastured down. Spring grain that has been sown is doing finely. The fruit crop is thriving. All trees are generally in full bloom. Present indications point to a phenomenal fruit crop this year. Hops have good growth. They are from one to two feet above the ground. The hop acreage has been increased. More potatoes than usual have been planted. Straw and other small berries are coming on finely; berries promise to be unusually plentiful. Lambs are doing well. Preparations are being made for shearing which will be in full blast next week. The week closes with most favorable prospects for western Oregon crops and productions.

**EASTERN OREGON WEATHER CROPS.**—*Weather Bureau Report*, April 25: The rains that fell the past week were needed, for the soil was becoming dry and late sown grain was not germinating. The rain gives renewed vigor to grain already up and greatly assists that not yet appearing. The rain that fell is worth a vast sum to the wheat fields. Prospects were never better for the wheat crop than they are at the close of the present week. The increased acreage and more favorable weather will produce much larger crops than the phenomenal yield of last year. Grass on the range is growing and furnishing good feed. Stock is flourishing. Shearing is in progress. Fleeces are large and wool of good quality. Fruit promises unusually well. In Wasco county there has been a largely increased acreage of water melons. Vegetables in gardens are growing rapidly. As in western Oregon, the prospects were never better for bounteous crops throughout eastern Oregon.

**FRUIT-GROWERS' CONVENTION.**—*Salem Journal*: The Marion County Fruit-Growers' Association will meet at Salem, on Saturday, May 16th. The following topics will be discussed: 1. Berry packages—what are best and most economical—samples to be shown. Mr. Keyes to lead. 2. Fruit-driers and fruit drying. Good and weak points of driers to be shown up. Mr. Jory to lead. 3. Final arrangements for berry show to be announced, and discussion.

**AFTER THE DAIRYMEN.**—*Portland*, April 25: Since W. W. Baker, the field and farm authority, was appointed State Food Commissioner, he has been rustling around in a way that shows he considers his office no sinecure. His latest exploit is the arrest of a dairyman whose place is just north of the Red house. The charge against him is keeping cows in a stable with less air than 800 cubic feet to each. The offense is punishable by either fine or imprisonment in the discretion of the court, and it applies only to cows whose milk is marketed.

**SPLENDID FRUIT PROSPECTS.**—*Oregonian*, April 25: The cool, showery weather which has prevailed for some time past has been very favorable to fruit-growers. Peach, cherry, plum and pear trees are loaded with blossoms, and around the old many apple trees are in bloom, but in the country the trees are not quite so forward. A prominent nurseryman says the prospects for the fruit crop this season are better than for many years. He has seldom seen such a show of blossom on the cherry, plum and pear trees as at present. Propagating work in nurseries has also been very successful, and he calculates that at least 85 per cent of the prune and 75 per cent of the peach buds put in have taken and are going to grow, and the grafts put in have also done well, and so have outtings of all kinds. If no late frosts come to damage fruit blossoms, and the lateness of the season renders this improbable, there will be a magnificent crop of all kinds of fruits and berries.

### WASHINGTON.

**WORK TO BE COMMENCED ON THE BIO CANAL.**—*Spokane*, April 20: Manager Granger, of the Northern Pacific and Yakima Irrigation Co., states that construction of the great Sunnyside canal, the estimated cost of which is a million and a half of dollars, will begin at once. Yakima has occasion to rejoice, for the building of this canal is the harbinger of good times for many years.

**CROPS AT OAKDALE.**—*Cor. Spokane Chronicle*, April 23: For the past few days we have had growing weather and farmers are getting along in first-class style with their spring plowing. We expect this year the heaviest crop we ever have had.

**CROPS IN EASTERN WASHINGTON.**—*Press-Times*: The grain yield of Whitman county will be 30 per cent greater this year than it was last. The same encouraging report comes from Asotin, Garfield, Walla Walla, Columbia and other counties.

# Easy Chair Shopping.

The Catalogue sells to the easy chair shoppers as readily as our best salesman sells to a customer at the counter. Why should it not? Clear in its statements, honest in import, replete with news,—it deals direct and above all is *complete*. The latest devices,

the sensible household necessities,—what you need and what you would like to have,—are all there in beautiful illustrations and interesting descriptions. It's a *helpful* book for young or old, rich or poor, and free for the asking.

If you send an order you may rest assured of getting the same goods, the same styles, the

same prices as if present in Sacramento. For how else can we hold your trade from year to year except by doing our best in every transaction?

**UNDERWEAR**—It really doesn't pay to make muslin underwear at home when 98 cents will buy a complete set, consisting of chemise, gown and drawers. Good strong muslin nicely trimmed. By mail, 22c. extra.

The price of the gown in the above set, if sold separately, 48c., neatly trimmed with tucks and embroidery.

**KIDSHOES, \$2**—Ladies' soft kid button shoes, medium toes and low heels, neat and dressy, price \$2. By mail, 20c. extra. Sizes, 2 1/2 to 8, and widths, D, E, and E E.

**MEN'S TROUSERS, \$3.50**—We are making a great specialty of these goods. Buying hundreds of pairs at a time, and from one of the largest manufacturers in the country, we are able to give

unusual value for that money. The trousers are neatly cut and well made of good material. In ordering give waist measure and length of inside seam of leg, and state whether you prefer medium or dark patterns. You will get in return a better pair of pants than you have ever had for anything like the same money. Price, \$3.50. Postage, 30c. extra.

**APRONS, 25c.**—Ladies' cream-colored aprons, with fancy open work stripes, and linen lace, one yard long, wide strings. Price, 25c. Postage, 5c. extra.

**SEERSUCKER DRESSES**—Fancy striped Seersucker dresses, Mother Hubbard style, for 6 months to 2 years. Price, 25c. Postage, 5c. extra.

## Weinstock, Lubin & Co.

F. W. KROGH & CO., 51 BEALE ST., SAN FRANCISCO.

## SHEEP AND WOOL.

## Wool Product of Eastern Oregon.

B. S. P. prepares for the *Oregonian* the following interesting statement:

Oregon boasts of her climate, productive soil, big yield of all soil productions, etc., and to these can be added the proud distinction of having one point, at least, within her State which is the largest wool-growers' delivery point in America, and this point is The Dalles. The year 1888 was the banner wool clip of Oregon, and in this year there were over 5,000,000 pounds of wool handled at The Dalles, of which ex-Governor Z. F. Moody handled over 3,000,000 pounds, making him in that year, at least, the largest original dealer in America, if not in the world. The geographical position of The Dalles, i. e. with reference to the topography of the country and transportation, makes it a natural wool-shipping point. At present this city is the leading wool market of Oregon.

Arlington, some 50 miles east of The Dalles, was for many years a close competitor of the latter place, but owing to the construction of the railroad to Heppner, Arlington lost her second place, and now Heppner is the second largest wool-shipping point in Oregon.

The winter of 1889-90 was unusually severe, and especially the month of February, 1890, which caused unusual and unprecedented loss among the bands of sheep, so that the wool statistics of the clip of 1890 is not an approximate average of the amount of wool handled at these three principal wool depots. The total receipts of wool in pounds, for the clip of 1890 was as follows: The Dalles, 3,697,971; Arlington, 855,970; Heppner, 1,762,779, making a total of 6,316,720 pounds shipped from these three points. This amount represents, to a very fair degree, the wool of Wasco, Sherman, Gilliam, Morrow, Grant and Crook counties. The average sheep in these counties will clip about seven pounds each, hence the shipment would represent 902,389 sheep. While the above is the actual amount of wool shipped, yet owing to the great loss among the sheep, before mentioned, there were about 165,000 pelts shipped; as not over two-thirds of the pelts were obtained, the loss can fairly be estimated at 220,000 sheep, which represents about 1,549,000 pounds of wool. The above is approximately the accurate result obtained from thorough investigation.

The sheep industry has been rapidly growing and developing for the past 20 years. The range, which was formerly as good as any in the world, suffered from overproduction of sheep, and hence gradual destruction of the range. For the past five years large bands have been sold and moved from the State. This, together with the great loss of one year ago, places the range to day in a less crowded and better condition than it has been for many years. The past winter was unusually favorable to stock of all kinds; the range was good and no severe weather occurred to injure the sheep. The natural annual average loss of sheep is five per cent, but this past winter not over 27 were lost. On the health of the sheep depend the quality and quantity of the wool, and also the percentage of increase. If a band is in good health and is fat, the wool has a steady, gradual growth, making it of higher marketable value than when the band is poor and thin. In the latter instance the wool grows, then stops, and when the sheep fatten up in the spring the wool again grows, making in the fleece a break, which lowers its value. From last autumn the conditions have been favorable for a good lamb product. The ewes have been remarkably healthy. Scab, as usual, is found in some sections, but in Gilliam county, especially, owing to a vigorous stock inspection, there is reputed to be less scab than in any other county. The increase this year is unusually large; in large bands fully 90 per centum of the lambs have been saved; in instances over 100 per centum have been saved, the latter in poorer-bred lambs where twins were common. The better bred the band the less liability to twins. Many bands of sheep in Eastern Oregon will average ten pounds to the fleece; others will not average over five or six; seven pounds or eight at the outside is a good general average fleece. A 32-pound fleece has been sheared from a fine thoroughbred buck. Take it all through, a one-half or seven-eighths merino is the most profitable sheep in the Eastern Oregon range. The reason is they are more hardy and do not travel as much.

The cost of sheep husbandry is more now than formerly. The range is shorter and more feed has to be provided. Then, to offset this to a certain degree, there is now a local market, while formerly all wool had to be shipped to a foreign market.

Better prices are expected this year—this for several reasons: the new tariff, cleaner wool and better quality. There is a great difference in the cost of transportation between Oregon and Australian wool. Boston is the central wool market of America. From Australia to Boston it costs for transportation \$1 per 100 pounds, a distance of 11,000 miles, while from Oregon, a distance of 3500 miles, the cost is \$2.62 per 100 pounds. The Australian wool can be grown for 6½ cents per pound. The duty on wool, corresponding to Oregon wool is

11 cents per pound; hence the price must be 1 cent for transportation, 11 cents duty and 6½ cents cost of production, or a total of 18½ cents per pound or more.

Eastern Oregon wool cannot be produced with a profit for less than 15 cents per pound; to this add 2.62 cents for transportation, and there must be a price of 17.6 cents per pound. The tariff gives at least 0.9 of a cent per pound to every pound of wool grown in Oregon. Hence the tariff has a beneficial effect on the wool-grower of Oregon. Let the tariff be removed, and Oregon cannot compete with foreign producers, hence the wool market of America will be dictated by the foreign producer.

The price of sheep is from 75 cents to \$1 higher than formerly—wethers of 2 years old and upward sell at from \$2.75 to \$3 per head. They are bought up and driven to the corn States. A band of 4500 sheep (70 per cent wethers and 30 per cent ewes) sold in Gilliam county a few days since for \$2.85 per head, to be delivered at the corral after shearing, about May 1st. For general purposes, sheep of 2 years old and upward are sold. They are then in better condition to be driven long distances. Good mutton should be 3 years old and upward. Sheep do not, as a rule decrease in wool product until five years old. The range is better, hence the general sheep husbandry is better by these sheep being sold and driven from the country. Eastern Oregon wool is generally known as a heavy wool, i. e. greasy and dirty. Columbia river wool shrinks from 68 to 75 per centum in scouring. Wool from the John Day section is lighter; it shrinks from 55 to 65 per centum in scouring. The heavy wools are more generally sold in local market, and the light wools shipped to foreign, i. e., Eastern market, the latter being the higher price, hence the general average price paid here for wool is quite low; 18 or 19 cents per pound for John Day or mountain wool is not as high a price, correspondingly, as 14 or 15 cents for Columbia river wool. The wool of Umatilla and Morrow counties is heavier and not so bright as that of other counties. Oregon wool is quoted at higher prices than wools of any other section of the country, save those of sections like Montana where the wool is lighter.

The outlook for the clip this year is unusually good. The gradual improvement in the grade of sheep is now very marked; most of the wool is from three quarter blood Merino. The wool grew all winter; the quality is extra and the quantity will be fully one-third more than last year, for the effects of the severe loss of one year ago is not overcome yet. The distribution of Oregon wool can be well shown by the following shipments made from Heppner last year: Out of a total of 1,762,779 pounds, there was shipped directly East to Boston in graded sales, 650,000 pounds; to San Francisco, 350,000 pounds; to Oregon mills, 450,000 pounds; and the balance was shipped to Portland for reshipment to San Francisco and to points eastward. The above shows a large percentage to be consumed or used, i. e., manufactured into woolen goods in Oregon. Last year, from Heppner alone, 49,865 pelts were shipped, while this year not over 2000 will be shipped. In order to show the successful lambing season, one instance well known can be quoted where a man had 43 ewes and he saved from their product 48 lambs. Ninety per cent of lambs saved is generally considered to be a big saving.

A good range, healthy bands, excellent lambing season, good quality of wool and plenty of it, all tend to make the wool clip of 1891, now progressing, one of the most successful for many years.

## QUERIES AND REPLIES.

## Broom Corn Culture.

EDITORS PRESS:—Forty years ago in Wisconsin my father raised broom corn and made it up, and for 30 years of my life, up to ten years ago, I have been more or less identified with the production and manufacture of it; hence I think perhaps I am qualified to accept your invitation to write of its habits.

In this State the first week in May is the proper time to plant, and the present season is an exceptionally good one, as the late rains have been so copious. To grow a fine brush to make the best house broom, there is but little land in the State that will answer, and that is principally in Sutter county; but for a coarser fiber, for brooms for men's use in stables, wine and beer tanks and rough work generally, this fine brush is not fitted, and there are many places where the better article for this purpose can be grown. In an early day, 1857 to 1859, I think, Armes Bros. planted some on the Russian river bottom land near Healdsburg. In 1859, Mr. Winnie grew a goodly quantity on what is now the property of T. L. Rutherford, east of the little town of the same name, and in 1860 the writer commenced its cultivation near Napa. Kern county has produced some and various other localities, but it is all coarse and more or less crinkly anywhere outside of the one locality where the land is a warm, sandy loam, always moist, enabling the roots to run through it without interruption, and the temperature high even during the night. A cold night will put a kink in the brush every time.

Broom-corn is worth from \$60 to \$100 a ton, and one-third of a ton to an acre is the average crop. The finer crops growing in the favored locations should be out before the seed is ripe, in order to preserve the brush green in color, and perhaps a little tougher; but the common stock can be left until the seed is nearly ripe, then cut and dried. The seed after being properly cleaned will be worth two-thirds the price of wheat for chicken-feed, and the product will amount to half a ton per acre. Thus the outcome of the crop amounts to about \$30 to \$45 per acre.

To plant, take a wheat drill that covers nine feet, shut off all but the center and two outside drills; arrange an outrigger on the hubs, three feet from the outside drills, so the driver can keep the proper distance from the last row. Some judgment is required when hoeing to thin out the plants, a strong sail needing more than a weak sail, the plants depending to a great extent on each other. A single stalk of Indian corn growing alone would produce two or three ears of good corn, but the stalk of broom-corn by itself would be so large and coarse, it would be good for nothing, while if too many are near each other, they grow too small and fine for any use.—R. E. WOOD, Rutherford, Napa Co.

[This is very timely and interesting. Thank you.—EDS. PRESS.]

## Starting Blue Gums.

Can any of the readers of the *RURAL* give me directions for making a handy, portable hog fence? I saw a letter from your Santa Paula correspondent in regard to starting Blue Gum seeds. My experience might be of use to some one, so will give it. My soil is a red, decomposed granite and becomes very hard when not cultivated. Last September, I dug the ground for a small bed, throwing the dirt out of the way, until I had it about eight inches

deep. Then I put in a coat of chicken and horse manure about four inches deep, and then filled the hole with water, into which I then put the dirt first shoveled out. When this was well soaked, I ran over it with a garden rake, making the surface as fine as possible. Then I put a board on it and tramped it down until the surface was smooth and compact. On this I sowed the seed and covered it by sifting sand about half an inch thick over it through a piece of fine wire screen. This bed was sprinkled every evening, and in four days the little plants began to show up, and in a week it looked as though every seed had come up. These trees I have just been planting out in a grove. They are fine, thrifty trees. I started two beds of pepper trees in the same way, and have had good success.—L. S. LYMAN, Alessandro.

## Cement Cisterns, Etc.

EDITORS PRESS:—In reply to your query as to the building of cement cisterns in this State, I would say that in this place there are six, holding from 100 to 150 barrels each for five purposes. The first was built ten years ago by Dr. Geo. McCowen. It is in the form of the common flower pot covered with a single thickness of brick on edge. The arch is 9 feet 4 inches in diameter with 14 inches raise, and rests on the ground only. No supports were put under it when building it. The cement walls are of Portland cement, 3 to 1 sand, one inch thick, put on in two coats, and then a whitewash coat of pure cement. It has leaked once or twice, presumably from seismic disturbances of the ground, but on the whole is a success. The other five were built by the town for the same purpose.

I would like to know how canneries put up corn and beans to save. Domestic attempts in that line usually result in a blow out.

Another query: Will not a given amount of milk yield more cream when exposed to strong light and plenty of air, than when under reverse conditions? I notice that the lighted side of the pan always yields thicker and yellower cream than the darker side. Does the cream all rise anyway, but determine itself toward the light, or does more rise because of the light at that point.

On gophers.—The surest way I have yet found to dispose of these pests is crystals of strychnine in pieces of carrots. Open the run way by taking out a square sod, put a piece each way, and close it up again.—READER, Ukiah.

## Peaches Doubling.

EDITORS PRESS:—I would be pleased to receive some information on the subject of "peaches doubling." Are some kinds more disposed to doubling than others? It appears to be the case here; for instance, the Early Crawford is so bad there can scarcely a single one be found. What do you suppose or know to be the cause? Is there any remedy? If some are free from this overdoing business, please state the varieties. By answering this communication you will confer a favor to many of our beginners in horticulture.—L. B. D., Monterey Co.

We would like letters on this important subject.

## Easy Binder.

Dewey's patent elastic binder, for periodicals, music and other printed sheets, is the handiest, best and cheapest of all economical and practical file binders. Newspapers are quickly placed in it and held neatly, as in a cloth-bound book. It is durable and so simple a child can use it. Price, size of Mining and Scientific Press, Rural Press, Watchman, Fraternal Record, Masonic Record, Harper's Weekly, and Scientific American, 75 cents; post age, 10 cents. Postpaid to subscribers of this paper, 60 cents. Send for illustrated circular. Agents wanted.

### Our Bargain with the Inventor.

A United States patent is a contract. The parties to it are the inventor on the one hand and the people of the United States on the other. The inventor, by a public record, informs the people concerning a useful discovery which he has made, which must be original with him and new in the United States. In return, the people, by their letters patent, secure to him the exclusive right to make, to use and to sell his invention for a limited number of years. At the end of that period the contract terminates, and the discovery belongs to all the people forever. A patent, therefore, does not flow from the bounty of the community as a pension, or a shield or a medal. It belongs to the inventor by right. It comes into existence in consequence of the legal establishment of a certain state of facts, namely, that the invention is new, useful and original with the claimant. This disclosure is the consideration on the part of the inventor, who, therefore, gives the community something of value which it did not before possess. The community gives to the inventor, not something of value which it already had, as where a part of the public domain is patented to a settler, but simply protection. If the invention is valuable, so is the protection; if the invention is worthless, the protection is without benefit. Thus the contract is reciprocal and evenly balanced. The validity of a patent depends upon the maintenance of the facts established. To determine issues of validity is a function of the United States courts; to determine whether the consideration probably exists, and to make the contract itself, is the function of the United States Patent Office. "He who receives an idea from me," wrote Thomas Jefferson, "receives instruction himself without lessening mine; as he who lights his taper at mine receives light without darkening mine." An idea once made known is subject to human control only when incorporated, and therefore it can become the subject of patent only when it is tangible and existent. In the beginning it may be regarded as a marvel; in time it becomes a necessity of life, a manufacture, perhaps the basis of a great industry. In a certain sense the invention then detaches itself from the inventor, for the patent no longer protects only one man, but through him many men in their rights.

The patent system of the United States has now completed its one hundredth year. The experience of the century shows that the advantages incident to the patent contract constitute a sufficient incentive, not merely to lead people to publish their inventions, but to make them invent. The number of patents granted yearly has steadily augmented; it is now more than 26,000 and is increasing. Under the fostering protection of patents we have developed, and are developing inventors as a distinctive national product; and because of this we are enabled to exhibit to the world a growth and prosperity as a manufacturing people unexampled in the history of mankind. The patent contract secures to the inventor his right for a fixed period of time, absolutely and without limitation, save by the obligations which every man owes to society. It assumes that self-interest will best conduce to the development of the invention, and therefore, it imposes on the patentee no recurring taxes, nor does it compel him practically to operate his device. A patent grant is not made in payment for an invention, in the sense that one is a measure of value for the other, but in return for its disclosure. No one can assess the value of a new discovery to the human race for all time. The more important it is, however, the more incommensurate become the returns obtainable during the latent period. The millions made from the patents on the sewing machine, or the reaper and mower, or the telegraph, or the telephone, are utterly inconsiderable beside the enormous benefits which the public acquires through all futurity from these inventions. Whether the thing contrived is to underlie a great industry or whether it is merely an improved pin, the inventor, to be entitled to his patent, must disclose it fully, and without restriction or reservation; so that when the patent term shall be finished, the public may be able to make and use the thing as well as he himself can make and use it. He is entitled in return to equally full, unreserved and unrestricted protection. To lessen the enjoyment of that protection, or to limit it by harassing requirements, such as taxes or obligations to work the invention, as the opponents of the system have proposed, would amount simply to failure on the part of the people to comply with their side of the contract.—Park Benjamin in the Forum.

THE SOURING OF MILK IN THUNDER STORMS has just received a scientific explanation at the hands of an Italian savant, Prof. Tolomei. He has found that the passage of an electric current directly through milk, so far from souring it, actually keeps it sweet, so that it does not turn until the sixth day; when, however, an electric current is passed over the surface of milk it soon becomes sour, and this the professor attributes to the generation of ozone, since the souring is more rapid when the current passes silently than when it is discharged explosively, more ozone being generated by the former than by the latter method. The fact that the souring of milk can be retarded by so simple a procedure as the passage of an electric current may prove of practical value, and offer a safer way of preserving milk than by the use of antiseptics.

THE GREATEST IRON PORT IN THE WORLD.—Escanaba is the county seat of Delta County, Michigan. It lies at the foot of the great pine forests, and overlooks Little Bay de Nequet, the headwaters of Green Bay. Five years since it was practically a village in the wilderness. To-day finds it a city with a population of 8,000, lighted by electricity, having a well equipped fire brigade, waterworks with a capacity of 4,000,000 gallons per day, a high school and three other schools, six churches, three newspapers, a railway station where 216 trains arrive and depart daily, and it will shortly have an electric street railway in full work. Its annual retail trade is estimated at \$3,000,000, and its wholesale trade, including iron ore, pig iron, lumber, and coal, at about \$25,000,000. According to Mr. Nurse's carefully written report, capable of the fullest verification, Escanaba is the greatest iron port of the world. He tells us that during the navigation season of 1890 it shipped 3,700,000 tons of iron ore, or nearly double that of all the ore ports of Michigan, Wisconsin, and Minnesota combined. Its lumber output amounted to about 120,000,000 feet, while the freight capacity of the vessels entering and clearing from its port exceeded 8,000,000 tons. This compares with the tonnage of the greatest seaports of the world, which are: (1) London, 19,000,000; (2) Liverpool, 14,000,000; (3) New York, 11,000,000; and next comes Escanaba with 8,000,000 tons.

UNINFLAMMABLE WOOD.—Wood cannot be rendered incombustible, or, more strictly speaking, non-alterable by heat, but its non inflammability may, to a considerable extent, be insured so as to preserve buildings from a limited and temporary fire, at any rate until assistance arrives. It is, however, hopeless to expect a building encumbered with inflammable substances to pass through such a test uninjured. The methods of preserving wood against fire are of two kinds—the injections of saline solutions and the application of a paint or coating. The former appears but little practical; and, indeed, short of proof to the contrary, it must be considered dangerous in the case of wood of large dimensions. This system is, however applicable to small pieces of wood. Of all the substances recommended, a concentrated solution of phosphate of ammonia is undoubtedly the best, the use of this substance, notwithstanding its high price, possessing such great advantages that it should be employed in all cases where expense is no object. In the majority of cases, however, coating with a brush is the only practical solution of the question, and Professors Bondin and Denny, of Ghent, recommend as the substance most suitable for use in this manner cyanide of potassium and asbestos paint.

THE RAPIDITY OF THOUGHT.—Much speculation has been set on foot in regard to the rapidity of thought; but Prof. Donders of Utrecht has recently made some interesting experiments in this direction by means of two instruments, which he calls respectively the "neomatachograph" and the "neremachometer." His experiments thus far show that it takes the brain one sixty-seven hundredths of a second to elaborate a single idea. He says: "Doubtless the time required for the brain to act is not the same in all individuals. I believe, however, that these instruments may be so far perfected that we shall be able to determine the mental caliber of our friends without our friends knowing that we are testing their aptness." And again: "For an eye to receive an impression requires seventy-seven hundredths of a second, and for the ear to appreciate a sound, one hundred and forty-nine hundredths of a second is all that is necessary, which, however, note with nearly double the rapidity of the eye."

THE PARTITIONMENT OF AFRICA.—Only 2,500,000 of the 11,000,000 square miles of Africa remain in the hands of native rulers. France has 2,300,247 square miles, England 1,900,445, Germany 1,035,720, Congo Free State 1,000,000, Portugal 774,993, Italy 360,000, Spain 210,000. While the share of France is largest, England's is most valuable.

#### WANT A BUGGY?

Why of course you do. A moonlight ride is enhanced a hundred fold if the Buggy is all right. Does the name Pioneer suggest anything? The "Complete Horse Book" tells you where to buy it. Sent for 10 cents, silver or stamps. Pioneer Buggy Company, Columbus, Ohio.

## When The Hair

Shows signs of falling, begin at once the use of Ayer's Hair Vigor. This preparation strengthens the scalp, promotes the growth of new hair, restores the natural color to gray and faded hair, and renders it soft, pliant, and glossy.

"We have no hesitation in pronouncing Ayer's Hair Vigor unequalled for dressing the hair, and we do this after long experience in its use. This preparation preserves the hair, cures dandruff and all diseases of the scalp, makes rough and brittle hair soft and pliant, and prevents baldness. While it is not a dye, those who have used the Vigor say it will stimulate the roots and color-glands of faded, gray, light, and red hair changing the color to

### A Rich Brown

or even black. It will not soil the pillowcase nor a pocket-handkerchief, and is always agreeable. All the dirty, gummy hair preparations should be displaced at once by Ayer's Hair Vigor, and thousands who go around with heads looking like 'the fretful porcupine' should hurry to the nearest drug store and purchase a bottle of the Vigor."—The Sunny South, Atlanta, Ga.

"Ayer's Hair Vigor is excellent for the hair. It stimulates the growth, cures baldness, restores the natural color, cleanses the scalp, prevents dandruff, and is a good dressing. We know that Ayer's Hair Vigor differs from most hair tonics and similar preparations, it being perfectly harmless."—From Economical Housekeeping, by Eliza R. Parker.

## ENTOMOLOGICAL.

## The New California Laws.

EDITORS PRESS:—Will you, if not too much trouble, send me the new changes in full in the Horticultural law as made by the last Legislature and approved by the Governor. I have seen what the Press has published but do not yet understand clearly all.

GEO. E. STEWART.

Rhonerville.  
As the matter is of so great interest and importance we print below in full the new laws relating to horticultural subjects as follows:

## CHAPTER CLXXVII.

An Act to amend an Act entitled "An Act to amend an Act entitled 'An Act to protect and promote horticultural interests of the State,'" approved March 19, 1889.

(Approved March 31, 1891.)

SECTION 1. Said Act is hereby amended by adding a new section thereto, to be known as section twelve, and to read as follows, viz.:

SEC. 12. When a petition is presented to the Board of Supervisors of any county, as required by Section 1 of said Act, the said Board of Supervisors may appoint a Commission to consist of any number less than three members, at a compensation each of not less than four dollars, and if but one member, five dollars for each day actually engaged in the performance of his duties under this Act; and all the provisions prescribing the duties of and conferring powers upon the County Board of Horticultural Commissioners contained in said Act shall apply to the Commission appointed under this section.

SEC. 2. This Act shall take effect from and after its passage.

## CHAPTER CLXXXVIII.

An Act amendatory of an Act entitled "An Act to amend an Act entitled 'An Act to promote the horticultural interest of the State'" approved March 14, 1881, approved March 19, 1889.

(Approved March 31, 1891.)

SECTION 1. Section 2 of said Act is hereby amended so as to read as follows:

SEC. 2. It shall be the duty of the County Board of Horticultural Commissioners in each county, whenever it shall deem it necessary, to cause an inspection to be made of any orchards, or nursery, or trees, plants, vegetables, vines, or fruits, or any fruit-packing house, storeroom, salesroom, or any other place or articles in their jurisdiction, and if found infested with scale insects, or codlin moth, or other pests injurious to fruit, plants, vegetables, trees, or vines, or with their eggs or larvae, they shall notify the owner or owners, or person or persons in charge or possession of the said places, or orchards, or nurseries, or trees, or plants, vegetables, vines, or fruit, or articles, as aforesaid, that the same are infested with said insects, or other pests, or any of them, or their eggs or larvae, and they shall require such person or persons to eradicate or destroy the said insects or other pests, or their eggs or larvae, within a certain time to be specified. Said notices may be served upon the person or persons, or either of them, owning, or having charge, or having possession of such infested place, or orchard, or nursery, or trees, plants, vegetables, vines, or fruit, or articles, as aforesaid, by any Commissioner, or by any person deputed by the said Commissioners for that purpose, or they may be served in the same manner as a summons in a civil action. Any and all such places, or orchards, or nurseries, or trees, plants, shrubs, vegetables, vines, fruit, or articles thus infested, are hereby adjudged and declared to be a public nuisance. And whenever any such nuisance shall exist at any place within their jurisdiction, or on the property of any non-resident, or on any property, the owner or owners of which cannot be found by the County Board of Horticultural Commissioners, after diligent search, within the county, or on the property of any owner or owners upon which notice aforesaid has been served, and who shall refuse or neglect to abate the same, within the time specified, it shall be the duty of the County Board of Horticultural Commissioners to cause said nuisance to be at once abated, by eradicating or destroying said insects or other pests, or their eggs or larvae. The expense thereof shall be a county charge, and the Board of Supervisors shall allow and pay the same out of the General Fund of the county. Any and all sum or sums so placed shall be and become a lien on the property and premises from which said nuisance has been removed or abated, in pursuance of this Act, and may be recovered by an action against such property and premises, which action to foreclose all such liens shall be in the proper court by the District Attorney of the county, in the name and for the benefit of the county making such payment or payments, and when the property is sold, enough of the proceeds shall be paid into the County Treasury of such county to satisfy the lien and costs; and the overplus, if any there be, shall be paid to the owner of the property, if he be known, and if not, into the court for his use when ascertained. The County Board of Horticultural Commissioners is hereby vested with power to cause any and all such nuisances to be at once abated in a summary manner.

SEC. 2. This Act shall take effect and be in force from and after its passage.

## CHAPTER CXCV.

An Act to appropriate five thousand dollars for the purpose of sending an expert to Australia, New Zealand, and adjacent countries, to collect and import into this State parasites and predaceous insects.

(Approved March 31, 1891.)

SECTION 1. There is hereby appropriated the sum of five thousand dollars out of any money in the State Treasury not otherwise appropriated, for the purpose of sending an expert to Australia, New Zealand, and adjacent countries, to collect and import into this State parasites and predaceous insects for distribution; the expenditure of said sum to be under the direction of the State Board of Horticulture.

SEC. 2. The Controller of State is hereby directed to draw his warrant for the above sum upon the State Treasurer in favor of said Board, and the State Treasurer is hereby directed to pay the said warrant.

SEC. 3. This Act shall take effect immediately.

THE last rivet in the pipe line between the Bear Valley reservoir and the Alessandro colony is made of solid silver.

A dry, hacking cough keeps the bronchial tubes in a state of constant irritation, which, if not speedily removed, may lead to bronchitis. No prompter remedy can be had than Ayer's Cherry Pectoral, which is both an anodyne and expectorant.

## TO SHIPPERS!

## California Ventilated Barrel

EXCELS ALL OTHERS!

IT IS LIGHTER, STRONGER, MORE DURABLE AND BETTER VENTILATED THAN ANY OTHER BARREL.

This engraving of the CALIFORNIA VENTILATED BARREL makes plain to the practical shipper its points of superiority over the common barrel, which may be enumerated as follows:

It weighs from five to seven pounds less than the ordinary barrel, making a material saving in freight charges.

It costs less than one-half for trimming, and does not require an experienced hand to cooper it.

It is the only thoroughly ventilated barrel made, a very important point.

The heads are warranted not to come out in transit, and no liners are required.

It is stronger and more durable than any other barrel.

Never varies in size, even to the extent of a quart.

—ALTOGETHER MAKING IT—

The Cheapest and Best Barrel on the Market.

It is Made of the Best Quality of Spruce, Woven Together with Copper Wire, And can be furnished in any size desired.

THE CALIFORNIA BARREL IS ADAPTED TO SHIPPING THE FOLLOWING ARTICLES:

Apples, Oranges, Onions, Potatoes,

Sweet Potatoes, Dried Meats, Bottled Goods,

Glassware, Canned Meats, Crockery,

Eggs, Poultry, Walnuts, Almonds,

And Vegetables of All Descriptions.

A factory making these barrels is now in operation in San Francisco, with a capacity of 4000 barrels a day. The success of the barrel is almost unprecedented, and it is bound to become the package in a very short time. EVERY ONE USING IT IS ENTHUSIASTIC IN ITS PRAISE. IT HASN'T A FAULT. When shipped in knock-down form, about 2500 barrels can be placed in a single car. Special rates given on car lots. WRITE FOR PRICES AND PARTICULARS.

California Ventilated Barrel Co.,

No. 403 MARKET STREET, - - - SAN FRANCISCO, CAL.

FACTORY: N. W. Cor. Powell and North Point Streets.

## HILL'S IMPROVED LIGHTNING BALER.

Capacity, 32 Tons per Day.

AWARDED FIRST PREMIUM BY THE CALIFORNIA STATE AGRICULTURAL SOCIETY FOR 1890.

MULES

VERSUS

MEN.

CALIFORNIA'S TRIUMPH.

No tramping. No forking from the stack. No cutting of stacks necessary. You can sit at a hundred-foot stack and bale it without a move. It makes the best bale in the market. You can put ten tons in a car. The forking from the stack is all done by the horses. The Baler can turn out more hay in less time and better style than any other Press. Here is one of the recent endorsements of this wonderful machine:

J. F. HILL—Dear Sir: We baled on James Ryan's Ranch on the Cosumnes, one mile from the Slough House, 277 bales of alfalfa hay, that weighed 32 tons and 35 pounds, with one of your Lightning hay presses on the 21st day of July, 1890. Yours respectfully,

CONNOR &amp; ANDERSON.

—MANUFACTURED BY—

Pacific Wheel and Carriage Works

J. F. HILL, Proprietor,

Office and Factories, Nos. 1301 to 1323 J St., SACRAMENTO, CAL.

SEND FOR CIRCULARS.

# WALTER A. WOOD MOWERS,

FOUR SIZES: 4 ft. 3 in. Cut, 4 ft. 6 in. Cut, 5 ft. Cut, 6 ft. Cut.

The Cutting Apparatus and Gearing are the Vital Parts of a Mower. Walter A. Wood makes the best ever yet produced and the lightest draft of all mowers. Try pulling it, in gear, with a man in the seat; then try others.

The Walter A. Wood Cutting Apparatus does not clog. By its design the largest possible amount of power is saved, from friction, for the actual work of mowing.

THE BEARINGS are boxed with brass—the best for light draft and durability. These boxes preserve the shafting from wear and can be easily renewed, but a worn shaft or frame is costly to replace.

THE GEARING is compactly enclosed in a dust-proof box and has the motion for heavy cutting and light draft.

THE UNEQUALED HEIGHT TO WHICH THE BAR AND DROOP FRAME CAN BE RAISED permits passing obstacles, whether under the bar or between the wheels, which would otherwise have to be driven around.

The Mower combines Great Strength with Lightness of Draft. **HIGH WHEELS, WIDE TREAD, IMPROVED PITMAN.**

JONES & SMITH, Williams, Cal., wrote us last year: "The mowing season opened here with a trial of mowers in a field of alfalfa, that had a heavy crop of fox-tail with the alfalfa. They first took a "———" into the field and after choking up many times they pulled out. Then the agent of the "———" took a machine into the field but could do no better than the other had done, and made a complete failure, only going around the field once and then gave it up and pulled out. We were asked if we would try the "WOOD'S" in the same field, which we did, and went two rounds without ever choking or making a stop, only to oil the machine. The party bought the "WOOD'S" 4 ft. 3 in., when he was offered the "———" for about \$20 less.

## Single Apron Twine Binder.

POINTS GAINED IN THE WALTER A. WOOD MACHINE NOT ENJOYED BEFORE: Greater compactness and firmness. Decreased weight. A saving of ONE THIRD in draft. Increased cleanness of Harvesting. The platform can be closed or opened at rear and the tallest grain handled without checking the progress of the heads or rubbing and shelling out grain. It is virtually impossible to choke the Binder, thus trouble and delay are avoided. It is a particularly easy machine to manage. Boys do a man's work with it. The team draws it with ease. It is a genuine two horse binder. It is different from any other, and everywhere is conceded a great improvement.

THIN STEEL PLATFORM, LAPPED STEEL MAIN FRAME, STEEL DRIVE WHEEL AND STEEL GRAIN WHEEL. The Knotter accommodates itself to all twines without readjustment. It places the knot right down against the grain while tying, thus saving a large amount of twine during an ordinary harvest. The machine is a great grain-saver and in many localities has been the only effectual way of cleaning out foul growth. It is sold under our well-known broad warranty.

# WALTER A. WOOD SELF-DUMP RAKES.

THREE SIZES: 8-FOOT, 10-FOOT AND 12-FOOT.

OPERATED BY ANY ONE WHO CAN DRIVE.

The Walter A. Wood Rake is both a self-dump and a hand-dump, though generally operated as a self-dump. A light touch of either foot of the driver causes it to dump and resume raking without noise or jar and without skipping any hay.

Steel Wheels of the Best Design ever used on a Rake. Steel Axles.

The Rake is strong, free from dead-lock, neck galling, side-jerk, dirt-scratching and liability to breakage. If desired, an attachment is furnished so the shafts on the 8 foot Rake can be quickly changed to a pole for using the mower team in place of bringing out a single horse. Seat is instantly changeable to accommodate a man or child.

— ADDRESS —

**FRANK BROTHERS, WALTER A. WOOD, President,**  
33 & 35 Main St., SAN FRANCISCO, CAL. 68 Front St., PORTLAND, OR.  
Machines and Repairs to be had at all principal points.

DANIEL BEST, San Leandro, Cal.

## CEREAL CROPS.

## Rice Culture.

R. R. Smith, the large real estate owner of this county, has long entertained the idea of trying the experiment of raising rice on his tule land, and with that end in view has busied himself in getting information on the subject. A few days ago, while in San Francisco, Mr. Smith called to see Horace D. Dann relative to the matter, but the gentleman was not in his office. Mr. Dann has since received a letter on the subject of rice culture from R. J. Redding, a director of the Georgia Experiment Station, which he incloses to Mr. Smith. In his letter Mr. Redding says:

"Cultivation is entirely confined to alluvial soils along the rivers and creeks, subject or capable of being overflowed by back water induced by tides. Advantage is taken of the ebb and flow of the tide, not only to flood the fields but also to drain them, as the exigencies of culture demand, the same system of ditches being used for both purposes. The tidal rice lands of the Carolinas and Georgia are naturally below the level of the spring tides, hence they may be 'flowed' at these periods. These lands are also several feet above the level of the main tides, hence they may be drained. Embankments, or banks are constructed of earth to hold out high water or to hold it, as may be desired. When the water is admitted it is conducted through the gates and ditches around and over the field. The tide fall in the Savannah river and vicinity is about six feet.

"The first preparation for a coming crop is to clear out the ditches, spreading sediment and decayed matter over the land and burning all trash. The seeding time usually commences early in March and continues at intervals governed by the spring tides, sometimes as late as early in June. The seed is sown by a machine in drills 15 inches apart and is covered by a harrow. Early sowings require three bushels of seed per acre, later sowings two to two and one-half bushels. The sprout flow is then immediately put on, covering the fields so as to thoroughly cover and saturate the soil with water in order to induce prompt and simultaneous germination of the seed.

"As soon as the sprouts have broken the shell the water is drawn off and the ground is permitted to remain without a flow until the growing plants have sprouted through the soil and may be seen along the rows for a distance of 300 feet or less. The 'stretch' flow is then put on, completely submerging the plants. They take a growth beneath the water, according to the temperature of the water, growing several inches in from two to ten days. The water must now be lowered until the leafy plants float on the surface. This is called the 'stretch' gage and is held steadily until the end of the flow approaches, or from 10 to 40 days, according to temperature and the condition of the plants. The object of the flow is not only to stimulate growth but to destroy weeds.

"The water is gradually drawn off to avoid prostrating the plants that may have been too much 'stretched' in the low levels. The water is finally entirely dismissed and drainage fully re-established, which is now very important. The 'dry growth' continues for from two to six weeks, or until the plants have formed their first hollow joints at the base.

"The 'harvest flow' is then applied, fully submerging the land so as to wet the high grades, destroy insects and give the plants a uniform start. After 48 hours the flow is reduced to a low gage, corresponding with the low gage of the 'stretch' flow, and is then subsequently gradually raised, following the upward growth of the plants, until finally it may reach the highest level the tides will permit. By this time the plants will have obtained full growth, and the heads are shot out. The 'harvest flow' is usually applied in June or July, and is steadily retained until the grain is ready to harvest late in August or in September.

"When the grain is nearly ripe, the water is completely drawn off, and when the ground is sufficiently dry to enter upon it, the harvesting commences. The reaphook is still generally used, but harvesters are being gradually adapted to the requirements of these lands. As soon as sufficiently dried, the rice is gathered into sheaves and stacked. It is then moved to the thrashing machines, and the grain is separated and sent to the pounding and cleaning mills.

"The cost of cultivation averages from \$25 to \$30 per acre under ordinary conditions of a well-regulated plantation. The yield of paddy per acre averages from 20 to 70 bushels, the general average in the tidal regions of Georgia being almost 30 bushels. One bushel of paddy yields about 27 pounds of clean rice per bushel. The commercial weight of paddy is 45 pounds per bushel, and 100 pounds of paddy represents about 2.25 bushels, and this should yield of cleaned rice, say 51.75 pounds.

"Varieties—The most reliable varieties are gold seed and white rice, the former being adapted only to wet culture. White rice is earlier, is nearly clean, and is therefore commonly preferred. It is also adapted to high land growth."

Mr. Smith intends to experiment in a limited way, although his land is not so much subject to tides as the land in Georgia. He says

that rice has been raised successfully in Jamestown, Tuolumne county, and he thinks it can certainly be produced in San Joaquin county.—*Stockton Independent.*

## THE STOCK YARD.

## Dehorning Cattle.

Less than ten years ago, says a correspondent, when H. H. Haaff of Illinois dehorned his cow, some supersensitive neighbor had him arrested for cruelty to animals; but now in all that section, horns are an exception. It is estimated that 15,000,000 cattle in the United States are now without horns. A great many men, convinced of the advantage of dehorning, hesitate because they do not know how it is done and are afraid of injuring the cattle. The operation is a simple one. The writer dehorned 30 cows in a few minutes, one afternoon, without ever having seen the operation performed, or having any other guide than the directions given in the bulletin of a Western Experiment Station. Patent chutes are now made that are very convenient for holding the animals, but they are not essential so long as the head is kept quiet. Mr. Haaff gives the following simple directions:

1. Animal should be cast to dehorn it.
2. The head should be perfectly rigid. It is essential that there be no movement of the head or neck during the operation.
3. Do not dehorn any animal while heated or excited from driving or otherwise, and do not drive an animal directly after the operation is performed.
4. Always shape the head of a yearling or two-year-old—that is, cut off enough bone at the top of the horn, and the hide too, to give it a good top-knot appearance. Make the head shapely.
5. In case of cattle older than two years, place the saw on the matrix so as to cut at least one-half inch below the base of the horn. This prevents any stub horn growing.
6. Never put a thing on; let the head alone. Nature does the healing better than you can.
7. Have all quiet around, and having dehorned the animal, allow it to pass out of the chute at once. An expert will be ten seconds in operating on an ordinary pair of horns, and if he is more than 15 seconds, something is wrong with his chute or saw.

Avoid the new knives and shears that some have been using. They are all more or less skull crushers, and in one case that I know of the use of a pair of shears, made on purpose too, left 50 out of 200 cattle in a bad condition for months, and the owner wrote me a few weeks ago that two of those cattle still run at the head after, now, nine months' time, and the 50 were ruined for the market of last year. No, let knives and shears alone. A dehorning saw costs but a trifle, and once the operator gets his hand in, neither he nor the animal cares for the operation. At the great Denver test on imported Holland cows two chutes were used and two cows side by side, tested as to pulse and as to temperature. One cow was dehorned and the other just handled so as to scare her, and the fright ran both temperature and pulse to the same point that the actual operation did in the case of the cow that was dehorned. If care is used by not pounding or prodding or angering a bull, he will go along as meek as a lamb. It is all in how you do it. Dehorn any time but fly time.

Caustic potash, now so largely used for dehorning calves, is not a very agreeable stuff to handle unless certain precautions are observed. It has a way of absorbing moisture from the air and becomes deliquescent, and then, unless handled with care, is quite as apt to attack one's hands as to destroy embryo horns. It comes in sticks about the size of an ordinary lead pencil. These may be separately wrapped in oiled paper and kept in a tightly corked bottle, in which a few fragments of quick lime have been placed to absorb moisture. When used the oiled paper may be torn off from the end of stick, the remainder protecting the hand from injury. The parts to which it is applied should be moistened a little by the end of the finger, with care not to spread the moisture beyond the part or apply so much that it will run. The end of a stick of potash is then rubbed gently on the moistened part for a short time and the application repeated the next day until the cap of horny matter is so decomposed that it will run off completely, leaving a bare spot. This may be dressed with a little calomel, when it will soon heal. As the part to be removed at the age of the calf is not vascular, and is devoid of nerves, the operation will be almost completely painless if properly performed.—*Western Stockman.*

## ORANGE PLANTERS

Should read the advertisement of the Aloha Nurseries. The best varieties are offered at rates so low that no one need hesitate about planting for experiment, or for investment in places where the orange is known to thrive.

Use "Suicide" Gopher Traps. They are the best. See advertisement in this paper.

## CHAMPION RAKE.

WHY IT TAKES THE LEAD.

It has our patent tooth to PREVENT SCRATCHING.  
It has NO SPRINGS to get out of order.  
It RUNS BACKWARD as well as forward.  
It has NO JAK ON THE THILLS in dumping.  
Its thills work as freely as those on a carriage.  
It will NOT CRATCH UP FINE SEEDING in harvest field.  
It is WORTH TEN TIMES THE EXTRA COST.

It costs more than Rakes with ordinary teeth, but is WORTH TEN TIMES THE EXTRA COST.  
It will run over trash lying on the ground, and leave it there.  
It will rake barley, rye, oats, Hungarian and millet free from dirt.  
It is so easily managed that a boy who can drive a horse can use it as well as a strong man.  
It can be held down to MAKE VERY LARGE WINDROWS, or bunch them up.  
It has an OSCILLATING CLEANER THAT KEEPS THE HAY FROM ROLLING and working out at both ends into the wheels.  
It will rake "scatterings" perfectly, because the cleaner keeps the bay from rolling.  
It is very easy to keep up the teeth after going over a windrow.  
It picks the windrow, leaving it in good shape for rolling up or pitching.  
It dumps DAMP PART OF WINDROW ON TOP, and saves use of bay tedder.  
It can rake the heaviest grass that grows, as soon as cut.  
It will give better satisfaction than any other rake sold in this country.

## GOOD HEALTH.

### Remedy for Blood Poisoning.

It is claimed that Mr. Ernest Tanner of Baltimore, Md., a gentleman without affix of "M. D.," to his name, has compounded a remedy to counteract the ill effects from the bite of rabid animals, reptiles, insects, etc., all of which exist in such numbers that members of the human family are constantly exposed. The remedy is a vegetable compound embodying rib grass, plantain and hazel, all easily obtainable and manufactured by a simple and inexpensive formula. This medicine is taken internally, and also applied externally to the bite. A good, reliable remedy should be in every household, as poisonous insects are liberally supplied to nearly all communities, and in localities abounding in venomous snakes, no one should be without a ready antidote.

It is claimed that this remedy only requires a little systematic effort and energy to develop it into a profitable and beneficial article of large demand. If the gentlemen of the medical profession would only throw aside their professional exclusiveness, now and then, and devote a little attention to such announcements as the above, they would add, much more frequently than they now do, to their catalogue of remedies.

The history of medicine shows us that the nonprofessionals have, by either accident or study, added quite as much, if not more, to medical progress within the last three centuries, than the profession itself has done. An important factor in regard to these unprofessional discoveries is the fact that they have in nearly, if not every instance, been derived from the vegetable kingdom, while the chief study of the regulars has been almost exclusively confined to the mineral kingdom.

The tendency of the day is to substitute vegetable for mineral derivatives in the practice of medicine, and there is good reason to believe that the day is not far distant when the shelves of our druggists will be almost completely relieved of the dangerous and poisonous nostrums which owe their origin chiefly to the mineral researches of the chemist. Nature seems to have provided in the vegetable kingdom remedies for almost or quite every ailment. We have evidence of this in the animal kingdom. Nature seems to have given an almost universal instinct to animals to search out and feed upon certain herbage, which will remove almost or quite all the ailments which come to them in a state of nature. There are, however, ailments which afflict them when under restraint or an abnormal mode of life, that they do not seem to know what to do for. Man, in such cases, generally intervenes with his mineral preparations. The now well-known cancer remedy, which is meeting with such remarkable success in this city, is composed exclusively of vegetable compounds and applications of a non caustic nature, helped out only with new sweet cream or butter direct from the churn—the smallest possible remove from the vegetable kingdom. This may be regarded as a most successful application of vegetable remedies to one of the most persistent and malignant ailments with which humanity has ever been afflicted. The malignant nature of this ailment is especially manifested when treated with the knife or the poisonous mineral application, so universally, yet so unsuccessfully, employed by the medical faculty at large.

**THE ELECTRIC LIGHT IMPROVES THE APETITE AND STIMULATES SLEEP.**—It has been remarked as showing what a powerful element of health the electric light is, that the general health of those who use it improves, their appetite and their ability to sleep increase, and the visits of the doctor become less frequent. This is especially apparent in the statistics of the attendance of working people in factories and other places. In the savings bank in Queen Victoria street, London, where 1200 persons are employed, the absences from illness have been so far reduced that the extra labor gained is said to have paid for the electric light. The influence of artificial light on the eyes has also a very important sanitary bearing. It has been asserted that the injury to the eyes, of which the growing short sightedness of the day is but one result, is due to the heat rays and not to the light rays. If that be so, the electric light is less injurious than any other. If the eyes are exposed to the strong light of the arc lamp, its ultra-violet rays have a painful effect, but no one has ever complained of the influence of a steady glow lamp upon the sight, and it is possible to read and write for many hours by such a light without experiencing the least fatigue.—*New York Sun.*

**A CURE FOR DIPHTHERIA.**—The following remedy was discovered in Germany, and is said to be the best known. At the first indication of diphtheria in the throat of a child, make the room close; then take a tin cup and pour into it a quantity of tar and turpentine, equal parts. Then hold the cup over a fire so as to fill the room with fumes. The little patient on inhaling the fumes will cough up and spit out all the membranous matter, and the diphtheria will pass off. The fumes of the tar and turpentine loosen the matter in the throat, thus affording the relief that has baffled the skill of physicians.—*Hall's Journal of Health.*

**PREVENTION OF MERCURIAL POISONING.**—Jules Mayer, an employe in a French mirror factory,

has lately ascertained that by scattering through the working rooms a pint or a half-pint of aqua ammonia every evening, all danger from the absorption of mercurial vapors will be in a measure prevented. This practice has now been in use for several years in his establishment without the occurrence of any new attack of mercurial poisoning.

**COMBINATION TOOLS.**—Every man who has done out-side work, knows how troublesome the augers and long bits become when packed with their handles in a tool-chest or box. This trouble may be overcome by fitting all the augers to one handle, and all the bits to one brace; then make two chucks, one to fit the brace, the other to fit the auger handle. Make all the augers to fit the brace chuck, or rather the chuck to fit all the augers, then make another chuck to fit the auger handle and all the bits. With this combination, all the bits, augers and handles are interchangeable, and never a job can be brought along but can be handled. In addition to the handles, a ratchet chuck may be made for boring in a corner, or where there is not room enough to swing brace or auger handle.

### A PRESENT FOR BUTTER MAKERS.

We have received an account book printed especially for dairymen, with columns for amount of milk, pounds of butter churned, to whom sold, etc., for each day in the year. It also contains valuable breeders' tables, rules for making gilt-edged butter, and other interesting matter. Wells, Richardson & Co., Burlington, Vt., have kindly offered to mail a copy free to any of our readers who sends a stamp for postage.

In connection with this we would say that Wells, Richardson & Co.'s Improved Butter Color is thoroughly reliable and one that we can recommend to all dairymen. From a letter recently written by Mrs. H. P. Dunham, Lenexa, Kansas, we quote: "Several of my neighbors said they would not use anything to color their butter, but when they had to sell for several cents a pound less than I was getting, they changed their minds and now are using what I do, Wells, Richardson & Co.'s Improved Butter Color."

PLEASANTON seems a charming rural town. The Rose hotel, we understand, will accommodate many summer boarders, and at very reasonable rates.

### The Farmers' Alliance in Kansas —AND— Its Great Paper, The Advocate.

To the Alliance Brothers and Sisters of California: The Advocate desires to send greeting, and to say through the columns of the *PACIFIC RURAL PRESS*: Send for a sample copy of *THE ADVOCATE* and it will tell you how we are "holding the fort" here in Kansas and pushing the movement along with the same zeal and enthusiasm as the *RURAL PRESS* tells us you are doing on the Pacific Coast. The Advocate has over 125,000 readers in Kansas and sister States. It contains 16 p. ges, 64 columns, and bears the proud distinction of having been the most potent factor in the glorious political victories of the Alliance in Kansas. We will send you sample copy free, and 52 copies, one year, for \$1. Yours Fraternally,

ADVOCATE PUBLISHING CO.,  
Topeka, Kansas.

We will send the *RURAL PRESS* and the *ADVOCATE* one year for \$3 to any address in the United States.—PUBLISHERS *PACIFIC RURAL PRESS*.

## The Birds of Spring

If they could be weary of their songs, would find, in our great stock, an almost infinite variety of new melodies. 40,000 kinds of our old music are still called for, and the new are more numerous than the old.

**Cantatas.**—THE JOLLY FARMERS, Sargent, [40 cts., \$3.60 doz.] New, bright, easy, and all jolly farmers and their friends will like it. **HEROES OF '76**, [51, or 59 cts.] Trowbridge, for 4th of July; and **NEW FLOWER QUEEN** [60 cts., \$5.40 doz.] Root, for flower time.

**Sunday Schools** like **PRaise in Song** [40 cts., or \$4.20 doz.], Emerson; **SONG WORSHIP** [35 cts., or \$3.61 doz.], Emerson and Sherwin; **NEW SPIRITUAL SONGS** [35 cts., \$3.60 doz.], Tenney & Hoffman.

**Choirs** constantly send for our octavo music—5000 numbers of Anthems, Sacred Selections, etc., 5 to 8 cts. each. Send for lists.

**Organists** furnished with Voluntary and other music, and players on Violins, Guitar, Mandolins, Banjos and all other instruments, supplied with appropriate music. Send for lists and information.

**EMERSON'S VOCAL METHOD FOR ALTO, BASS, TENOR AND BASS VOICES** [51.60] is a new and superior method.

Any book mailed for retail price.

**OLIVER DITSON COMPANY, BOSTON.**  
C. H. DITSON & CO., 387 Broadway, New York City.

## SORGHUM.

To **JAMES LINFORTH**, 37 Market St., S. F., General Agent for Pacific Coast. Also Catalogue with prices of Mills delivered either from San Francisco or from the Works direct.

## Educational.

### School of Practical, Civil, Mechanical and MINING ENGINEERING.

Surveying, Architecture, Drawing and Assaying, 723 MARKET ST., SAN FRANCISCO, CAL.  
Open all year.

A. VAN DER NAALLEN, President.  
Assaying of Ores, \$25; Bullion and Chlorination Assay, \$25; Blowpipe Assay, \$10. Full Course of Assaying, \$50. ESTABLISHED 1864. Send for Circular.

## HEALD'S BUSINESS COLLEGE,

24 POST ST. S. F.  
FOR SEVENTY-FIVE DOLLARS THIS College instructs in Shorthand, Type Writing, Book-keeping, Tel. graphy, Penmanship, Drawing, all the English branches, and everything pertaining to business, for six full months. We have sixteen teachers, and give individual instruction to all our pupils. Our school has its graduates in every part of the State. Send for Circular.  
E. P. HEALD, President.  
C. S. HALEY, Secretary.

### THE PIONEER COMMERCIAL SCHOOL

Established 1863. **PACIFIC Business College,** 320 POST ST. SAN FRANCISCO. LIFE SCHOLARSHIPS, \$75. No Vacations. DAY AND EVENING SESSIONS. Ladies admitted into all Departments. Address: T. A. ROBINSON, M. A., President.

## CHESNUTWOOD'S BUSINESS COLLEGE SANTA CRUZ, CAL.

BEST EQUIPPED ON THE COAST. INDIVIDUAL Instruction. No classes. Ladies admitted to all departments. Board and room in private families, \$16 per month. Tuition, six months, \$42.  
J. A. CHESNUTWOOD, Box 43, Santa Cruz, Cal.

## "PRESERVATIVE"

ACKNOWLEDGED THE BEST AND ONLY

## Pure Preservative —FOR— MILK, CREAM, BUTTER AND CHEESE.

Will keep Milk and Cream sweet and fresh even in the warmest and muggiest weather. Butter and Cheese kept fresh in their original condition for many months.

It has been the aim of science these many years to counteract the disadvantageous influence exercised by heat and atmospheric changes upon animal and vegetable food. The experiments have been many and the remedies proposed very numerous, but all were found to be ineffectual, impracticable and useless until the discovery of Preservative was made.

### A Simple Experimental Test.

Persons who wish to convince themselves of its effectiveness should send for sample, which we mail free, and by taking two separate quarts of new milk; into one put 1/2 of a teaspoonful of Preservative; put nothing into the other, and set them side by side so that the temperature of the milk may be the same. See which keeps sweet the longer and which raises the more cream.

Preservative is the only genuine preservative that has ever been discovered. It is the cheapest, because it is not only the BEST, but because, at the same time, it is Harmless, Tasteless, Odorless, Simple, Economical, and, above all, absolutely Effective.

Circular giving full directions how to apply Preservative, as also prices and other information desired, can be had of

**G. G. WICKSON & CO.,**  
3 & 5 Front St., San Francisco, Cal.  
141 Front St., Portland Or.  
348 N. Main St., Los Angeles, Cal.

**BUDDING.** WANTED, a contract to bud a large quantity of citrus or deciduous nursery stock, or budding by the month; all work guaranteed. Address H. E. V. PICKSTONE, Postoffice box 597, Santa Clara, Cal.

## LAND

### WORTH LOOKING AFTER

—AND—

### Likely to Double in Price Soon.

## FINE VINEYARD CHOICE FRUIT RARE RAISIN AND ALFALFA LAND

### EXAMINE THIS RARE CHANCE.

A well-cultivated farm of 160 acres, with miles of fencing and cross fencing, good improvements, 7-room, two-story, hard-finished house, nearly new, plenty shade trees, large barn, blacksmith shop, milk house, grain house and other outbuildings; 7 acres of bearing orchard; 20 acres of alfalfa; large flowing artesian well of splendid water, and first-class surface wells of water; pleasantly located 7 miles from Tulare City; is offered for sale at about cost of improvements, on easy terms, by the owner, who is engaged in other business. Land sold, in lots, without improvements, at \$25 per acre. The readers of this journal are assured that this chance is worth looking after. Parties in San Francisco who know the property can be referred to. Some adjoining land can be secured at favorable rates if desired.

Address E. M. DEWEY, Porterville, Tulare Co., or A. T. DEWEY, 220 Market St., S. F.

**H.S. COMPLETE KIT OF TOOLS**  
Only \$26.  
Send for No. 16 Illustrated Catalogue.  
**TRUMAN, HOOKER & CO., San Francisco.**

### ORANGE CULTURE IN CALIFORNIA.

Now that the interest in the culture of the orange is extending so as to embrace nearly all parts of the State, a book giving the results of experience in parts of the State where the growth of the fruit has been longest pursued will be found of wide usefulness. "Orange Culture in California" was written by Thos. A. Garey of Los Angeles, after many years of practical experience and observation in the growth of the fruit. It is a well-printed hand-book of 327 pages, and treats of nursery practice, planting of orange orchards, cultivation and irrigation, pruning, estimates of cost of plantations, best varieties, etc. The book is sent post-paid at the reduced price of 75 cents per copy, in cloth binding. Address DAWAY & CO., Publishers "Pacific Rural Press," 220 Market St., S. F.

FARMERS' INSTITUTES.

What of the Five?

EDITORS PRESS:—Secretary Rusk tells us that through the agricultural journals he reaches one-sixth of the agricultural population of the country, thus covering the entire field, for he who reads no paper devoted to his calling is beyond the reach of intelligent effort in his behalf.

He probably "speaks from the card," comparing the aggregate circulation of agricultural papers with the census returns. As a practical soliloquist, experience would show that the paper of more general circulation than any other we know, reaches about one in ten where the territory has been well canvassed. These results tally pretty well, and go to show that five are jogging along in the same old ruts to every one that is even trying to get on the hard road. What are the five doing? Very much as Pa did and Grandpa did. In dairying, they are setting milk in the old tin pans and getting half to two-thirds of the cream, then using the old dash churn, and carrying the butter in a pall or basket to the groceryman, and getting about half what the sixth fellow gets for his. In fruit-growing, they plant a little of everything—prune or not, as it happens, cultivate when they feel like it, pack it in whatever comes handy, and say that the real estate men have lied about the climate and the fruit business.

In wheat-growing, they spread out thin the least possible labor over the most possible acres, and often make the statistics of average products look as though we lived in a desert rather than a garden. "What does this mean to our nation?" Why, simply this: That in Iowa, five years ago, a million cows were producing butter. One-third was thrown away in the skimmed milk, and the average product marketed for half the price of the best. It meant that Iowa dairymen were getting one-third the gross income that an intelligent application of the best methods would have yielded. We are speaking on waste of cream from an experience covering a term of years in gathering cream produced by thousands of cows, and on prices from official report of Dairy Commissioner Sherman. We leave out losses arising from failure to test cows and from imperfect churning of butter. Those who have tested cows have generally been those who were using improved methods, and it has been very common for them to report that they found one-fourth their dairy running them in debt, and that all their profit had to come from the best half. If that is the case with cows well fed and milked, with cream and butter well banded and marketed, what of the five who never tested a cow or heard of a separator? Iowa is one of the better dairy States, and instance only as one we happen to be posted about. We don't believe dairying is any more carelessly done than other branches of farming. You remember there was a great gulf between the rich man and Lazarus. Well, there's almost as much of a gulf between the worst and best of farmers. To bring up as many as possible from the lower to the higher standard means an immense advance in national wealth, and is a proper object of the Government's paternal care. Gov. Hoard referred to that when he said that every dollar Wisconsin had spent upon the Farmers' Institute had brought her back a thousand.

J. H. Hale of Connecticut meant that, when he said: "The Institute is the highest scheme in the world to boom the Grange." Get one of the five out this year to the Institute, two next and so on, remembering that every time we have waked up one of the five to a vital interest in progress, we have doubled our present effective force in any institutions designed to advance common interest through advanced ideas and improved practice. Remaining as they are, we may fairly infer that the five are no more likely to profit by Secretary Rusk's report than Ingersoll to accept the scheme of redemption.

Get them to think there is something to find out that is worth knowing, and they will take the paper and attend the Grange; but for the fellow who knows all about farming it would be folly to spend time or money in that way. To show how Institutes have waked them up elsewhere we recall a report that seemed to us upon good authority, where Gov. Hoard had compared returns from two neighboring townships, in one of which Institutes had been held with large attendance and deep interest for three or four years, while no interest was taken in the other. The assessor's books showed that for a term of years their net products had been of about the same market value, but that the Institute township now took in double the coin that the other did. That was an object-lesson worth learning. Several of the five must have been waked up there. FRANK S. CHAPIN, Tulare.

THE BOW-WOWS.—The bench show of the California Kennel Clubs in progress in the Wigwam, in this city, as we go to press. The building is closely filled with the exhibits, which include nearly all known kinds of blooded dogs, some specimens being among the finest of their class. The popular appreciation of the show seems to be ample, and the show bids fair to be a success in every way.

FLORIST AND GARDENER.

Hints for the Garden.

EDITORS PRESS:—An excellent contrivance for protecting small seedlings when first placed in the borders, or well-grown but weakish perennials, early in the season, from slugs, is the dome-shaped wire cover used in the country for excluding flies from butter, meat, cheese, etc. This article is to be bad of several sizes, from five to 12 or 15 inches in diameter, and at a cost, where purchased by the dozen and of assorted sizes, of from eight to ten cents each. The cover has a thin edge of tin, which is easily pressed down into the soft ground, thus insuring the complete exclusion of the enemy, while the little knot at the top enables one to quickly raise, move or remove the article when desirable.

It seems almost an impossibility to start plants in the open ground, as they are likely to be devoured as soon as they appear above the surface; but with the use of the cover, the protection is perfect, and the seedlings may not only show themselves, but may remain quietly in place, especially in the case of perennials, until of quite good size and the heat has driven the slimy creature we dread to his summer quarters. Under a 12-inch cover, a hundred seeds can be germinated, and there stay until three or four inches in height; and the plants so grown will be greatly stronger than those started beneath glass—in fact, will be ready, when set separately in the border, to continue their upward and lateral growth.

Another garden convenience is the two-pointed tack such as is employed for fastening matting to the floor. I recommended the use of this tack, some eight or ten years since, for attaching vines to posts, close fences and weather-boarding, and my opinion of it to-day is precisely what it was when I first called attention to it. For the climatic, the ivy, ivy-leaved geranium, rose when young, the manettia vine, the Ampelopsis vetches, or Boston ivy, and other climbers, it is just the article needed. The use of this little staple saves much time, and the work done with it is neat, clean and inconspicuous, quite unnoticeable in fact, even in cases where the leaves of the plant supported but partially cover the upholding fence or weather-boarding. The tack is to be had of several sizes and at a price low enough for its use by all. B. F. L. Santa Clara, April 27, 1891.

Blossom Time.

EDITORS PRESS:—From the bills west of Petaluma, the writer has received, April 24th, larkspurs, iris, large yellow mimulus, several painted cups, several members of the rose family, columbines, and a lot of composite plants, all lacking in completeness; also a Solomon's seal.

From Dillon's beach, near Bodega, came canary grass, *Collinsia bicolor* and *C. uniflora*, *Claytonia Siberica*, thrift (*Armeria vulgaris*) *Phacelia leucostachya*, lupines, *Cammassia esculenta* and *Viola canina*.

From the Santa Lucia mountains, opposite Gonzales, came *Fritillaria lanceolata*, *Vicia Americana*, *Tellima affinis*, *Astragalus Coulteri*, a rattle weed, a white flowered oenothera, half a dozen clovers and *Brodiaea ixioideis*.

A little pearlwort (*Alsenella occidentalis*, *Pickeringia montana*, *Thermopsis Californica* and a *Dendromecon* were noted near San Juan.

Near the Cholones, a pretty malvaceous plant resembling a *modiola* was found April 18th. *Astragalus nigrescens*, *Ellisia chrysanthemifolia* and more gillias were noted.

The season has so far advanced that nearly all the plants with common names have blossomed, even down to poison oak. Some of the summer-flowering bulbous plants are in bud, and in many localities they are showing the effects of alternation of dry and wet and of warm and cold weather. Of this, more later.

A frost on the 25th did harm to potatoes in the Salinas valley, and some even fear injury to blossoming barley. A. L. LIANCE, Gonzales.

Gopher Traps.

No doubt our readers have noticed the attractive advertisements in our columns of the "suloide" and "deadlock" gopher and mole traps by Ira F. White & Son of Pomona, Cal. We have heard that these traps have been found very satisfactory and effective by our readers. The "suloide" took the highest award at the late horticultural fair in Los Angeles. David C. Cook, owner of the great Pirn ranch in Ventura county after testing the "suloide" writes: "It is a good trap surely; send me one gross by express." He keeps one man trapping all the time. Of the "deadlock" trap, John F. Cahill of San Miguel writes: "I have given the trap a thorough trial, and it is indeed the best I have seen. I had three traps of another make, and they snap and let the gopher go. I only caught five gophers with the three traps, but with your single 'deadlock' I caught 12 gophers and never missed one." No doubt this experience will lead others to try these traps which are advertised in our columns.

List of U. S. Patents for Pacific Coast Inventors.

Reported by Dewey & Co., Pioneer Patent Solicitors for Pacific Coast.

FOR WEEK ENDING APRIL 21, 1891.

450,905.—OPERATING ELEVATOR DOORS—W. N. Anderson, San Rafael, Cal.

450,764.—GOLD SAVING APPARATUS—O. H. Bagley, Astoria, Or.

450,860.—REAPING MACHINE—M. S. Cody, Anacortes, Wash.

450,780.—STEAM ENGINE—M. B. Dodge, S. F.

451,005.—PENHOLDER—P. D. Horton, Oakland, Cal.

450,696.—FAUCET—G. H. Merrick, S. F.

450,773.—REPEATING GUN—W. H. Ostrander, Merced, Cal.

450,873.—SHOW TABLE, TOILET STAND AND BUREAU—M. Rosenbaum, Tacoma, Wash.

450,894.—BIER—Sanders & Rafferty, Reno, Nev.

451,007.—JOURNAL BOX—J. T. Smith, S. F.

451,008.—PACKING—J. T. Smith, S. F.

450,878.—SEWER MAN HOLE—Frank Walker, Los Angeles, Cal.

450,956.—SAFE—P. Wilhelm, Portland, Or.

450,858.—BROOM CRATE AND DISPLAY STAND—Frank Zan, S. F.

450,859.—SHIELD FOR BROOMS—Frank Zan, S. F.

The following brief list, by telegraph, for April 21 will appear more complete upon receipt of mail advices:

California—Delbert E. Barton, S. F., cultivator attachment; Delbert E. Barton, S. F., cultivator; Delbert E. Barton, S. F., cultivator clamp; Delbert E. Barton, Los Angeles, assignor of one-half to P. A. Wagner, S. F., cultivator; John L. Calahan, S. F., pipe; Benjamin F. Carman, S. F., cash-box and tray; Geo. A. Cooper, Alameda, sash-holder; Byron Jennings, San Jose, assignor of one-half to J. Brusie, Oakland, tension and cut-out device for electric railways; Francis H. Keislar, S. F., stone sawmill; Gustav F. W. Schultz, S. F., document file; Henry J. Small and T. W. Heintzman, Sacramento, snow-plow; Frank White, Pomona, snap-book. Oregon—Wm. W. Conder, Tillamook, milk-cooler.

Notes.—Copies of U. S. and Foreign patents furnished by Dewey & Co., in the shortest time possible (by mail or telegraphic order). American and Foreign patents obtained, and general patent business for Pacific Coast inventors transacted with perfect security, at reasonable rates, and in the shortest possible time.

Horse Sale at Oakland Park.

Don't forget Henry Pierce's horse sale, which is to be conducted by Killip & Co. at Oakland Trotting Park, Shell Mound Station, Oakland, at noon on Tuesday, May 5th. Forty-three head will be sold for what they will bring, for no fault, but because Mr. Pierce has too many. The offering of Mr. Pierce, though limited, contains some choicely bred animals. Especially is this the case with the young stallions, they

The Oriental Gas Engine.

This class of engine, through which power is developed by means of exploding gas in its cylinder with an electric spark, is being applied to so many purposes, and finding such general favor, that a new candidate for honors deserves notice. Mr. M. A. Graham, the inventor and patentee of the "Oriental," has had long experience in this kind of work and is a thoroughly practical machinist. His special claims for superiority in the Oriental is its peculiar sparking device by which absolute certainty of explosion is insured, the durability of all its wearing parts and its perfect steadiness of motion. The engine is neat in design and simple in construction, requires no skilled engineer, and can be operated with gasoline, city gas or natural gas. It is perfectly adapted to any use where a safe and cheap motive-power is required.

The following testimonials culled from a number of the same tenor are submitted. They speak for themselves:

SAN FRANCISCO, April 13, 1891.

M. A. GRAHAM, Prop'r Oriental Gas Engine Works—DEAR SIR: Your 10-horse power, double cylinder gas engine gives me complete satisfaction. It develops from 11 to 12 horse-power, is economical, burns about 750 cubic feet of gas per day of nine hours and 500 cubic feet per day of eight hours. The engine is well made and works right along, and we have not as yet had a hot bearing. My boy oils and starts it up in three minutes, and it never misses the first explosion. I had a great deal of trouble with gas engines before I got yours, and now I am of the opinion (having used gas engines for the last 15 years) that the Oriental is equal to the Otto in power and steadiness, much more simple in construction, will stand rough usage better, and consumes 60 per cent less gas. Will willingly show your friends the points wherein the Oriental excels all other gas engines I have seen in the United States or Europe.

Yours respectfully, GEO. HOUSTON, Architect and Builder, 23 and 30 Haight St., S. F.

SAN FRANCISCO, April 15, 1891.

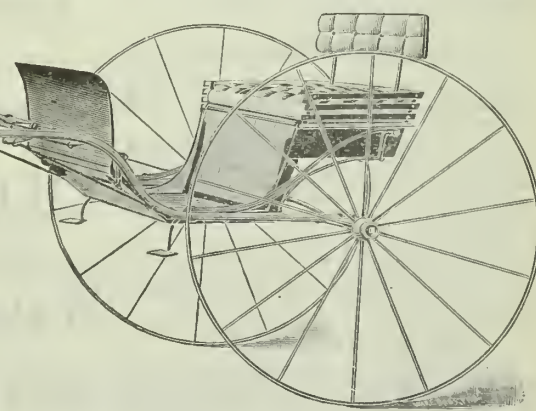

MR. M. A. GRAHAM—DEAR SIR: Your letter of the 12th inst. is received and contents noted. In reply to your inquiry about the six-horse power Oriental gas engine you made us, would say it is giving perfect satisfaction. It is fully six-horse power as represented, and gives more satisfaction than the electric motor power and at one-half the cost.

Yours truly, J. H. Wilson, Supt for J. C. Johnson & Co., Horse Collar and Pad Factory, 400 Market St., S. F.

See illustrated advertisement on another page, and send for catalogue to M. A. Graham, Corner Beale and Mission Sts., S. F., Cal.

A New Principle in Road Carts.

A late improvement in road carts recently patented is shown in the Victoria, the body of which is hung on two steel oscillating rock rods, one suspended from long flexible springs at the rear, and the other from metal boxes on the shafts in front. Having no rigid connections it is claimed the body remains perfectly steady

and does not receive the unpleasant motion of the horse and gear. As set forth above, the Victoria certainly presents a stylish and attractive appearance with its slat seat and phaeton body, while the upholstering and double bent shafts convey an impression of comfort and ease of access.

This new candidate for public favor is introduced by Frank Brothers, 33 and 35 Main street, San Francisco, who have brought out several other leading styles of vehicles.

BEFORE YOU CLEAN HOUSE.—Long before the calendar says it is time to begin house-cleaning, says the *Ladies' Home Journal*, you should look over the magazines, papers, disabled furniture, discarded garments and household ornaments which even 12 months accumulate so wonderfully. Be brave, and do not save an indiscriminate mass of articles against the possible needs of the seventh year of which we hear so much. Give away the best of the old garments and sell the remainder to the junk-man. The magazines and papers which you do not intend to have bound or to utilize in your scrap-book, will be eagerly read in some hospital or other institution. Even the furniture and ornaments will greatly brighten the dreary surroundings of some poor family. Have the courage of your convictions in dealing with the contents of trunks and boxes. Dispense with non-essentials and systematize the remainder, and your reward will be a delightful sense of space and a feeling of almost physical relief.

A SITE has been selected for the new Indian school at Perris, San Diego county. It is to be located on an 80-acre tract 4½ miles north of the town, and work will probably be commenced within 30 days. The sum of \$25,000 is to be expended, and the school will probably be opened in October with about 100 pupils.

## Breeders' Directory.

Six lines or less in this Directory at 50c per line per month.

### HORSES AND CATTLE.

P. H. MURPHY, Perkins, Sac. Co., Cal., Importer and Breeder of Shorthorn Cattle and Poland China Hogs.

M. D. HOPKINS, Petaluma, importer and dealer in Eastern registered Shorthorns, Red Polled Cattle, Holsteins, Devons and Shropshire Sheep.

PETER Saxe & SON, Lick House, San Francisco, Cal. Importers and Breeders, for past 21 years, of every variety of Cattle, Horses, Sheep and Hogs.

PERRIN STANTON, Sacramento, Cal., Importer and Breeder of Registered A. J. C. C. Jersey Cattle of the Best Strains. Stock for sale.

J. R. ROSE, Lakeville, Sonoma Co., Cal., breeder of Thoroughbred Devons, Roadsters and Draft Horses.

P. PETERSEN, Sites, Colusa Co., Importer & Breeder of registered Shorthorn Cattle. Young bulls for sale.

WILD FLOWER STOCK FARM, Fresno Co. A. Heilbron & Bro., Props., S. C. Breeders of thoroughbred strains and Cruikshank Shorthorns; also Registered Herefords; a fine lot of young bulls in each herd for sale.
